If you will pardon me, I will read to you the two slight planks in the Democratic platform upon which the President of the United States was elected, and upon which the Congress which is now in power, and which is to be convened upon the 7th of next month, was elected, and you will see that so soon as the financial question is disposed of, which is merely a preliminary, and must be disposed of before the regular meeting of Congress, the next great question is the tariff, in which you are interested, and which the President and both Houses of Congress are pledged to reduce. [Applause.] The Democratic platform upon which Mr. Cleveland was elected says: "We denounce Republican protection as a fraud; a robber of the great majority of the American people for a few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

We denounce the McKinley tariff law, enacted by the Fifty-first Congress, as the culminating atrocity of class legislation; and we indorse the efforts made by the Democrats of the present Congress to modify its most oppressive features in the direction of free raw materials and the cheaper manufactured goods that enter into general consumption; and we promise its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party. Since the McKinley tariff went into operation there have been ten reductions of the wages of laboring men to one increase. We deny that there has been any increase of prosperity to the country since the tariff went into operation, and we point to the dullness and distress, the wage reductions and strikes in the iron trade, as the best possible evidence that no such prosperity has resulted from the McKinley tariff.

After reading that platform of the Democratic party, and emphasizing the fact that the Democratic party was the party of free trade, Mr. Folsom, an officeholder of the United States, and, be it remembered, a cousin of the President of the United States, further said to the cutlery manufacturers of Sheffield:

I am not saying one word as to whether protection or free trade, or a tariff for revenue only, is the best thing for the United States or not. I am simply giving you the facts, and you can judge for yourselves. [Applause.] In closing my career in Sheffield as consul of the United States, it affords me satisfaction to think that before another twelve months has rolled by Sheffield will not be subjected to the onerous and oppressive tariff duties that have restricted her trade. [Applause.]

Think of it, Mr. President; think of it, Democratic Senators; what a spectacle it was for an officeholder of the United States, and a cousin of the President of the United States, saying to an English audience that he was not discussing the question as to whether the legislation of the Democratic party would aid the United States or not—that seemed to be of no consequence—but he was congratulating them that it would roll from Sheffield the onerous burdens that are upon them at the present time! Is it any wonder, Mr. President, when that utterance was being made in the great city of Sheffield, that the cutlery manufacturers of New England were alarmed? Is it any wonder that under those circumstances the only cutlery manufactory in my State concluded to close its doors for a portion of the time?

The cutlery manufactured in New Hampshire is protected under the McKinley tariff law sufficiently to enable it to be manufactured in competition with the cutlery made in Sheffield, England. But a consul of the United States, and a cousin of the President, assures our English competitors that that tariff duty is to be removed, and that they will have increased prosperity at the expense of American manufacturers.

Will it be any wonder, under such circumstances, if American cutlery establishments all over the country close their doors? Is it any wonder that American manufacturers refuse to accumulate manufactured goods which they may have to sell in competition with the product of the underpaid labor of English manufacturing towns?

Mr. President, I do not desire to further detain the Senate; Let the bill reported by the Senate Finance Committee, permitting banks to increase their circulation to the par value of the bonds deposited, be enacted into law. Then let this resolution, amended as I propose, be promptly passed. Confidence in our finances will at once be strengthened, both at home and abroad; trade will brighten, and another era of prosperity, possibly equal to the marvelous prosperity of the administration of President Harrison, will speedily come to the people of the United States.

SENATOR FROM MONTANA.

The PRESIDING OFFICER (Mr. CHANDLER in the chair). The Chair lays before the Senate the unfinished business; which will be stated.

The SECRETARY. A resolution providing that Lee Mantle be admitted to his seat as a Senator from Montana.

Mr. HOAR. Mr. President, notice was given the other day that on Wednesday this resolution would be called up and the Senate requested to consider it until it was disposed of. It is very obvious that the more important are the public questions which are pending, the more important the right of the States to be fully represented. So I have no apology to make for insisting upon the determination of titles to seats here, even in the presence of the great public calamity which is upon the people.

I understand that the Senator from Florida [Mr. PASCO], who intended to address the Senate to-day, has some disorder in his throat which makes it inconvenient for him to speak just now, but that he will be ready to go on to-morrow. Therefore I suggest that this resolution shall go over until to-morrow, unless some other Senator is ready to speak upon it.

Mr. FRYE. The Senator from Florida has taken the floor.

The PRESIDING OFFICER. If there be no objection, the resolution will be passed over.

EXECUTIVE SESSION.

Mr. HOAR. I now suggest that we have a vote on the resolution of my colleague [Mr. LODGE].

Mr. PASCO. The Senator from South Carolina [Mr. BUTLER] is not in his seat. He yesterday gave notice of an amendment to that resolution, and I therefore suggest that the resolution go over now.

Mr. HOAR. We might have a vote on the amendment of the Senator from New Hampshire [Mr. GALLINGER] in that case.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. COCKRELL. I think we had better proceed to the consideration of executive business, and therefore I move accordingly.

The PRESIDING OFFICER. The question is on the motion of the Senator from Missouri.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After ten minutes spent in executive session the doors were reopened.

TREASURY NOTES AND GOLD COIN.

Mr. JONES of Arkansas. I ask leave at this time to submit a resolution, on which I ask immediate action, if there be no objection.

The PRESIDING OFFICER. The resolution will be read.

The Secretary read the resolution, as follows:

Resolved, That the Secretary of the Treasury be, and he is hereby, directed to report to the Senate what amount, if any, of the Treasury notes issued under the act of July 14, 1890, commonly called the Sherman act, have been during the present month redeemed by the Government, at the request of the holders thereof, in silver dollars, and whether the holders of such notes were advised, at the time of such redemption, that they could have gold instead of silver if they so desired.

The Secretary of the Treasury is also directed to inform the Senate whether gold coin has been recently presented to the Treasury Department, or any subtreasury, and silver dollars asked in exchange therefor; and, if so, if such exchanges have been made, and whether the Department would or could exchange silver dollars for gold coin if requested to do so by holders of gold.

The resolution was considered by unanimous consent, and agreed to.

Mr. HARRIS. I move that the Senate do now adjourn.

The motion was agreed to; and (at 3 o'clock and 12 minutes p. m.) the Senate adjourned until to-morrow, Thursday, August 17, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 16, 1893.

ENVOYS EXTRAORDINARY AND MINISTERS PLENIPOTENTIARY.

George William Caruth, of Little Rock, Ark., to be envoy extraordinary and minister plenipotentiary of the United States to Portugal, to which office he was appointed during the last recess of the Senate, vice Gilbert A. Pierce, resigned.

Luther F. McKinney, of Manchester, N. H., to be envoy extraordinary and minister plenipotentiary of the United States to

Colombia, to which office he was appointed during the last recess of the Senate, vice John T. Abbott, resigned.

William E. Quinby, of Detroit, Mich., to be envoy extraordinary and minister plenipotentiary of the United States to the Netherlands, to which office he was appointed during the last recess of the Senate, vice Samuel R. Thayer, resigned.

Thomas L. Thompson, of Santa Rosa, Cal., to be envoy extraordinary and minister plenipotentiary of the United States to Brazil, to which office he was appointed during the last recess of the Senate, vice Edwin H. Conger, resigned.

MINISTER RESIDENT AND CONSUL-GENERAL.

Alexander McDonald, of Lynchburg, Va., to be minister resident and consul-general of the United States to Persia, to which office he was appointed during the last recess of the Senate, vice Watson R. Sperry, resigned.

SECRETARIES OF LEGATION.

George B. Anderson, of the District of Columbia, to be secretary of the legation of the United States at Rio de Janeiro, Brazil, to which office he was appointed during the last recess of the Senate, vice Charles F. Markell, recalled.

Stephen Bonsal, of Baltimore, Md., to be secretary of the legation of the United States to China, to which office he was appointed during the last recess of the Senate, vice Howard Martin, recalled.

Owen McGarr, of Chattanooga, Tenn., to be secretary of the legation of the United States to Chile, to which office he was appointed during the last recess of the Senate, vice Fenton R. McCreery, recalled.

Henry C. Stuart, of Denver, Colo., to be secretary of legation in Guatemala and Honduras and consul-general of the United States to Guatemala, to which office he was appointed during the last recess of the Senate, vice Samuel Kimberly, recalled.

Jacob Sleeper, of Boston, Mass., to be secretary of the legation and consul-general of the United States at Bogota, Colombia, to which office he was appointed during the last recess of the Senate, vice Jeremiah Coughlin, recalled.

COMMISSIONER.

John Goode, of Virginia, to be commissioner on the part of the United States under the treaty for a claims commission, concluded between the United States and Chile, August 7, 1892, to which office he was appointed during the last recess of the Senate.

CONSULS-GENERAL.

Wendell A. Anderson, of Lacrosse, Wis., to be consul-general of the United States at Montreal, Canada, to which office he was appointed during the last recess of the Senate, vice Charles L. Knapp, recalled.

Joseph G. Donnelly, of Milwaukee, Wis., to be consul-general of the United States at Nuevo Laredo, Mexico, to which office he was appointed during the last recess of the Senate, vice Warner P. Sutton, recalled.

Darius H. Ingraham, of Portland, Me., to be consul-general of the United States at Halifax, Nova Scotia, to which office he was appointed during the last recess of the Senate, vice Wakefield G. Frye, recalled.

Alfred D. Jones, of Raleigh, N. C., to be consul-general of the United States at Shanghai, China, to which office he was appointed during the last recess of the Senate, vice Joseph A. Leonard, recalled.

Wallace S. Jones, of Monticello, Fla., to be consul-general of the United States at Rome, Italy, to which office he was appointed during the last recess of the Senate, vice Augustus O. Bourn, recalled.

Daniel W. Maratta, of Fargo, N. Dak., to be consul-general of the United States at Melbourne, Australia, to which office he was appointed during the last recess of the Senate, vice George H. Wallace, resigned.

Frederic C. Penfield, of Hartford, Conn., to be agent and consul-general of the United States at Cairo, Egypt, to which office he was appointed during the recess of the Senate, vice Edward C. Little, recalled.

Irving B. Richman, of Muscatine, Iowa, to be consul-general of the United States at St. Gall, Switzerland, to which office he was appointed during the last recess of the Senate, vice Samuel H. M. Byers, recalled.

John B. Riley, of Plattsburg, N. Y., to be consul-general of the United States at Ottawa, Canada, to which office he was appointed during the last recess of the Senate, vice Richard G. Lay, recalled.

Van Leer Polk, of Nashville, Tenn., to be consul-general of the United States at Calcutta, India, to which office he was appointed during the last recess of the Senate, vice Samuel Merrill, resigned.

E. Spencer Pratt, of Mobile, Ala., to be consul-general of the United States at Singapore, Straits Settlements, to which office he was appointed during the last recess of the Senate, vice Adolph G. Studer, recalled.

Victor Vifquain, of Lincoln, Nebr., to be consul-general of the United States at Panama, Colombia, to which office he was appointed during the last recess of the Senate, vice Thomas Adamson, recalled.

SOLICITOR OF INTERNAL REVENUE.

Robert T. Hough, of Ohio, to be solicitor of internal revenue, vice Alphonso Hart, resigned.

ASSISTANTS ATTORNEY-GENERAL.

Holmes Conrad, of Virginia, to be assistant attorney-general, vice John B. Cotton, resigned.

Charles B. Howry, of Mississippi, to be assistant attorney-general, vice Leonard W. Colby, resigned.

CHIEF JUSTICE, ARIZONA.

Albert C. Baker, of Arizona Territory, to be chief justice of the supreme court of the Territory of Arizona, vice Henry C. Gooding, resigned.

ASSOCIATE JUSTICE, OKLAHOMA.

Frank Dale, of Oklahoma Territory, to be associate justice of the supreme court of the Territory of Oklahoma, vice John G. Clark, removed.

ASSOCIATE JUSTICE, ARIZONA.

Owen T. Rouse, of Arizona Territory, to be associate justice of the supreme court of the Territory of Arizona, vice Joseph H. Kibbey, removed.

ASSOCIATE JUSTICE, UTAH.

Harvey W. Smith, of Utah Territory, to be associate justice of the supreme court of the Territory of Utah, vice John W. Blackburn, removed.

UNITED STATES ATTORNEYS.

Joseph N. Miller, of Alabama, to be attorney of the United States for the southern district of Alabama, vice Morris D. Wickersham, resigned.

Emmet O'Neal, of Alabama, to be attorney of the United States for the northern district of Alabama, vice Lewis E. Parsons, jr., removed.

Henry D. Clayton, of Alabama, to be attorney of the United States for the middle district of Alabama, as provided by chapter 220, laws 1893, volume 27, United States Statutes at Large.

Everett E. Ellinwood, of Arizona Territory, to be attorney of the United States for the Territory of Arizona, vice Thomas F. Wilson, removed.

William E. Shutt, of Illinois, to be attorney of the United States for the southern district of Illinois, vice James A. Connolly, resigned.

Charles W. Seals, of Louisiana, to be attorney of the United States for the western district of Louisiana, vice Milton C. Elstner, resigned.

Sherman Hoar, of Massachusetts, to be attorney of the United States for the district of Massachusetts, vice Frank D. Allen, removed.

Andrew Fuller Fox, of Mississippi, to be attorney of the United States for the northern district of Mississippi, vice M. A. Montgomery, removed.

Robert B. Glenn, of North Carolina, to be attorney of the United States for the western district of North Carolina, vice Charles Price, resigned.

Daniel R. Murphy, of Oregon, to be attorney of the United States for the district of Oregon, vice Franklin P. Mays, removed.

Harry Alvin Hall, of Pennsylvania, to be attorney of the United States for the western district of Pennsylvania, vice Walter Lyon, resigned.

Charles E. Gorman, of Rhode Island, to be attorney of the United States for the district of Rhode Island, vice Rathbone Gardner, whose term expired March 19, 1893.

William Perry Murphy, of South Carolina, to be attorney of the United States for the district of South Carolina, vice Abial Lathrop, resigned.

John W. Judd, of Utah Territory, to be attorney of the United States for the Territory of Utah, vice Charles S. Varian, resigned.

A. J. Montague, of Virginia, to be attorney of the United States for the western district of Virginia, vice William E. Craig, resigned.

William H. Brinker, of Washington, to be attorney of the United States for the district of Washington, vice Patrick H. Winston, removed.

Cornelius C. Watts, of West Virginia, to be attorney of the United States for the district of West Virginia, vice George C. Sturgiss, removed.

UNITED STATES MARSHALS.

Judge C. Musgrove, of Alabama, to be marshal of the United States for the northern district of Alabama, vice A. R. Nininger, removed.

Edward R. Morrissette, of Alabama, to be marshal of the United States for the southern district of Alabama, vice Benjamin W. Walker, removed.

William H. Tisdale, of Alabama, to be marshal of the United States for the middle district of Alabama, as provided by chapter 220, laws 1893, volume 27, United States Statutes at Large.

William K. Meade, of Arizona Territory, to be marshal of the United States for the Territory of Arizona, vice Robert H. Paul, removed.

Hewson E. Lannan, of Delaware, to be marshal of the United States for the district of Delaware, vice Henry C. Mahaffy, removed.

Samuel C. Dunlap, of Georgia, to be marsnal of the United States for the northern district of Georgia, vice A. E. Buck, resigned.

William B. Brinton, of Illinois, to be marshal of the United States for the southern district of Illinois, vice Charles P. Hitch, resigned.

Robert L. Luckett, of Louisiana, to be marshal of the United States for the western district of Louisiana, vice John Vigneaux, resigned.

John S. McNeily, of Mississippi, to be marshal of the United States for the southern district of Mississippi, vice Frederick W. Collins, removed.

George M. Humphrey, of Nevada, to be marshal of the United States for the district of Nevada, vice James A. Moore, whose term expired October 12, 1892.

Edward L. Hall, of New Mexico, to be marshal of the United States for the Territory of New Mexico, vice Trinidad Romero, removed.

Evitt D. Nix, of Oklahoma Territory, to be marshal of the United States for the Territory of Oklahoma, vice William Grimes, removed.

Henry C. Grady, of Oregon, to be marshal of the United States for the district of Oregon, vice Louis T. Barin, removed.

Otto Peemiller, of South Dakota, to be marshal of the United States for the district of South Dakota, vice Cyrus J. Fry, deceased.

Stephen P. Condon, of Tennessee, to be marshal of the United States for the eastern district of Tennessee, vice W. S. Tipton, whose term expired March 30, 1893.

Richard C. Ware, of Texas, to be marshal of the United States for the western district of Texas, vice Paul Fricke, whose term expired March 27, 1893.

Nat M. Brigham, of Utah Territory, to be marshal of the United States for the Territory of Utah, vice Irving A. Benton, removed.

James C. Drake, of Washington, to be marshal of the United States for the district of Washington, vice Thomas R. Brown, removed.

Samuel S. Vinson, of West Virginia, to be marshal of the United States for the district of West Virginia, vice Henry S. White, resigned.

JUSTICE OF THE PEACE, DISTRICT OF COLUMBIA.

Oliver P. Johnson, of the District of Columbia, to be justice of the peace in the District of Columbia (to be assigned to the city of Georgetown), vice Mathias V. Buckey, deceased.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *August 16, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

LEAVE TO COMMITTEE TO PRINT.

The SPEAKER. The Chair will lay before the House an order which the joint commission of Congress to inquire into the status of the laws organizing the Executive Departments desire to have made.

The Clerk read as follows:

Ordered, That the joint commission of Congress to inquire into the status of laws organizing the Executive Departments be authorized to have printed and bound testimony taken by it and documents connected with the inquiry with which it was charged during the Fifty-third Congress.

The SPEAKER. Without objection this order will be made. There was no objection, and it was so ordered.

PURCHASE AND COINAGE OF SILVER.

Mr. MEIKLEJOHN. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. MEIKLEJOHN. To offer a resolution.

The SPEAKER. A resolution can not now be introduced except by unanimous consent.

Mr. MEIKLEJOHN. I desire to ask unanimous consent. It is a resolution which is pertinent to the question under consideration by the House.

The SPEAKER. The gentleman will send it up.

Mr. BYNUM. Let us have the resolution read, Mr. Speaker.

The SPEAKER. Does the gentleman from Nebraska ask unanimous consent simply to introduce the resolution?

Mr. MEIKLEJOHN. I ask for the adoption of the resolution.

The SPEAKER. The gentleman submits a resolution.

Mr. BLAND. With the understanding that it is subject to objection.

The SPEAKER. The right to object will be reserved.

The Clerk read as follows:

Resolved, That the Secretary of the Treasury is hereby respectfully requested to communicate to the House the following information relating to the purchase and coinage of silver under the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes:"

First. How many ounces of silver bullion have been purchased, and what has been the highest, lowest, and average market price paid?

Second. What amount of Treasury notes has been issued in payment of the silver bullion, what amount redeemed, and what amount reissued?

Third. What amount of Treasury notes has been redeemed in gold coin and what amount in silver coin?

Fourth. How many standard silver dollars have been coined?

Fifth. How many ounces of silver bullion are now owned by the Government?

The SPEAKER. Is there objection to the present consideration of this resolution?

Mr. TRACEY. Mr. Speaker, I suggest to the gentleman that he can get all the information sought for by addressing a note to the Treasury Department, and as we have an order pending I do not think we should entertain other matters.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The resolution was then agreed to.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed the bill (S. 22) making appropriations for the purchase of ground and the erection thereon, in the city of Washington, D. C., of a building to be used as a hall of records; in which the concurrence of the House was requested.

SILVER.

The SPEAKER. The gentleman from Massachusetts is recognized.

Mr. McCALL. Mr. Speaker, I agree entirely with the proposition advanced in this House by most of the opponents of this bill, that the question at issue is monometallism against bimetallism; but I do not agree with those gentlemen as to which side represents monometallism and which side represents bimetallism. To my mind it is as clear as the sunshine that a continuance of the policy of the Government in purchasing 4,500,000 ounces of bullion each month, or the free coinage of silver at any of the ratios in the amendments pending before this House, will result in this country becoming a monometallic and not a bimetallic country, and that metal will be silver, and in our having as our standard of value the amount of silver coined in the silver dollar.

I believe, Mr. Speaker, in bimetallism so far as it can be maintained on the gold standard, which is our present standard. I believe that we should have all the silver we can circulate in this country, and yet adhere to the standard which prevails among the nations of the civilized world; and because I so believe, I am in favor of this bill.

Let us consider what the policy of this Government has been. It would take no very great gift of prophecy to foretell that when this Government must invest in a certain amount of silver each month without any surplus revenue over and above its expenditures, that it could only acquire silver at the expense of its gold. That is what the effect of this policy should be. Let us see what the effect has been.

During the three years in which we have been upon this policy our Treasury has parted with nearly $100,000,000 of its gold, and the reason it has not parted with precisely the amount of gold that it has purchased in silver is, in my judgment, due to the extraordinary measures pursued by it during the last two years to keep it. If we look at the matter from an international standpoint we find this remarkable coincidence, that up to July 1, 1893, we had purchased $140,500,000 of silver bullion, and we had exported from this country $141,000,000 of gold. The effect of this policy then, I say, is precisely what we might expect it

would be—that as we have parted with our gold we have piled up silver.

Mr. Speaker, it will not require any very long time, it will not be a very distant day when this Government, at this rate, will have parted with so much of its gold that it will be compelled to suspend gold payments, and the result will thus inevitably be the expulsion of all our gold from circulation, and the placing of the country upon a silver standard.

And that is the essential question at issue here to-day. What standard do we propose to maintain in this country? What is our dollar? You might infer that a "dollar" was simply a fiat of the Government, an umbra, a piece of that very intangible and unmeasurable thing called the "faith of the Government." You might infer that any other word containing the same number of letters, if it was emitted by the Government, would have the same value.

But there is this significant thing in the situation, this extraordinary coincidence, that what we call our dollar is worth precisely, and has been since the first day of January, 1879, the amount of gold in the gold dollar. That is the striking fact. That means simply that we are upon a gold standard. That means that the gold dollar is, in effect, the dollar of ultimate redemption, and every one of our dollars, whatever may be the intrinsic value of the material of which it is made or upon which it is stamped, whether it is worthless paper or whether it is silver, is worth precisely the value of the amount of gold in a gold dollar.

That results from the fact that this Government has since 1879 declared its purpose to convert every kind of its dollars into any other kind that any person may desire. The consequence has been that so long as it could maintain payment upon the basis of the gold dollar, which is the most expensive dollar, that would be our standard of value. But when we see the gold flowing from our Treasury we see that the Government is approaching the point where, although it may have the willingness, it can not have the ability to redeem its promises, and when the time arrives then it will have to go to the basis of the next most valuable dollar.

So, instead of your dollar being anything intangible or a subject of mere imagination, it will then be the amount of silver contained in our present dollars, or in whatever silver dollar we may hereafter adopt, if we adopt free coinage. Believing, then, that the important question involved in this debate is the question of standard, it seems to me that we ought to consider for a moment whether it is wise to-day for the United States to adopt a silver standard in preference to a gold standard.

What does that involve? It is said that silver was demonetized in 1873 by this Government, by Germany, by France, and by other nations, and that, as a result of that demonetization, there has been a far less demand for it, and, consequently, that it has gone down in value. Now, Mr. Speaker, notwithstanding the reduced demand for silver, caused by the demonetization of 1873, you will find that, in the face of that decreasing demand, the product of silver has constantly increased, and to-day the annual output of that metal is nearly 250 per cent greater than it was in 1873. It has gone up so that to-day silver can hardly be ranked among the precious metals, and the new output of this metal, to say nothing of the stock at present existing in the world, amounts to nearly 6,000 tons per year.

Now, in view of the fact that the mints of all the civilized and of the greater part of the heathen world have been closed to silver, I submit that it would be madness for this Government to-day to go upon the silver standard and, at least, thereby shoulder the new output of silver. But that is not all. I think there is a great deal in the argument, though I do not think it should have the force that has been given to it, that the silver of other nations, especially if there was any rise in the value of the article by reason of our adopting free coinage, would be unloaded upon us. Those nations would seize the opportunity to unload their silver upon us, precisely as Germany did in 1873 and 1874. It is said that the German Government sold its silver at a loss.

Mr. Speaker, it might have sold its silver at a loss as compared with the arbitrary ratio fixed in the German coinage, but there has been no day from that time to this when the German Government could not have purchased back, if it desired, that very silver at less than what it received; so that it would have made by the transaction.

It seems to me entirely clear that the result of our going upon the silver basis would be to expose this country to the great fluctuations in that metal and in the value of our dollar, and that, by reason of our alone attempting to carry silver as against all the rest of the world, we would see a constant shrinkage in the value of our dollar.

We should not have free coinage, simply because Mr. Carlisle is not a pattern of consistency and apparently has seen a new light. I do not agree upon many political questions with Mr. Carlisle, but he possesses the instincts of a statesman; and the effect of the great responsibility of the office he now holds, with his hand upon the throttle of that mighty engine which can start or stop all our wheels of industry, has been to sober him, as it would sober any man who had at heart the interests of his country.

I do not imagine that it is necessary here to repeat any of the old classical arguments about the desirability of the gold standard as against the silver standard; and I may say here that I take no stock whatever in the exploded theory that we can have a double standard. I do not believe you can have any double standard of value any more than you can have a double quart measure or a double pound weight. It seems to me that we must adopt some standard in value; and while, from the nature of the case, we can not get anything that is inflexible, that will never rise or decrease in value, it is our duty to adopt that at least which will put us on terms of equality with the other trading nations of the world, and which will possess, in the highest degree obtainable, the quality of stability.

If we take the value of gold as compared with labor, which I think is fairly the unit of production, we shall see that gold and labor during the last twenty years have maintained their relations to each other, and that wages expressed in terms of gold are at least equal to-day to what they were twenty years ago, if not greater.

But gentlemen say you must take commodities as the measure of value. Now, Mr. Speaker, I submit that commodities do not constitute a proper test. If twenty years ago an article required so much human labor in its production, and to-day that article is produced by the mere automatic motion of a machine at one-third the cost at which it was produced then, I say it should have, with reference to human labor, only one-third the value that it had then. The work of a machine does not count in this matter.

The work of a machine, except as it may involve the ingenuity of the inventor, to whom money is paid for the invention and the cost of labor in producing the machine, should count for nothing whatever in the transaction.

And now let us see what terrible burden is laid on the debtor class in this country. Twenty years ago, for instance, you may have loaned a man $100. That $100 required on your part a certain amount of labor to procure it. To-day that man returns to you $100; and I submit that this sum of $100 should require as much human labor to-day to procure it as was required to procure $100 when you lent him that sum. I submit it would be most unjust if to-day the man should undertake to repay you in any commodity which, by reason of the invention of a new machine, costs to-day only $20 in labor, although at the time the original loan was made the cost would have been $100 in labor.

Consider the improvement in various processes of human labor. Sixty years ago the labor involved in carrying a bushel of wheat from a point west of the Missouri river to New York would have been one hundred fold in excess of the amount of labor involved in the original production of that wheat. But by reason of improved methods of transportation that wheat can to-day be put down in New York for an infinitesimal fraction of what it would have cost then. Shall we select some metal as our standard of value which will go backward and simply record what was the cost of a given transaction sixty years ago—which will keep its par with the obsolete and expensive methods of twenty years ago? I submit that the most nearly correct unit of value you can get is the unit of human labor, which is the unit of production, and as measured in that gold has been the most stable.

Mr. Speaker, there is another reason in favor of the gold standard besides the reason that it is the better standard. The gold standard is the existing standard in this country, and it should require some very potent reason to justify us in changing that standard to another. But it is asked: "Why do you propose to diminish the amount of your money when we are having a money famine; when all our industries are crying out for more money, why should you go to work and practically demonetize a large part of the money of the country"?

Mr. Speaker, there never was a more patent fallacy than that. This country is not suffering from lack of currency or circulating medium. If you will compare the Treasury report of the 1st of August in this year with the Treasury report of one year previous, you will find that there has been an increase in the amount of circulating medium to the extent of at least $10,000,000; and when you take into account the $20,000,000 of gold which since the 1st of August has reached New York, and the increase of ten or fifteen millions more in the national bank circulation, it is entirely clear that our circulating medium to-day is $40,000,000 more than it was a year ago.

Why is it, then, that our business has declined? It may be from a variety of causes. I have no doubt that the fear of a radical change in the tariff has contributed to a considerable degree and has curtailed the operations of our manufacturers. But it is to be observed that this depression did not begin with the stop-

ping of mills and the consequent tightening of money; but when, with the wheels of our mills revolving, with our manufacturing establishments having orders upon which to run, they have had to shut down because of the lack of money, it is clear that there is some cause which affects those who have money, creating a fear which is paralyzing the business of the country.

So long as this Government is able, and so long as the people believe it able, to redeem all its money in gold, people will be entirely controlled in the kind of money they select by considerations of mere convenience. But the moment the point is reached when it appears that the Government may not be able to redeem all its money in gold, but that some holders of its obligations will be obliged to take a less valuable metal, then convenience gives place to fear; the bill holder becomes timid; and from the effect of this impulse of fear there is a locking up of our money from actual use.

Gentlemen call this a conspiracy to tighten the money market; but there never was such a widespread and universal conspiracy since the world began. It does not affect merely the great financial heart of this country, the city of New York, where the bankers to-day see their deposits constantly decreasing, where the national banks have run below their required reserve—$15,000,000—but this distrust has appeared in Boston, in Chicago, in Denver, and in cities beyond the Sierras; and I believe it is due to a fear which can chiefly be traced to the effect of the policy of the Sherman law and the continuance of the purchase of silver upon our circulating medium.

I have said what to my mind are the chief things which should be considered here in this discussion. In the first place, we have in this country to-day about the sum of $650,000,000 in silver. That is all that we can stagger under. But if we stop where we are, I believe we can carry that amount and return to our normal financial condition, but it is necessary to stop there in order to prevent a further contraction of the currency which would result by the demonetization of gold, and in order to keep us from a silver standard.

The only thing for us to do, in view of the policy of the other nations of the world, is to take up the battle and fight, not merely for ourselves, but for the common interests of mankind; and in that view to go into a struggle with the other nations of the world for gold. That is the surest way to fix the international status of silver. We will never get there—to the point desired by those who favor silver—if we are content to load down the energies of the nation with a burden that would swamp the greatest nation that ever existed by attempting to carry the silver of the world alone.

I do not care, sir, whether the Republican party or the Democratic party was originally responsible for the passage of this bill, or what motives or methods were involved in its passage. I will admit that the Republican party was responsible for its enactment. But I believe that they were dealing then with an evil, and this movement was made, as the President of the United States has said in his message, by the conservative financial element, with the intent to solve an existing grave question of finance. But whether the Republican party was responsible originally or not, I believe that it stands here to-day ready to terminate its responsibility.

The Democratic party unanimously voted against the act of 1890. It unanimously voted against that act when it had not been tried, and when it might possibly have been a measure of wise and sound finance. Is it not, then, most extraordinary, Mr. Speaker, that the operation of that act should produce a change, and such a change, in the policy of the Democratic party? I submit it would be scarcely to the glory of the Democratic party if they stood out opposed to that policy when it might be for the financial interest of the country and become converted to its support by the disaster and the ruin which have followed from putting it into practice. And that, Mr. Speaker, would be simply their attitude to-day if they fail to adhere to the position they took when this act was originally before the Congress for consideration and when it originally passed the House—an attitude of uncompromising hostility to it.

Now, sir, to go outside of the two points on which I have been speaking I desire to say that I have listened with somewhat of amazement to some remarks on this floor concerning the bankers of this country. I have no doubt that there are some very wicked men in the country engaged in this business. It is my experience with mankind that while we are all generally good you will find a bad lot here and there, and sometimes very bad men are found in Wall street; and we find also some bad men in Missouri. Under our complicated social system the banker of the country is just as necessary as the farmer. The farmer's crops could not be moved from the place of production to the place of consumption but for the banker.

Great railroad enterprises could not be inaugurated, important industries and interests could not spring up throughout the country, if there was not some place where the business men, the enterprising men of the country could go and get money to carry them into execution. The banker is a necessary part of our institutions, and is entitled to as much respect as any other class of business men in our community. And, sir, when I look at what they have done during the last few months, bearing as they have borne the brunt of this tempest, a tempest that threatened to engulf both them and us, and when I see the courage shown in the face of decreasing deposits and increasing deficits, when I see the ingenuity of the expedients to which they have resorted in order to maintain the vast interests intrusted to their care and prevent the breaking down of the business of the country, so far from speaking of them in terms of derogation as "Shylocks," or "gold bugs," or other epithets of derision, I should say that they are entitled to the admiration and support of the country.

Mr. Speaker, I say, in conclusion, that if we want to maintain the two metals in circulation here, if we want to maintain the gold standard in this country, if we do not desire to drive from our business every drop of the rich, red, golden blood that vitalizes every civilized nation, if we do not wish to continue this paralysis of business, and subject our farmers to the system of exchange that is chiefly responsible for the degradation and practical slavery of the Indian peasant, we will have to repeal the act of 1890 unconditionally. And while we may not restore confidence in the minds of the people at one blow, we will go very far towards remedying the depression which has settled upon all of the industries of the country. [Applause.]

Mr. COOMBS. Mr. Speaker, I wish to preface the remarks I am about to make, with the request that I shall not be interrupted. I shall not expect or ask from this House the courtesy of an extension of the time which has been granted to me. I may not occupy it all; you will all have the opportunity to answer in your own time any statements that I make. I shall attempt to make no discourteous remark, and expect the same courtesy of treatment from this House that I have always received.

I shall try not to cover the same ground which has been so ably covered on both sides of this question.

Although I am a citizen of the State of New York, and one of the delegation from that State, I shall not attempt to defend the city of New York. She does not ask it of me. She does not need it. Her splendid record is her defense. Who ever saw a more magnificent spectacle than is now presented by the banks and the merchants of that great city, with the storm beating upon their heads from all sides, calmly, quietly, consistently holding their ground, and at the same time holding out the hand of help to every section of the country? New York needs no defense against the charge of selfishness, for whenever did humanity call upon her, whether it be in aid of a Southern city stricken by the plague, or of any community impoverished by flood or conflagration, that New York was not the first to respond? Gentlemen, I do not defend New York; she has defended herself; and in speaking of New York I include my own grand city of Brooklyn.

I send to the Clerk's desk, in order to lay a foundation for the remarks I am to make, an editorial that appeared in the Iron Age. The Iron Age is a newspaper devoted to the iron interests of the United States. I may say that it is Republican in politics but it is nonpartisan in its loyalty.

The Clerk read as follows:

THE DISCOURAGING OUTLOOK FOR BUSINESS.

The business situation steadily grows more unsatisfactory. Trade is shrinking in every direction, and all branches of business are participating in the distress which envelops the country like a dismal fog. The wail of the unemployed is heard on all sides. Factories are idle that had not been known to close except for repairs within the memory of the present generation. Towns that have never before felt the blighting touch of adversity are struggling with the problem of feeding the hungry, who almost outnumber the fortunate ones still blessed with employment. In a manufacturing city in the central West, possessing diversified industries in such an advanced state of development that its prosperity seemed founded on a rock-rooted basis, there is at present not a single establishment of any moment in operation, and a loaf of bread is not to be had on credit. The inhabitants have seen paralysis affect one industry after another, and they now understand for perhaps the first time in their experience what is meant by hard times. No relief is to be had by tramping to some other locality where there may be factories in operation, because those are probably running on half time or with a reduced force, and there is no chance for a stranger.

It seems like mockery in such a time as this to say that the country is really in a sound condition and that the distress is of an artificial character. But was there ever seen in the history of the world such a series of financial reverses among really solvent institutions? Manufacturers fail with assets largely in excess of their liabilities. Banks go to the wall with their safes filled with good securities. Merchants close their shutters because they are only in need of a comparatively small amount of cash to discharge pressing liabilities. In the throng of insolvents there are, of course, not a few who had attempted to carry too heavy a load for their capital; but this country can now show the most remarkable collection of solvent bankrupts ever seen under the canopy of heaven. Business men of all kinds have taken refuge in receiverships, that they may secure the protection of the courts in saving valuable properties that would be ruthlessly sacrificed in this crisis. There appears to be no value at present in any kind of property whatever, and to offer it for sale means to instantly depreciate it enormously.

The restoration of values appears to be a simple matter and to lie wholly

with Congress. The early repeal of the Sherman act and the authorization of a bond issue to increase the gold reserve, thereby insuring the maintenance of our silver currency on a par with gold, would impart confidence to the people at once, and the further hoarding of money would be checked. It will, of course, require sometime for trade to resume its wonted course, as the disturbance to business has been very great. There may also be some halting in certain branches of industry and commerce until it is definitely known what changes may be made in the tariff schedules. But the first thing necessary to check the awful demoralization in the business of the country is to reëstablish our currency on a sound basis. To this end all patriots should earnestly work, and partisan cries should be stifled until it is accomplished.

I have been requested by the New York Hardware Board of Trade to present a petition to the same end, which I will ask the Clerk to read. It is signed by the representatives of the iron interests of the United States, the largest manufacturers of hardware in the United States.

The Clerk read as follows:

The following is the petition of the Hardware Board of Trade of New York, with the list of signatures up to date:

"The undersigned, business men and merchants, believing that restoration of confidence is absolutely necessary to avert further disaster, and that it is the duty of our legislators to do everything in their power to bring about such restoration of confidence, respectfully but earnestly urge upon Senators and Representatives at the extra session the following steps:

"First. That the purchasing clause of the Sherman silver bill be repealed.

"Second. That no substitute of any kind whatever be enacted at this session.

"Third. That an expert commission be appointed to consider and recommend a scientific plan of currency based on the experience of other countries, and adequate to the requirements of a great commercial nation."

Now, Mr. Speaker, this is only one of the thousands of petitions representing thousands of sections and interests in this country that have come up to this House. If I should attempt to detail the instances of suffering and of injury to business, it would more than take up the time that is allotted to me. In no section of the country does there seem to be so much ignorance in relation to the suffering and to the actual condition of the country as in this city of Washington, the focal point of the United States. But I shall not attempt to supply what you ought youselves to possess. Understand that this cry comes up not from Democrats or Republicans alone; not only from the banking interests, from the life-insurance interests, from the savings-bank interests, from the exporting interests, from the cotton-growing interests, from the grain-growing interests, but from every interest and from every hamlet in this broad country.

That cry went up to the President. Much against his will, at first, he was forced by the cry so universal to call this extra session of Congress, and in a message which I claim, for simplicity, for patriotism, and for sympathetic interest in the affairs of the people, has not been surpassed by any state paper, he calls our attention to the situation and lays the responsibility upon us. He might have said at the conclusion of that message, "It is a condition, not a theory, that confronts us."

How have we met that responsibility? I agreed, much against my will and better judgment, to the arrangement by which it has been brought before the House. It seemed wise to those who are best versed in parliamentary matters. We had to make an arrangement with those who were not willing that this plain, simple call and demand of the people should be met, by a compromise which permitted a drag-net to be drawn through this House and every phase of the silver question to be canvassed before the real question and demand of the people was answered.

It seemed to me—and I do not want to be discourteous to those gentlemen—that if they had had the confidence in their cause which they profess to have and which life devotion to it seemed to indicate, that they should have removed this evil, which they themselves acknowledged to be an evil, before anything else was done. They do not defend this legislation which is now upon the statute books. It seemed to me that they should have consented at the call of the people to remove this evil and trust to the future to vindicate their position on silver. But they did not take this course, and upon them is left the responsibility.

During the fourteen days of discussion and voting disaster is spreading throughout the land, the canker is eating deeper into the body politic, and the measures which might have relieved, if quickly passed, may be inadequate to restore the depleted patient.

This is all the more inexcusable for the reason that this body did not need more discussion of the silver question; for in the previous sessions the ground had been gone over so often that nothing really was left to be said. Events were speaking to us louder than oratory or logic. The lurid light of the conflagration which was destroying our industries revealed unmistakably the path of safety.

The failure of the last experiment in silver legislation, a failure so apparent that even its friends do not hesitate to admit it and its reputed author turns from it in disgust, demanded a remedy. The demand for repeal came from the East, from the West, from the North, from the South; and from no quarter came a demand for its retention. I do not remember to have seen one petition, except from the silver States, for the retention of the purchasing clause of the Sherman act. How has that demand been met? By the suggestion of a series of other silver experiments, and a demand that these shall be considered in this body before the acknowledged evil is removed.

I ask, gentlemen, in all sincerity, throwing aside all prejudice, standing here as representatives of the people, is this treating the people fairly? Would not the manly course have been to remove the evil thing and wait for time and events and the justice of the cause for further opportunities? I say that the whole country is turning to us for relief. The cry for it is agonizing in its tone. Men who have withstood financial storms are holding on, counting the hours; institutions for savings are sacrificing their assets while they wait. Manufacturing industries are perishing; the click of the shuttle, the whirl of the pulley, and the thud of the hammer are dying out; mechanics are tramping by thousands from State to State; the fires of socialism and anarchy are being fed by new material.

The work of building up social organizations and industries which it has taken generations to accomplish is being undermined while you say "Wait!" The cotton fields of the South are whitening with their fleecy contribution to the world's industries; the wheat fields of the prairies of the West are yellowing with rich harvest of food for the world's supply. An appeal for help to gather and market them comes, crying out for the remedy we have proposed, and which they have asked for, and you say, "Wait! Wait until we have discussed for fourteen days some new experiments; wait until we have made new records." "Won't a week be enough?" "No," you reply; "fourteen days." "Won't you make it ten days." "No; fourteen days or obstruction." Upon you, gentlemen, again I say, rests the responsibility for all the danger that occurs in this country, for all the increase of demoralization while this discussion is going on.

The first reply made to this call of the people was that it was a conspiracy.

Now, I sincerely hope and trust that the gentlemen making that claim are honest in their views. I have never had occasion to distrust their honesty; but it only shows how blinded they are by their extreme partisanship for silver. They claim that it is Wall street, the gold bugs, systematically conspiring to bring ruin and disaster on the country in order to discredit that which they have so long worshiped. I take issue with this. The movement—and I will attempt in some measure to repeat what I said in the last Congress in relation to the evolution of this demand for a better currency—the movement of all advanced nations in the direction of a gold standard is a natural evolution made necessary by the evolution of commerce. Financial systems are but the handmaids of commerce, and have through all generations been based upon its requirements.

In the early ages, when nations had very little intercourse with one another, there was no harmony of construction or action. Each nation, having to do only with its own people, could devise and maintain its own independent standard of value and systems of finance. With the increase of commerce and communication began the necessity for a closer approximation, growing closer as centuries advanced, and universally recognized as a necessity. Crude methods and standards were gradually eliminated as the profits of transactions became closer, and a survival of the fittest became the rule.

If such were the case when the world's international transactions were carried on large margins of profit, how much more important now, when by the increase of facilities of communication through steamship and cable the world has been drawn closer together, and profits have been reduced to the minimum, requiring the greatest accuracy and certainty of calculation corresponding in time with decrease of profits. That has been a natural and necessary evolution in the standard by which values are measured. From copper the evolution was to silver, and from silver to a mixed standard of silver and gold. Now from silver the pressure from commercial necessity is in the direction of gold.

Legislation, where it has registered its decrees, has simply recognized what was before decided by the force of events and the great movements of human enterprise—more powerful than the decrees of councils, the enactments of Parliaments, or the laws of Congress. This necessity was first recognized by the European Governments who, on account of their proximity, first felt the necessity for having a precise standard in order to meet the close competition of trade between themselves. They recognized the need of having a single standard, without which all trade was more or less speculation, and could not be carried on upon the prevailing fine lines of margin.

Centuries of experience in commerce had taught them this. If they found it necessary to guard against this in 1873, when the product of gold was as 112 against a silver production of 75, how much more important is it now for us, when the production of gold is as 124 to a silver production of 183. If the demonetiza-

tion of silver was the result of a conspiracy, as is alleged by the silver producers, and echoed on this floor, the "conspiracy" was one in which every nation that recognized the laws of commerce had a part.

No, Mr. Speaker, it was not a conspiracy or a combination, but a natural and proper movement in the interest of order, stability, and safety. Commerce demands, in the present age of the world, instruments of precision. It needs them, and any nation which fails to adopt them will inevitably fall behind in the race. Do you say that my reasoning simply applies to the merchant? I answer you, gentlemen, that commerce and the merchant are only the servants of the producers, whether of agricultural or of mechanical products. It is the merchant's province to look over the world and find markets for the productions, and the more extended the market the more certainty is there of remunerative prices. Competition will never, under normal conditions, permit the merchant to become the master of the producer.

The merchant is, of necessity, bound up with the producer. It is only when abnormal conditions are forced upon commerce, requiring additional risk in its transactions, that the merchant can find opportunity for extraordinary profits, and then he ceases to be a merchant and becomes a speculator. The adventurer, the speculator, the stock-gambler, find advantage in unstable values. That is their business, and the more unstable the conditions the greater are their chances of profit to be gained from the poor, the inexperienced, and the undefended. But to the man engaged in legitimate business, to the poor man, the greatest boon that can be given is stability of institutions and of values.

Another objection that has been made by the opponents of this bill of the people, is that it is a radical departure from the Democratic platform. I do not propose to say many words upon that point, but merely to offer two suggestions. The Democratic party has always found its greatest strength in listening to the voice of the people and in regarding their demands, and should the Democratic party disregard this plain and unmistakable command of the people, it would lose the opportunity of benefiting the people in the future. But, Mr. Speaker, I say that the Democratic party is not recreant to its trust or to the promises that it made in its platform. Conditions have changed, and this change makes it necessary to halt in the course that they had laid out.

The existing conditions did not prevail when the platform was adopted in Chicago. I charter a ship to load and proceed to a certain port. My charter is imperative that she proceed; does the captain of that ship, when a storm comes on and he finds that it means destruction and shipwreck to proceed in a direct course—does he violate that charter when he tacks and goes in another direction? No man would be fool enough to claim that. The Democratic party must to-day say to the silver men, "Wait! Experiments have not succeeded, and until greater security is offered for the results of anything that you propose, we must stop all attempts to go in the direction of bimetallism."

Having answered the cry of "conspiracy," and said a few words in relation to the alleged violation of the Democratic platform, I come now to consider the propositions which the so-called friends of silver seek to attach as a condition to meeting the universal demand for the repeal of the Sherman purchasing law. And now, gentlemen, I make the broad statement, and shall prove it before I get through, that these gentlemen have been careless in considering the immediate consequences of the legislation they propose. It is bad enough that they try to replace a law against which the people rebel, but by which the Government may receive some profit, by another law by the operation of which that profit is given away by the Government into the hands of the silver producers.

But the great and fundamental error of their first proposition—the coinage of free silver at 16 to 1—lies, I believe, in a misconception of the power of the Government. Now, as I read history in relation to coinage, it tells me this—that the Government was not a creator of value in the coin, but an indicator of what the market value of that coin was in the world; and that value was attested by the solemn seal and stamp of the Government. In early history, when the precious metals began to be used, they were paid out by weight.

A little further we find that merchants of respectability stamped the bars with their weight and fineness, and they began to circulate. By and by it was found that the bars of the merchants were not always correct, and the Government itself assumed the duty which had been performed by the merchants and undertook to stamp upon these bars, or coin, or pieces of metal, what was the real intrinsic weight, quality, and value of the metal. Wherever in the history of nations this policy has been departed from—wherever coin has been debased or marked above its value—there have invariably come destruction and disaster.

But gentlemen insist that the Government of the United States, which has always claimed to be honest, shall be a party to a fraud; and they want to make the people a party to the same fraud by forcing them to pay the expense of mintage. Then they turn round upon the people and say, "You have been a party to the fraud; now take this stuff at the price at which you have valued it." The ultimate result, gentlemen, is not to put the profit into the pocket of the poor man whom you seek to benefit, but that profit is diverted ultimately into the hands of the silver producers. And that is the reason why their lobby is so active here in Washington. I am glad to see that there is no affiliation upon this floor with that lobby. They can work outside, but they can not affect the honest vote of this House.

Now, I come to the next proposition, and I ask for it careful consideration. Having made some investigation of the matter, I ask your attention while I undertake to give the result of my inquiry. The second proposition is to increase the ratio to 17 to 1; the next is to fix it at 18 to 1; next, 19 to 1; next, 20 to 1. Now, when I charged the gentlemen who originated these propositions with carelessness as to the immediate result of the measures that they have proposed, I did so advisedly. We have in the Treasury and in circulation over four hundred and nineteen million silver dollars which are now doing service as currency in this country, either in the shape of the silver dollars which are afloat or the certificates for silver dollars which have been deposited.

Suppose for a moment, gentlemen, that action were taken in this House by which the legal standard would be made 20 to 1; would not the immediate effect of that be to discredit every silver dollar of the $419,000,000 now in the Treasury or in circulation? I repeat the question. Suppose that a law of Congress had decided that 20 to 1 was the proper ratio, would it not immediately discredit and drive out of healthy circulation every dollar of the $419,000,000? But you say that can be recoined. Yes, that is so; but I asked the Director of the Mint how long it would take to recoin the $419,000,000, and his answer is this: "It would take ten years to recoin, at a new ratio, all the silver dollars in the Treasury or in circulation."

A MEMBER. We might issue certificates.

Mr. COOMBS. How would you issue certificates against a coin which was not of true value? I leave you gentlemen to devise a means to cover that point. You evidently have not thought of it, and you have exhausted all your amendments. Certainly if you should pass this amendment in the shape you propose you would bring the country into a condition of greater disaster than it was before. Think of the ten years that must pass before this money could be brought again into circulation. Eleven cotton crops, eleven crops of wheat, must be gathered and marketed in the markets of the world, and by unwise legislation you have taken from an insufficient currency $419,000,000.

Now, how can you answer that question? If you make the ratio 17 to 1, or 18 to 1, or 19 to 1, you accomplish the same result. You have discredited the silver dollar that is now in existence, and there is no way that I can see by which you can avoid the result that I have pointed out. Will you dare to try the experiment of a new ratio under these conditions? No, gentlemen; no man is so insane in his advocacy of silver. If he loves silver he will not sacrifice it in that way. It would never recover from the blow.

Mr. MONTGOMERY rose.

Mr. COOMBS. No, I do not yield; you must answer that question in your own time; my time is getting short. I concede that there might be a time in some prosperous period in the country when you could bridge that gap—when by legislation we might accomplish that result; but you have not provided for that in this resolution; you have not thought of it.

I ask gentlemen of this House who are hesitating, to consider how unwise it is to follow the lead of men who are so careless in considering the measures which they propose. I ask these same gentlemen whether they have considered the cost of this measure to the country should it be adopted. There are gentlemen here who are sticklers for economy; they do not believe in spending the people's money unwisely.

Have they counted the cost? What would be the cost to the Government if we should raise the standard to 20 to 1? It would require 81,017,630 ounces of silver to make the difference in that ratio, and the cost of mintage would be $4,651,000, making the cost, independently of the damage to commerce, $65,414,233. If you should adopt a ratio of 19 to 1 it would require 60,763,223 ounces of silver, which, at the present market price with the cost of minting added, would make the expense $50,223,435. If the ratio be raised to 18 to 1 there would be required 40,508,000 ounces of silver, which, with the cost of mintage, would add $35,022,612 to our indebtedness. If the ratio were fixed at 17 to 1 there would be required 20,254,407 ounces of silver, which, with the cost of mintage, would amount to $19,841,801.

Had you made these calculations, gentlemen, those of you who

refuse to listen to the voice of the people—had you made these calculations before you injected these amendments into the bill of the people? During that ten years the savings banks would have failed and gone into liquidation, the poor man would have gone to the poorhouse; for remember that the mechanical part alone which you have provided for, I say again, would require ten years to accomplish.

Then I come to the last clause, the revival of the Bland bill. That, I say, is inadequate to meet the existing conditions. The people have passed upon that experiment once before. It has been repealed. Something has been substituted. That has been found to be a mistake; and now we propose to go back to the original mistake. If the first amendment is correct in principle, the last is a mistake. If the first and the last amendments are correct in principle, the other four amendments are mistakes. There is no show of consistency in the whole situation, gentlemen. They are only fences that are raised here to defeat the wishes of the people and to call a halt in complying with their demands. But, I repeat, it is inadequate, and so were the suggestions of the distinguished ex-Secretary of the Navy.

I asked the Director of the Mint how long it would take to coin $50,000,000 from silver bars. He answered: "It will take a year and a half to coin fifty millions of silver dollars from the bars." That certainly is not furnishing a ready remedy for existing evils.

Mr. Speaker, I shall not consume much more time. I think I have pointed out to you that the changed ratio would be a fatal mistake. I think I have established, by figures and by proofs which you can not deny, that we can not afford to make that mistake.

And now, I may be fairly asked, "What remedy do you propose?" I propose, gentlemen, first of all, if the question remained for me to answer, to do just exactly what the people ask us to do, and put the responsibility upon them. The President has put it upon us. If we perform our duty in answering this demand of the people, we shall have relieved ourselves of the responsibility, and the result must rest with the people themselves.

I believe that it is the universal opinion of the people that the purchases of silver are accountable for this demoralization of our currency. You may not believe that they are correct, but they believe it, and so do I. Acting upon that belief, they have, in anticipation of a storm, hoarded up the currency until there is a painful scarcity of it. Remove the cause and you will quiet their fears; with returning confidence the currency will again come into its ordinary channels.

But I recognize the claim that some gentlemen of the South bring that we need a larger circulation. I do not for myself believe that it needs to be much larger. We should not overdo in our measures of relief. I would feel the way to recovery first, and apply milder remedies. In the first place, I would, as I have said already, pass this bill of the people framed in accordance with their demands. In the next place, I would add some twenty millions more to the circulation of the country by permitting the banks to issue up to the full value of the Government bonds they have deposited; and, in addition, I would suggest another measure, and I ask gentlemen's attention to the subject, for it is worthy of their consideration.

One great difficulty is that we lack the proper distribution of money. Money finds its way to the financial centers, and it demoralizes them by giving rise to speculation. Now, what I would do would be to enact a law to make it illegal for any national bank to deposit its funds in those great commercial centers and draw interest on the same. The banks were established in the various localities in order to furnish aid and assistance in financial matters to the citizens and enterprises of those localities. If they divert the funds which come from their depositors to New York or Philadelphia or Boston, instead of using them to benefit local enterprises, they fail to that extent in performing their duty to the community in which they are established. I would make it imperative that no national bank should pay interest on deposits from another national bank.

I believe that this would remedy one great defect. I believe if you should to-day increase the currency of this country $200,000,000 that Texas would need money, that the prairie countries of the West would also need it, for it would all find its way, whether silver, gold, or paper, to the financial centers, and for the reason that there are greater opportunities there to use large blocks of money. The problem to which we might address ourselves with a great degree of earnestness is this: How to preserve the distribution of money in the localities where it is most needed.

But, Mr. Speaker, I see that my time has nearly expired. I am very much obliged to the members of the House for the patience and attention with which they have listened to me. I can not, however, take my seat before making one more appeal for speedy, certain, and prompt action. You gentlemen who are making your record have made a splendid record as silver champions; your people will not doubt you. You have made all the record you can, and any record, I fear, that you make beyond this will be injurious to you and injurious to your people. Your first duty is to restore confidence in the minds of the people by removing the cause of their fears.

If you would save the savings banks and the savings of the poor, repeal the law. If you would stop feeding the fires of socialism and anarchy, repeal the law. If you would set the wheels of our factories in motion, repeal the law. If you would have our cotton and grain crops made available, you must repeal the law. If you would save the laboring man from suffering during the winter which is approaching and during the coming years, repeal the law. [Applause.]

Mr. BRYAN. Mr. Speaker, I shall accomplish my full purpose if I am able to impress upon the members of the House the far-reaching consequences which may follow our action and quicken their appreciation of the grave responsibility which presses upon us. Historians tell us that the victory of Charles Martel at Tours determined the history of all Europe for centuries. It was a contest "between the Crescent and the Cross," and when, on that fateful day, the Frankish prince drove back the followers of Abderrahman he rescued the West from "the all-destroying grasp of Islam," and saved to Europe its Christian civilization. A greater than Tours is here! In my humble judgment the vote of this House on the subject under consideration may bring to the people of the West and South, to the people of the United States, and to all mankind, weal or woe beyond the power of language to describe or imagination to conceive.

In the princely palace and in the humblest hamlet; by the financier and by the poorest toiler; here, in Europe, and everywhere, the proceedings of this Congress upon this problem will be read and studied; and as our actions bless or blight we shall be commended or condemned. The President of the United States, in the discharge of his duty as he sees it, has sent to Congress a message calling attention to the present financial situation, and recommending the unconditional repeal of the Sherman law as the only means of securing immediate relief. Some outside of this Hall have insisted that the President's recommendation imposes upon Democratic members an obligation, as it were, to carry out his wishes, and overzealous friends have even suggested that opposition to his views might subject the hardy dissenter to administrative displeasure. They do the President great injustice who presume that he would forget for a moment the independence of the two branches of Congress. He would not be worthy of our admiration or even respect if he demanded a homage which would violate the primary principles of free representative government.

TO WHOM ARE WE RESPONSIBLE?

Let his own language rebuke those who would disregard their pledges to their own people in order to display a false fealty. In the message which he sent to Congress in December, 1885, he said, in words which may well be our guide in this great crisis: "The zealous watchfulness of our constituencies, great and small, supplements their suffrages, and before the tribunal they establish every public servant should be judged." Among the many grand truths expressed felicitously by the President during his public career none show a truer conception of official duty or describe with more clearness the body from which the member receives his authority and to which he owes his responsibility.

Yes, Mr. Speaker, it is before the tribunal established by our constituencies, and before that tribunal only that we must appear for judgment upon our actions here. When we each accepted a commission from 180,000 people we pledged ourselves to protect their rights from invasion and to reflect their wishes to the best of our ability, and we must stand defenseless before the bar if our only excuse is "he recommended it." And remember, sir, that these constituencies include not bankers, brokers, and boards of trade only, but embrace people in every station and condition of life; and in that great court from whose decision there is no appeal every voter has an equal voice. That the Democratic party understands the duty of the Representative, is evident from the fact that it found it necessary to nonconcur in a similar recommendation made by the President in 1885.

In the message which he sent to the Forty-ninth Congress, at the beginning of the first session, we find these words:

Prosperity hesitates upon our threshold because of the dangers and uncertainties sourrounding this question. Capital timidly shrinks from trade, and investors are unwilling to take the chance of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect.

As a necessary consequence, labor lacks employment, and suffering and distress are visited upon a portion of our fellow-citizens especially entitled to the careful consideration of those charged with the duties of legislation. No interest appeals to us so strongly for a safe and stable currency as the

vast army of the unemployed. I recommend the suspension of the compulsory coinage of silver dollars, directed by the law passed in February, 1878.

It will be seen that the same forces were at work then as now; the same apprehensions existed as now; the same pressure was brought from the same sources in favor of the debasement of silver; but the members of Congress, refusing to take counsel of their fears, stood by the record of both great parties and by the nation's history and retained the coinage of silver as then provided for. Let it be said to the credit of the Democratic party that in the House only 33 of its members voted to suspend the Bland law, while 130 are recorded against suspension. Time has proved that the members, reflecting the opinions of their people, were wiser than the Executive, and he is doubtless grateful today that they did not follow his suggestion.

THE MESSAGE.

I have read with care the message sent to us last week, and have considered it in the light of every reasonable construction of which it is capable. If I am able to understand its language it points to the burial of silver, with no promise of resurrection. Its reasoning is in the direction of a single standard. It leads irresistibly to universal gold monometallism—to a realm over whose door is written: "Abandon hope, all ye who enter here!" Before that door I stop, appalled. Have gentlemen considered the effect of a single gold standard universally adopted? Let us not deceive ourselves with the hope that we can discard silver for gold, and that other nations will take it up and keep it as a part of the world's currency. When all the silver available for coinage could gain admission to some mints and all the gold available for coinage would find a place for mintage, and some nation like France maintained the parity by means of bimetallism it was of comparatively little importance whether a particular nation used silver or gold or both.

Exchange did not fluctuate and trade could be carried on without inconvenience. But times have changed. One nation after another has closed its mints to silver until the white metal has in European countries been made an outcast by legislation and has shown a bullion value different from its coinage value. India, at last, guided by the misrepresentations of the metropolitan press, which proclaimed as certain what was never probable, has suspended free coinage, fearing that this country would stop the purchase of silver. If the United States, the greatest silver producing nation, which now utilizes more than one-third of the total annual product of the world, closes its mint to the coinage of silver, what assurance have we that it can retain its place as primary money in the commercial world?

Is it not more reasonable to suppose that a further fall in the bullion value of silver will be followed by a demand for a limitation of the legal-tender qualities of the silver already in existence? That is already being urged by some. Is it not reasonable to suppose that our hostile action will lead to hostile action on the part of other nations? Every country must have money for its people, and if silver is abandoned and gold substituted it must be drawn from the world's already scanty supply.

AN HONEST DOLLAR.

We hear much about a "stable currency" and an "honest dollar." It is a significant fact that those who have spoken in favor of unconditional repeal have for the most part avoided a discussion of the effect of an appreciating standard. They take it for granted that a gold standard is not only an honest standard, but the only stable standard. I denounce that child of ignorance and avarice the gold dollar, under a universal gold standard, as the most dishonest dollar which we could employ.

I stand upon the authority of every intelligent writer upon political economy when I assert that there is not and never has been an honest dollar. An honest dollar is a dollar absolutely stable in relation to all other things. Laughlin, in his work on Bimetallism, says:

> Monometallists do not—as is often said—believe that gold remains absolutely stable in value. They hold that there is no such thing as a 'standard of value' for future payments in either gold or silver which remains absolutely invariable.

He even suggests a multiple standard for long-time contracts. I quote his words:

> As regards national debts, it is distinctly averred that neither gold nor silver forms a just measure of deferred payments, and that if justice in long contracts is sought for, we should not seek it by the doubtful and untried expedient of international bimetallism, but by the clear and certain method of a multiple standard, a unit based upon the selling prices of a number of articles of general consumption. A long-time contract would thereby be paid at its maturity by the same purchasing power as was given in the beginning.

Jevons, one of the most generally accepted of the writers in favor of a gold standard, admits the instability of a single standard, and in language very similar to that above quoted suggests the multiple standard as the most equitable if practicable. Chevalier, who wrote a book in 1858 to show the injustice of allowing a debtor to pay his debts in a cheap gold dollar, recognized the same fact, and said:

> If the value of the metal declined, the creditor would suffer a loss upon the quantity he had received; if, on the contrary, it rose, the debtor would have to pay more than he calculated upon.

I am on sound and scientific ground, therefore, when I say that a dollar approaches honesty as its purchasing power approaches stability. If I borrow a thousand dollars to-day and next year pay the debt with a thousand dollars which will secure exactly as much of all things desirable as the one thousand which I borrowed, I have paid in honest dollars. If the money has increased or decreased in purchasing power, I have satisfied my debt with dishonest dollars. While the Government can say that a given weight of gold or silver shall constitute a dollar, and invest that dollar with legal-tender qualities, it can not fix the purchasing power of the dollar. That must depend upon the law of supply and demand, and it may be well to suggest that this Government never tried to fix the exchangeable value of a dollar until it began to limit the number of dollars coined.

DOLLARS RISE AND FALL.

If the number of dollars increases more rapidly than the need for dollars—as it did after the gold discoveries of 1849—the exchangeable value of each dollar will fall and prices rise. If the demand for dollars increases faster than the number of dollars—as it did after 1800—the price of each dollar will rise and prices generally will fall. The relative value of the dollar may be changed by natural causes or by legislation. An increased supply—the demand remaining the same—or a decreased demand—the supply remaining the same—will reduce the exchangeable value of each dollar. Natural causes may act on both supply and demand: as, for instance, by increasing the product from the mines or by increasing the amount consumed in the arts. Legislation acts directly on the demand, and thus affects the price, since the demand is one of the factors in fixing the price.

If by legislative action the demand for silver is destroyed and the demand for gold is increased by making it the only standard, the exchangeable value of each unit of that standard, or dollar, as we call it, will be increased. If the exchangeable value of the dollar is increased by legislation the debt of the debtor is increased, to his injury and to the advantage of the creditor. And let me suggest here, in reply to the gentleman from Massachusetts [Mr. MCCALL], who said that the money loaner was entitled to the advantages derived from improved machinery and inventive genius that he is mistaken. The laboring man and the producer are entitled to these benefits, and the money loaner by every law of justice ought to be content with a dollar equal in purchasing power to the dollar which he loaned, and any one desiring more than that desires a dishonest dollar, it matters not what name he may give to it. [Loud applause.] Take an illustration: John Doe, of Nebraska, has a farm worth $2,000 and mortgages it to Richard Roe, of Massachusetts, for $1,000. Suppose the value of the monetary unit is increased by legislation which creates a greater demand for gold. The debt is increased. If the increase amounts to 100 per cent the Nebraska farmer finds that the prices of his products have fallen one-half and his land loses one-half its value, unless the price is maintained by the increased population incident to a new country.

The mortgage remains nominally the same, though the debt has actually become twice as great. Will he be deceived by the cry of "honest dollar?" If he should loan a Nebraska neighbor a hog weighing 100 pounds and the next spring demand in return a hog weighing 200 pounds he would be called dishonest, even though he contended that he was only demanding one hog—just the number he loaned. Society has become accustomed to some very nice distinctions. The poor man is called a socialist if he believes that the wealth of the rich should be divided among the poor, but the rich man is called a financier if he devises a plan by which the pittance of the poor can be converted to his use. [Laughter and applause.]

The poor man who takes property by force is called a thief, but the creditor who can by legislation make a debtor pay a dollar twice as large as he borrowed is lauded as the friend of a sound currency. [Laughter and applause.] The man who wants the people to destroy the Government is an anarchist, but the man who wants the Government to destroy the people is a patriot. [Applause.]

CONFIDENCE MUST BE RESTORED.

The great desire now seems to be to restore confidence, and some have an idea that the only way to restore confidence is to coax the money loaner to let go of his hoard by making the profits too tempting to be resisted. Capital is represented as a shy and timid maiden who must be courted, if won. Let me suggest a plan for bringing money from Europe. If it be possible, let us enact a law "Whereas confidence must be restored; and whereas money will always come from its hiding place if the inducement

is sufficient: Therefore, be it enacted, That every man who borrows $1 shall pay back $2 and interest (the usury law not to be enforced)."

Would not English capital come "on the swiftest ocean greyhounds?" The money loaner of London would say: "I will not loan in India or Egypt or in South America. The inhabitants of those countries are a wicked and ungodly people and refuse to pay more than they borrowed. I will loan in the United States, for *there* lives an honest people, who delight in a sound currency and pay in an honest dollar." Why does not some one propose that plan? Because no one would dare to increase by law the number of dollars which the debtor must pay, and yet by some it is called wise statesmanship to do indirectly and in the dark what no man has the temerity to propose directly and openly.

WHAT DOES A GOLD STANDARD MEAN?

We have been called cranks and lunatics and idiots because we have warned our fellow-men against the inevitable and intolerable consequences which would follow the adoption of a gold standard by all the world. But who, I ask, can be silent in the presence of such impending calamities? The United States, England, France, and Germany own to-day about $2,600,000,000 of the world's supply of gold coin, or about five-sevenths of the total amount, and yet these four nations contain but a small fraction of the inhabitants of the globe. What will be the exchangeable value of a gold dollar when India's people, outnumbering alone the inhabitants of the four great nations named, reach out after their share of gold coin? What will be the final price of gold when all the nations of the Occident and Orient join in the scramble?

A distinguished advocate of the gold standard said recently, in substance: "Wheat has now reached a point where the English can afford to buy it, and gold will soon return to relieve our financial embarrassment." How delighted the farmer will be when he realizes what an opportunity he has to save his country! A nation in distress; banks failing; mines closed; laborers unemployed; enterprise at a standstill, and behold, the farmer, bowed with unceasing, even if unremunerative, toil, steps forth to save his country—by selling his wheat below the cost of production! And I am afraid he will even now be censured for allowing the panic to go as far as it has before reducing his prices.

It seems cruel that upon the growers of wheat and cotton, our staple exports, should be placed the burden of supplying us at whatever cost with the necessary gold, and yet the financier quoted has suggested the only means, except the issue of bonds, by which our stock of gold can be replenished. If it is difficult now to secure gold, what will be the condition when the demand is increased by its adoption as the world's only primary money? We would simply put gold upon an auction block, with every nation as a bidder, and each ounce of the standard metal would be knocked down to the one offering the most of all other kinds of property. Every disturbance of finance in one country would communicate itself to every other, and in the misery which would follow it would be of little consolation to know that others were suffering as much as, or more than, we.

THE SUFFERING CONTINUOUS.

I have only spoken of the immediate effects of the substitution of gold as the world's only money of ultimate redemption. The worst remains to be told. If, as in the resumption of specie payments in 1879, we could look forward to a time when the contraction would cease, the debtor might become a tenant upon his former estate and the home owner assume the rôle of the homeless with the sweet assurance that his children or his children's children might live to enjoy the blessings of a "stable currency." But, sir, the hapless and hopeless producer of wealth goes forth into a night illuminated by no star; he embarks upon a sea whose further shore no mariner may find; he travels in a desert where the ever-retreating mirage makes his disappointment a thousand-fold more keen. Let the world once commit its fortunes to the use of gold alone and it must depend upon the annual increase of that metal to keep pace with the need for money.

The Director of the Mint gives about $130,000,000 as the world's production for last year. Something like one-third is produced in connection with silver, and must be lost if silver mining is rendered unproductive. It is estimated that nearly two-thirds of the annual product is used in the arts, and the amount so used is increasing. Where, then, is the supply to meet the increasing demands of an increasing population? Is there some new California or some undiscovered Australia yet to be explored?

Is it not probable that the supply available for coinage will diminish rather than increase? Jacobs, in his work on the Precious Metals, has calculated the appreciation of the monetary unit. He has shown that the almost imperceptible increase of 2 per cent per year will amount to a total appreciation of 500 per cent in a century. Or, to illustrate, that cotton at 10 cents to-day and wheat at 60 cents would mean cotton at 2 cents and wheat at 12 cents in one hundred years. A national, State, or municipal debt renewed from time to time would at the end of that period be six times as great as when contracted, although several times the amount would have been paid in interest.

When one realizes the full significance of a constantly appreciating standard he can easily agree with Alison that the Dark Ages resulted from a failure of the money supply. How can anyone view with unconcern the attempt to turn back the tide of civilization by the complete debasement of one-half of the world's money! When I point to the distress which, not suddenly, but gradually, is entering the habitations of our people; when I refer you to the census as conclusive evidence of the unequal distribution of wealth and of increasing tenancy among our people, of whom, in our cities, less than one-fourth now own their homes; when I suggest the possibility of this condition continuing until, passed from a land of independent owners, we become a nation of landlords and tenants, you must tremble for civil liberty itself.

FREE GOVERNMENT IN DANGER.

Free government can not long survive when the thousands enjoy the wealth of the country and the millions share its poverty in common. Even now you hear among the rich an occasionally expressed contempt for popular government, and among the poor a protest against legislation which makes them "toil that others may reap." I appeal to you to restore justice and bring back prosperity while yet a peaceable solution can be secured. We mourn the lot of unhappy Ireland, whose alien owners drain it of its home-created wealth; but we may reach a condition, if present tendencies continue, when her position at this time will be an object of envy, and some poet may write of our cities as Goldsmith did of the "Deserted Village:"

> While scourged by famine from a smiling land,
> The mournful peasant leads his humble band,
> And, while he sinks without one hand to save,
> The country blooms—a garden and a grave.

But, lest I may be accused of reasonless complaining, let me call unimpeachable witnesses who will testify to the truth of my premises and to the correctness of my conclusions.

UNIMPEACHABLE WITNESSES.

Jevons says:

> If all nations of the globe were suddenly and simultaneously to demonetize silver and require gold money, a revolution in the value of gold would be inevitable.

Giffin, who is probably the most fanatical adherent of the gold standard, says, in his book entitled The Case Against Bimetallism:

> The primary offender in the matter, perhaps, was Germany, which made a mistake, as I believe, in substituting gold for silver as the standard money of the country. * * * To some extent also Italy has been an offender in this matter, the resumption of specie payments in that country on a gold basis being entirely a work of superfluity; the resumption on a silver basis would have been preferable. * * * No doubt the pressure on gold would have been more severe than it has been if the United States had not passed the Bland coinage law.

The gentleman from Maryland [Mr. RAYNER] said in the opening speech of this debate:

> In my opinion there is not a sufficient amount of gold in existence to supply the demands of commerce and the necessities of the world's circulation.

Mr. Balfour, member of Parliament, in a speech recently made, said:

> Let Germany, India, and the United States try a gold currency and a tremor seizes every one of our commercial magnates. They look forward, in the immediate future, to catastrophe, and feel that the ultimate result may be a slow appreciation of the standard of value, which is perhaps the most deadening and benumbing influence that can touch the enterprise of a nation.

Mr. Goschen, delegate from Great Britain, said at the International Monetary Conference in 1878:

> If, however, other States were to carry on a propaganda in favor of a gold standard and the demonetization of silver, the Indian government would be obliged to reconsider its position and might be forced by events to take measures similar to those taken elsewhere. In that case the scramble to get rid of silver might provoke one of the gravest crises ever undergone by commerce. One or two states might demonetize silver without serious results, but if all demonetize there would be no buyers, and silver would fall in alarming proportions. * * *. If all States should resolve on the adoption of a gold standard, the question arose, would there be sufficient gold for the purpose without a tremendous crisis? There would be a fear on the one hand of a depreciation of silver, and one on the other of a rise in the value of gold, and a corresponding fall in the prices of all commodities.
>
> Italy, Russia, and Austria, whenever they resume specie payments, would require metal, and if all other states went in the direction of a gold standard, these countries too would be forced to take gold. Resumption on their part would be facilitated by the maintenance of silver as a part of the legal tender of the world. The American proposal for a universal double standard seemed impossible of realization, a veritable Utopia; but the theory of a universal gold standard was Utopian, and indeed involved a false Utopia. It was better for the world at large that the two metals should continue in circulation than that one should be universally substituted for the other.

AMERICAN AUTHORITY.

Thus does an eminent English monometallist denounce the idea of a universal gold standard and foretell its consequences.

But we are not dependent for authority upon foreign advocates of a single standard. Read the words of him who for many years was the guiding genius of the Republican party, Hon. James G. Blaine, and say whether he was a lunatic because he described in emphatic words the dangers attendant upon universal monometallism. He said upon the floor of the House, February 7, 1878:

On the much vexed and long-mooted question as to a bimetallic or monometallic standard, my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in and throughout the commercial world.

The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly $7,000,000,000 of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands.

Again, he said:

I believe gold and silver coin to be the money of the Constitution; indeed, the money of the American people, anterior to the Constitution, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has, therefore, in my judgment, no power to demonetize silver any more than to demonetize gold.

Senator SHERMAN said in 1869:

The contraction of the currency is a far more distressing operation than Senators suppose. Our own and other nations have gone through that operation before. It is not possible to take that voyage without the sorest distress. To every person except a capitalist out of debt, or a salaried officer or annuitant, it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. It means ruin of all dealers whose debts are twice their business capital, though one-third less than their actual property. It means the fall of all agricultural production without any great reduction of taxes. What prudent man would dare to build a house, a railroad, a factory, or a barn with this certain fact before him?

Let me quote from an apostle of the Democratic faith, whose distinguished services in behalf of his party and his country have won for him the esteem of all. Mr. Carlisle, then a member of the House of Representatives, said, February 21, 1878:

I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever be so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world.

The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half the metallic money of the world.

The junior Senator from Texas [Mr. MILLS] never did the party greater service than when, on the 3d of February, 1886, on this floor he denounced, in language the force and earnestness of which can not be surpassed, the attempted crime against silver. Let his words be an inspiration now:

But in all the wild, reckless, and remorseless brutalities that have marked the footprints of resistless power there is some extenuating circumstance that mitigates the severity of the punishment due the crime. Some have been the product of the fierce passions of war, some have come from the antipathy that separates alien races, some from the superstitions of opposing religions.

But the crime that is now sought to be perpetrated on more than fifty millions of people comes neither from the camp of a conquerer, the hand of a foreigner, nor the altar of an idolator. But it comes from those in whose veins runs the blood of the common ancestry, who were born under the same skies, speak the same language, reared in the same institutions, and nurtured in the principles of the same religious faith. It comes from the cold, phlegmatic, marble heart of avarice—avarice that seeks to paralyze labor, increase the burden of debt, and fill the land with destitution and suffering to gratify the lust for gold—avarice surrounded by every comfort that wealth can command, and rich enough to satisfy every want save that which refuses to be satisfied without the suffocation and strangulation of all the labor of the land. With a forehead that refuses to be ashamed it demands of Congress an act that will paralyze all the forces of production, shut out labor from all employment, increase the burden of debts and taxation, and send desolation and suffering to all the homes of the poor.

LANGUAGE COULD NOT BE STRONGER.

Can language be stronger or conclusion more conclusive? What expression can be more forcible than the "most gigantic crime of this or any other age?" What picture more vivid than that painted in the words, "The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world?" What more scathing rebuke could be administered to avarice than that contained in the words of Mr. MILLS?

It is from the awful horrors described by these distinguished men, differing in politics, but united in sentiment, that I beg you, sirs, to save your fellow-men.

On the base of the monument erected by a grateful people to the memory of the late Senator Hill of Georgia are inscribed these words:

Who saves his country saves himself, and all things saved do bless him. Who lets his country die lets all things die, dies himself ignobly, and all things dying, curse him.

If, sirs, in saving your country you save yourselves and earn the benedictions of all things saved, how much greater will be your reward if your efforts save not your country only but all mankind! If he who lets his country die brings upon himself the curses of all things dying, in what language will an indignant people express their execration, if your action lead to the enslavement of the great majority of the people by the universal adoption of an appreciating standard!

BIMETALLISM.

Let me call your attention briefly to the advantages of bimetallism. It is not claimed that by the use of two metals at a fixed ratio absolute stability can be secured. We only contend that thus the monetary unit will become more stable in relation to other property than under a single standard. If a single standard were really more desirable than a double standard, we are not free to choose gold, and would be compelled to select silver. Gold and silver must remain component parts of the metallic money of the world—that must be accepted as an indisputable fact. Our abandonment of silver would in all probability drive it out of use as primary money; and silver as a promise to pay gold is little, if any, better than a paper promise to pay. If bimetallism is impossible, then we must make up our minds to a silver standard or to the abandonment of both gold and silver. [Applause.]

Let us suppose the worst that has been prophesied by our opponents, namely, that we would be upon a silver standard if we attempted the free coinage of both gold and silver at any ratio. Let us suppose that all our gold goes to Europe and we have only silver. Silver would not be inconvenient to use, because a silver certificate is just as convenient to handle as a gold certificate, and the silver itself need not be handled except where it is necessary for change. Gold is not handled among the people. No one desires to accept any large amount in gold. The fact that the Treasury has always on hand a large amount of gold coin deposited in exchange for gold certificates shows that the paper representative is more desirable than the metal itself. If, following out the supposition, our gold goes abroad, Europe will have more money with which to buy our exports—cotton and wheat, cattle and hogs.

If, on the other hand, we adopt gold, we must draw it from Europe, and thus lessen their money and reduce the price of our exports in foreign markets. This, too, would decrease the total value of our exports and increase the amount of products which it would be necessary to send abroad to pay the principal and interest which we owe to bondholders and stockholders residing in Europe. Some have suggested the advisability of issuing gold bonds in order to maintain a gold standard. Let them remember that those bonds sold in this country will draw money from circulation and increase the stringency, and sold abroad will affect injuriously the price of our products abroad, thus making a double tax upon the toilers of the United States, who must ultimately pay them.

Let them remember, too, that gold bonds held abroad must sometime be paid in gold, and the exportation of that gold would probably raise a clamor for an extension of time in order to save this country from another stringency. A silver standard, too, would make us the trading center of all the silver-using countries of the world, and these countries contain far more than one-half of the world's population. What an impetus would be given to our Western and Southern seaports, such as San Francisco, Galveston, New Orleans, Mobile, Savannah, and Charleston. Then, again, we produce our silver, and produce it in quantities which would to some extent satisfy our monetary needs.

[Here the hammer fell.]

On motion of Mr. HUNTER the time of Mr. BRYAN was extended indefinitely.

Mr. BRYAN. I thank the gentleman from Illinois and the House.

Our annual product of gold is less than 50 cents per capita. Deduct from this sum the loss which would be occasioned to the gold supply by the closing of our silver mines, which produce gold in conjunction with silver; deduct, also, the amount consumed in the arts, and the amount left for coinage is really inconsiderable. Thus, with a gold standard, we would be left dependent upon foreign powers for our annual money supply. They say we must adopt a gold standard in order to trade with Europe. Why not reverse the proposition and say that Europe must resume the use of silver in order to trade with us? But why adopt either gold or silver alone? Why not adopt both and trade with

both gold-using and silver-using countries? The principle of bimetallism is established upon a scientific basis.

The Government does not try to fix the purchasing power of the dollar, either gold or silver. It simply says, in the language of Thomas Jefferson, "The money unit shall stand upon the two metals," and then allows the exchangeable value of that unit to rise or fall according as the total product of both metals decreases or increases in proportion to the demand for money. In attempting to maintain the parity between the two metals at a fixed ratio, the Government does not undertake the impossible. France for several years did maintain the parity approximately at 15½ to 1 by offering unlimited coinage to both metals at that ratio. It is very common for some people to urge, "You can not put value into anything by law," and I am sorry to see some proclaim this who know by rich experience how easy it is for the Government to legislate prices up or down.

VALUE CREATED BY LAW.

We were called together to relieve financial distress by legislation. Some propose to relieve the present stringency in the money market by removing the tax on national-bank circulation and allowing banks to issue 100 per cent on their bonds instead of 90 per cent. This legislation would put values into bank stocks by law, because it would add to the profits of the bank, and such a law would probably raise the market price of bonds by increasing the demand for them. I will not discuss the merits of this proposition now. Let those who favor it prepare to justify themselves before their constituents. The New York World of August 3 contained an article encouraging the banks to issue more money under the present law. It showed the profits as follows:

These bonds are selling now at 109 to 110. At this latter period a $100,000 bond transaction would stand as follows:

$100,000 U. S. 4's at 110, less ½ per cent accrued interest, $109,666 net, would cost		$109,666
Less circulation issued on this amount		90,000
Making the actual cash investment only		19,666
On which the bank would receive an income of over 12¾ per cent, as follows:		
Interest on $100,000 4's per annum		$4,000
Less tax 1 per cent on circulation	$900	
Less sinking fund to retire premium to be improved at 6 per cent	464	
Loss expenses	100	
		1,464
Net income		2,536

Already a good portion of these bonds held in reserve are coming into the market and soon find their way into the hands of national banks.

If the proposed law is adopted $900 will be taken from the expense column by the repeal of the tax on circulation and $10,000 will be taken from the cost of investment, so that the profits would amount to $3,436 on an investment of $9,666, or more than 33 per cent. If, however, the increased demand for bonds raised the premium to 15 per cent, we could only calculate a little less than $3,436 on an investment of $14,666, or nearly 25 per cent. This they would probably call a fair divide. The bondholder would receive an advantage in the increased premium of, say, $25,000,000, and the national bank would be able to make about double on its investment what it does now. If the premium should increase more than 5 per cent the bondholder would make more and the bank less. If the premium should not increase that much the bondholder would make less and the bank more.

Let those, I repeat, who favor this plan be prepared to defend it before a constituency composed of people who are not making 5 per cent on an average on the money invested in farms or enterprises, and let those who will profit by the law cease to deny the ability of Government to increase the price of property by law. One is almost moved to tears by the sight of New England manufacturers protesting with indignation against the wisdom or possibility of giving fictitious value to a product, when for the last thirty years they have drained the rest of the country and secured artificial prices by protective tariff laws. [Applause.] Some of our Eastern friends accuse the advocates of free coinage of favoring repudiation.

Repudiatiation has not been practiced much in recent years by the debtor, but in 1869 the credit strengthening act enabled the bondholder to repudiate a contract made with the Government and to demand coin in payment of a bond for which he had given paper and which was payable in lawful money. That act increasing the market value of the bonds gave a profit to many who now join the beneficiaries of the act assuming the District debt in vociferous proclamation that "the Government can not create value." Does not the location of a public building add to the value of adjacent real estate? Do not towns contest the location of a county seat because of the advantage it brings? Does not the use of gold and silver as money increase the value of each ounce of each metal?

PRECIOUS METALS LIMITED.

These are called precious metals because the production is limited and can not be increased indefinitely at will. If this Government or a number of governments can offer a market unlimited as compared with the supply, the bullion value of gold and silver can be maintained at the legal ratio. The moment one metal tends to cheapen, the use falls on it and increases its price, while the decreased demand for the dearer metal retards its rise and thus the bullion values are kept near to the legal ratio, so near that the variation can cause far less inconvenience and injustice than the variation in the exchangeable value of the unit would inflict under a single standard. The option is always given to the debtor in a double standard.

In fact, the system could not exist if the option remained with the creditor, for he would demand the dearer metal and thus increase any fluctuation in bullion values, while the option in the hands of the debtor reduces the fluctuation to the minimum. That the unit under a double standard is more stable in its relation to all other things is admitted by Jevons and proven by several illustrations. Mr. Giffin tries to avoid the force of the admission by saying that the difference in favor of the double standard is only in the proportion of 2 to 1, and therefore not sufficient to justify its adoption. It would seem that where stability is so important—and it never was so important as to-day, when so many long-time contracts are executed—even a slight difference in favor of the double standard ought to make it acceptable.

We established a bimetallic standard in 1792, but silver, being overvalued by our ratio of 15 to 1, staid with us and gold went abroad, where mint ratios were more favorable.

THE DOLLAR OF OUR DADDIES.

I have here a silver coin [exhibiting it] which came from the mint in 1795. It has upon the edge these significant words: "Hundred Cents—One Dollar or Unit." It would seem, therefore, that the weight of the gold dollar was regulated by the silver dollar, and the gold pieces provided for made multiples of it. In 1834 and in 1837 the alloy was changed and the gold dollar reduced in size in order to correspond to the newly established ratio of 16 to 1. The amount of pure silver in the standard dollar has never been changed since its adoption in 1792.

The ratio of 16 to 1 overvalued gold and our silver went abroad. The silver dollar was worth about 3 cents more than the gold dollar, because it could be coined in France at the ratio of 15½ to 1. Thus, during all the period prior to 1873 this country enjoyed bimetallism and, although at one time we used one metal and at another time another, no statesman arose to demand a single standard. We now have three kinds of bimetallists—those who favor a double standard only by international agreement, those who favor independent action at a changed ratio, and those who favor independent action at the present ratio. Those favoring an international agreement might be again divided into those who favor an agreement by a few nations, those who favor an agreement by many nations, and those who favor it only on condition that all nations would join.

INTERNATIONAL BIMETALLISM.

I suppose it would hardly be proper to further divide them into those who really desire an international agreement and those who utilize the possibility of an international agreement to prevent independent action. I am afraid the agreement will not be brought about by those who, like the gentleman from Ohio [Mr. HARTER], are willing to try it, but have no faith in its permanency; nor will it receive much aid, I fear, from the gentleman from New York [Mr. HENDRIX], who said on last Saturday:

I predict to you that inside of three months—before this Congress meets again—if you repeal this Sherman law and adjourn, England will make proposals to this country to come into a monetary conference and see what can be done for the sake of her ward, India.

Less than five minutes before he had pierced the veil of the future with prophetic ken and declared:

The moving finger of Time, down from the days when gold started in the race for first place to this moment, has pointed to a single unit of value. It is our destiny. It will triumph in this Hall—perhaps not in this Congress nor in your day; but it is going to become the financial policy of this country just as sure as to-morrow morning's sun will rise.

Any hope of bimetallism there?

What is the prospect for the establishment of international bimetallism? I would be glad to see the unlimited coinage of gold and silver at a fixed ratio among the nations, but how is such an agreement to be secured? The gentleman from Maryland [Mr. RAYNER] says the unconditional repeal of the Sherman law will bring England to terms. Is it impossible to extract a lion's teeth without putting your head in his mouth? Is it not a dangerous experiment to join England in a single standard in order to induce her to join us in a double standard? International agreement is an old delusion and has done important duty on many previous occasions.

WE ARE STILL WAITING.

The opponents of the Bland law in 1878 were waiting for international bimetallism. Mr. Cleveland mentioned the prospect of it in his message in 1885, and again this year. It was a valua-

ble weapon in 1890, when the Sherman bill was passed and the Brussels conference was called in time to carry us over the last Presidential election. We are still waiting, and those are waiting most patiently who favor a gold standard. [Laughter and applause.] Are we any nearer to an international agreement than we were fifteen years ago? The European nations wait on England, and she refused within a year to even consider the adoption of the double standard. Can we conquer her by waiting? We have tried the Fabian policy.

BOND OR FREE?

Suppose we try bringing her to terms by action. Let me appeal to your patriotism. Shall we make our laws dependent upon England's action and thus allow her to legislate for us upon the most important of all questions? Shall we confess our inability to enact monetary laws? Are we an English colony or an independent people? If the use of gold alone is to make us slaves, let us use both metals and be free. If there be some living along the Eastern coast—better acquainted with the beauties of the Alps than with the grandeur of the Rockies, more accustomed to the sunny skies of Italy than to the invigorating breezes of the Mississippi Valley—who are not willing to trust their fortunes and their destinies to American citizens, let them learn that the people living between the Alleghanies and the Golden Gate are not afraid to cast their all upon the Republic and rise or fall with it. [Loud applause.]

One hundred and seventeen years ago the Liberty Bell gave notice to a waiting and expectant people that Independence had been declared. There may be doubting, trembling ones among us now, but, sirs, I do not overestimate it when I say that out of twelve millions of voters more than ten millions are waiting, anxiously waiting, for the signal which shall announce the financial independence of the United States. [Applause.] This Congress can not more surely win the approval of a grateful people than by declaring that this nation, the grandest which the world has ever seen, has the right and the ability to legislate for its own people on every subject regardless of the wishes, the entreaties, or the threats of foreign powers. [Applause.]

WHAT SHALL THE RATIO BE?

Perhaps the most important question for us to consider is the question of ratio. Comparatively few people in this country are in favor of a gold standard, and no national party has ever advocated it. Comparatively few, also, will be deceived by the promise of international bimetallism annually held out to us. Among those in favor of bimetallism, and in favor of independent action on the part of the United States, there is, however, an honest difference of opinion as to the particular ratio at which the unlimited coinage of gold and silver should be undertaken. The principle of bimetallism does not stand upon any certain ratio, and may exist at 1 to 30 as well as at 1 to 16.

In fixing the ratio we should select that one which will secure the greatest advantage to the public and cause the least injustice. The present ratio, in my judgment, should be adopted. A change in the ratio could be made (as in 1834) by reducing the size of the gold dollar or by increasing the size of the silver dollar, or by making a change in the weight of both dollars. A larger silver dollar would help the creditor. A smaller gold dollar would help the debtor. It is not just to do either, but if a change must be made, the benefit should be given to the debtor rather than to the creditor.

Let no one accuse me of defending the justness of any change; but I repeat it, if we are given a choice between a change which will aid the debtor by reducing the size of his debt and a change which will aid the creditor by increasing the amount which he is to receive, either by increasing the number of his dollars or their size, the advantage must be given to the debtor, and no man during this debate, whatever may be his private wish or interest, will advocate the giving of the advantage to the creditor.

A CHANGE OF RATIO UNFORTUNATE.

To illustrate the effect of changing the ratio let us take, for convenience, the ratio of 24 to 1, as advocated by some. We could make this change by reducing the weight of the gold dollar one-third. This would give to the holders of gold an advantage of some $200,000,000, but the creditors would lose several billions of dollars in the actual value of their debts. A debt contracted before 1873 would not be scaled, because the new gold dollar would purchase as much as the old gold dollar would in 1873. Creditors, however, whose loans have been made since that time would suffer, and the most recent loans would show the greatest loss. The value of silver bullion has only fallen in relation to gold. But the purchasing power of one ounce of silver has varied less since 1873 than has the purchasing power of one ounce of gold, which would indicate that gold had risen.

If, on the other hand, the ratio is changed by increasing the size of the silver dollar, it would be necessary to recoin our silver dollars into dollars a half larger, or we would have in circulation two legal-tender silver dollars of different sizes. Of the two plans it would be better, in my judgment, to keep both dollars in circulation together, though unequal in weight, rather than to recoin the lighter dollars. The recoinage of more than 500,000,000 of silver dollars, or the bullion representing them, would cause a shrinkage of about $170,000,000, or one-third of our silver money; it would cause a shrinkage of nearly one-sixth of our metallic money and of more than one-tenth of our total circulation. This contraction would increase our debts more than a billion dollars and decrease the nominal value of our property more than five billions.

A change in the ratio made by increasing the size of the silver dollar as above suggested would also decrease by one-third the number of dollars which could be coined from the annual product of silver. If, as Mr. Carlisle has said, the supply of metal, both gold and silver, is none too large to keep pace with population, the increase in the weight of each dollar would make the supply to that extent deficient. A change in ratio, whether secured by decreasing the gold dollar or by increasing the silver dollar, would probably make an international agreement more difficult, because nearly all of the silver coin now in existence circulates at a ratio less than ours.

If the change should be made in this country by increasing the size of the silver dollar and an international agreement secured upon the new ratio, to be effected by other nations in the same way, the amount of money in the world, that is, metallic money, would suffer a contraction of more than $1,000,000,000, to the enormous injury of the debtor class and to the enormous advantage of the creditor class. If we believe that the value of gold has risen because its supply has not increased as fast as the demand caused by favorable legislation, then it would be unfair to continue this appreciation by other legislation favorable to gold. It would be a special injustice to the mine owner and to the farmer, whose products have fallen with silver, to make perpetual the injunction against their prosperity.

WHO IS UNSELFISH?

We often hear our opponents complain of the "cupidity of the mine owner." Let us admit that the mine owner is selfish, and that he will profit by the increased price of silver bullion. Let us, for the sake of argument, go further, and accuse him of favoring the free coinage of silver solely for the purpose of increasing the price of his product. Does that make him worse than other men? Is not the farmer selfish enough to desire a higher price for wheat? Is not the cotton-grower selfish enough to desire a higher price for his cotton? Is not the laboring man selfish enough to desire higher wages? And, if I may be pardoned for the boldness, are not bankers and business men selfish enough to ask for legislation at our hands which will give them prosperity? Was not this extraordinary session called in order to bring back prosperity to our business men?

Is it any more important that you should keep a mercantile house from failing than that you should keep a mine from suspending? Are those who desire free coinage of silver in order that the barren wastes should be made to "blossom like the rose" any worse than those who want the Sherman law repealed in order to borrow foreign gold and retire clearing-house certificates? There is a class of people whose interest in financial legislation is too often overlooked. The money-loaner has just as much interest in the rise in the value of his product—money—as farmers and miners have in the increased price of their products.

The man who has $10,000 in money becomes worth $20,000 in reality when prices fall one-half. Shall we assume that the money-lenders of this and other countries ignore the advantage which an appreciated currency gives to them and desire it simply for the benefit of the poor man and the laborer? What refining influence is there in their business which purges away the dross of selfishness and makes pure and patriotic only their motives? [Laughter.] Has some new dispensation reversed the parable and left Lazarus in torment while Dives is borne aloft in Abraham's bosom? [Laughter.]

THE MINER'S JUST COMPLAINT.

But is the silver miner after all so selfish as to be worthy of censure? Does he ask for some new legislation or for some innovation inaugurated in his behalf? No. He pleads only for the restoration of the money of the fathers. He asks to have given back to him a right which he enjoyed from 1792 to 1873. During all those years he could deposit his silver bullion at the mints and receive full legal-tender coins at the rate of $1.29 for each ounce of silver, and during a part of the time his product could be converted into money at even a higher price. Free coinage can only give back to him what demonetization took away. He does not ask for a silver dollar redeemable in a gold dollar, but for a silver dollar which redeems itself.

If the bullion value of silver has not been reduced by hostile legislation, the free coinage of silver at the present ratio can bring to the mine owner no benefit, except by enabling him to pay a debt already contracted with less ounces of silver. If the price of his product has been reduced by hostile legislation, is he asking any more than we would ask under the same circumstances in seeking to remove the oppressive hand of the law? Let me suggest, too, that those who favor an international agreement are estopped from objecting to the profits of the silver mine owner, because an international agreement could only be effected at some ratio near to ours, probaly 15½ to 1, and this would just as surely inure to the benefit of the owner of silver as would free coinage established by the independent action of this country.

If our opponents were correct in asserting that the price of silver bullion could be maintained at 129 cents an ounce by international agreement, but not by our separate action, then international bimetallism would bring a larger profit to the mine owner than the free coinage of silver by this country could. Let the international bimetallist, then, find some better objection to free coinage than that based on the mine owner's profit.

THE PROFITS OF MINING.

But what is the mine owner's profit? Has anyone told you the average cost of mining an ounce of silver? You have heard of some particular mine where silver can be produced at a low cost, but no one has attempted to give you any reliable data as to the average cost of production. I had a letter from Mr. Leech when he was Director of the Mint, saying that the Government is in possession of no data in regard to the cost of gold production and none of any value in regard to silver. No calculation can be made as to the profits of mining which does not include money spent in prospecting and in mines which have ceased to pay, as well as those which are profitably worked.

When we see a wheel of fortune with twenty-four paddles, see those paddles sold for 10 cents apiece, and see the holder of the winning paddle draw $2, we do not conclude that money can be profitably invested in a wheel of fortune. We know that those who bought expended altogether $2.40 on the turn of the wheel, and that the man who won only received $2; but our opponents insist upon estimating the profits of silver mining by the cost of the winning paddle. It is safe to say that taking the gold and silver of the world—and it is more true of silver than of gold—every dollar's worth of metal has cost a dollar. It is strange that those who watch so carefully lest the silver miner shall receive more for his product than the bare cost of production ignore the more fortunate gold miner.

Did you ever hear a monometallist complain because a man could produce 25.8 grains of gold, .9 fine, at any price whatever, and yet take it to our mint and have it stamped into a dollar with full legal-tender qualities? I saw at the World's Fair a few days ago a nugget of gold, just as it was found, worth over $3,000. What an outrage that the finder should be allowed to convert that into money at such an enormous profit! And yet no advocate of honest money raises his hand to stop that crime.

VALUE NOT DEPENDENT ON COST.

The fact is that the price of gold and silver does not depend upon the cost of production, but upon the law of supply and demand. [Applause.] It is true that production will stop when either metal can not be produced at a profit; but so long as the demand continues equal to the supply the value of an ounce of either metal may be far above the cost of production. With most kinds of property a rise in price will cause increased production; for instance, if the price of wheat rises faster than the price of other things, there will be a tendency to increased production until the price falls; but this tendency can not be carried out in the case of the precious metals, because the metal must be found before it can be produced, and finding is uncertain.

Between 1800 and 1849 an ounce of gold or silver would exchange for more of other things than it would from 1849 to 1873, yet during the latter period the production of both gold and silver greatly increased. It will be said that the purchasing power of an ounce of metal fell because of the increased supply; but that fall did not check production, nor has the rise in the purchasing power of an ounce of gold since 1873 increased the production. The production of both gold and silver is controlled so largely by chance as to make some of the laws applicable to other property inapplicable to the precious metals. If the supply of gold decreases without any diminution of the demand the exchangeable value of each ounce of gold is bound to increase, although the cost of producing the gold may continue to fall.

Why do not the advocates of gold monometallism recognize and complain of the advantage given to gold by laws which increase the demand for it and, therefore, the value of each ounce? Instead of that they confine themselves to the denunciation of the silver-mine owner. I have never advocated the use of either gold or silver as the means of giving employment to miners, nor has the defense of bimetallism been conducted by those interested in the production of silver. We favor the use of gold and silver as money because money is a necessity and because these metals, owing to special fitness, have been used from time immemorial. The entire annual supply of both metals, coined at the present ratio, does not afford too large a sum of money.

THE ANNUAL INCREASE OF SILVER.

If, as is estimated, two-thirds of the $130,000,000 of gold produced annually are consumed in the arts, only $46,000,000—or less than we need for this country alone—are left for coinage. If one-sixth of the $185,000,000 of silver produced annually is used in the arts, $155,000,000 are left for coinage. India has been in the habit of taking about one-third of that sum. Thus the total amount of gold and silver annually available for all the people of all the world is only about $200,000,000, or about four times what we need in this country to keep pace with increasing population. And as population increases the annual addition to the money must also increase.

The total sum of metallic money is a little less than $8,000,000,000. The $200,000,000 per annum is about two and a half per cent on the total volume of metallic money, taking no account of lost coins and shrinkage by abrasion. To quote again the language of Mr. Carlisle:

Mankind will be fortunate indeed if the annual production of gold coin shall keep pace with the annual increase of population, commerce, and industry.

An increase of the silver dollar one-third by an international agreement would reduce by 50,000,000 the number of dollars which could be coined from the annual product of silver, which would amount to a decrease of about one-fourth of the entire increase of metallic money, while the abandonment of silver entirely would destroy three-quarters of the annual increase in metallic money, or possibly all of it, if we take into consideration the reduction of the gold supply by the closing of gold-producing silver mines.

Thus it is almost certain that without silver the sum of metallic money would remain stationary, if not actually decrease, from year to year, while population increases and new enterprises demand, from time to time, a larger sum of currency. Thus it will be seen that the money question is broader than the interest of a few mine owners. It touches every man, woman, and child in all the world, and affects those in every condition of life and society.

INCIDENTAL BENEFITS.

The interest of the mine owner is incidental. He profits by the use of silver as money just as the gold miner profits by the use of gold as money; just as the newspaper profits by the law compelling the advertising of foreclosures; just as the seaport profits by the deepening of its harbor; just as the horse seller would profit by a war which required the purchase of a large number of horses for cavalry service, or just as the undertaker would profit by the decent burial of a pauper at public expense.

All of these receive an incidental benefit from public acts. Shall we complain if the use of gold and silver as money gives employment to men, builds up cities, and fills our mountains with life and industry? Shall we oppress all debtors and derange all business agreements in order to prevent the producers of money metals from obtaining for them more than actual cost? We do not reason that way in other things; why suppress the reason in this matter because of cultivated prejudices against the white metal? But what interest has the farmer in this subject, you may ask. The same that every laboring man has in a currency sufficient to carry on the commerce and business of a country. The employer can not give work to men unless he can carry on the business at a profit, and he is hampered and embarrassed by a currency which appreciates because of its insufficiency.

THE FARMER'S INTEREST.

The farmer labors under a double disadvantage. He not only suffers as a producer from all those causes which reduce the price of property, but he is thrown into competition with the products of India. Without Indian competition his lot would be hard enough, for if he is a land owner he finds his capital decreasing with an appreciating standard, and if he owes on the land he finds his equity of redemption extinguished. The last census shows a real-estate mortgage indebtedness in the five great agricultural States—Illinois, Iowa, Missouri, Kansas, and Nebraska—of more than one billion of dollars. A rising standard means a great deal of distress to these mortgageors. But, as I said, the producers of wheat and cotton have a special grievance, for the prices of those articles are governed largely by the prices in Liverpool, and as silver goes down our prices fall, while the rupee price remains the same. I quote from the Agricultural Report of 1890, page 8:

The recent legislation looking to the restoration of the bimetallic standard of our currency, and the consequent enhancement of the value of silver, has unquestionably had much to do with the recent advance in the price of

cereals. The same cause has advanced the price of wheat in Russia and India, and in the same degree reduced their power of competition. English gold was formerly exchanged for cheap silver and wheat purchased with the cheaper metal was sold in Great Britain for gold. Much of this advantage is lost by the appreciation of silver in those countries. It is reasonable, therefore, to expect much higher prices for wheat than have been received in recent years.

Mr. RUSK'S reasoning is correct. Shall we by changing the ratio fix the price of wheat and cotton at the present low price? If it is possible to do so it is no more than fair that we restore silver to its former place, and thus give back to the farmer some of his lost prosperity. Can silver be maintained on a parity with gold at the present ratio? It has been shown that if we should fail and our effort should result in a single silver standard it would be better for us than the adoption of the gold standard—that is, that the worst that could come from the attempt would be far better than the best that our opponents could offer us.

PRESENT RATIO BEST.

It has been shown that dangers and disadvantages attend a change of ratio. It may now be added that no change in the ratio can be made with fairness or intelligence without first putting gold and silver upon a perfect equality in order to tell what the natural ratio is. If a new ratio is necessary, who can tell just what that ratio ought to be? Who knows to what extent the divergence between gold and silver is due to natural laws and to what extent it is due to artificial laws? We know that the mere act of India in suspending free coinage, although she continues to buy and coin on government account, reduced the price of silver more than 10 cents per ounce. Can anyone doubt that the restoration of free coinage in that country would increase the bullion price of silver? Who doubts that the free coinage of silver by the United States would increase its bullion price?

The only question is how much. It is only a guess, for no one can state with mathematical precision what the rise would be. The full use of silver, too, would stop the increased demand for gold, and thus prevent any further rise in its price. It is because no one can speak with certainty that I insist that no change in the ratio can be intelligently made until both metals are offered equal privileges at the mint. When we have the free and unlimited coinage of gold and silver at the present ratio, then, and then only, can we tell whether any of the apparent fall in the bullion price of silver is due to circumstances over which we have no control, and if so, how much? If this experiment should demonstrate the necessity for a change of ratio it can be easily made, and should be made in such a way as to cause the least injury to society. But we can, in my judgment, maintain the parity at the present ratio. I state this without hesitation, notwithstanding the fact that our opponents do not disguise the contempt which they feel for one who can believe this possible. If the past teaches anything it teaches the possibility of this country maintaining the parity alone. The royal commission of England stated in its report that France did maintain the parity at 15½ to 1, although she has not half our population or enterprise. During the years when her mint laws controlled the price of gold and silver bullion the changes in the relative production of gold and silver were greater than they have been since. At one time before 1873 the value of the silver product was related to the value of the gold product as 3 to 1, while at another time the relation was reversed, and the production of gold to silver was as 3 to 1.

No such changes have occurred since; and the present value of the silver product is only 1½ to 1 of gold. Much of the prejudice against silver is due to the fact that it has been falling as compared to gold. Let it begin to rise and it will become more acceptable as a money metal. Goschen at the Paris Conference very aptly stated the condition when he said:

> At present there is a vicious circle. States are afraid of employing silver on account of the depreciation, and the depreciation continues because States refuse to employ it.

Let that "vicious circle" be broken and silver will resume its rightful place. We believe, in other words, that the opening of our mints to the free and unlimited coinage of gold and silver at 16 to 1 would immediately result in restoring silver to the coinage value of $1.29 per ounce, not only here, but everywhere. That there could be no difference between the dollar coined and the same weight of silver uncoined, when one could be exchanged for the other, needs no argument.

We do not believe that the gold dollar would go to a premium, because it could not find a better coinage ratio elsewhere, and because it could be put to no purpose for which a silver dollar would not be as good. If our ratio were 1 to 14 our gold would, of course, be exchanged for silver; but with our ratio of 16 to 1 gold is worth more here than abroad, and foreign silver would not come here, because it is circulating at home at a better ratio than we offer.

NO DANGER FROM FOREIGN COIN.

We need not concern ourselves, therefore, about the coin silver. All that we have to take care of is the annual product from the mines, about 40 per cent of which is produced in this country. Under the Sherman law we furnish a market for about one-third of the world's annual product. I believe about one-sixth is used in the arts, which would leave about one-half for all the rest of the world. India has suspended free coinage temporarily, in anticipation of the repeal of the Sherman law. The Herschell report expressly states that the action was necessary, because no agreement with the United States could be secured. The language is as follows:

> In a dispatch of the 31st of June, 1892, the government of India expressed the deliberate opinion that, if it became clear that the Brussels conference was unlikely to arrive at a satisfactory conclusion, and if a direct agreement between India and the United States were found to be unattainable, the government of India should at once close their mints to the free coinage of silver and make arrangements for the introduction of a gold standard.

There is no doubt of the restoration of free coinage in India if this Government takes the lead, and with India taking the usual amount, but one-sixth of the annual supply is left for the other silver-using countries. There can be no flood of silver, nor will prices rise to any considerable extent—except the price of silver itself and a few of the staple products of agriculture which have fallen with silver because of India's competition. General prices can not rise unless the total number of dollars increases more rapidly than the need for dollars, which has been shown to be impossible. The danger is, that taking all the gold and all the silver, we will not have enough money, and that there will still be some appreciation in the standard of value.

To recapitulate, then, there is not enough of either metal to form the basis for the world's metallic money; both metals must therefore be used as full legal tender primary money. There is not enough of both metals to more than keep pace with the increased demand for money; silver can not be retained in circulation as a part of the world's money if the United States abandons it. This nation must, therefore, either retain the present law or make some further provision for silver. The only rational plan is to use both gold and silver at some ratio with equal privileges at the Mint. No change in the ratio can be made intelligently until both metals are put on an equality at the present ratio. The present ratio should be adopted if the parity can be maintained; and, lastly, it can be.

THE SHERMAN LAW.

If these conclusions are correct what must be our action on the bill to unconditionally repeal the Sherman law? The Sherman law has a serious defect; it treats silver as a commodity rather than as a money, and thus discriminates between silver and gold. The Sherman law was passed in 1890 as a substitute for what was known as the Bland law. It will be remembered that the Bland law was forced upon the silver men as a compromise, and that the opponents of silver sought its repeal from the day it was passed. It will also be remembered that the Sherman law was in like manner forced upon the silver men as a compromise, and that the opponents of silver have sought its repeal ever since it became a law. The law provides for the compulsory purchase of 54,000,000 ounces of silver per year, and for the issue of Treasury notes thereon at the gold value of the bullion.

These notes are a legal tender and are redeemable in gold or silver at the option of the Government. There is also a clause in the law which states that it is the policy of this Government to maintain the parity between the metals. The Administration, it seems, has decided that the parity can only be maintained by violating a part of the law and giving the option to the holder instead of to the Government. Without discussing the administration of the law let us consider the charges made against it.

FALSE ALARM.

The main objection which we heard last spring was that the Treasury notes were used to draw gold out of the Treasury. If that objection were a material one, the bill might easily be amended so as to make the Treasury notes hereafter issued redeemable only in silver, like the silver certificates issued under the Bland law. But the objection is scarcely important enough for consideration. While the Treasury notes have been used to draw out gold, they need not have been used for that purpose, for we have $346,000,000 worth of greenbacks with which gold can be drawn, so long as the Government gives the option to the holder. If all of the Treasury notes were destroyed the greenbacks are sufficient to draw out the $100,000,000 reserve three times over, and then they can be reissued and used again. To complain of the Treasury notes while the greenbacks remain is like finding fault because the gate is open when the whole fence is down, and reminds me of the man who made a box for his feline family, and cut a big hole for the cat to go in at and a little

hole for the kittens to go in at, forgetting that the large hole would do for cats of all sizes.

Just at this time the law is being made the scapegoat upon which all our financial ills are loaded, and its immediate and unconditional repeal is demanded as the sole means by which prosperity can be restored to a troubled people.

The main accusation against it now is that it destroys confidence, and that foreign money will not come here, because the holder is afraid that we will go to a silver standard. The exportation of gold has been pointed to as conclusive evidence that frightened English bondholders were throwing American securities upon the market and selling them to our people in exchange for gold. But now gold is coming back faster than it went away, and still we have the Sherman law unrepealed. Since that theory will not explain both the export and import of gold, let us accept a theory which will. The balance of trade has been largely against us during the last year, and gold went abroad to pay it, but now our exportation of breadstuffs has increased and the gold is returning. Its going was aggravated by the fact that Austria-Hungary was gathering in gold for resumption and was compelled to take a part from us. Instead of using that export of gold as a reason for going to a gold basis, it ought to make us realize the danger of depending solely upon a metal which some other nation may deprive us of at a critical moment.

Mr. CANNON of Illinois. Will the gentleman permit me to interrupt him?

Mr. BRYAN. Certainly.

Mr. CANNON of Illinois. I am in complete harmony with what my friend is saying now. I ask him if he will allow me to request him not to omit to state that in the twelve months ending June 30 last this same balance of trade that was against us not only took the gold of the United States, but nearly $17,000,000 of silver as well.

Mr. BRYAN. I think the statement made by the gentleman is correct.

The Sherman law fails utterly to account for present stringency. Let me suggest a more reasonable cause for the trouble. Last spring an attempt was made to secure the unconditional repeal of the Sherman law. We had no panic then, but the same forces which have always opposed any legislation favorable to silver demanded that the purchase of bullion should stop. Some who believe that 15 per cent reserve makes a bank safe became frightened lest a 25 or 30 per cent reserve might not be sufficient to make the Government safe, and wanted an issue of gold bonds. The great argument used in favor of both these propositions was that money was being drawn from the Treasury and sent to Europe; that confidence was being destroyed and that a panic would follow. They emphasized and magnified the evils which would follow the departure of gold; they worked themselves and their associates into a condition of fright which did cause financial stringency. Like the man who innocently gives the alarm of fire in a crowded hall, they excited a panic which soon got beyond control.

THE REAL TROUBLE.

The trouble now is that depositors have withdrawn their deposits from the banks for fear of loss, and the banks are compelled to draw in their loans to protect their reserves, and thus men who do business upon borrowed capital are crippled. The people have not lost faith in the Government or in the Government's money. They do not refuse silver or silver certificates. They are glad enough to get any kind of money. We were told last spring that gold was going to a premium, but recently in New York City men found a profitable business in the selling of silver certificates of small denominations at 2 per cent premium, and on the 5th of this month there appeared in the New York Herald and the New York Times this advertisement:

WANTED—SILVER DOLLARS.—We desire to purchase at a premium of ½ per cent, or $7.50 per thousand, standard silver dollars, in sums of $1,000 or more, in return for our certified checks payable through the clearing-house.

ZIMMERMAN & FORSHAY, *Bankers, 11 Wall street.*

About the same time the New York police force was paid in $20 gold pieces because of the scarcity of other kinds of money. How many of the failing banks have obeyed the law in regard to reserve? How many have crippled themselves by loaning too much to their officers and directors? The situation can be stated in a few words: money can not be secured to carry on business because the banks have no money to loan; banks have no money to loan because the depositors have withdrawn their money; depositors have withdrawn their money because they fear the solvency of the banks; enterprises are stagnant because money is not in circulation.

FAMINE WILL NOT CURE HUNGER.

Will a repeal of the Sherman law cure these evils? Can you cure hunger by a famine? I know that there are some who tell us that we have plenty of money. If I may be pardoned for a personal allusion, their attitude reminds me of a remark made by my father-in-law just after he entrusted his daughter to my care. "William," said he, laying his hand affectionately on my head, "While I have, we shall not *both* want." Others say, "What is the use of having more money? We can not get it unless we have something to sell." That is true; but the price of what we sell depends largely upon the amount of money in circulation. How can we pay our debts without selling something, and how can we sell anything without there is money in circulation to buy with? We need money. The Sherman law supplies a certain amount. Will the stringency be relieved by suspending that issue? If the advocates of repeal would take for their battle cry, "Stop issuing money" instead of "Stop buying silver," would not their purpose be more plain? But they say the repeal of the law will encourage foreign capital to come here by giving assurance that it will be repaid on a gold basis. Can we afford to buy confidence at that price? Can we afford to abandon the constitutional right to pay in either gold or silver in order to borrow foreign gold with the certainty of having to pay it back in appreciated dollars? To my mind, Mr. Speaker, the remedy proposed seems not only dangerous and absurd, but entirely inadequate. Why try to borrow foreign capital in order to induce the people in this country to redeposit their savings in the banks?

A SUGGESTION.

Why do not these financiers apply the remedy to the diseased part? If the gentleman from New York [Mr. HENDRIX], to whom I listened with pleasure, and who said, "I have come into this Hall as a banker, I am here as the president of a national bank," desires to restore confidence, let him propose for the consideration of the members a bill to raise, by a small tax upon deposits, a sum sufficient to secure depositors against possible loss; or a bill to compel stockholders to put up security for their double liability; or to prevent stockholders or officers from wrecking a bank to carry on their private business; or to limit the liabilities which a bank can assume upon a given amount of capital, so that there will be more margin to protect its creditors; or a bill to make more severe the punishment for embezzlement, so that a man can not rob a bank of a half million and escape with five years, and can not be boarded at a hotel by a marshal, while the small thief suffers in a dungeon. [Applause.] Let him propose some real relief and this House will be glad to coöperate with him.

Or if there is immediate relief necessary in the increased issue of paper money, let our financiers press the suggestion made by the gentleman from Ohio [Mr. JOHNSON], viz, that the holders of Government bonds be allowed to deposit them and draw the face in Treasury notes by remitting the interest and with the power of redeeming the bonds at any time. [Applause.] This will give immediate relief and will save the Government interest on the bonds while the money is out. But no, the only remedy proposed by these financiers at this time, when business is at a standstill and when unemployed men are suffering, is a remedy which will enable them to both control the currency and reap pecuniary profit through its issue.

MORE MONEY NEEDED.

One of the benefits of the Sherman law, so far as the currency is concerned, is that it compels the issue of a large amount of money annually, and but for this issue the present financial panic would, in my judgment, be far more severe than it is. That we need an annual increase in the currency is urged by Mr. SHERMAN himself in a speech advocating the passage of the Sherman law. On the 5th day of June, 1890, he said in the Senate:

Under the law of February, 1878, the purchase of $2,000,000 worth of silver bullion a month has by coinage produced annually an average of nearly $3,000,000 per month for a period of twelve years, but this amount, in view of the retirement of the bank notes, will not increase our currency in proportion to our increasing population. If our present currency is estimated at $1,400,000,000, and our population is increasing at the ratio of 3 per cent per annum, it would require $42,000,000 increased circulation each year to keep pace with the increase of population; but as the increase of population is accompanied by a still greater ratio of increase of wealth and business, it was thought that an immediate increase of circulation might be obtained by larger purchases of silver bullion to an amount sufficient to make good the requirement of bank notes and keep pace with the growth of population. Assuming that $54,000,000 a year of additional currency is needed upon this basis, that amount is provided for in this bill by the issue of Treasury notes in exchange for bullion at the market price.

This amount, by the fall in the price of bullion silver, has been largely reduced. Shall we wipe it out entirely? He insisted that the Sherman law gave to the people more money than the Bland law, and upon that ground its passage was defended before the people. Could it have been passed had it given less than the Bland law? Who would have dared to defend it if it had provided for no money at all?

What provision shall be made for the future? Upon that question our opponents are silent. The bill which they have proposed leaves us with no increased currency provided for. Some

of the advocates of a gold standard, in the defense of their theory, find it necessary to dispute every well-established principle of finance.

We are told that as civilization increases credit takes the place of money and that the volume of real money can be diminished without danger. That recalls the experience of the man who conceived the idea that a fish could be made to live without water. As the story goes, he put a herring, fresh from the sea, in a jar of salt water. By removing a little every morning and adding rainwater he gradually accustomed it to fresh water. Then by gradually removing the fresh water he accustomed it to air, and finally kept it in a cage like a bird. One day, in his absence, his servant placed a cup of water in the cage in order that the fish might moisten its food; but, alas! when the master came home he found that the fish had thoughtlessly put its head into the water and drowned!

From the arguments of some of our opponents we might be led to the conclusion that the time would come when money would not only be unnecessary but really dangerous.

REAL OR CREDIT MONEY?

The question, Mr. Speaker, is whether we shall increase our supply of primary money, as we do when we increase our gold and silver, or whether we shall increase our promises to pay real money, as we do when we increase national bank notes.

Mr. BLAND. Will the gentleman permit a suggestion?

Mr. BRYAN. Yes, sir.

Mr. BLAND. The Treasury notes issued under the law for the purchase of the silver bullion are legal tender for all debts, public and private, and not like bank notes, mere credit money.

Mr. BRYAN. I understand that. I say they are primary money; although if it were construed to mean that they were merely a promise to pay gold, then they would be simply credit money to that extent.

Mr. BLAND. The distinction I wish to draw is this, that those Treasury notes issued in purchase of silver bullion are legal tender, while a bank note is not.

Mr. BRYAN. And the distinction is a very just one.

The larger the superstructure of credit, as related to the basis of metal, the more unsubstantial our system. If we present a bank note for payment we receive a greenback; if we present a greenback for payment, the Treasurer has a right to pay in silver dollars, and now our opponents want it understood that a silver dollar is only a promise to pay a gold dollar. Is that sound money?

No, Mr. Speaker; if metallic money is sound money, then we who insist upon a base broad enough to support a currency redeemable in coin on demand are the real friends of sound money, and those are "dangerous fiatists" who would make the metallic base so narrow as to compel the Government to abandon it for the preservation of its people. If all the currency is built upon the small basis of gold those who hold the gold will be the masters of the situation. [Applause.] We have a right to demand that the future financial policy shall be a part of the repealing act, so that we may choose between it and what we have and reject it if it is less favorable than the present law. And I may add, in the language adopted by the Bimetallic League a few days ago—

> The refusal of the opponents of bimetallism to propose any substitute for the present law, or to elaborate any plan for the future, indicates either an ignorance of our financial needs or an unwillingness to take the public into their confidence.

THE GREAT OBJECTION.

But, sir, more serious than any other objection which can be made to the unconditional repeal of the Sherman law is the incontrovertible fact that a suspension of silver would tend to lower the price of silver bullion and thus make the restoration of bimetallism more difficult. That this will be the effect is proven not only by reason but by the utterances of Mr. Herschell's committee in discussing the finances of India. That report says:

> In December last a bill was introduced in the Senate to repeal the Sherman act, and another to suspend purchases under it. Whether any such measures will pass into law it is impossible to foretell, but it must be regarded as possible; and although, in the light of past experience, predictions on such a subject must be made with caution, it is certainly probable that the repeal of the Sherman act would be followed by a heavy fall in the price of silver.

The first question for us to decide then is, are we in favor of bimetallism or a universal gold standard? If we are in favor of bimetallism, the next question is, will a fall in the bullion price of silver as measured by gold help or hinder bimetallism? We are told by those who want a gold standard that it will help bimetallism; but the query is, if it would, "why do they favor it?" It is sufficient to arouse suspicion when every advocate of gold monometallism favors unconditional repeal, and the more emphatic his advocacy of gold the more earnest his desire for repeal. Is any subsequent legislation in behalf of silver intended? If so, why not propose it now? What money loaner, loaning upon a mortgage, would be willing to let the money go upon a promise that the mortgage should be delivered next week? Or what business man would cancel an obligation to-day on the promise of having the money paid to-morrow? Shall we be more careless in protecting the sacred interests of our constituencies than a business man is in transacting his business?

What excuse can we give to our people for releasing what we have with the expectation of getting something in the future when the advocates of repeal boldly demand, upon this floor, the adoption of a universal gold standard, and predict that its coming is as certain as the rising of to-morrow's sun. Read the utterances of these leaders in the crusade against silver. Read the famous article of the distinguished gentleman from New York [Mr. COCKRAN]. Read the article in the Forum of last February, from the pen of Hon. George Fred Williams, who, in the last Congress, spoke for those demanding unconditional repeal:

> In the efforts which have thus far been made towards a repeal, a single question has been repeated by the silver men so often as to give a plain indication to the situation. What, it is asked, do you propose to put in place of silver purchases? There never was a time more opportune to answer definitely this question with the single word, "nothing."

Let me join issue upon this question, and say that the time will never come in this country when that word "nothing" will be accepted as a satisfactory answer.

GARBLING.

They tell us that our platform demands repeal, but does it demand repeal only? Shall we take away the "cowardly makeshift" before we restore the real thing for which that "temporary expedient" was substituted? As well denounce one kind of food because it lacks nourishment and then refuse all food to the patient. They shall not be permitted to thus mutilate the platform. No such inexcusable attempt at garbling has been witnessed since the minister took from the sentence "Let him which is on the house *top not come down* to take anything out of his house" the words "topnotcome down," and inveighed against the feminine habit of wearing the hair in a knot on the top of the head. [Laughter.] They demand of us unconditional repeal. They demand that we give up all that we have in the way of silver legislation before we know what we are to receive. Shall we surrender on these terms?

ARE WE CARTHAGENIANS?

Rollin tells us that the third Punic war was declared by the Romans and that a messenger was sent to Carthage to announce the declaration after the army had started on its way. The Carthagenians at once sent representatives to treat for peace. The Romans first demanded the delivery of three hundred hostages before they would enter into negotiations. When three hundred sons of the nobles had been given into their hands they demanded the surrender of all the arms and implements of war before announcing the terms of the treaty. The conditions were sorrowfully but promptly complied with, and the people who boasted of a Hannibal and a Hamilcar gave up to their ancient enemies every weapon of offense and defense. Then the Roman consul, rising up before the humiliated representatives of Carthage, said:

> I can not but commend you for the readiness with which you have obeyed every order. The decree of the Roman Senate is that Carthage shall be destroyed.

Sirs, what will be the answer of the people whom you represent, who are wedded to the "gold and silver coinage of the Constitution," if you vote for unconditional repeal and return to tell them that you were commended for the readiness with which you obeyed every order, but that Congress has decreed that one-half of the people's metallic money shall be destroyed? [Applause.]

They demand unconditional surrender, do they? Why, sirs, we are the ones to grant terms. Standing by the pledges of all the parties in this country, backed by the history of a hundred years, sustained by the most sacred interests of humanity itself, we demand an unconditional surrender of the principle of gold monometallism as the first condition of peace. [Applause.] You demand surrender! Aye, sirs, you may cry "Peace, peace," but there is no peace. Just so long as there are people here who would chain this country to a single gold standard, there is war—eternal war; and it might just as well be known now! [Loud applause on the Democratic side.] I have said that we stand by the pledges of all platforms. Let me quote them:

POPULISTS, 1892.

The Populist platform adopted by the national convention in 1892 contained these words:

> We demand free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1.

As the members of that party, both in the Senate and in the House, stand ready to carry out the pledge there made, no appeal to them is necessary.

THE REPUBLICAN POSITION.

1888.

The Republican national platform adopted in 1888 contains this plank:

The Republican party is in favor of the use of both gold and silver as money and condemns the policy of the Democratic administration in its efforts to demonetize silver.

1892.

The same party in 1892 adopted a platform containing the following language:

The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, such restrictions to be determined by contemplation of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be equal at all times.

The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or gold, issued by the Government, shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international parity of value between gold and silver for use as money throughout the world.

Are the Republican members of this House ready to abandon the system which the American people favor "from tradition and interest"? Having won a Presidential election upon a platform which condemned "the policy of the Democratic administration in its efforts to demonetize silver," are they ready to join in that demonetization? Having advocated the Sherman law because it gave an increased use of silver, are they ready to repeal it and make no provisions for silver at all? Are they willing to go before the country confessing that they secured the present law by sharp practice, and only adopted it as an ingenious device for preventing free coinage, to be repealed as soon as the hour of danger was passed?

THE DEMOCRATIC POSITION.

1880.

The Democratic platform of 1880 contained these words:

Honest money, consisting of gold and silver, and paper convertible into coin on demand.

It would seem that at that time silver was honest money, although the bullion value was considerably below the coinage value.

1884.

In 1884 the Democratic platform contained this plank:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

It would seem that at that time silver was considered honest money.

1888.

In 1888 the Democratic party did not express itself on the money question except by saying:

It renewed the pledge of its fidelity to Democratic faith, and reaffirms the platform adopted by its representatives in the convention of 1884.

Since the platform of 1884 commended silver as an honest money, we must assume that the reaffirming of that platform declared anew that silver was honest money as late as 1888, although at that time its bullion value had fallen still more.

1892.

The last utterance of a Democratic national convention upon this subject is contained in the platform adopted at Chicago in 1892. It is as follows:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Thus it will be seen that gold and silver have been indissolubly linked together in our platforms. Never in the history of the party has it taken a position in favor of a gold standard. On every vote taken in the House and Senate a majority of the party have been recorded not only in favor of bimetallism, but for the free and unlimited coinage of gold and silver at the ratio of 16 to 1.

SHALL WE REPUDIATE OUR PLEDGES?

The last platform pledges us to the use of both metals as standard money and to the free coinage of both metals at a fixed ratio. Does anyone believe that Mr. Cleveland could have been elected President upon a platform declaring in favor of the unconditional repeal of the Sherman law? Can we go back to our people and tell them that, after denouncing for twenty years the crime of 1873, we have at last accepted it as a blessing? Shall bimetallism receive its deathblow in the house of its friends, and in the very hall where innumerable vows have been registered in its defense? What faith can be placed in platforms if their pledges can be violated with impunity? Is it right to rise above the power which created us? Is it patriotic to refuse that legislation in favor of gold and silver which a majority of the people have always demanded? Is it necessary to betray all parties in order to treat this subject in a "nonpartisan" way?

The President has recommended unconditional repeal. It is not sufficient to say that he is honest—so were the mothers who, with misguided zeal, threw their children into the Ganges. The question is not "Is he honest?" but, "Is he right?" He won the confidence of the toilers of this country because he taught that "public office is a public trust," and because he convinced them of his courage and his sincerity. But are they willing to say, in the language of Job, "Though He slay me, yet will I trust Him?" Whence comes this irresistible demand for unconditional repeal? Are not the representatives here as near to the people and as apt to know their wishes? Whence comes the demand? Not from the workshop and the farm, not from the workingmen of this country, who create its wealth in time of peace and protect its flag in time of war, but from the middlemen, from what are termed the "business interests," and largely from that class which can force Congress to let it issue money at a pecuniary profit to itself if silver is abandoned. The President has been deceived. He can no more judge the wishes of the great mass of our people by the expressions of these men than he can measure the ocean's silent depths by the foam upon its waves.

THE MASSES OPPOSE UNCONDITIONAL REPEAL.

Mr. Powderly, who spoke at Chicago a few days ago in favor of the free coinage of silver at the present ratio and against the unconditional repeal of the Sherman law, voiced the sentiment of more laboring men than have ever addressed the President or this House in favor of repeal. Go among the agricultural classes; go among the poor, whose little is as precious to them as the rich man's fortune is to him, and whose families are as dear, and you will not find the haste to destroy the issue of money or the unfriendliness to silver which is manifested in money centers.

This question can not be settled by typewritten recommendations and suggestions made by boards of trade and sent broadcast over the United States. It can only be settled by the great mass of the voters of this country who stand like the Rock of Gibraltar for the use of both gold and silver. [Applause.]

There are thousands, yes, tens of thousands, aye, even millions, who have not yet "bowed the knee to Baal." Let the President take courage. Muehlbach relates an incident in the life of the great military hero of France. At Marengo the Man of Destiny, sad and disheartened, thought the battle lost. He called to a drummer boy and ordered him to beat a retreat. The lad replied:

Sire, I do not know how. Dessaix has never taught me retreat, but I can beat a charge. Oh, I can beat a charge that would make the dead fall into line! I beat that charge at the Bridge of Lodi; I beat it at Mount Tabor; I beat it at the Pyramids; Oh, may I beat it here?

The charge was ordered, the battle won, and Marengo was added to the victories of Napoleon. Oh, let our gallant leader draw inspiration from the street gamin of Paris. In the face of an enemy proud and confident the President has wavered. Engaged in the battle royal between the "money power and the common people" he has ordered a retreat. Let him not be dismayed.

He has won greater victories than Napoleon, for he is a warrior who has conquered without a sword. He restored fidelity in the public service; he converted Democratic hope into realization; he took up the banner of tariff reform and carried it to triumph. Let him continue that greater fight for "the gold and silver coinage of the Constitution," to which three national platforms have pledged him. Let his clarion voice call the party hosts to arms; let him but speak the language of the Senator from Texas, in reply to those who would destroy the use of silver:

In this hour fraught with peril to the whole country, I appeal to the unpurchased representatives of the American people to meet this bold and insolent demand like men. Let us stand in the breach and call the battle on and never leave the field until the people's money shall be restored to the mints on equal terms with gold, as it was years ago.

Let this command be given, and the air will resound with the tramp of men scarred in a score of battles for the people's rights. Let this command be given and this Marengo will be our glory and not our shame. [Applause on the floor and in the galleries.]

THE PARTING OF THE WAYS.

Well has it been said by the Senator from Missouri [Mr. VEST] that we have come to the parting of the ways. To-day the Democratic party stands between two great forces, each inviting its support. On the one side stand the corporate interests of the nation, its moneyed institutions, its aggregations of wealth and capital, imperious, arrogant, compassionless. They demand spe-

cial legislation, favors, privileges, and immunities. They can subscribe magnificently to campaign funds; they can strike down opposition with their all-pervading influence, and, to those who fawn and flatter, bring ease and plenty. They demand that the Democratic party shall become their agent to execute their merciless decrees.

On the other side stands that unnumbered throng which gave a name to the Democratic party and for which it has assumed to speak. Work-worn and dust-begrimed, they make their sad appeal. They *hear* of *average* wealth increased on every side and *feel* the *inequality* of its distribution. They see an overproduction of everything desired because of the underproduction of the ability to buy. They can not pay for loyalty except with their suffrages, and can only punish betrayal with their condemnation. Although the ones who most deserve the fostering care of Government, their cries for help too often beat in vain against the outer wall, while others less deserving find ready access to legislative halls.

This army, vast and daily vaster growing, begs the party to be its champion in the present conflict. It can not press its claims 'mid sounds of revelry. Its phalanxes do not form in grand parade, nor has it gaudy banners floating on the breeze. Its battle hymn is "Home, Sweet Home," its war cry—"Equality before the law." To the Democratic party, standing between these two irreconcilable forces, uncertain to which side to turn and conscious that upon its choice its fate depends, come the words of Israel's second lawgiver: "Choose you this day whom ye will serve." What will the answer be? Let me invoke the memory of him whose dust made sacred the soil of Monticello when he joined

> The dead but sceptered sovereigns who still rule
> Our spirits from their urns.

He was called a demagogue and his followers a mob, but the immortal Jefferson dared to follow the best promptings of his heart. He placed man above matter, humanity above property, and, spurning the bribes of wealth and power, pleaded the cause of the common people. It was this devotion to their interests which made his party invincible while he lived and will make his name revered while history endures. And what message comes to us from the Hermitage? When a crisis like the present arose and the national bank of his day sought to control the politics of the nation, God raised up an Andrew Jackson, who had the courage to grapple with that great enemy, and by overthrowing it, he made himself the idol of the people and reinstated the Democratic party in public confidence. What will the decision be to-day? The Democratic party has won the greatest success in its history. Standing upon this victory-crowned summit, will it turn its face to the rising or the setting sun? Will it choose blessings or cursings—life or death—which? Which? [Prolonged applause on the floor and in the galleries, and cries of "Vote!" "Vote!"]

The SPEAKER. The gentleman from Iowa.

Mr. GROSVENOR. Will not the gentleman from Iowa give way until I can ask a parliamentary inquiry of the Chair?

Mr. HENDERSON of Iowa. Certainly.

Mr. GROSVENOR. I desire, Mr. Speaker, to call the attention of the Chair to the terms of the order under which this debate is proceeding, and to ask the Chair to say at what time, pursuant to the order and under his construction of the order, the vote upon the first amendment, and the several amendments, and upon the main question, can be taken?

The SPEAKER. The attention of the Chair was called by the gentleman from Ohio [Mr. GROSVENOR] this morning to the question just propounded. The Chair has made some examination of the order, and is of the opinion, from its terms, that the first vote on the first amendment to be proposed would be on Monday week, the 28th.

The order contemplates that general debate extend up to and including next Wednesday, and debate under what is known as the five-minute rule for the three remaining days of the next week. The order also provides for the meeting of the House at 11 o'clock, but is a little ambiguous as to whether that extends beyond next week or not; and if there be no objection the Chair will announce that the House will meet on that day—Monday week—at the usual hour of 12 o'clock, and the vote will be then taken according to the terms of the order.

Mr. HENDERSON of Iowa. Mr. Speaker, I think that the most gratifying sound that will reach the people from this Hall will be the cries just heard of "Vote!" "Vote!" "Vote!"

Whatever may have been the purpose of the President in bringing us here, I think the people of this country expect action, and early action, if we are going to act at all. I would have been glad to have come to a vote on the pending questions at once, but could not. Many of us would have been glad to submit some other questions for a vote, but could not. Fourteen days have been set apart by the majority of this House for debate. Whether we on this side talk or not, these fourteen days will run before we can come to a vote. With that fact staring me in the face, I have felt that I would like to make a few observations touching the situation, and may properly do so.

The President has called us to meet in extraordinary session. The last time that the American Congress was called together in extraordinary session, excepting in 1877, was when the dark clouds of the civil war hung over the nation, and its life was in peril. That was a correct construction of the constitutional power vested in the President. The Chief Executive of this Republic, with its teeming millions, should not call us together in extraordinary session except for weighty reasons. In his message he has told us why we are called together—to repeal the purchasing clause of the Sherman act, so-called, and for such other relief as the wisdom of Congress may suggest—but without giving us any aid or a single suggestion as to what that relief should be, beyond the repeal referred to.

The President says that this country is in distress. I have heard no dissent from that opinion. The nation is in great distress. Never before since 1837 have the American people felt distress such as we are now experiencing. The financial disturbance of 1873 was like a business boom compared to the distress of this hour. Distress! This nation is convulsed and congested with distress. Laboring men are being stricken from the rolls by thousands. The farmer is looking over his grain fields and looking at the market prices and wondering where he will get money enough to pay his taxes and buy the necessaries of life. Banks are tumbling to the right and left of us. Their doors are closed against the manufacturing industries and all business institutions in our country. Exchange is a thing of the past. We are told by the Government that $177,000,000 within two months have been taken from the national banks of the country, and the Government can not estimate how much more from private, State, and savings banks. To-day, Mr. Speaker the doors are closing in the great manufacturing industries in this country. The spindles are stopping, more having suspended in New England than the entire number now running in the sunny South. We learn this morning that a great continental railroad has passed into the hands of a receiver. Great jobbing houses that used to send their army of brainy commercial men into all parts of the country to invite purchasers for their goods are laying them off, and nothing is being asked in the way of purchases. The country merchants are canceling the orders given earlier in the summer, and the nation stands still. The murmurs of the bread riot can almost be heard now.

It is in such an hour and under such a condition that we are called together. We all admit these conditions; and I tremble when I think that the fever has only just begun. I trust that this may be an error of judgment. What is the cause of all of this? We are asked to come here in a sense as physicians to treat the alarming condition of the country. We can not act wisely unless we act intelligently. I withhold my vote and voice with caution when I come to act, unless I know what is the trouble with my country.

The President in his message gives us to understand that it is the Sherman law. My eloquent young friend [Mr. BRYAN], who has just closed his beautiful peroration, that gifted leader of the Democracy and of the Populists of the nation, who has perhaps no superior in painting in words the conditions that attract his attention, tells us that these troubles do not come from the Sherman law. He has pointed out, as did the eloquent gentleman from New York on Saturday last, the honored Representative from Brooklyn [Mr. HENDRIX], and the same fact was referred to by that sturdy old commoner from Ohio [Mr. GROSVENOR] the day before yesterday, that a long time had elapsed—over two years—after the adoption of the Sherman law before the fever or the paralysis in our country began.

The gentleman from New York pointed out that under the Sherman law we are now adding $300,000 less currency per month ($3,600,000 per annum) than under the act of 1878, known as the Bland-Allison act. This trouble, therefore, is not the result of an undue inflation of the currency. There has been no great failure of crops; no black-eyed monster of disease has swept our continent to paralyze our people. Everything indicated power, vigor, energy in the American people when this blow from some source began to fall.

What is the cause of it, Mr. Speaker? Let us in this debate be honest with each other. I pity the representative of the people who goes back to his constituents having indulged in anything but an honest application of his mind to the situation that confronts us all. What is the cause of it, Mr. Speaker?

In answering the question, in my own way and from my own standpoint—and in the remarks that I shall make this afternoon I shall speak only for myself—I shall not stop to read the declarations of the last Democratic platform in respect to the tariff. Such extracts and references as I deem necessary I shall incor-

porate in my printed remarks, so that my position may be fully understood.

But you all know full well what it was—a broad, ponderous, and yet cutting attack upon the system of protection in America. The President, in the message calling us to meet here this month, says:

It was my purpose to summon Congress in special session early in the coming September—

No clouds of war hanging over us, a court of nations settling the seal controversy, peace on every hand; what was this extra session to be called for in September?—

that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demanded, which so large a majority of the people, as shown by their suffrages, desire and expect.

Then we were to have had an extra session in September without reference to the Sherman law or to the congested and tottering condition of our business. The President who put that paragraph into that message at that hour forgot his oath of office taken on yonder steps of this Capitol. My God! were there none but clerks in his Cabinet? Was there no patriot there to say, "Mr. President, strike out that attack upon our people at this hour"?

Your platform, gentlemen, did not disturb the country, because we are accustomed and the country is accustomed to your platforms and they always put the several constructions upon them, just as eloquent gentlemen are doing in this debate with the silver plank in your last platform. You are as cunning as some theologians who can make the Bible support any creed. You can make the planks of your platform support any theory on this money question. But here the President, standing under the darkest clouds and behind the shield that he thinks convenient to use in fighting for his party, tells the people that as soon as this is over then will come the attack upon the American policy of protection.

Gentlemen may say that Mr. Cleveland was in power before—I have heard that suggestion made—and that all went well. That is true, but at that time, at the other end of the Capitol, there was still a bulwark that he could not down. [Applause on the Republican side.] But now, sir, the people see the House, the Senate, and the Executive Mansion controlled by men who have made an earnest, savage declaration against our American policy of protection. The mighty industrial engine is to be reversed. The hands of European workmen are to make the things to be consumed here, and American mills and American shops are to be closed while European ones are to supply our markets.

Mr. Speaker, the moment it was seen that the Senate, as well as the other branches of the Government, had gone into your hands the fever began to set in. That was the initial point of this hour of terror. Men who had planned increasing their industries stopped; men who had contemplated new manufacturing plants stopped; men who had invested large sums, to my knowledge, to buy ground on which to rear buildings, where industry would make music to the heavens and our people, went no farther.

I know one plucky little German in my own city who by dint of industry has built up a good, safe business. Last fall, before the election, he had made his plans to extend that business. He gave up his project as soon as it was known that the Democratic party had this country in control. When asked why, he said, "I think the safest thing for me now is to wait to see what they will do." He knew nothing of political economy—a hard-fisted, simple, broken-speeched German, who had worked his way to success, found a party suddenly in control that was striking with a mailed hand at the industries that he had seen growing in his new home.

That little true story contains the key to the situation in this country. Every man began to cut down and wait. Those who had money to loan said, "We will wait; we may strike a better thing," just as Europe is now striking a better thing. My gifted friend from Nebraska [Mr. BRYAN] wants to know why $23,000,000 of gold has just crossed the ocean to this country. The Government had nothing to do with it. It is because the best kind of stock and bonds in this country have been pressed down to almost nothing, and the European gold can not resist the temptation of investing. The yellow eagle on that piece of coin has an eye for a good thing, and it comes from mountain or valley or across the sea, wherever it can make a big investment. And the golden eagles of Europe are coming to make purchases here that will in due time double their investment. The persons who had cash to loan held on. Every form of industry began to contract. This does not take place in an hour; but one man gives his ideas and fears to another; they spread and spread until the whole Republic is imbued with one great fear. And now we are in the midst of a panic such as none living probably ever saw before.

Mr. Speaker, certain plans are proposed for the relief of this condition. I believe that none of the pending measures would bring complete relief to this country. I admit that any legislation which will restore confidence among the people will do some temporary good. Now, I am not going to speak in a way to please either my hard-money friends or my soft-money friends. I am talking from my own simple standpoint; and I am no financier. I notice that the financiers of this country, as a rule (there are a few honorable exceptions), stand paralyzed and silent in the presence of this condition; and those who know nothing about it are pouring in propositions so thick and fast that I can not get time to read them. [Laughter.] Only the day before yesterday I received a communication from some gentleman in New York wanting to bet me $1,000 that I could not point out wherein his proposition did not solve the whole trouble. [Laughter.] Each of you gentlemen here, no doubt, received one of those circular letters. [Members nod assent.]

Now, what are the propositions before the House? Here they are:

THE PROPOSITIONS BEFORE THE HOUSE SUBMITTED AND FIXED UPON AUGUST 11, 1893.

Mr. WILSON of West Virginia. Mr. Speaker, I desire to offer a bill for the present consideration of the House.

The bill was read, as follows:

"An act to repeal a part of an act, approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes.'

"*Be it enacted, etc.*, That so much of the act approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes,' as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding one dollar for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law."

Mr. BLAND. Mr. Speaker, I desire to present to the House an order embodying an agreement as to the mode in which proceedings shall be had in the consideration of the bill just offered, on which order I shall demand the previous question, with the statement——

The SPEAKER. The Chair will state the question. The gentleman from West Virginia [Mr. WILSON] offers a bill in the absence of any rules of the House, and the gentleman from Missouri [Mr. BLAND] offers a resolution providing for the method in which the House shall consider that bill. The Clerk will report the resolution of the gentleman from Missouri.

The resolution was read, as follows:

"*Ordered by the House*, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

"Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions."

Mr. BLAND. Mr. Speaker, I demand the previous question.

Now, coming to these propositions, I shall give you my views in respect to them, stating what I am going to do and why. I have told my people at home to expect no relief unless one of two things should come to pass: First, a declaration in the message of the President to the effect that the revolutionary proposition in the last national Democratic platform should not be carried out. In that I have been disappointed. It is to be carried out. As some one suggested to me to-day, the President says, "Boys, come and help me dispose of this financial matter and then I will give you 'hell on the Wabash' upon the tariff, right afterward."

I told my people, secondly, that if the President gave no such assurance in his message, then this Congress must pass away without revolutionary tariff legislation before relief—full relief—could come to the country.

But men are, after all, animals, and only a short degree removed from the lower animals. It is wonderful how a great body of men can be converted into a flying flock of sheep. There are men here who know that one soldier breaking from the ranks and running has cost a nation a great battle. Under the influence of some little fright men will break and run by thousands in the face of danger, when under other circumstances they would fight like demons even unto death.

This country has cause for alarm. We do not all agree as to the cause. I may be unfortunately constituted, but I give the majority of mankind the credit of being just as honest in their

convictions as I am. The men who have been crossing swords on the other side of this House on this money question are honest about it. Those who differ from me as to the tariff being the cause of our trouble are honest about it. And, my countrymen, it may be that we have got to be tortured in the crucible of experience before some of these problems can be finally solved. But if there is anything now that the popular mind or any great portion of our people believe is working them injury and you can remove that, you may gain some temporary advantage.

Now, what are the propositions before us? I will state, briefly, that first we have free coinage in different forms; then, the restoration of the Bland-Allison act of 1878; and third, the Wilson bill for the repeal of the purchasing clause of the Sherman act.

I shall not vote for any of the propositions for free coinage. On that I may be wrong; but from my standpoint my conviction is clear.

Like my friend from Nebraska [Mr. BRYAN], and others who have spoken upon this question here, I do not want a contraction of the currency. I may be a child in my reasoning, although I will be supported by a good many able men. But I believe that free coinage will bring this country to a silver basis and eliminate from our circulation the $504,000,000 of gold now circulating amongst the people. If I am right in that, I will make no error in voting against it. I will be voting against contraction.

What is the difference between 16 to 1 and 20 to 1? What do you gain when the ratio at this hour is 28 to 1? I would rather if I were to take free coinage, take it at 15½ to 1 than 20 to 1, keeping myself somewhere in line with the other great nations that wrestle on the mighty field of industry in the world. The 20 to 1 ratio is but a bait to catch the unthinking ones. But to make it that ratio which is close enough so that it can not vary from it very much within a given time there might be some reason for the suggestion. But until you do that I see nothing to be gained, and that is not a wise solution.

The value of the silver dollar to-day is but 56 cents, the ratio is about 28 to 1. Look at the fluctuations in silver, as shown by this table, and answer me are you safe, or do you gain anything by adopting free coinage on any of the proposed ratios?

Highest, lowest, and average price of silver bullion, and value of a fine ounce, bullion value of a United States silver dollar, and commercial ratio of silver to gold by fiscal years, 1874 to 1893.

Fiscal years.	Highest.	Lowest.	Average London price per ounce standard, .925.	Equivalent value of fine ounce with exchange at par, $4.8665.	Equivalent value of fine ounce based on average price of exchange.	Bullion value of United States silver dollar at average price of silver, exchange at par.	Commercial ratio of silver to gold.
	Pence.	*Pence.*	*Pence.*

TREASURY DEPARTMENT,
Bureau of the Mint, August 1, 1893.

As to the Bland-Allison act, that will not secure my vote, because if we are going to have a change I want it to be a radical one. I say to you this afternoon that my conviction is that the time is near at hand when there must be a radical revision of our whole financial system. The conditions will force it upon us, and let none of us have pets or hobbies. If in this debate I see good reason to change my mind I will be swift to do it. I am willing to let go any views of mine if I think they are injuring my people.

When it comes, Mr. Speaker, to the Wilson proposition to repeal the purchasing clause of the Sherman act I shall vote for that; but I will vote for it not with any enthusiasm. I shall not take it down as an agreeable draught. It only skims along the edge of the question and does not enter deeply into it. It will doubtless help to stop the outflow of gold, and, above all things, it will, I believe, tend to restore in some degree confidence amongst the people. It may sometimes be wise to give the patient an opiate to stop the pain, with its terrible effects on the constitution, in order to give the physician time to cure the disease.

I am willing to have this little opiate administered. It may be a good thing to put the patient through that course in order to treat the disease in a comprehensive remedying manner. But that time, I fear, will not come until this nation feels that the great mountain of industry that has been reared in thirty years shall stand untouched, that no fragment of it shall be battered down; and that I fear, Mr. Speaker, can not be done until this nation apprehends its necessities and selects its servants here and elsewhere who will execute its honest mandates and guard its sacred interests.

These propositions, gentlemen, that are before us can not be touched by any amendment known to parliamentary law. Remark the closing sentence of this order:

> If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill *without other intervening motions*.

With your 102 majority you have bound and gagged us to only vote on these propositions that I have named. [Applause on the Republican side.]

You say, "Make no partisan speech in this debate." What is partisanship? The contending forces of Democracy on this subject in the House, plus, I presume, their plus quantity, the Populist party, which always stands by them, directly or indirectly, have met together and formulated these propositions to be submitted to the House of Representatives. The Republican side were not thus addressed: "Gentlemen, here is a crisis in our country, one which demands that we all act together as one, forgetting everything but the duty in front of us, not waiting to discuss who is responsible for this law or that law, but taking the law on the statute books of our country as it is. Come in and see if we can not find some remedy." No such suggestions came to the Republican side, but in the star chamber of the combination they formulated these propositions, and we are left to vote for them as we think best. For my own part, sir, no vote of any Republican on this proposition will surprise me. Each man can vote according to his convictions and justify himself very easily before his people.

I have given you the plan that I intend to pursue. My people want me to vote for it, Republicans and Democrats alike. It may act as an opiate. It will not cure the disease. When this Congress with its long and short session has come and gone, then and not until then will this country return to its old activities. That is my prediction. If you have the patriotism and courage, gentlemen, to forget your tariff plank in the national platform; if you have the courage to tell Mr. Cleveland on his second proposition what so many of you told him on the first one, that you will do as you think best, and that you think it best to let the tariff alone, you can set the wheels going again, open the bank safes and vaults, and make the business of the country once more sing its glad songs, and in no other way can you do it. [Applause on the Republican side.]

Some men say, as did my friend from Nebraska [Mr. BRYAN], "What! are you going to let England dictate the money policy of this country?" And I was delighted to see with what eloquence and power and vigor they denounce English tyranny over this country. Why do not these gentlemen stop when they invite England to come in here and take the bread out of the mouths of the laboring millions of their own countrymen. [Applause on the Republican side.]

Even my eloquent friend from Nebraska [Mr. BRYAN], while spreading flowers of oratory like a heavenly carpet before us, stopped long enough to slap in the face the manufacturing interests of his own country, giving it as a peroration to Brother Folsom, who belongs to the President's family, and who, in his recent speech in Sheffield said: "You are to be congratulated because, for the first time in thirty years, the Democratic party holds complete control of this country," and then he read the Democratic tariff plank and congratulated them because they were to enjoy the markets of the United States. [Derisive laughter on the Republican side.] Uncle Benny and Uncle Bryan and Uncle Grover are all in the same bed. [Applause on the Republican side.]

The following is the full and complete text of the speech of the United States consul to Sheffield, Mr. Benjamin Folsom, a cousin of the Democratic President, Grover Cleveland, as delivered in the Cutler's Hall, Sheffield, England, on the 4th of July,

1893, and reported in the Sheffield and Rotherham Independent of Wednesday, July 5, 1893:

The chairman, Mr. Benjamin Folsom, United States consul to Sheffield, who was loudly cheered, said: "I ask you to fill your glasses for the first toast I have to give you. I ask you to drink to the Queen and the President [applause]—she, the best beloved of Queens; he, the most honest and upright of Presidents." [Applause.]

The toast was enthusiastically honored.

The chairman, again rising, said: "Mr. Mayor, Mr. Master Cutler, and friends, it is customary in my country on this day to inflict an oration upon as many innocent and unoffending people as the orator can get within the sound of his voice. [Laughter.] It is not my intention to bore you with an oration to-day, but I wish to tell you why you are here. ["Hear!" "Hear!"] and laughter.] It is because you are big-hearted, loyal, thorough Englishmen. It is because you love and admire courage and valor whenever and wherever they may be shown. ["Hear!" "Hear!"]

On the 4th day of July, 1776, there was signed by the American representatives gathered together in Congress one of the most remarkable documents that has ever had existence. For more than two years these loyal, faithful British subjects had been beseeching their king to grant them such privileges as to-day would not have to be asked for. ["Hear!" "Hear!"] At length it became necessary that these English subjects should assume the control and responsibility of their own affairs. They signed the Declaration of Independence upon the 4th of July, 1776, and it was followed by seven years of weary, wasting war.

That war would scarcely be considered to-day as more than a skirmish or guerilla fighting, for at that time the population of the thirteen colonies amounted to only a few over three million souls. The fighting force that was placed in the field to contend against the mother country was not so great as the men who were killed on the field of battle in the struggle which took place in the years that followed. To-day we can all look back upon the conflict, and we can all see that it terminated for the best interests of the world. [Applause.] The spirit of enterprise which was given to the United States by this new birth would not have been there had they been separate and dependent colonies.

I need not linger upon the subject. There are many things I should like to say. There are two or three practical things I can say to you which are of more importance than any résumé of our history. England's greatest customer has been the United States; and, in spite of tariffs that have been raised against foreign countries, there is, and must continue to be, a great and gigantic trade flowing from England to America. ["Hear!" "Hear!"] You have passed the worst period; you have crossed the highest barrier that can be raised between the United States and England in the way of trade obstruction. [Applause.]

I will tell you why this is. For the first time since the year 1860 the Democratic party, which has been the party of free trade, is for the first time in power, not only in the executive, but in both its legislative branches. [Applause.] During the former term of Mr. Cleveland he was blocked by the Senate standing between him and the House of Representatives, which was Democratic, and therefore no bill could be passed which was not in the shape of a compromise. When the struggle came on for the Presidential election last year the Democratic party, for the first time in its history, took fair and square ground, and made a straight out-and-out issue between protection and tariff for revenue only. ["Hear!" "Hear!"] If you will pardon me, I will read to you the two slight planks in the Democratic platform upon which the President of the United States was elected, and upon which the Congress which is now in power, and which is to be convened upon the 7th of next month, was elected; and you will see that so soon as the financial question is disposed of, which is merely a preliminary, and must be disposed of before the regular meeting of Congress, the next great question is the tariff in which you are interested, and which the President and both Houses of Congress are pledged to reduce. [Applause.]

The Democratic platform set forth upon which Mr. Cleveland was elected, says: "We denounce Republican protection as a fraud; a robber of the great majority of the American people for a few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered. We denounce the McKinley tariff law, enacted by the Fifty-first Congress, as the culminating atrocity of class legislation; and we indorse the efforts made by the Democrats of the present Congress to modify its most oppressive features in the direction of free raw materials and the cheaper manufactured goods that enter into general consumption; and we promise its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party."

Since the McKinley tariff went into operation there have been ten reductions of the wages of laboring men to one increase. We deny that there has been any increase of prosperity to the country since the tariff went into operation, and we point to the dullness and distress, the wage reductions and strikes in the iron trade, as the best possible evidence that no such prosperity has resulted from the McKinley tariff. I am not saying one word as to whether protection or free trade, or a tariff for revenue only is the best thing for the United States or not. I am simply giving you the facts, and you can judge for yourselves. [Applause.] In closing my career in Sheffield as consul of the United States, it affords me satisfaction to think that before another twelve months has rolled by Sheffield will not be subjected to the onerous and oppressive tariff duties that have restricted her trade. [Applause.] I further want to thank you each one individually for coming here to-day, for showing your broad-mindedness, for showing your liberality, for showing your friendship, not only to me, but to my country. [Applause.]

I agree with my friend from Nebraska [Mr. BRYAN] when he says that it is not a question of the miner. It is a question of what money is best for this country. But I sympathize with him when he says that if in the solution of the question the men in the mountains are to get relief, he will be glad. In that I am with him. I would not for one moment have my voice reach any ear or any heart, to make any man think I have any unkindly feeling toward the men in the mines.

These superb men in the mountains are brothers of all the men in the valleys. I have had letters and appeals from men near and dear to me, now living in the mountains, saying that starvation confronts the miners there. These words fill me with sorrow, and these men appeal to me to know how I would like to have the market taken away from the pork-raiser or the corn-raiser or the raisers of the other products of my State. They do not seem to comprehend the fact, which my friend from Nebraska does comprehend, that an additional and a different law touches the material that enters into the composition of money than the law which governs the products that are simply raised for consumption between man and man. This monetary question must be lifted above the mere question of a commodity, and this I urge upon the attention of my friends who appeal to me in that behalf.

Several times during this debate I have noticed that a portion of the Democratic party—indeed, most of them—find great pleasure in the fact that the Sherman bill was passed by a Republican Congress; and when that announcement was made on their side loud applause followed, as though we had in the Fifty-first Congress committed a great crime. And yet, gentlemen—and I now address the free-coinage members of this House—I predict that if you do not get your free-coinage propositions every one of you will vote to retain the Sherman law upon the statute books and will vote against the pending bill introduced by the gentleman from West Virginia [Mr. WILSON].

But let us see what you wanted to do when the Sherman bill was enacted. I say that the Democracy of this country at that time were for free coinage, and if the Sherman law should be condemned, or those who passed it should be condemned, what should be said of the Democratic party in Congress who asked to go far beyond the Sherman law and enact free coinage?

Let us look at the RECORD. On June 5, 1890, Mr. BLAND moved to recommit the bill H. R. 5381, the Windom bill as amended, to the Committee on Coinage, Weights, and Measures, with instructions to "report back a bill for the free coinage of silver." The vote stood, yeas 116, nays 140, not voting 71. Democrats for, 102; Democrats against, 13; Democratic majority for free coinage, 89. Republicans for, 14; Republicans against, 127; Republican majority against free coinage, 113.

In the Senate June 11, 1890, the House bill 5381 was reported back from the Committee on Finance by Senator MORRILL. Senator Plumb moved free coinage as an amendment. His amendment was agreed to by the following vote: Yeas 43, nays 24. Democrats for, 30; Democrats against, 3; Democratic majority for free coinage, 27. Republicans for, 13; Republicans against, 21; Republican majority against free coinage, 8.

On June 25, 1890, in the House of Representatives, the motion to agree to the Senate free-coinage amendment was rejected by the following vote: Yeas 135, nays 152. Democrats for, 114; Democrats against, 22; Democratic majority for free coinage, 92. Republicans for, 21; Republicans against, 130; Republican majority against free coinage, 109.

In 1892, in the Senate, the Democratic vote for free coinage was 30; against it, 10; Democratic majority for free coinage, 20. Republicans for free coinage, 14; against free coinage, 31; Republican majority against free coinage, 17. In the House: Democrats for free coinage, 130; against free coinage, 81; Democratic majority for free coinage, 49. Republicans for free coinage, 12; against free coinage, 67; Republican majority against free coinage, 56.

DEMOCRATIC POSITION ON FREE COINAGE BY STATES, 1890.

The following States in their platforms declared for the free coinage of silver in 1890: California, Illinois, Indiana, Iowa, Kansas, West Virginia, Michigan, Missouri, Nebraska, North Carolina, Ohio, Oregon, South Carolina, Tennessee, Texas, North Dakota. In the following States the Democratic conventions were silent on the question in 1890: Connecticut, Delaware, Georgia, Maine, Massachusetts, Wisconsin, Minnesota, New Hampshire, Pennsylvania, and Vermont.

With the foregoing facts before us it is apparent that the Democratic party in 1890 was for free coinage, and certainly so in the House and Senate. The Sherman law represented a compromise between the conservative and the extreme elements in the Republican party. The President truly says in his message that it was a compromise by the contending forces over free coinage.

But, Mr. Speaker, I have gone far beyond my purpose when I addressed the House. I only wish to say in conclusion that I want this question dealt with honestly on all sides, without partisanship so far as possible. The only partisanship is in the way we are forced to come up and meet this question, the bars being closed against any Republican having the opportunity to offer any amendment to the pending proposition. That is partisanship stripped of patriotism, and the triumph of gag law without a czar. [Applause on the Republican side.]

I am here and now eager and willing to join with my fellow Representatives in the adoption of any legislation that will touch the root of the disease, and am willing even to administer an opiate. But I want to say this, that no one shall mislead me, the Representative of an agricultural State, by trying to make me believe that the farmers of my State and the laborers of my State are interested in cheap money.

If I know anything about my duty, it is to keep a good, relia-

ble money for the farmers and the laboring men. [Applause on the Republican side.] Strike it down until it becomes worthless, and the worthless money will not turn up in the hands of the bankers and trust companies, but among the simple-minded people, who trust their Government to protect them in their coin and currency. [Applause on the Republican side.] For that people I appeal. Lay aside partisanship, and let us join together as patriots, so far as we can, to meet the trouble that now confronts us. [Applause.]

Mr. MOSES. Mr. Speaker, when the gentleman who has just concluded began his speech by saying that no one who had hitherto spoken knew anything about the question under discussion, we all thought that when he got through we would know something about it, and I want you to-morrow morning to read the RECORD and see how much clearer it is than it was before he threw his great light upon it. He says the reason why gold is coming from Europe is because we are selling our securities there; that the European bankers know a good thing when they see it, and they are buying American securities because they are cheap. A New York banker [Mr. HENDRIX], in his speech upon this floor a few days ago, said that the English holders of American securities are throwing them upon the market through fear that we were going to a silver standard. Surely if Europe were now buying our securities the New York bankers would know it. The truth is, they are mad because Europe will not take these watered stocks.

Mr. Speaker, both the great parties in formulating the silver plank of their platforms state that they favor bimetallism because it is conducive to the interests of the "farmers and workingmen."

Section 7 of the Democratic platform is as follows:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar, at all times, in the markets and in the payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

You notice it says:

We insist upon this policy as especially necessary for the protection of the farming and laboring classes.

Why do not you now—

insist upon this policy as especially necessary for the protection of the farmers?

I say to you as a practical farmer myself, and representing an agricultural constituency, that we accepted the platform in good faith, and we expect it to be carried out to the letter.

You said you would insist upon it in the interest of the farmer. And our Republican brethren say:

The American people from tradition and interest favor bimetallism. * * * The interest of the producers of the country, its farmers and workingmen, demand this.

All parties were especially anxious before the election to do something for the farmers. Many doctors have volunteered their services to this sick man in our body politic. On yesterday the gentleman from Ohio [Mr. GROSVENOR] told us the reason why we were not in a prosperous condition was because we had repudiated high tariff. We were poor because we had refused to support the tariff barons of the country any longer.

In olden times the first thing the doctor did when he came to see a sick man was to bleed him, and if the patient turned off one doctor and sent for another he would be bled again; and it often happened that the poor patient was bled to death.

Now, these Republican doctors have been bleeding us for thirty years. We got up and kicked them out and engaged the services of the Democratic party because we favored the treatment they proposed. They now say that treatment would be fatal. Democrats from New York now say to us, "The tariff robber has been bleeding you all these years, and now let us bleed you on the other side."

You promised to secure us from the clutches of the plunderers of the people, and now some of you propose to add 40 per cent to their burdens. Leaving their hands in one of our pockets, you run yours into the other. New York sends one of her bank presidents here [Mr. HENDRIX] to act as the guardian of the farmer! May God pity the ward!

Mr. Speaker, I am not here to say that any man has violated his oath of office, as the last gentleman who spoke said of the President of the United States. I do not propose to say that any gentleman upon this floor has not the same right to his opinions that I have. I concede that every member of this House represents an equal constituency; and I impugn the motives of no man; but we come to you with our contract, we come to you with our agreement made at Chicago, and shall ask you to stand by it.

Some of you propose to repeal the Sherman law of 1890 and go home. Where would that leave us? Just as we stood after the enactment of the Sherman law of 1873. After denouncing that crime for twenty years you now propose to repeat it. In other words, we must, in order to save the country, go back to where the Republican party left us before we had secured either House in Congress. No one can deny that to simply repeal the Sherman act of 1890 would bring us where we were left in 1873.

What could we tell our friends at home? You have during all these years denounced the demonetization of silver as a "cowardly crime," and now you condone that crime. After denouncing the Sherman act as a "cowardly makeshift," you promised the people to "hold to the use of both gold and silver and to the coinage of both metals." You now say it would be dishonest to redeem that pledge.

No wonder my friend from Ohio [Mr. GROSVENOR] was emboldened to claim that the Republican party was the "honest party," when we stigmatize the policy for which we have always contended as dishonest. You abandon your own principles to adopt those of this "honest" party, which in 1869 raised the debts of the American people 35 per cent at the dictation of the bondholders! A party that has stolen everything, from the Presidency down to the dollar which the poor negro intrusted to its keeping. A party that has legalized robbery until a long-suffering and outraged people hurled it from power.

Mr. WILSON of Washington. Can I interrupt the gentleman to ask him a question?

Mr. MOSES. I am trying to make a plain statement of the case as I see it, and do not wish to be interrupted.

Mr. WILSON of Washington. The gentleman has spoken about the Sherman law of 1873. I know there is a so-called law of 1890, but he speaks of the Sherman law of 1873. Can he tell the House how the Senator from Ohio voted upon that law?

Mr. MOSES. I refer to the law demonetizing silver in 1873.

Mr. WILSON of Washington. How did the Senator from Ohio vote on that bill?

Mr. MOSES. I do not know how he voted.

Mr. WILSON of Washington. Well, he voted against it, and Senator STEWART of Nevada voted for it.

Mr. MOSES. How he voted has nothing to do with my argument.

Mr. WILSON of Washington. Then you should not denounce him as having voted for it when, in fact, he voted against it.

Mr. MOSES. I have not referred to Senator SHERMAN. But Mr. SHERMAN is in favor of the demonetization of silver.

Mr. WILSON of Washington. But you spoke of the demonetization law of 1873 as "the Sherman law," while the record shows that Senator SHERMAN voted against it.

Mr. MOSES. That has nothing to do with the argument I was making, that the policy now is, by repealing the law of 1890, to carry us back to just where the country stood after the passage of the act of 1873. Do you deny that proposition?

Mr. WILSON of Washington. We would be upon the same standard as since 1834.

Mr. MOSES. I mean as to bimetallism.

Mr. WILSON of Washington. Oh, we are all bimetallists except the free-coinage silver men, who are monometallists—all for silver.

Mr. GROSVENOR. If we repeal the Sherman act it will not revive the Bland-Allison act, under which we lived from 1878. We shall be simply without a law on the subject.

Mr. MOSES. Of course it would not revive the Bland act. It would strike down all Democratic legislation on the silver question.

Mr. Speaker, the Republican party began its career under Gen. Grant in 1869. Congress was convened on March 4 in extraordinary session. New York and London had lost confidence in us, as now. The people then owed billions, a great part of which was payable, according to the contract, in "lawful money." It then took $135 of greenbacks to buy $100 in specie. They demanded that the Government should pay its greenback debt in coin. They rushed this infamous measure through in fourteen days—the same number allotted for the bill now under consideration. Thank God, not one Democrat voted for it in either House. It cost us billions to restore Wall street's confidence.

A MEMBER. They were all for repudiation, were they?

Mr. MOSES. For twenty years you have been raising the standard of values in this country, and when the people cry for relief you add 40 per cent to their burdens by striking down one-half the money of the country. The party that does it will be ground into atoms under the feet of an outraged people. The

way to pay an honest dollar is to pay the same dollar borrowed—not one that has been appreciated or debased. We should see to it that justice is done as between citizens of our own country. Say that a young man borrowed money to buy a farm in 1873. He gave his note, payable in six years. He bought the farm in 1873 with greenbacks, borrowed when gold was at $1.25. Congress passed the resumption act, which made all debts coin debts, and declared that when he pays that debt he shall pay 25 per cent premium, in addition to interest.

Mr. WILSON of Washington. Is the gentleman in favor of silver or of greenbacks?

Mr. MOSES. I am in favor of a gold and silver standard, the constitutional money of the country, and a paper currency convertible into either. Then I would expand this currency until we had at least $50 per capita in actual circulation. I would resume the coinage of silver at a ratio of 16 to 1. If then, when both metals are treated alike, silver should remain at a discount, I would increase the weight of the silver dollar.

Mr. WILSON of Washington. I wanted to ask the gentleman, because I am much interested in his remarks——

Mr. MOSES. Here is what I said: I said that our people in your State and mine in 1870, 1871, 1872, and 1873 contracted debts, greenback debts; we bought farms on long credit; we paid high rates of interest; we borrowed greenbacks when it took $125 in greenbacks to pay $100 in specie. When pay day came you had juggled with the currency of the country. You took 25 per cent from the debtor and gave it to the creditor.

Mr. HEPBURN. You paid it in greenbacks, did you not?

Mr. MOSES. I did not hear the gentleman's question.

Mr. WILSON of Washington. I am nearer and will repeat the remark. The question is whether you did not pay the indebtedness in greenbacks, because by Republican legislation adopted in 1879 every greenback was worth 100 cents on the dollar.

Mr. MOSES (addressing Mr. WILSON of Washington). Now, let me ask you a question. Did they not by legislation turn the greenbacks into gold——

Mr. WILSON of Washington. The gentleman will permit me——

Mr. MOSES. Please answer my question now. Did they not turn the greenbacks into gold by the resumption act? Answer "yes" or "no."

Mr. WILSON of Washington. Well, I can not be catechised in that manner. The gentleman, if he asks me a question, must permit me to explain myself in my own way. In 1879 the Republican party, by its legislation, placed $100,000,000 in gold in the Treasury of the United States to make the $346,000,000 of greenbacks worth 100 cents on the dollar. That was all there was of it. But since that time we have gone on increasing the amount of Government notes from $346,000,000 to $830,000,000; without having the $100,000,000 of gold that we originally started with. That is the trouble.

Mr. MOSES. Every member of this House knows the truth of my assertion that we have been going from a cheap dollar to a high-priced dollar—an always appreciating dollar. No one denies it; and you know that when you make the greenback debt a gold debt you added 35 per cent to the debts of the people.

Mr. VAN VOORHIS of New York. In what year was that done?

Mr. MOSES. I refer to the "credit-strengthening" act of 1869, the resumption act, the stoppage of free coinage of silver, and the contraction of the currency.

Mr. HEPBURN. I would like to ask the gentleman whether the greenback is any better now than it ought to be.

Mr. MOSES. Let the greenback be redeemable in gold or silver, and it is no better and no worse than it ought to be. The trouble about our money is there is not enough of it. The silver dollar is to-day selling at a premium in New York. Yet you would destroy it, and the gentleman who spoke last seemed impatient for the sacrifice. No doubt his conscience was like that of Macbeth, who when another historic crime was contemplated, said:

> If it were done when 'tis done, then 'twere well
> It were done quickly.

But, let me say to you, that when this crime is consummated by this "honest" party, joined by a minority of the party that has always stood by the people, outraged and evenhanded justice will sooner or later commend the poisoned chalice to your own lips.

But, Mr. Speaker, I do not wish to be diverted. I was seeking to show that for twenty years we have been gradually raising the standard of values to the injury of the debtor class. You said you must have gold and silver. We yielded. We borrowed your silver and when we return it in payment you are not satisfied, but you cry in your greed, "Give us nothing but gold," making all debts gold debts and creating an enormous demand for gold which you know will cause an appreciated dollar. This is a fight between the debtor and the creditor class. The people are not asking you to debase the currency, but they appeal to you not to increase their burdens by making the dollar still dearer.

For years the Democratic party has been voting for the free coinage of silver, and we pledged our faith to insist upon it if elected to power.

Mr. GROSVENOR. Will you allow me a question?

Mr. MOSES. Well, if it is on this line.

Mr. GROSVENOR. On that line exactly.

Mr. MOSES. Very well.

Mr. GROSVENOR. Did the gentleman from Georgia read a letter that the President of the United States, prior to his inauguration, in February, 1885, addressed to Gen. A. J. WARNER, a member of this House, on the subject of silver?

Mr. MOSES. I did.

Mr. GROSVENOR. Did you read also the message of the President, after his inauguration in 1885, recommending the repeal of the silver-purchasing act—the coinage act?

Mr. MOSES. I did.

Mr. GROSVENOR. Did you vote for him for President last fall?

Mr. MOSES. I did.

Mr. MONEY. Voted for him on the platform adopted last year?

Mr. MOSES. Certainly. I voted for him because he accepted the Democratic nomination, and in his letter of acceptance he said "both gold and silver can be safely utilized upon equal terms in the adjustment of our currency." The duty devolves upon us to redeem our pledges to the people. Democrats from New York wrote to Southern men, myself among the number, and urged us to go into the disaffected regions of the South; and we pledged these people to give them free coinage, according to the promise of the party for a hundred years, and especially for the last year.

Mr. GROSVENOR. Who wrote those letters?

Mr. MOSES. The managers of the Democratic party campaign.

Mr. GROSVENOR. On this floor?

Mr. MOSES. We carried the country upon the strength of these promises. If you now repudiate the pledges upon which you received the indorsement of the people, then I charge that you have received goods under false pretenses. [Laughter and applause.]

A MEMBER. You ought to give them back.

Mr. MOSES. The Republicans can receive no encouragement from that statement. You have been already condemned and your doom is fixed. This question rises above all parties. It involves the eternal principles of right—that no government has the right to rob one citizen to enrich another.

Mr. GROSVENOR. Let me ask the gentleman——

Mr. MOSES. And you are not in it, my friends. [Laughter.]

Mr. GROSVENOR. Suppose we are not in it——

Mr. MOSES. Indeed, I had almost forgotten you, until the gentleman from Ohio rose in his place here yesterday like the Rip Van Winkle of a past era. [Laughter.] They do not yet realize that they are dead. They remind me of the old negro's terrapin down in Georgia. After cutting its head off the terrapin kept crawling around, and the old man remarked, "That fool terrapin don't know he is dead yet. He keeps crawling around." [Laughter and applause.] My friend from Ohio got up here after a prolonged absence to tell us of benefits of high tariff. You and your high tariff are dead, and still you do not know it. You are crawling around so. [Laughter.]

Mr. Speaker, I have not despaired of the Democratic party because of apparent divisions here. We have had divisions before. We were divided upon the tariff. Our tariff reform measures were defeated by a minority of our own party. We have elected others to fill their places, and we have come to Congress finally with a large majority in favor of tariff reform—a united party. I do not believe the Democratic Administration will begin its career as the Republicans did, by striking down the money of the people. We may differ as to the best method to attain bimetallism, but I believe that the ultimate result will be the redemption of our pledges to the people.

Mr. Speaker, the Democratic members from the South and the West who are now denounced as advocates of dishonest money devoted all their energies last year in fighting the men who were advocating the unlimited issue of irredeemable paper currency. We opposed a party. They do not want gold or silver. They would give us rag money and a 50-cent dollar. We contended for the honest dollar, for the dollar of the fathers. Now, when we come here we find men on the other extreme, contending for a dollar worth 150 cents. [Laughter.] The Populists are opposed to both metals. They make no secret of the fact that they desire a currency not redeemable in either metal. They will vote for 16 to 1, and yet they do not want that law enacted.

They do not want silver, they do not want gold, and their idea is to demonetize silver, because they know it will eventually demonetize gold and will put the country upon what they call a basis of "scientific currency."

I warn you, gold men of New York, that you are overreaching yourselves. When you abandon the policy which the party has always adhered to, and go for a sole gold standard, I warn you that if we go down you will not ultimately succeed, but that the rag-money crowd will control Congress. The people are satisfied with the money we have. If you do not want unlimited fiat money stand by the great conservative element of the party. [Laughter on the Republican side.] I will make another prediction. The Republican party has always stood by combines and trusts and monopolies, and to-day it stands by the gold-standard men; and if you were to take away the conservative element represented by the bimetallists of the country and leave the battle to these two parties—the one representing European ideas and plutocracy, the other the socialistic, discontented element of the country—the battle would be sharp and decisive, and the Republic would go down in a drama of blood, just as the Government of France went out in the last decade of the last century.

But, as my young friend from Nebraska [Mr. BRYAN] said, "Thank God, Jefferson still lives," and the Democratic party, that for a hundred years has been the guardian of the people's interests and of constitutional liberty, will see to it that the people shall rule and the country be saved.

Mr. WILSON of Washington. Did I understand the gentleman to say that Jefferson still lives? If so, he must be a fine old man. [Laughter.]

Mr. MOSES. We know you thought both he and his principles were dead.

Mr. WILSON of Washington. I thought he was dead, but may be he is like that terrapin of yours, still moving around. [Laughter.]

Mr. MOSES. Mr. Speaker, I do not wish to have my time taken up by frivolous questions not asked in good faith, because this question is one of supreme importance to our people. It is no time for jesting. We are debating the question now whether we can ever pay our debts with 6-cent cotton and 30-cent wheat; and God knows if you add to the debts by raising the value of the dollar, we see no hope for our people either in the South or in the West.

Mr. Speaker, I desire to notice briefly the speech of the gentleman from New York [Mr. HENDRIX]. He repeats the solemn assertion that something should be done, in order that the people may be spared from the evils of an unstable and fluctuating currency. I agree with him. It has been fluctuating long enough. Do not juggle with it again. We Democrats from the South join with every lover of honest money in saying that we want a stable and nonfluctuating dollar or unit of value. We oppose monometallism simply because we know that when the whole world joins in the scramble for gold, and all contracts have to be redeemed in gold, there will be such a scramble and a demand for it that, although we may still have a nominal dollar, the debts of the people will be increased. You will double the amount of wheat, cotton, and labor required to secure your dollar.

I am not willing to adjust for all time to come the business of the country upon such a basis. A gold standard dollar means 5-cent cotton and 30-cent wheat. I am opposed to raising the ratio from 16 to 20, though I may vote for it to save the country from a sole gold standard.

Mr. Speaker, we were told by the gentleman from New York that it is "stark idiocy, mockery," and "infernal rot" for Democrats to come to a Democratic Congress and ask Democratic members of the House to vote to carry out the Democratic platform.

Mr. Speaker, eight months ago, when the news flashed over the country that the American people had intrusted full power to the Democratic party, there was joy and hallujahs of praise throughout my section of the country. But now, when Congress meets, throughout that selfsame section the people are asking with bated breath whether it be true that the representatives of the people will fail to carry out the contract made with them.

They are accustomed to defeat. The Democratic party for years, decade after decade, has gone down, but we never despaired. But never did we expect to be told by a Democrat upon this floor that our platform of principles is "stark idiocy, mockery, and infernal rot."

Mr. Speaker, we may trifle with the people one time; we may deceive them once; but I assure you that he who is not faithful to his trust will hear from them in the future. We of the South have come here to redeem our pledges. I challenge our colleagues from the North to state when we have ever failed to keep faith with them. Though we may be slandered, though we may need your missionaries, I challenge any man to say that the South has not always kept faith with its contracts. We have kept faith with you, and we come here to ask you to keep faith us, and let us give to the people the legislation they demand at our hands. But if this fell legislation must be consummated, we will stand by our principles. The South will not repudiate her promises.

> We'd rather be a mourner at the funeral of right,
> Than a king in the carnival of might.

Mr. Speaker, fidelity to trust is the highest duty of a representative. Let the Democratic party do its duty according to promise, and let us strike for a bold American policy, without considering what England's wishes may be.

They are telling us now that the farmers can not sell cotton to England if we do not have a gold standard, because the balances must be paid in gold. We sold cotton to England for 20 to 30 cents a pound when we had nothing but greenbacks, and we can sell cotton and wheat to the nations of the earth, and we can exchange our products for theirs. We have always bought goods in Europe with the money they paid for our products.

We should establish a standard for America, and not wait for the monarchies of Europe to do it for us.

Mr. Speaker, they say that cheapness of transportation and new improvements have made silver cheaper. Why do not the same forces that make silver cheaper make gold cheap? It is because silver is discriminated against. When compared with the prices of the world's products and with the price paid to-day for human labor, silver is as precious as it was twenty years ago. Gold has appreciated and, therefore, all other commodities have become cheap. When silver goes up cotton and wheat go up. In 1890, as soon as you passed the Sherman law, silver went to $1.25 an ounce, and for two years we received 10½ and 11 cents for our cotton. You may tell me that there is nothing in it, when for twenty years the price of silver has represented the cotton price.

But, Mr. Speaker, we have been told that the cause of the low prices of farm products is due to overproduction. Three years ago the farmers of the South and West, seeing that the whole world were combining in different organizations, determined to come together into an organization for self-protection. They were then called "calamity howlers," and when they met in their alliances the people of the cities would say, "You ought not to go to these places, but go home and work, like the merchant, three hundred and sixty-five days in the year, and make more to sell."

Mr. Speaker, we did make more. We made 9,000,000 bales of cotton and a larger crop of wheat, and still there was no relief. They then came to us and said, "You fools, you have made too much." That is the logic. You first tell us, "You do not work enough and do not make enough," and then say to us, "You have made too much."

Mr. Speaker, it is not overproduction. Cotton and wheat will bear world-wide transportation, and there never will be too much of either food or clothing so long as the great majority of earth's inhabitants have not sufficient clothing or food to stave off the pangs of hunger. If overproduction is the evil, then we should pray a merciful God to withhold the rain in its season, and send us the blighting, withering, drought to check overprotion. No, no; the God of the harvest is not the author of our ills.

Mr. WILSON of Washington. May I ask the gentleman a question right here, seriously?

Mr. MOSES. On this question of overproduction?

Mr. WILSON of Washington. I want to ask him a question now, seriously. I come from a Western constituency. I live right in the midst of the silver-producing region. I am interested in the production of silver, and I would like to see it rise in price. Now, I want to ask the gentleman, who says that he is speaking as an American, on behalf of the American people, whether he would be willing to vote for this kind of a measure: First, call in all the one and two dollar notes and let silver go out in their place; second, coin the American product upon such a ratio as may be agreed upon; third, put a high protective tariff upon all imported silver. Would the gentleman be willing to vote for a measure like that?

Mr. MOSES. I would not shut out silver. Like Alexander Stephens, of Georgia, "I would let it come from all the world until we had one thousand millions." For a thousand years men have agreed that in exchanging commodities it would be best to have some medium of exchange. We must have something as a gauge or measure or standard to go by. In this country our fathers thought it was unwise to take one commodity as that standard; that it was unwise to make gold alone the standard. Under true bimetallism gold and silver act together, like the compensating pendulum of a clock, and the average can neither rise nor fall.

Mr. WILSON of Washington. Did not Thomas Jefferson suspend the coinage of silver?

Mr. MOSES. As I have said, our fathers thought it unwise to take one metal as the standard, because one metal was more liable to fluctuate in value than the average of two. They thought it wiser to take two of the precious metals and establish a parity between them, so that when there was a scarcity of one there might be a supply of the other. Now, I think it is unwise for us to repudiate the system which has existed for a thousand years, and for more than a hundred years in our own country.

Men talk about putting a price upon silver; how can you put a price upon a thing which itself sets prices? To talk about putting a price upon silver under free coinage is to talk about measuring a measure, about measuring a yardstick. Now, I say it is our duty to our people to keep the standard of value uniform in our country, and I believe that if the American Government will say to the world that we propose to have free coinage of silver, silver will be upon a parity with gold at its coinage value the world over.

My friend from New York [Mr. HENDRIX] quoted Mr. Cernuschi, the great French financier, as a high authority to prove that free coinage by the United States alone is impracticable. I will introduce his own witness. Mr. Cernuschi said:

> France maintained for a century the ratio of 15½ to 1 in every part of the world. A monetary system based on two metals is more safe than it is when based on only a single metal. England has suffered many crises simply because she had only one metal in circulation.

He then goes on to say, Mr. Speaker:

> It is the monometallists who are the authors of the depreciation which they point to as a proof of the unworthiness of the metal they cry down. They resemble the people who, having tied the legs of a horse, call out for him to be killed because he does not gallop.

That is what Mr. Cernuschi says about the reason why silver does not keep upon a parity with gold.

Mr. Speaker, I see that my time is exhausted. I know that no man's vote will be changed one way or the other by this debate. Let us not inaugurate a Democratic Administration by repudiating our past record.

The people will see to this matter; and if you do not stand by your pledges they will send men here who will. I appeal to my colleagues to be faithful to the people; and then, with the Democratic party at the helm of state, we can go back and ask them for a continuance of power, and we shall close the last decade of this century with an era of prosperity greater than we have ever seen before, and we shall show to the struggling peoples of the world that we realize that we stand as the culmination of the hopes of past ages and will not be recreant to the trust committed to our care. [Applause.]

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. WISE, for two days, on account of important business.

To Mr. MARSHALL, for three days, on account of important business.

UNITED STATES MILITARY ACADEMY.

Mr. WHEELER of Alabama, by unanimous consent, presented the annual report of the Board of Visitors to the United States Military Academy for the year 1893; which was ordered to be printed, and laid on the table.

The SPEAKER. As it is now within two minutes of the hour fixed by the standing order for adjournment, the Chair, if there be no objection, will declare the House adjourned until to-morrow morning at 11 o'clock.

There was no objection; and accordingly (at 4 o'clock and 58 minutes) the House adjourned.

SENATE.

THURSDAY, *August 17, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D.D.

The Journal of yesterday's proceedings was read and approved.

CHANGE OF REFERENCE.

Mr. MCPHERSON. I find in the RECORD that a bill I had the honor to introduce yesterday, the bill (S. 504) for the relief of the Berdan Firearms Manufacturing Company, was read twice by its title, and referred to the Committee on Claims. By some mistake of mine it was referred to the Committee on Claims, when I desired to refer it to the Committee on Patents, that committee having inquired into this matter. I ask a change of reference of the bill from the Committee on Claims to the Committee on Patents.

The VICE-PRESIDENT. The change of reference will be made as requested by the Senator from New Jersey.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the Chamber of Commerce of Tacoma, Wash., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

Mr. TELLER presented a memorial of the Denver (Colo.) Chamber of Commerce, remonstrating against the repeal of the so-called Sherman silver law without an adequate substitute therefor; which was referred to the Committee on Finance.

He also presented a petition of citizens of Montezuma County, Colo., praying for the enactment of legislation providing for the free and unlimited coinage of silver at a ratio of 16 to 1; which was referred to the Committee on Finance.

Mr. HALE presented the petition of W. W. Thomas, president of the Canal Bank, and of representatives of seven other national and savings banks of Portland, Me., praying for the passage of Senate bill 453, allowing national banks to issue an amount of circulating notes equal to the par value of the United States bonds deposited as security therefor; which was referred to the Committee on Finance.

Mr. MITCHELL of Oregon. I present a petition signed by 19 business men and merchants of the city of Portland, Oregon, in which they pray that Congress may enact legislation as follows:

> First. That the purchasing clause of the Sherman silver act be repealed.
> Second. That no substitute of any kind whatever be enacted at this session.
> Third. That an expert commission be appointed to consider and recommend a scientific plan of currency, based on the experience of other countries, and adequate to the requirements of a great commercial nation.

All the petitioners are leading merchants and business men of the city of Portland, 19 of them; and their petition comes to me not directly from them, but under the cover of a communication from the secretary of the Chamber of Commerce of the city of New York. I move that the petition be referred to the Committee on Finance.

The motion was agreed to.

Mr. CHANDLER presented the petition of John P. Goggin, W. A. Nelson, George B. French, and 11 other citizens of Nashua, N. H., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. PERKINS presented a petition of the Board of Trade of Los Angeles, Cal., praying for the construction of the Nicaragua Canal by the Government; which was referred to the Committee on Foreign Relations.

Mr. PASCO presented a petition of the Board of Trade of Tampa, Fla., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

Mr. PEFFER presented the memorial of N. B. Coggeshall, of Eldorado, Kans., remonstrating against the unconditional repeal of the so-called Sherman silver law, and praying for the free and unlimited coinage of the silver dollar of the present weight and fineness; which was referred to the Committee on Finance.

He also presented a memorial of the Chanute Populist Club, of Kansas, remonstrating against the destruction of silver by any legislation; which was referred to the Committee on Finance.

Mr. WASHBURN presented a petition of the Board of Trade of Minneapolis, Minn., praying for the repeal of the compulsory silver-purchasing section of the so-called Sherman law, and the passage of a bill allowing national banks to issue notes to the full face value of United States bonds deposited to secure circulation; which was referred to the Committee on Finance.

Mr. FRYE presented a memorial of the Board of Managers of the National Temperance Society, remonstrating against the passage of a joint resolution providing for a six months' extension of the bonded whisky period; which was referred to the Committee on Finance.

Mr. KYLE presented two memorials of citizens of Clay County, S. Dak., remonstrating against the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. CALL. I present petitions from the boards of trade of a large number of cities in the United States, praying for the construction of a national harbor of refuge in the bight of Cape Canaveral, Florida. I move that the petitions be referred to the Committee on Commerce.

The motion was agreed to.

Mr. MARTIN presented a petition of citizens of Lyon County, Kans., praying for the repeal of the silver-purchasing clause of the so-called Sherman law, and for the passage of legislation in lieu thereof providing for the free and unlimited coinage of silver upon a basis of not less than 15 nor more than 16 to 1; which was referred to the Committee on Finance.

Mr. GORDON presented a petition of the Chamber of Commerce of Atlanta, Ga., praying for the location of a subtreasury in the city of Atlanta; which was referred to the Committee on Finance.

SILVER COINAGE IN INDIA.

Mr. GORMAN. I am instructed by the Committee on Print-

ing, to whom was referred the resolution submitted by the Senator from Connecticut [Mr. PLATT] on the 15th instant, to report it with a substitute. I ask for the present consideration of the resolution.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The substitute resolution reported by the committee will be read.

The Secretary read as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound in cloth 6,000 copies of the report of the commission appointed to inquire into the Indian currency, commonly known as the "Herschell Report on the Coinage of Silver in India," with the accompanying correspondence and testimony, of which number 2,000 shall be for the use of the Senate and 4,000 for the use of the House.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution? The Chair hears none. The question is on the amendment reported by the Committee on Printing.

The amendment was agreed to.

The resolution as amended was agreed to.

Mr. GORMAN. I ask that the report of the Committee on Printing on the resolution may be printed.

The PRESIDING OFFICER. The report will be printed under the rule.

BILLS INTRODUCED.

Mr. FRYE introduced a bill (S. 506) granting an honorable discharge to William Pierce; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Commerce:

A bill (S. 507) providing for the collection of fees for furnishing certificates of title to vessels;

A bill (S. 508) exempting American coastwise sailing vessels piloted by their licensed masters or by a United States pilot from the obligation to pay State pilots for services not rendered;

A bill (S. 509) to amend an act entitled "An act to amend section 4178, Revised Statutes, in relation to the marking of vessels' names at bow and stern, and also to provide for marking the draft," approved February 21, 1891;

A bill (S. 510) to protect the wages of seamen; and

A bill (S. 511) providing for the establishment and enforcement of rules and regulations for the use and navigation of United States canals and similar works of navigation, and for other purposes.

Mr. FRYE also introduced a bill (S. 512) to provide for a commission on the subject of the alcoholic liquor traffic; which was read twice by its title, and referred to the Committee on Education and Labor.

Mr. JONES of Arkansas introduced a bill (S. 513) granting the use of certain lands in the Hot Springs reservation, in the State of Arkansas, to the Barry Hospital; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 514) for the relief of the Eastern band of Cherokee Indians of North Carolina; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 515) to amend an act entitled "An act making appropriations for certain expenses and fulfilling treaty stipulations with Indian tribes for the fiscal year ending June 30, 1894;" which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 516) for the relief of the estate of James Scull, late of Arkansas;

A bill (S. 517) for the relief of Holliday S. Ravell;

A bill (S. 518) for the relief of the estate of J. H. Moseby, deceased;

A bill (S. 519) for the relief of the estate of Samuel J. Jones, deceased;

A bill (S. 520) for the relief of the estate of William B. Pool, late of Jefferson County, Ark.;

A bill (S. 521) for the relief of Henry M. Stone;

A bill (S. 522) for the relief of James R. Lafferry;

A bill (S. 523) for the relief of the board of trustees of the Old School Presbyterian Church of Helena, Phillips County, Ark.;

A bill (S. 524) for the relief of W. Jasper Blackburn;

A bill (S. 525) for the relief of Margaret E. Watkins; and

A bill (S. 526) making an appropriation for the benefit of the estate of William Moss, deceased.

Mr. BATE introduced a bill (S. 527) to construct a road to the national cemetery at Dover, Tenn.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 528) for the relief of A. W. Wills, administrator; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 529) for the relief of William R. Miller; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 530) for the relief of Capt. W. M. Wallace; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 531) for the relief of Howard Lodge, No. 13, Independent Order of Odd Fellows, of Gallatin, Tenn.;

A bill (S. 532) for the relief of the book agents of the Methodist Episcopal Church South;

A bill (S. 533) for the relief of J. Kropp, administrator of Christian Kropp, deceased;

A bill (S. 534) for the relief of Caleb Bryan;

A bill (S. 535) for the relief of the heirs of Samuel B. Sparkman, of Nashville, Tenn.;

A bill (S. 536) for the relief of Cummings, Doyle & Co., and Doyle & Co.;

A bill (S. 537) for the relief of the county of Davidson, Tenn.;

A bill (S. 538) for the relief of the city of Nashville, Tenn.;

A bill (S. 539) for the relief of Mrs. Clementine H. Holman;

A bill (S. 540) for the relief of the estate of Andrew J. Duncan, deceased;

A bill (S. 541) for the relief of D. W. and Minna H. Glassie and Joseph C. Nash; and

A bill (S. 542) for the relief of the trustees of Stewart College, Montgomery County, Tenn.

Mr. BATE also introduced a bill (S. 543) increasing the pension of Mrs. Rochie Brien Buell; which was read twice by its title, and referred to the Committee on Pensions.

Mr. McMILLAN introduced a bill (S. 544) to reclassify and prescribe the salaries of railway postal clerks; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 545) to provide for a more extended use of gold by the people of the United States; which was read twice by its title, and referred to the Committee on Finance.

Mr. MANDERSON introduced a bill (S. 546) to reorganize the artillery and infantry of the Army, and to increase its efficiency; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 547) providing for the public printing and binding and the distribution of public documents; which was read twice by its title, and referred to the Committee on Printing.

Mr. BLACKBURN introduced a bill (S. 548) for the relief of the estate of Pearce Noland, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. CALL introduced a bill (S. 549) for the construction of works to render the Bight of Canaveral, in the State of Florida, available for the use of the Navy; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Commerce.

Mr. TELLER introduced a bill (S. 550) explanatory of an act entitled, "An act to settle certain accounts between the United States and the State of Mississippi and other States," and for other purposes; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. FAULKNER introduced a bill (S. 551) for the relief of Marion Lance, administrator of Henry Lance, deceased, of Barbour County, W. Va.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. COCKRELL introduced a bill (S. 552) for the relief of Calvin Gunn; which was read twice by its title, and referred to the Committee on Claims.

Mr. MORRILL introduced a bill (S. 553) granting a pension to Martha R. Hitchcock; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. HAWLEY introduced a bill (S. 554) for the relief of Lydia T. Hadlock, administratrix of E. C. Hadlock, deceased, of Vermont; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 555) to remove the charge of desertion from the military record of Peter Buckley; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. LODGE introduced a bill (S. 556) for the relief of the Atlantic Works, of Boston, Mass.; which was read twice by its title, and referred to the Committee on Claims.

Mr. TURPIE introduced a bill (S. 557) for the relief of George

F. Roberts, administrator of the estate of William B. Thayer, deceased, surviving partner of Thayer Brothers, and others; which was read twice by its title, and referred to the Committee on Claims.

Mr. JONES of Arkansas introduced a bill (S. 558) to authorize the loyal Creek Indians, Indian Territory, to bring suit in the Court of Claims for damages committed upon their property; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 559) for the relief of the children and heirs-at-law of Albert Pike, deceased, and for other purposes; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 560) to pension Alexander Mackey; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 561) to provide for the improvement of the building and grounds of the United States court and post-office at Little Rock, Ark.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 562) for the relief of the estate of J. H. Moseby, deceased;

A bill (S. 563) for the relief of the board of trustees of the Old School Presbyterian Church of Helena, Phillips County, Ark.;

A bill (S. 564) for the relief of W. Jasper Blackburn;

A bill (S. 565) for the relief of the heirs of Mark W. Izard, deceased;

A bill (S. 566) for the relief of the estate of Albert L. Berry, deceased;

A bill (S. 567) authorizing and directing the Secretary of the Interior to examine certain claims of persons who owned or occupied buildings on the Hot Springs Mountain Reservation, which had been condemned by the Hot Springs Commission and afterwards burned, and to fix a reasonable value for each of said buildings from the evidence now on file in the Interior Department; and

A bill (S. 568) for the relief of William W. Burns.

Mr. LODGE introduced a bill (S. 569) for the erection of a public building at Medford, Mass.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. BATE introduced a joint resolution (S. R. 16) authorizing Musidora, Victoria, Ella, and Frank Wasson, of Tennessee, to present their claim to the Court of Claims; which was read twice by its title, and referred to the Committee on Claims.

NATIONAL BANK CIRCULATION.

Mr. KYLE. I submit a resolution which I ask may lie on the table, to be called up hereafter.

The resolution was read and ordered to lie on the table, as follows:

Whereas it is currently reported that certain of the national banking associations organized and carrying on business under and by virtue of the laws of the United States, have heretofore withdrawn from circulation their notes, and subsequently secured an increase of their circulation under existing laws: Therefore, be it

Resolved, That the Secretary of the Treasury be requested to report to the Senate what national banking associations have thus diminished and enlarged their circulation, and the extent thereof, and also whether any and what national banking associations have organized under the banking laws of the United States, and have no outstanding notes in circulation.

ERECTION OF PUBLIC BUILDINGS.

Mr. CHANDLER. I submit a resolution and ask for its present consideration, unless the Senator from Missouri [Mr. VEST], the chairman of the Committee on Public Buildings and Grounds, objects.

The resolution was read, as follows:

Resolved, That the Secretary of the Treasury be directed to inform the Senate as to the condition of the various appropriations for the erection of public buildings; stating what are the gross sums unexpended of appropriations made and of authorizations of final cost conferred by existing law; what buildings are not begun, and what preparations have been made for beginning them; and whether or not any delay in beginning is occasioned by the nonpreparation of the plans and designs, and if so, what action he is taking and what legislation, if any, he recommends in order to expedite the preparation of plans and designs.

Mr. VEST. I can see no possible objection to the resolution. I have the information as to many of the points named in it, but it will do no harm to have the information as a public document. I have not the slightest objection to its being considered now.

Mr. HALE. I suggest to the Senator from New Hampshire that precisely the information which he seeks in the resolution will be found in the annual report of the Supervising Architect, which is communicated by the Secretary of the Treasury. If the Senator desires the information now on this subject, instead of waiting for that report, of course his resolution would be opportune; but if it is only a general question of information, all of it is to be found in the Supervising Architect's report, which I suppose will come in in November.

Mr. CHANDLER. What the Senator from Maine says is quite true, that this information, with a great deal more, will be found in the report of the Supervising Architect of the Treasury, which will be communicated by the Secretary of the Treasury with his regular report on the first Monday in December. The resolution simply calls for a statement in concise form of the unexpended balances and a statement also of what buildings have not been commenced, with a suggestion as to whether there has been delay in commencing them on account of the nonpreparation of plans. It will not be a long statement, nor one which it will be injudicious to ask the Supervising Architect to prepare before the first Monday in December. If the Senator from Missouri has the information now in such shape that he can present it to the Senate and it can be printed, of course I do not desire to press the resolution, but I do desire to have before Congress the exact information called for by the resolution and as much more as can be furnished at this extraordinary session of Congress.

Mr. MITCHELL of Oregon. Will the resolution, if adopted, elicit information as to whether the plans for the new buildings are being prepared in the Architect's office or whether they are being prepared under calls for bids?

Mr. CHANDLER. The resolution asks for a statement of what preparation is being made.

Mr. MITCHELL of Oregon. I think the resolution ought to be adopted.

Mr. CHANDLER. I think it calls for all the information the Senator would want.

Mr. MITCHELL of Oregon. It is very desirable that we should have this information before the regular report comes in.

Mr. CHANDLER. I think I will ask for the present consideration of the resolution.

The VICE-PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. GORMAN. I ask the Senator from New Hampshire to let the resolution go over until to-morrow morning.

The VICE-PRESIDENT. The resolution goes over under the rule.

PENSION INVESTIGATION.

Mr. GALLINGER. I submit a resolution to which I feel sure there will be no objection, and for which I ask immediate consideration.

The resolution was read, as follows:

Resolved, That the Committee on Pensions be directed to inquire and report to the Senate whether or not the Secretary of the Interior and the Commissioner of Pensions have conformed to the provisions of existing law in suspending and dropping names from the pension rolls of soldiers duly enrolled thereon.

The VICE-PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. HARRIS. Let the resolution go over and be printed.

The VICE-PRESIDENT. The resolution will go over under the rule, and be printed.

PAYMENTS TO CHICKASAWS AND CHOCTAWS.

Mr. PLATT. Yesterday I submitted a resolution calling for information, which was objected to for the time being by the Senator from Arkansas [Mr. JONES]. I understand from him that he has no further objection to the resolution, and I ask that it be laid before the Senate and agreed to.

The resolution submitted yesterday by Mr. PLATT was read, and agreed to, as follows:

Resolved, That the Secretary of the Treasury be directed to transmit to the Senate a statement showing the amounts paid out under the appropriation of March 3, 1891, for the benefit of the Chickasaw and Choctaw nations of Indians, giving copies of the warrants for the payment, copies of the drafts drawn, and of the records of the deposits made in pursuance of said warrants with the Treasurer of the United States or any assistant treasurer, and, in addition, in case the sums paid remained either as gross sums or in subdivisions in the hand of said Treasurer or any assistant treasurer or any depository of the United States, and were subsequently drawn by checks, or drafts, or orders issued by the Chickasaw or Choctaw nations, or the treasurers or any agents thereof; also giving copies of said checks, drafts, or orders, and, further, giving all other information within the possession of the Treasury Department, showing what persons, either immediately or ultimately, received said amounts paid out or any portion thereof.

INCREASE OF NATIONAL BANK CIRCULATION.

Mr. GORMAN. I offer an amendment intended to be proposed to the bill (S. 453) to provide for the issue of circulating notes to national banks, which was reported by the chairman of the Committee on Finance. I ask to have the proposed amendment read and printed.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The amendment will be read.

The Secretary read as follows:

At end of line 13 add:

Provided further, That hereafter any national banking association, now organized or hereafter organized, desiring to withdraw any part of its circulating notes, shall, in writing, at least sixty days before the time of the proposed withdrawal, make application to the Comptroller of the Currency for permission to withdraw the same, stating in such application the amount of notes which it desires to withdraw, and no such withdrawal shall be made unless such application is approved, in whole or in part, by the Secretary of the Treasury: *Provided, however*, That permission shall not be granted for the withdrawal of more than $3,000,000 of the circulating notes of national banking associations within any one calendar month, nor shall any more than said amount of such notes be actually withdrawn within any one calendar month.

Mr. McPHERSON. I should like to ask the Senator from Maryland, as I was not paying close attention at the time, whether the matter he has had read at the desk is in reality an independent measure limiting the withdrawal of circulation, or whether it is offered as an amendment to the bill now pending?

Mr. GORMAN. It is offered as an amendment to the bill reported by the Committee on Finance.

The PRESIDING OFFICER. The proposed amendment will be ordered to be printed, in the absence of objection.

SENATOR FROM MONTANA.

Mr. HOAR. If the routine morning business is over, I call for the consideration of the case of Lee Mantle.

The VICE-PRESIDENT. The Chair lays before the Senate the resolution referred to by the Senator from Massachusetts.

The Senate resumed the consideration of the resolution reported by Mr. HOAR from the Committee on Privileges and Elections, March 27, 1893; which was read, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as Senator from the State of Montana.

Mr. PASCO. Mr. President, at the commencement of the present Congress, on the 4th of March last, it was found that the States of Montana, Wyoming, and Washington had failed to elect successors to their Senators whose terms had just expired. In Montana and Wyoming the Legislatures had met in January, according to the requirements of their organic laws, entered upon the work of the election, balloted fruitlessly from day to day, and when the term of each ended by constitutional limitation no choice had been made. The final adjournment occurred in these States before the ending of the terms of the former Senators, Sanders and Warren.

In the case of Washington the Legislature assembled later in January, and was still in session on the 4th of March; the balloting was then proceeding and continued after the Senate assembled in extra session, and the final adjournment occurred about the 9th of March, after the actual commencement of the new Senatorial term. The governors of these States attempted to make temporary appointments of successors to the Senators whose terms had expired, and the credentials of the appointees as they were presented and received were referred to the Committee on Privileges and Elections, and the majority of this committee have reached the conclusion that these appointments are regular and valid, and their reports are accompanied by resolutions for the admission to membership in this body of those claiming seats under the governors' certificates.

The reports of this majority in the Montana and Wyoming cases present the following proposition: the Constitution authorizes the governor of a State to appoint a Senator, to enter upon a full term at its commencement, after the Legislature charged with the duty of electing a Senator for such term has regularly met, attempted the performance of such duty and reached no result, and the session of such Legislature has subsequently been ended by a final adjournment before the commencement of the new Senatorial term.

The report of this majority in the Washington case presents this further proposition:

The Constitution authorizes such appointment under like circumstances even when the new Senatorial term commenced, not during a recess, but while such Legislature was actually in session, and the final adjournment occurred subsequently without the election of a Senator.

The Montana case, which is the one actually before us, rests upon the first proposition, and if it is demonstrated to the satisfaction of the majority of the Senate we shall be asked to proceed to consider and accept the second also.

This first proposition involves two important questions:

1. Whether a governor can make an appointment of a Senator at the beginning of a term.

2. Whether a governor can, under any circumstances, appoint a Senator after a State Legislature has had an opportunity to discharge its constitutional duty to choose and has not done so.

Unless both of these questions can be answered in the affirmative the proposition upon which the resolution of the majority of the committee rests is not sustained by constitutional authority.

The records of the Senate present no previous case in which both of these questions are involved.

The Lanman case, from Connecticut, which arose in 1825, involved the first question. It was the first contested case in which the question of the power of a governor to appoint a Senator at the beginning of a term was seriously considered. In a few preceding cases Senators so appointed were admitted to seats without objection or discussion or division, and in one case, that of Uriah Tracy, of Connecticut, in 1801, after discussion but without reference to a committee. In this last-mentioned case there was a yea-and-nay vote, in which it appears from the record that the Senate divided on party lines. The vote on the question of seating Mr. Tracy was—yeas 13, nays 10.

In the Lanman case, after the report of a committee and after consideration and discussion by the Senate, a motion to seat him failed on a yea-and-nay vote, there being 23 yeas and 18 nays. In these cases the State Legislatures charged with the duty of choosing the Senators had not met, and in this respect they differed from the case now under consideration. The Lanman case remained as an accepted authority upon the first question I am considering until the decision of the Bell case from New Hampshire in 1879. Mr. Bell, with a similar title, was admitted upon a yea-and-nay vote, though the report of the majority of the Committee on Privileges and Elections was adverse to his right, and since that decision the practice of the Senate has been in accord with it.

The leading case involving the second question is that of Mr. Kensey Johns, from Delaware, which arose in 1794. I will merely refer to it here, but will state it more at length presently. He was appointed by the governor, after the Legislature charged with the duty of electing a Senator to succeed Mr. George Read, who had resigned, had met and adjourned without final action. The Senate, after due deliberation, decided by a vote of 20 yeas and 7 nays, that Mr. Johns was not entitled to a seat. In all similar cases since then this authority has been followed, as I will show more at length hereafter. The only difference between the case of Johns and the one before us is, that in the former the governor attempted to fill a vacancy occurring in a broken term actually commenced; in the present case the governor has assumed the right to appoint at the beginning of a term; but the cases are alike in this, that in each the Legislature had failed to act after having an opportunity to do so.

It would seem that the governor's right to appoint would be far more doubtful under such circumstances at the beginning of a full term than upon the happening of a vacancy in a broken term.

It is not, however, because no case exactly similar ever before arose in the history of the country that this question has never been presented to the Senate. In the years that have passed other Legislatures have failed to elect Senators, and States have lost their representation here in whole or in part for months, sometimes years, at a time. It was not then contended that the failure of the Legislature cast a duty or conferred a privilege upon the governor of the State whose power here was thus diminished. It was not then contended that other States had constitutional rights as to such diminished representation because of its effect upon the general political situation of the entire country. The chairs remained unfilled until the unsuccessful or defaulting Legislatures or their successors had other opportunities in subsequent sessions to renew their efforts and continue them till finally their constitutional functions in the premises were performed.

With this history before us, it seems unreasonable to ask in the second century of the existence of the Senate that we should enter upon a new line of action. It is too late to change a practice that has been followed so long and uniformly; it is safer to regard the meaning of the Constitution upon this point as permanently and definitely settled.

In cases where a Senator has been elected at the beginning of a term and the Legislature has once entered upon the duty of filling a vacancy occurring subsequently, as has already been shown, the failure to elect has not, up to the present time, been held to warrant a gubernatorial appointment. The authority of the governor as to such vacancy is exhausted. This was formerly regarded as finally and forever settled after the decision of the Kensey Johns case, to which I have already referred, and no governor has since attempted to exercise the power of appointment under such circumstances.

The Johns case was as follows: Kensey Johns was appointed by the governor of Delaware to fill a vacancy caused by the resignation of Senator George Read in December, 1793, at the first session of the Third Congress. The Legislature met in January, 1794, failed to elect a successor to Mr. Read, and adjourned. The Executive appointment was made in February after this adjournment, and Johns was not admitted to the seat.

The committee of the Senate to whom his case was referred submitted the following resolution, which was adopted by a vote of 20 yeas to 7 nays:

Resolved, That Kensey Johns, appointed by the governor of the State of Delaware as a Senator of the United States for said State, is not entitled to a seat in the Senate of the United States, a session of the Legislature of the said State having intervened between the resignation of the said George Read and the appointment of the said Kensey Johns.

The same principle was afterwards fully recognized in the Phelps case, many years later, at the first session of the Thirty-third Congress.

In this case the appointment of Samuel S. Phelps as Senator had been made by the governor, during a recess of the State Legislature, to fill a vacancy caused by the death of Senator William Upham during the Thirty-second Congress. The appointee filled the seat during the closing months of that Congress and during an extraordinary session of the Thirty-third Congress. After the close of the latter session the Legislature met, failed to elect a Senator, and adjourned *sine die* in December. Mr. Phelps again attended the Senate, after this failure, on the 29th of December, 1853; his right to do so was questioned, and the Senate decided against his claim, when the question came to a vote, on the 16th day of March, 1854, there being 12 yeas and 26 nays.

No further appointment was attempted, and the seat remained vacant till the Legislature again met later in the year and elected Lawrence Brainerd, whose term of service here commenced on the 14th day of October, 1854. The Williams case, from New Hampshire, which arose during the first session of the Thirty-third Congress, should also be mentioned in this connection. Upon the death of Senator Charles G. Atherton during a recess of the Legislature, the governor appointed Jared W. Williams to fill the vacancy. His credentials were presented on the 12th day of December, 1853, and he was sworn in. Subsequently the Legislature met, attempted to elect a Senator, failed and, after transacting all the business of the session, adjourned on the 15th day of July, 1854, to a fixed day. This was in effect a final adjournment, and was so regarded and treated by the Senate in the consideration and decision of the case.

Ten days later Senator Mallory of Florida, one of my honored predecessors, submitted a resolution inquiring whether the right of Senator Williams under the appointment had expired. The resolution was referred to the Committee on the Judiciary, and a unanimous report against Mr. Williams's right was made on the 2d of August, 1854, and a few days later the report was adopted without a division.

Again the governor's power to appoint was regarded as exhausted, and the seat remained vacant till the Legislature again met in the following year and elected John P. Hale to fill the unexpired term of Senator Atherton. The newly elected Senator commenced his term here on the 13th day of July, 1855.

When the question as to the right of a governor to make appointments, after the Legislature had once assumed authority or jurisdiction over the subject, arose incidentally in this Chamber some years ago, during the discussion of one of the later New Hampshire cases, it was generally admitted by the Senators who participated in the debate that the governor had no longer any power under the Constitution to fill a vacancy when the Legislature had had the opportunity to elect and failed to do so. The Senator from Massachusetts [Mr. HOAR] has indicated in this debate that his views upon this point have undergone a change since then. His recognized ability as a lawyer entitles his opinions to the highest respect, and his long experience upon the Committee on Privileges and Elections, and his habit of carefully investigating questions of this character, give great weight to his views, but this opinion is not supported by practice or precedent.

The Senator from Indiana [Mr. TURPIE] toward the close of his interesting and able speech in this debate, expresses views similar to those of the Senator from Massachusetts as to the power of the governor to appoint after the failure of the Legislature to elect a Senator. He says:

> There is no mere construction by implication which will justify us in concluding that any vacancy could not be filled by the governor occurring during recesses. We ought to be unwilling to come to the conclusion that any such vacancy could happen from any cause which could not be supplied by a gubernatorial appointment, unless the power is expressly excluded by the terms of the Constitution. For instance, this would be an exclusion: "When the Legislature has been in session and adjourned without choice, the governor shall not in the subsequent recess appoint a Senator." What if that had been offered during the Convention which framed the Constitution of the United States? What if it had been read in the presence of the presiding officer, Washington, and in the presence of that great statesman, Franklin, as I have read it here to-day?
>
> I think there would have been many members of the Convention who would have sprung to their feet and said: "Why, gentlemen, it is impossible for us to adopt such a proposition as that."

The Senator thinks it incredible that such a proposition could have been entertained, and yet history tells us that the Convention did actually entertain and adopt a proposition which contemporaneous interpretation said meant that very thing which is held up as incredible. This interpretation, too, was by formal action of a Senate which contained in its membership some of the framers of the Constitution, and this occurred during the Administration of Washington, who had presided over the Convention.

The conclusions of these Senators upon constitutional questions will always be listened to with attention and interest by their colleagues, and will generally be accepted as conclusive; but upon this point the great current of authority is against them, and at present the position that the governor's power to appoint is exhausted in such cases may still be regarded as the settled doctrine, and it will remain so unless the Senate gives some new interpretation to this part of the Constitution.

The power of a governor to make an appointment at the commencement of a Senatorial term under any ordinary circumstances was never claimed or recognized after the decision in the Lanman case until the New Hampshire cases arose in 1879 and subsequent years. Lanman, who was appointed from Connecticut under such circumstances, was refused his seat in 1825, after his case had been considered by a committee and thoroughly discussed in the Senate.

As Senators who sustain the views of the majority of the committee insist that the Lanman decision rests upon a different principle and is not decisive upon this point, I will give a fuller statement of the case than I have yet done. The term of Senator James Lanman, of Connecticut, expired March 3, 1825, and no successor had been chosen. An extraordinary session of the Senate was called by the President to assemble on the next day. Lanman appeared and presented an executive appointment dated February 8, 1825, a few weeks before the former term had ended. The Legislature was not in session, and did not meet till May. Exceptions were taken to his credentials and they were referred to a committee. The facts were reported to the Senate on the 7th of March, and a motion was made that he be admitted to the oath required by the Constitution. This motion was defeated by a vote of 18 yeas and 23 nays.

The majority of the Committee on Privileges and Elections in their report say:

> There is no historical evidence from which we can determine whether the Senate rejected Mr. Lanman on the ground that the governor could not fill a vacancy happening at the beginning of the term, or on the ground that the governor could not lawfully make the appointment in anticipation, before the vacancy occurred and before he could possibly [which should, perhaps, be positively] know whether the Legislature might be called together before that time.

They cite the following authorities in support of the view that the case was decided upon the latter ground:

> Judge Story (Constitution, sec. 727, note 2) says: "In the case of Mr. Lanman, a Senator from Connecticut, a question occurred whether the State executive could make an appointment in the recess of the State Legislature in anticipation of the expiration of the term of office of an existing Senator. It was decided by the Senate that he could not make such an appointment. * * * The Senate, by a vote of 23 to 18, decided that the appointment could not be constitutionally made until after the vacancy had actually occurred." (See Gordon's Digest of the Laws of the United States, 1827; appendix, note 1, B).
>
> In regard to the same case, the National Intelligencer of March 8, 1825, says in an editorial note:
>
> "An important constitutional question was yesterday decided in the Senate by the refusal to admit Mr. Lanman to a seat in the Senate under a commission from the governor granted before the expiration of Mr. Lanman's late term of service. This is the first time the question has been adjudicated under such circumstances as to form a precedent; and we presume it may now be considered as a settled construction of the constitutional provision that a vacancy must have literally 'happened,' or come to pass, before an appointment can be made to fill it."

Certainly the decision is an authority upon this second point, but neither Mr. Story nor the National Intelligencer claimed that the only question decided was that a vacancy could not be anticipated. The other was also in issue, and the fair supposition is that both grounds of objection to Mr. Lanman were sustained.

But the committee, in endeavoring to ascertain the teachings of the Lanman case, did not exhaust the sources of historic information, nor did the Senator from Virginia [Mr. HUNTON] in his recent interesting and able presentation of his views in support of the majority report.

Mr. Benton devotes a chapter of his Thirty Years View (volume 1, page 56) to this case, and he shows that the right of a governor to appoint a Senator at the beginning of a term was one of the questions that was passed upon by the Senate.

I quote the chapter in full, omitting only the names of the Senators who voted upon each side:

> Mr. Lanman had served a regular term as Senator from Connecticut. His term of service expired on the 3rd of March of this year, and the General Assembly of that State having failed to make an election of Senator in his place, he received a temporary appointment from the governor. On presenting himself to take the oath of office, on the 4th day of March, being the first day of the special Senatorial session convoked by the retiring President (Mr. Monroe), according to usage, for the inauguration of his successor; his appointment was objected to, as not having been made in a case in which a governor of a State could fill a vacancy by making a temporary appointment.

Mr. Tazewell was the principal speaker against the validity of the appointment, arguing against it both on the words of the Constitution and the reasons for the provision. The words of the Constitution are: "If vacancies happened (in the Senate) by resignation or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments, until the next meeting of the Legislature."

"Happen" was held by Mr. Tazewell to be the governing word in this provision, and it always implied a contingency, and an unexpected one. It could not apply to a foreseen event, bound to occur at a fixed period. Here the vacancy was foreseen; there was no contingency in it. It was regular and certain. It was the right of the Legislature to fill it, and if they failed, no matter from what cause, there was no right in the governor to supply their omission. The reason of the phraseology was evident. The assembly was the appointing body. It was the regular authority to elect Senators. It was a body of more or less members, but always representing the whole body of the State, and every county of the State, and on that account vested by the Constitution with the power of choosing Senators.

The terms choose and elect are the words applied to the legislative election of Senators. The term appoint is the word applied to a gubernatorial appointment. The election was the regular mode of the Constitution, and was not to be superseded by an appointment in any case in which the Legislature could act, whether they acted or not. Some debate took place, and precedents were called for. On motion of Mr. Eaton, a committee was appointed to search for them, and found several. The committee consisted of Mr. Eaton of Tennessee, Mr. Edwards of Connecticut and Mr. Tazewell of Virginia. They reported the cases of William Cocke, of Tennessee, appointed by the governor of the State in April, 1797, to fill the vacancy occasioned by the expiration of his own term the 3d of March preceding; of Uriah Tracy, of Connecticut, appointed by the governor of the State in February, 1801, to fill the vacancy to occur upon the expiration of his own term, on the 3d of March following; of Joseph Anderson, of Tennessee, appointed by the governor of the State in February, 1809, to fill the vacancy which the expiration of his own term would make on the 4th of March following; of John Williams, of Tennessee, appointed by the governor of the State in January, 1817, to fill the vacancy to occur from the expiration of his term on the ensuing 3d of March; and in all these cases the persons so appointed had been admitted to their seats, and all of them, except in the case of Mr. Tracy, without any question being raised, and in his case by a vote of 13 to 10. These precedents were not satisfactory to the Senate; and after considering Mr. Lanman's case, from the 4th to the 7th of March, the motion to admit him to a seat was rejected by a vote of 23 to 18.

Then follow the names of the Senators voting.

And with this decision the subsequent practice of the Senate has conformed, leaving States in part or in whole unrepresented when the Legislature fails to fill a regular vacancy.

We must suppose that this result, upon the ground last stated as well as the other, was generally acquiesced in, for no action was subsequently taken adverse to the authority of this case upon either point, until the operation of the law of 1866, to which I shall refer at some length later on, shut New Hampshire out at times from her full representation in the Senate except through the appointing power. The action in these cases and in the Florida case, which has recently occurred, admitting Senators appointed under such circumstances, has rested, if I understand the matter correctly, mainly upon the idea that these States had never had the opportunity to elect. There was no foundation for any imputation or suggestion of neglect or willful omission in the discharge of duty by the Legislature. This is a broad distinction between these precedents and the cases at bar. New Hampshire and Florida had no opportunity to choose Senators before the new terms began. Montana and Wyoming had the opportunities and failed to improve them.

Several of those who have supported the report of the majority of the committee in the argument regard these later cases as logically following the action taken already in the former ones, and there is force in the suggestion. But if this is the logical result and it is wrong, the remedy is to retrace the wrong step and accept the reasoning and conclusion of the Lanman, case and return to the practice of admitting Senators at the beginning of a term only after the Legislature of a State has actually performed its constitutional functions with reference to filling the seat and securing its representation. The situation of my own State in this regard has pressed this matter upon my attention and justifies me in entering upon it at greater length; which can, however, be done more appropriately later on in the course of these remarks.

Let us examine the Constitution with reference to the respective powers of the Legislature and the governor in filling seats in this body.

The first paragraph of section 3, Article I, declares how States are to be given their representation in the Senate, and the power of filling a whole and entire term of six years is there given to the Legislature, and only to the Legislature. No hint or suggestion is there found that any national legislation or executive action in the State can abridge that power of choosing for six years by a single day. When the Legislature of New Hampshire met in June, 1889, to elect a Senator they found themselves shorn of their constitutional rights and prerogatives because the executive had claimed and exercised the power of appointment and the Senate had recognized and confirmed the action. Instead of choosing a Senator for six years, as the Constitution gave them the right and power to do, they were able to choose the present senior Senator for five years and eight and a half months, only a fraction of a term.

The reasoning of the Senator from Massachusetts, who now claims that the power to appoint is revived in the executive, whenever a Legislature adjourns without action, would make it possible in case of successive failures in a Legislature to fill the entire time by appointing and reappointing, by piecemeal, the same person for a full term in all or by filling the seat for the full term, but with different persons for different parts of the term. I do not find in the Constitution any foundation for such power.

The first part of the second paragraph relates to the establishment of classes, and settles the length of the first term of Senators from a State acquiring representation here, but there is a distinct recognition of the right of choosing them for full terms thereafter, and it is manifestly the legislative choosing referred to in the former paragraph that is meant.

The remainder of the paragraph relates to the subject of vacancies, and even here the Legislature is to act if possible. If it referred again to full terms, why is it necessary to give the Legislature the power to fill vacancies of that character? Such power had been already granted if it referred to the beginning of a new term. Is it not manifest that the vacancies referred to were not such as were caused by the constitutional ending of terms which had already been provided for, but mere fractions of a term caused by some unlooked-for event? These fractional terms even were to be filled by the Legislature if possible. The governor's power was only to be exercised during the recess of the Legislature, the appointment was only to be temporary, it was evident that the executive was expected to exercise it or not at his discretion, the power existed only until the next meeting of the Legislature. If no session of the Senate was to be held before the meeting of the Legislature no appointment was necessary; if the Legislature were soon to meet it might not be desirable to make an appointment that would perhaps terminate at an early day. Therefore, says the Constitution, the executive *may* make temporary appointments.

The latter part of the second paragraph evidently takes up a new subject not already provided for. The provision for filling full terms is ample and complete, but broken terms may occur and an arrangement was necessary to fill them without unnecessary delay, so as to preserve to each State its right of full representation. This was the purpose of the closing part of the second paragraph. The suggestion that the framers of the Constitution in this paragraph intended not only to provide for broken terms, but also to provide for the beginning of new terms in cases where the machinery provided in the former paragraph had failed is not well founded. Attention has already been called by Senators who have preceded me to the presumption that those charged with duties would perform them, and it could not be that in this one matter provision should have been deemed necessary against neglect or default. No such provision against failure was deemed necessary elsewhere, except in cases of failure to elect a President or Vice-President through the machinery of the electoral colleges, and the vital importance of these elections is a sufficient reason for the exception.

There is none to be found in the following instances: Where the President is charged with the duty of appointing public officers; where the governor is charged with the duty of setting in motion the machinery for filling a vacancy from his State in the House of Representatives; where the House of Representatives are charged with the duty of choosing their Speaker and other officers; where the Senate, in the absence of the Vice-President, have to choose a President *pro tempore*. In the two latter cases the difficulty of coming to an agreement because of political differences and individual ambition and rivalry may arise, as in State Legislatures when Senators are to be chosen. The importance of these occasions is greater, the wheels of government are at a standstill while either House remains unorganized, and history affords instances of the danger to our institutions from the failure of an organized Congress. But in these cases patriotism prevailed over selfishness and the Constitution was found to be equal to the emergency. It was as easy to anticipate a difficulty in organizing the House of Representatives, or in choosing a presiding officer in this body, as in electing a Senator, and yet it was not deemed essential to directly provide for a failure, either by naming some other officer to preside after a designated time had been spent in fruitless efforts to elect, or by giving the power of appointing a Speaker or President *pro tempore* under such circumstances to some other authority.

The theory of the Constitution is that the duties charged in it will be performed by those upon whom the different functions of government are imposed, not that they may be neglected and that provision must be made in case of their nonperformance by those primarily charged with them. If this idea that responsibilities devolved upon others in case of the neglect or omission of those to whom they were originally committed were well founded, it would only remove the possibility of failure a single step further, and it was far better to rely, as the founders

of our Government manifestly did, upon the idea that patriotism would be a stronger influence than party strife and personal ambition in the days then to come, when divisions and differences might delay and obstruct the easy and regular movement of the machinery of the Constitution they were framing.

But I claim that the Constitution sheds more and still clearer light upon this interesting and important subject. An object lesson is afforded us by the arrangements for organizing the Senate of the First Congress. Surely we shall be safe if we pursue the same course that was then to be pursued. There was never a time when the importance of a full Senate was greater. The number of States was small. There was indifference in certain quarters as to accepting the Constitution and entering into the "more perfect union." Neglect or refusal on the part of a few States to elect Senators, even after they had ratified it and accepted the new scheme of government, might render the whole plan abortive. These difficulties must have been understood thoroughly and well by the public men of that day, and they soon became realities and actually palsied the efforts of those charged with setting in motion the machinery of the new Government for nearly two months.

When the 4th day of March, 1789, arrived, the day fixed for commencing the operations of government under the new Constitution, but eleven States had ratified that instrument, and it was found that only ten had participated in the election which had made George Washington President. The great State of New York, whose principal city was to be the temporary capital, had not even chosen her Senators. No one was then bold enough to assume that the governor might avoid the delay caused in part by the absence of elected Senators by exercising the appointing power. Only eight Senators, representing in whole or in part five States, were present, and an adjournment was necessary from day to day and from time to time till the appearance of an actual quorum.

After waiting one and two weeks for the absentees to assemble, two circulars were successively issued urging their attendance, and they gradually came in one by one, till on the 6th of April the arrival of a Senator from Virginia made a bare quorum of 12 from eight different States. The electoral vote was then counted. Six more Senators had presented themselves by the 21st of April, when the Vice-President was formally conducted to the chair and assumed his office. The President was not inaugurated till the 28th day of April, and the full complement of Senators was not completed till the Senators from New York presented themselves on the 25th and 27th of July, and on the 28th they drew lots for their classes, and the entire legislative machinery of the new plan of government was only then fully completed and in working order.

Why is the Constitution silent upon the questions of vacancies until after making arrangements for completing the machinery by the division of the Senators into classes? Why was the power of filling them not given in the first instance? The answer must be that the provision for filling vacancies was only intended to include fractional and broken terms, and that no such terms could exist when the Senate first met. If vacant full terms, or original vacancies as they are sometimes called, were to be provided for, the provision for filling them at the first organization of the Senate would have been as important as in subsequent sessions, and I think I have shown that it would have been vastly more important. The Senator from Indiana [Mr. TURPIE] recognizes that the vacancies to be filled were such as might occur only after the first organization of the Senate had been completed and the division into classes had been perfected; but his argument avoids the conclusions I have drawn from the absence of any power to fill vacancies at the outset by suggesting that the vacancies meant vacancies in the classes and not in the terms of Senators. This would seem to make it of greater importance to keep the classes full, when they are established simply for convenience in regulating the number of Senators to be elected every second year, than to preserve to each State, as far as practicable, its full constitutional representation.

The foundation stone upon which the majority of the committee rest their conclusions is a requirement which they claim to have found in the Constitution that the Senate must be always full. To accomplish this result of keeping up constantly and without interruption the full complement of Senators, they wrest words from their usual and plain meaning and attach new or unusual signification to them. "Happen" is thus made to mean "occur" and "exist;" instead of relating to some event which could not be foreseen or predicted, it is made to relate to something in the future that is fixed, settled, and determined by constitutional enactment.

If this doctrine of a Senate to be kept always full can be found, then the canons of construction may be invoked to give such interpretation to the language of the Constitution as will carry out its plain and manifest intent, but not otherwise. A careful examination of the instrument from its beginning to its latest amendment discloses no such doctrine, either in direct language or by fair inference. Neither its makers nor its early interpreters claimed the existence of any such a doctrine when they decided the Johns and Lanman cases. Nor had it been discovered by their successors when they decided the Phelps and Williams cases. The Constitution gives to the States the absolute right to a full and equal representation in the Senate, and provides that such right shall never be taken from any State, even by an amendment to the Constitution, except with its full consent, and the necessary means are provided to secure such representation without intermission, except for such brief periods as it may take for the constituted authorities to act. But there is no provision for an absolutely uninterrupted succession, as in the case of the Presidency. As a matter of actual experience we see every second year, except when an extraordinary session intervenes, a break in the terms of about one-third of our number from March to December, if the theory is correct that the choosing of a Senator is not completed till the oath of office is administered.

The correct doctrine with reference to the representation of the States here is that it is a privilege and right given to each, and if there is any protracted lapse in such representation while the Senate is in session it is owing to the failure of the proper authority to act, or to some faulty legislation here.

The deliberate omission of a Legislature to elect at the proper time is a voluntary relinquishment on the part of the State of its privilege for the time being, and during the century of our history such omissions have been rare, and no serious inconvenience or disastrous result has followed in any case.

The Senator from Massachusetts [Mr. HOAR] lays stress upon an amendment offered by Mr. Madison in the convention of 1787 to the clause or passage relating to vacancies. It seems he wished to add after "vacancies" the words "happening by refusals to accept, resignations, or otherwise," and that he deemed these words important so as to prevent doubts whether resignations could be made by Senators. The Senator suggests that Mr. Madison's doubt was based upon a practice that prevailed in England of denying to a member of Parliament the right to resign. But certainly, if this was his sole purpose, Mr. Madison must have offered this amendment out of abundant caution, and for some reason it was only engrafted in part upon the passage relating to vacancies when the instrument was put in its final shape, before adoption as a whole, under the supervision of a committee of which he himself was a member.

The acceptance of a part of the amendment did not change the right of a Senator as to resignation, but its true effect was certainly to limit the vacancies to a class, and excludes the idea that all vacancies, those occurring by the natural ending of terms according to the provisions of the Constitution as well as those happening by some event which could not be foreseen, could be filled by the executive of a State by temporary appointment. Even if the Madison amendment had been incorporated into the Constitution in full, it would not have settled the meaning of the clause relating to removals decisively in favor of the views of the majority of the committee; for in the case of a Senator-elect refusing to accept, which is the case omitted by the committee on style and arrangement, the Legislature has acted and commenced the term, and in that respect it is like the case of a resignation.

If the part of the Madison amendment relating to resignations had never been adopted, the right of a Senator to resign would still have been clear. Prohibitory words would have been necessary to deny to him such a privilege. The right of a President to resign is referred to only incidentally; it was not deemed necessary to confer it by affirmative words, and there are many reasons why a President should not voluntarily abandon his office which do not apply to a Senator.

Senators have referred to the custom in England which denied to a member of Parliament the privilege of resigning, but they have overlooked the fact that this practice was not followed in the American Congress which existed under the Articles of Confederation prior to the adoption of the Constitution.

In that body, on the 14th day of July, 1786, a report was offered by a committee containing, among other resolutions, the following:

> That a Delegate, having taken his seat in Congress, has no right to withdraw himself without permission obtained either from Congress or the State he represents.

The yeas and nays were called. Each State had one vote and all questions of this character were determined by the votes of a majority of the States. But five of the thirteen States voted aye, and the resolution was defeated.

In this connection it may be pertinent to suggest that if a reasonable doubt existed as to the right of a member of either House to resign, it was as important to remove it in the case of a Rep-

resentative as a Senator; yet there is no mention in the Constitution, even incidentally or indirectly, of the right of a Representative to resign. Still, the right has never been questioned since the first Congress was organized. The practice established and followed prior to that time was continued under the Constitution, and scarcely a session passes without one or more resignations.

If we are to depart from the interpretations of the past and enter upon a new line of practice with reference to States that have failed to elect Senators at the time and in the manner required by the Constitution and laws, it is better to admit, as the Senator from New Hampshire [Mr. CHANDLER] does, that it is "a new advance." He claims that "three gains over the old prohibitory notions" have been made in the course of modern progress, and he is ready for another forward movement. He takes pride in having "gone on gradually outgrowing the old, the narrow, and the technical construction of the Constitution which prevailed in some minds and in some cases."

This is a dangerous doctrine, but it places squarely before us the real meaning of the majority report. The Constitution as it has come down to us from the fathers does not permit a governor to appoint a Senator when a Legislature charged with the duty of choosing and having had the opportunity to choose has omitted or neglected or failed to do so. This is regarded by the Senator from New Hampshire as illiberal, so we must change it by interpretation. If the irreverent hand of change is thus to be laid upon this instrument whenever those charged with the duty of enforcing it deem that it does not suit the advanced spirit of the age, the end of our form of government is near, its stability is threatened, its permanency is in peril.

But I claim that the power to appoint under such circumstances was wisely withheld from the executive, and if we were making a new Constitution to-day a true conservatism would suggest that the authority of a governor should not be increased in this direction. If it is once understood that the prevention of an election does not deprive a State of any part of its representation, but merely shifts the jurisdiction, it will be to the interest of an ambitious candidate, who is not strong with the representatives of the people, but who is, or thinks he is, in favor with the executive, to delay and hinder and prevent an agreement among the members of the Legislature. In many States the sessions are limited to sixty days, or even less, and men of shrewdness and resource, whether in the halls or lobby, can accomplish much among a lot of inexperienced legislators by pursuing the Fabian policy.

This will soon be regarded as a legitimate mode of political warfare in Senatorial struggles, just as the gerrymander has become a recognized, a convenient, a potential factor in arranging the districts of a State so as to secure the largest possible representation. There are already instances in the history of the country where legislators have abandoned their seats and gone beyond the reach of the power of the body to which they belonged so as to prevent an election. This must have been from some mistaken notion that they had a right to pursue their opposition to some party or some candidate even to this extent. But such instances will rapidly increase and multiply if by our action we say that when such methods are adopted by Senators and Representatives they are not neglecting a duty, but are merely transferring the duty to another constitutional source of power; that they are not preventing the election of a Senator, but are arranging to secure one more acceptable personally, or more in harmony with their views of governmental policy from a source fully sanctioned by constitutional interpretation, in which they have more confidence than they have in the majority of their colleagues.

Nor will it do to overlook the opportunities afforded to a governor in such a contest to carry out his personal or party views. Power is sweet, and it is in accordance with human nature to desire it, to seek it, to extend it to its farthest limits, and the voice of ambition is constantly persuading the possessor to grasp more. When the Legislature is adverse to the executive wish and the votes are close, what a temptation to use the whole power of the office to obstruct and delay and hinder, when, in the event of failure, he is the legatee of the constitutional authority to make a Senator and can bestow the appointment upon whomsoever he pleases.

I myself remember an instance here where the executive of a State assumed the authority to determine the sufficiency of an election of a Senator made by the Legislature of his State. He passed his judgment upon it and decided it to be invalid and void, declared the seat vacant, and attempted to fill it. He claimed that it was his duty to determine whether the situation required an appointment. The judgment of the Senate was never passed upon this action, because the Senator chosen by the Legislature was seated, but it illustrates the dangerous tendency in this direction, if we recognize the governor as the successor of the Legislature to the constitutional authority to fill Senatorial vacancies after they have failed to elect. It is not wise to extend the power of the executive beyond the plain meaning of the language used in the Constitution, beyond the interpretation of that language that has come down to us from the early days of the Republic. The Constitution ought not to be changed in this particular, either by any latter-day interpretation or by any regular amendment.

Those advocating the report of the majority of the committee made frequent reference in the early part of this debate to the fact that Senators had been admitted to seats here upon executive appointments; some after debate and a vote, others without question or division, at the beginning of their terms; and this was deemed a sufficient reason for the adoption of the pending resolution. At that time I was here representing the State of Florida under such an appointment, and my name being thus introduced into the debate, I deem it proper to show why the State, which I have the honor in part to represent, was in this situation, and that if she was not at the time represented by a Senator duly chosen by her Legislature, it was because of the legislation of former years and the decisions of the Senate thereunder.

I am not disposed to find fault with the proposition that Florida should not be represented at the beginning of a full term by an appointee of a governor, any more than Montana. But it is not the State of Florida that has sought or arranged this mode of representation. It has resulted from the act of 1866 and the decisions of this body under its constitutional power to judge of the elections of its own members. But if the logic of the New Hampshire cases leads to the conclusions reached by the majority of the committee, before we decide to follow this logic it may be well to take our bearings, and if we find ourselves away from the right track, let us see where we left the proper sailing lines, and so direct our voyage as to return to them.

In 1866 the Congress, in the exercise of the power given by the Constitution to make or alter regulations as to the time and place of holding elections for Senators, determined which Legislature in each State should discharge the duty, and at what time during the session they should enter upon the work. The main purpose in view was to secure as much uniformity as possible in these elections.

The section of the act which relates to the time of holding such elections is as follows:

> The Legislature of each State which is chosen next preceding the expiration of the time for which any Senator was elected to represent said State in Congress, shall, on the second Tuesday after the meeting and organization thereof, proceed to elect a Senator in Congress, etc.

Each State is entitled to two Senators, and it would seem to be manifest that it was the duty of the Congress in enacting this legislation to keep this fact in view, and give every State the opportunity to keep its representation full, always full. If the statute did not protect every State in this right, I feel no hesitancy in saying that it was in violation of the Constitution, for there is no power to take from a State its equal representation here, without its own consent, even for a day.

There was but one way to do this, and that was to cast the duty of choosing the Senator upon the Legislature which last convened before the close of the Senatorial term and at the latest session of such Legislature before such term ended. Instead of this the duty of choosing was imposed upon the Legislature which was last elected before the expiration of the term.

Two Legislatures were elected in New Hampshire in 1878, one in March, whose term began in June and extended to May, 1879; the other in November, whose term began in June, 1879, and lasted two years. Senator Wadleigh completed his term of six years March 3, 1879. An extraordinary session of the Forty-sixth Congress was called later in the month. The Legislature of New Hampshire elected in March, 1878, treated the law of 1866 as valid, and took no steps to elect a Senator, leaving the duty where the act of 1866 placed it, to be performed by the next Legislature elected in November, 1878. Of course, the duty belonged under the Constitution to the former body, for it only could elect a Senator for the full term of six years; the later Legislature could only choose for a fraction of that time. The governor appointed Charles H. Bell to represent the State in the interim, and after consideration and debate he was seated, by a vote of 35 yeas and 27 nays, on the 10th of April, 1879. In June the later Legislature met and elected Mr. Blair for the residue of the term.

This occurred some years before I became a member of this body, but I remember the debate and the decision very well, and the conclusions reached by the majority did not meet the approval of my judgment then, and my subsequent investigation and consideration of the question have confirmed those views. But the judgment of the Senate was adhered to in the next case that arose, when Mr. Blair's term expired six years later, and he

presented a similar appointment from the governor authorizing him to represent the State from the beginning of the term, March 4, 1885, or from the date of his appointment, till the Legislature met in June, when he was again elected for a fractional term.

This, then, became the accepted way for States thus situated to secure representation. The Senate was the constitutional tribunal to pass upon these elections and these were its judgments.

The members of the Legislature of Florida are elected under its present constitution in October in the even-numbered years, and the two houses convene in the April after the election. The statute of 1866 requires an election by the Legislature chosen next preceding the expiration of the term for which a Senator was elected. The term of the present junior Senator expired in March last, and the State of Florida, respecting the legislation of the Congress and the practice of the Senate in former cases, had not through her Legislature attempted to provide for this expiry before it occurred. There was but one way in which her constitutional right to representation could be secured during the interval before the meeting of the Legislature under the law as established and settled in the New Hampshire cases, and that was by an executive appointment. It was proper under these circumstances that her representation should have been kept full without objection, for she had followed the course determined by the constitutional tribunal having jurisdiction of the question to be proper and lawful. But though Florida is compelled to obtain her constitutional representation in part, at times, in the manner fixed and established as regular by the decisions of this body, which alone has jurisdiction to pass final judgment upon what constitutes a valid right to a seat here, a Senator from that State is under the same obligation as his colleagues to endeavor to change and abandon a practice he believes to be unauthorized, although it is his duty to accept it and respect it as long as it is sustained and continued by the Senate. Whenever the Senate is convinced that the course heretofore pursued is wrong, it is our duty to change the law at such a time and in such a way that no State will lose any part of its representation.

But the law of 1866 produces other results that are incongruous and undesirable. Some States elect their legislators for terms of four years, and although the bodies thus formed may hold several sessions during the years of their existence, they must, upon the second Tuesday after they convene and organize, enter upon the election of the successors to the Senators whose terms expire before another Legislature is elected. In such a case a Senator may be chosen more than three, and perhaps nearly four years before his term begins. The late Senator Gibson of Louisiana served an entire term in the House of Representatives during the Forty-seventh Congress after he had been chosen a member of this body.

In Mississippi, the present Legislature was elected in November, 1891. It met and was organized in January, 1892, and on the second Tuesday thereafter entered upon the choice of its Senators—one to fill a term beginning March 4, 1893, the other beginning March 4, 1895, and ending March 3, 1901. Certainly it would be wise to avoid such results, and the law should be so amended that Senators should be always chosen before the beginning of a term, and as near as possible to the time when the former term expires. A law requiring an election to be held after the term begins abridges the right of a State to choose its Senators for six years.

It may be urged that a State should alter its constitution when the time fixed for the meeting of its Legislature causes these results, but that is no answer to the objections to the present law. States fix the time for electing and convening their Legislatures to suit their convenience and interests; their action is not subject to the supervision of the Congress. It is very natural that these considerations should differ in different States, and there is no reason why any uniformity should be attempted; it is our duty in legislating upon this subject to consider the convenience of the States. We have no power to change their constitutions, and we should conform to them and shape our laws so as to secure to each the opportunity to be always represented by a full representation of elected Senators.

But whether the law of 1866 is continued or not, and whether the precedent established by the Bell case is to be again followed or not, it must still be remembered that the report of the majority of the committee rests upon two propositions, and if either of them fail their conclusions fall. Not only must the Bell case be sustained, but the Johns case must also be reversed. The broad line of demarcation between the point involved, in the Montana case, as to the power of a governor to appoint when the Legislature has had the opportunity to choose a Senator and has failed to choose, and the point involved in the Bell case, where no such opportunity had been afforded to the Legislature, has hitherto been carefully observed by the Senate, and the Senator from Massachusetts clearly recognized this distinction when he participated in the discussion of the Bell case, as he has himself recently reminded us.

The former case is the one before us. In this respect it is like the Kensey Johns case from Delaware, the Phelps case from Vermont, the Williams case from New Hampshire. They all sustain the doctrine that the power of the governor to appoint no longer exists when the Legislature has met and had an opportunity to act. The decisions upon this point are entirely uniform. Not a single decision has been made in the Senate inconsistent with this doctrine, which was settled in the Johns case in 1794. The Montana case rests upon the same state of facts as these precedents, and our decision should be in harmony with them. While the action of the Senate has not been consistent in cases similar to the Lanman case, as the Bell case demonstrates, as to the right of a governor to make an appointment at the beginning of a term, there has been no inconsistency as to its decisions in cases where the Legislature charged with the duty of choosing a Senator has met and finally adjourned without doing so, and this is precisely the case before the Senate. Whatever opportunity there may be to differ as to the first question involved in the proposition upon which the majority report rests, the second question must be answered in the negative if we follow the uniform action of the Senate up to this time.

Mr. President, I have attempted to show that the Constitution confers upon the Legislatures (and only upon the Legislatures) of States the power of choosing Senators at the commencement of terms, and that the power of a governor to appoint is only in cases of broken terms caused by some unforeseen event after a Legislature has acted; that the executive of a State under no circumstances has power to make an appointment, even in cases of broken terms, where a Legislature has once entered upon its constitutional duty of attempting to choose; that these views are supported by the plain meaning of the Constitution and by the action of the Senate when questions arose involving the power of the Legislature and the governor in such cases up to the passage of the act approved July 25, 1866, and included in the Revised Statutes, Title II, chapter 1, page 3; that this act of 1866 encroached upon the constitutional right of some of the States to elect their Senators for six years, and has resulted in a departure from the practice of our predecessors, in the early days of the Republic, of admitting only Senators elected by State Legislatures at the beginning of a term; that instead of treating these cases as proper precedents, and following their logic by taking another step in the direction of changing the Constitution by interpretation, we should retrace our steps and amend the objectionable section of the law of 1866, so as to give each State an opportunity to elect its Senators before the beginning of their terms; that the recognition of a power in the governor to appoint a Senator, after the omission of a Legislature to do so when it has had the opportunity, is not only unwarranted, but such a power is undesirable, and would encourage a spirit of disorganization in Senatorial contests to prevent an election whenever it was deemed desirable to transfer the power of making the Senator to the executive authority.

Believing, as I do, that these views are founded upon the Constitution, and the interpretation of it that was accepted when its makers were still upon the stage of action; believing that the makers of that honored instrument acted with wisdom and discretion in limiting the power of the executive of a State in appointing Senators to the filling of broken terms temporarily until the next meeting of the Legislature, I can not accept the report of the majority of the committee nor favor the adoption of their resolution. And instead of joining the Senator from New Hampshire [Mr. CHANDLER] in "this new advance," I favor an abandonment of "the three gains over the old prohibitory notions," which he claims that he and his associates have made, and a return to the practice as it prevailed when the Senate first diverged from the right path to make these so-called gains.

Mr. DUBOIS. Mr. President, the question before the Senate as to whether the governor of a State has a right to appoint a Senator when the Legislature fails to elect to provide for a known vacancy gives a splendid opportunity for those who love to deal in legal abstractions and fine technicalities. For myself, I have no taste for either, and I do not intend now to further confuse this question by further refinements of constitutional law. I rise simply to emphasize an answer which has been made to those who say that if the Senate at this time seats these gentlemen who have been appointed by the governors it will pave the way for fraud and corruption in the future and offer a premium to those who desire to betray their constituents.

It is said that a gentleman who goes into the Legislature with a small following and has the governor as his personal friend, will prevent the election of a Senator, knowing that the governor will appoint him if the Legislature fails to elect. Senators have emphasized that point several times. My object in rising now is to say that plainly the effect of the action of the Senate in refusing to seat these gentlemen who have been appointed will be offering a premium to corruption. It has often happened in other

States, and it was the case in the State of Montana now under discussion, that at the time for the election of a Senator there were three parties, neither of whom had a majority in the Legislature. There were the Democrats, the Republicans, and the Populists, neither of whom alone and unaided could elect a Senator.

The members of the Legislature were elected on separate plain and distinct platforms, pledging them to carry out certain principles. As honorable men there was but one course for them to pursue, and that was to vote for a gentleman for the high office of United States Senator who represented the principles which they were pledged and elected to carry out. In the case of Montana, and in similar cases which will arise, there is no way by which a United States Senator can be elected unless some of the members of the Legislature abandon their principles; they must be corrupted either by money or by office or through some other means. It is their duty to sit there and vote their principles; and if they can not elect a United States Senator, then they must return to their people and the governor can fill the position temporarily until, at the next election, the people will again be called upon to decide.

None of the members of the Legislature have a moral right to abandon their candidate, and when they do so they abandon their principles. When you say to these gentlemen they can not get a seat because the Legislature should have elected some one, you say to future Legislatures that they must in some way elect a Senator, even if they have to sell out their party and principles. That answer occurs to me, and I think it is a sufficient one as to the dangers from a moral standpoint, arising from seating the Senator from Montana at this time. If you refuse to seat him, the same Legislature which could not elect will be called together again, with instructions that they must elect or their State will be but partially represented in the United States Senate. Some of the members must betray their constituents and principles in order to elect, and thus the door for corruption is widely opened.

Mr. MITCHELL of Oregon. Mr. President, I do not intend to detain the Senate at any length in regard to the pending question, but I rise simply for the purpose of stating a fact or two and introducing in evidence a couple of letters bearing upon this matter.

In 1858 the Legislature of the State of Oregon elected two Senators from that State. This was prior to the admission of the State into the Union. The State was not admitted until the 14th day of February, 1859. On the admission of the State the two Senators previously elected by the Legislature of the embryo State presented their credentials to the Senate of the United States and both were admitted.

Lots were drawn, and under the classification as it then stood one or the other necessarily had to retire on the 4th of March, 1859. Delazon Smith, one of the Senators elected, drew the short time. Consequently his term of service ended on the 4th day of March, 1859, he having served only a few days, perhaps two weeks. Then there was a vacancy in the Senate of the United States from the State of Oregon occasioned by the expiration of a term. The Legislature of the State subsequently met, and although it was the constitutional duty of such Legislature to choose a Senator it adjourned without making choice, and the question presented to the governor of the State was, whether he had the constitutional power to temporarily appoint a Senator to fill that term, the precise question now presented in the Montana case now before the Senate.

Mr. GRAY. May I ask the Senator a question?

Mr. MITCHELL of Oregon. Certainly.

Mr. GRAY. When did the Legislature which elected both of these Senators adjourn?

Mr. MITCHELL of Oregon. It had adjourned prior to the 4th of March, prior to the expiration of the term, so that the case was free from any question as to whether a recess of the Legislature had occurred.

The question was a new one, of course, to the people of Oregon at that time, to the governor of the State, and the leading representative men of the State. At that time Mr. Lewis Cass was Secretary of State. The Legislature of the State of Oregon and the governor of the State were in accord with the party in power at that time, and it was determined that the opinion of Mr. Cass should be taken upon the question as to the constitutional power of the governor to appoint to fill that vacancy. He was addressed on the subject by the ex-Senator, Delazon Smith, and he gave in his response his opinion against the constitutional power of the governor to appoint. I regret I have been unable to get a copy of the letter of Gen. Cass, but I have a letter from ex-Senator and ex-Governor Grover, of the State of Oregon, who participated in that matter at the time, and who was fully conversant with the whole question then discussed, and had seen and remembered distinctly the contents of Secretary Cass's letter. He has very kindly given me the following letter, reciting the history of the matter at that time and what took place, which I ask the Secretary to read, if there is no objection.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The Secretary will read as requested.

The Secretary read as follows:

PORTLAND, OREGON, *July 12, 1893.*

MY DEAR SENATOR: In reply to your favor of the 10th instant, requesting the copy of a letter written by Secretary Lewis Cass to Hon. Delazon Smith, of which I spoke to you, I can only say that after diligent search I have been unable to obtain the letter referred to. But I will give you its purport as I now recall it.

Mr. Smith was elected to the United States Senate in 1858 by the Legislature of the new State of Oregon, prior to the admission of the State to the Union, and took his seat in that body when the State was admitted in the midst of the second session of the Thirty-fifth Congress. He drew a short term, expiring March 4, 1859. Shortly afterwards in the same year the Legislature of Oregon was convened for the purpose of setting the wheels of the new State government in motion and of electing a United States Senator; the Legislature, after having made an effort to elect, adjourned without effecting an election.

Mr. Smith then wrote to Secretary of State Lewis Cass, asking to be advised whether, under the circumstances, the executive of the State could appoint a Senator. Having been consulted in the matter, I recollect the answer of the Secretary very well. It was in effect that the prime duty and power of choosing Senators to represent each State in the Senate of the United States was devolved by the Constitution upon the State Legislature; that the executive of a State could not initiate a term in the Senate of the United States; that his power to appoint was secondary only, and did not attach until there occurred a vacancy in the office, after the term had been occupied by a Senator regularly elected. He said this was the settled rule of the Senate established on full consideration.

He advised against the appointment of a Senator by the executive of the State at that time; and no appointment was made. The State of Oregon was represented by one Senator only in the Senate of the United States from March 4, 1859, to March 4, 1861, in obedience to this rule.

After careful examination of the subject at that time, I was satisfied of the correctness of this doctrine; and, of course, I fully concur in the position taken by you on this question at the last session of Congress, and congratulate you on your lucid and forceful demonstration of it in the debates.

Very truly yours,

L. F. GROVER.

Hon. J. H. MITCHELL, *United States Senator, Washington, D. C.*

Mr. MITCHELL of Oregon. The then governor of Oregon, acting upon this very sensible advice of Secretary Cass, declined to make a temporary appointment, and from March 4, 1859, until March 4, 1861, Oregon was represented by but one Senator. Having given the opinion of the leading Democrat and Secretary of State of that day, approved by another leading Democrat and able lawyer of my own State, the writer of the letter just read, as to their views of the Constitution on this important question, I now desire to call attention to another case happening in my own State.

In 1885, March 4, the term of Senator Slater, then a Senator from the State of Oregon, expired. Under the law it was the duty of the Legislature of the State of Oregon which met in January, 1885, to elect a successor. That Legislature met, balloted during the whole forty days of the session in a futile attempt to elect a Senator, and then adjourned prior to the 4th of March, 1885, without making an election. There was a vacancy again, precisely on all fours with that now before the Senate, it being the case of the expiration of a term, and the meeting of the Legislature whose business it was to elect, and a failure on the part of that Legislature to elect. Again, for the second time in its history, the State of Oregon was confronted with the question as to the constitutional power of the governor to appoint temporarily at the beginning of a term, and where the Legislature had had opportunity to elect and failed. The Legislature was then Republican. The governor of the State was a Republican. He was at a loss to know what his duties in the premises were. Although one of our most prominent and leading citizens and an excellent business man, he is not a lawyer. Therefore he took advice from a number of lawyers in our State.

Mr. GRAY. Let me ask the Senator before he speaks of the decision in that case, did the Legislature which failed to elect adjourn before the 4th of March, 1885?

Mr. MITCHELL of Oregon. It did. It adjourned before the 4th of March, 1885. Among other leading lawyers, not only in the State of Oregon but outside of the State, the governor addressed a letter to Hon. George F. Edmunds, of the State of Vermont, then a Senator from the State of Vermont in the Senate of the United States. Senator Edmunds responded, and, by the courtesy of Governor Moody, I have his letter here, which I ask may be read, giving his opinion as to the constitutional power of Governor Moody to appoint a Senator under the circumstances just stated.

The Secretary read as follows:

BURLINGTON, VT., *Sept. 1, 1885.*

DEAR SIR: I have yours of the 21st ultimo. The Constitution, as you know, provides respecting Senators that "If vacancies happen by resignation or otherwise during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancy."

It has been held by the Senate, and may now be considered as the settled law of that body, that if a State Legislature has once acted or had an oppor-

tunity to act while a vacancy exists, the governor has no power to supply the failure of the Legislature to fill it up.

Applying this rule to the case of Oregon, a vacancy existed on and after 4th March, 1885, and your Legislature, as I understand it, continued to sit a long time after that date and had the legal opportunity to fill the vacancy, so that the vacancy did not happen during a recess of the Legislature, and it only now exists because the Legislature failed in its duty of keeping its Senatorial representation full. If we construe this clause of the Constitution as some Democratic Presidents have the corresponding clause respecting the President filling vacancies in offices, so as to make it mean that if vacancies happen to exist during any recess the governor may fill them, it would be an indefinite power to be exerted just so long as the Legislature failed, which is not according either to the language or spirit of the Constitution. But, however we may reason about it, the Senate will be obliged to reverse its repeated decisions on the subject in order to admit a Senator appointed by a governor under such circumstances. Trusting that in some way a Republican Senator from Oregon may be preserved to us at a time when the only security for safe and conservative government lies with the Senate, I am,

Very truly, yours,

GEO. F. EDMUNDS.

His Excellency Z. F. MOODY,
Salem, Oregon.

Mr. CHANDLER. I should like to ask the Senator——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from New Hampshire?

Mr. MITCHELL of Oregon. Certainly.

Mr. CHANDLER. I should like to ask the Senator from Oregon whether prior to this date in 1885, to wit, in 1879, Mr. Bell had not been admitted to a seat in the Senate under an appointment from the governor of New Hampshire, and whether at that very time, in 1885, Senator Blair was not admitted to a seat in the Senate under an appointment from the governor of New Hampshire, for both of which admissions Senator Edmunds voted?

Mr. MITCHELL of Oregon. I believe the statement of the Senator from New Hampshire is entirely correct; but, Mr. President——

Mr. CHANDLER. Now, then——

Mr. MITCHELL of Oregon. I do not yield now. Pardon me. But the vote given then by Senator Edmunds was in strict accordance and entirely consistent with the views given in the letter, where he places the right to appoint upon the ground that the Legislature whose business it was to elect had had no opportunity to elect.

Mr. CHANDLER. I am aware that that was the very question, whether the Legislature of New Hampshire had had an opportunity to elect and had failed to do it, as the Legislature of Oregon had had an opportunity to elect and had failed to do it. I do not myself comprehend the distinction which is made in the two cases by the Senator from Oregon and the Senator from Florida.

Mr. MITCHELL of Oregon. The distinction is——

Mr. CHANDLER. I have never been able myself to see why the case of New Hampshire was any stronger for the allowance of the gubernatorial power of appointment than the case of the States whose Senators are now seeking admission to this floor.

Mr. MITCHELL of Oregon. I will state the difference. I decline to yield for a speech. I have not finished my speech.

Mr. CHANDLER. I thought the Senator yielded.

Mr. MITCHELL of Oregon. I yielded for a question. I did not yield for a speech.

Mr. CHANDLER. I did not ask the Senator to yield for a question. I asked him to yield to let me make a statement, and I supposed he had yielded to me. However, the Senator so seldom interrupts anyone himself that I do not like to interrupt him further.

Mr. MITCHELL of Oregon. I yield to the Senator to finish his statement, if he has not finished it.

The PRESIDING OFFICER. The Chair recognizes the Senator from New Hampshire.

Mr. CHANDLER. I was about to sit down when the Senator informed me that he did not yield to me to make a speech.

Mr. MITCHELL of Oregon. The Senator need not get testy about it. I said I did not yield to the Senator to make a speech. I did yield to him to make a statement, and I am willing to yield yet if he has any more statement to make.

Mr. CHANDLER. I will wait until the Senator gets through.

Mr. MITCHELL of Oregon. The Senator says he does not see any difference between the present case, the Montana case, and the cases from New Hampshire, his own State. The Senator is too bright a man not to be able to see the difference. Whether that difference makes any odds or not is another question; but the difference is this: In the case of the State of New Hampshire, both in the Bell case and the Blair case, the Legislature of the State of New Hampshire, whose business it was to elect a successor, had not met, had never convened, and therefore had no opportunity to elect a Senator, while in the case at bar the Legislature whose business it was to elect a successor to Senator Sanders from the State of Montana had not only convened in regular session according to law, had not only had an opportunity to elect, but had absolutely endeavored to elect, running through a period of three or four weeks. There is the difference.

Now, I frankly confess that, with the view I take of the Constitution, it does not make any difference. Evidently it did make a difference with Senator Edmunds; evidently it does make a difference with a great many Senators; evidently it made difference enough, when the Bell case and the Blair case was here, to cause a majority of the Senate to vote against the majority of the Committee on Privileges and Elections, and both of those gentlemen were seated. Seated why? Evidently because the Senate were of the opinion that, inasmuch as the Legislature of the State of New Hampshire had no opportunity to elect, therefore it was no more than right—without going into the constitutional question very deeply—that the governor should have the power to fill that vacancy until such time as the Legislature of New Hampshire met and could fill the vacancy.

But I shall not consume the time of the Senate further. As I said, I think this question should be brought to a close at as early a day as possible. If the gentlemen whose cases are in question are to be seated, they should be seated without any unnecessary delay; and if they are not to be seated, they ought to know it. I gave my views on this subject fully at the extra session of the Senate in April last, and therefore I shall not now detain the Senate further than to say, in my judgment a vote to seat the contestants in these three cases is a vote to overturn the precedents of the Senate, and in plain contravention of the provisions of the Constitution relating to the choosing of Senators.

Mr. CALL. Mr. President, it is not my intention to occupy any considerable time in the discussion of the question before the Senate as to the right of Senators to admission here upon the appointment of the governor of a State at the commencement of a term, or where the Legislature has failed to exercise its power. It seems to me that all reasonable construction of the language of the Constitution, and of the theory and scheme of government established by the Constitution, concur in one direction, and leave but little doubt upon this subject. The language of the Constitution is:

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof.

In a subsequent clause it says:

If vacancies happen—

Vacancies in what? In the office of Senator appointed by the executive or in the office of Senator chosen by the Legislature of a State? There seems to be no doubt that the vacancy must be of that character prescribed in the original clause constituting this body, vacancies in the only office known to the Constitution, the office of a Senator chosen by the Legislature of a State.

In this view it is not material how you may define the term "happen," but unquestionably the whole theory and scheme of this Government is a representative one, that this body shall represent the Legislatures, that it shall be chosen by a representative body, the Legislatures, who are themselves chosen by the people of the respective States.

This interpretation is sustained further by the theory of the Government. It is a Government of the people, in which the voice of the people ought to be potential in all its departments; and every interpretation of parts of this Constitution must be made in that direction.

Is it true that this body, constituted by the exercise of an appointive power by a single individual, would be representative of the people? Is it true that there is less danger to popular government, to the proper representation of the ideas of the people, in the exercise of the power to appoint Senators by a single individual, than it is by their being chosen by the voice of men immediately elected by the people and constituting their law-making power?

These days, Mr. President, have justified the wisdom of the provision of the Constitution limiting the power of appointment to vacancies in the office of a Senator chosen by the Legislature of a State. These are days in which the power of money, of men in high social and business positions influence and direct the performance of public trusts, when the money power of the country controls to a great extent those in whom the power of the people is vested.

If we permit the introduction into this body in the beginning of a term of a Senator created by a governor, the interpretation of the Constitution which permits that must permit the exercise of a like power in every recess of the Legislature of a State; and, as was said by my colleague [Mr. PASCO] in his speech to-day, it might be, under this construction of the Constitution, that the entire term of six years, not only of one, but of two Senators, and not only of two Senators, but of a majority of this body might be constitutionally created under the influence and power of corrupt methods.

Sir, it is within my knowledge that in one State of this Union

the great corporations of this country, under this supposed interpretation of the Constitution that the governor would have power to appoint a Senator, has been used to pervert the voice of a Legislature chosen, four-fifths of it, under instructions to obey the will of the people in a particular direction. For the purpose of enabling this power to be exercised, the great corporate wealth and power of the country was brought to bear upon the Legislature, with the understanding that the governor of the State would exercise the power in correspondence with their will; and such will be the case in other States. If any other interpretation of this Constitution shall prevail than that the vacancy must be in the office of a Senator chosen by the Legislature of a State, this evil will have free course, and the way will be opened for the constitution of this body, not as a representative body of the people of this country, but as the representative of particular and special interests.

The PRESIDING OFFICER. What is the pleasure of the Senate? ["Vote!" "Vote!"] The question recurs on the adoption of the resolution reported by the Committee on Privileges and Elections.

Mr. HOAR. I call for the yeas and nays.

Mr. VANCE. Do I understand that the Senator from Massachusetts asks for a vote now?

The PRESIDING OFFICER. That is the understanding of the Chair. The Senator from Massachusetts demands a vote on the passage of the resolution reported by the Committee on Privileges and Elections, on which he demands the yeas and nays.

Mr. VANCE. I hope that will not be done. I wish to say something myself upon the question, and I am not able to do so to-day. There are a number of Senators on this side of the Chamber who were not expecting that the vote would be called for to-day, and consequently they are not prepared to proceed. I hope the Senator from Massachusetts will not insist upon his request.

Mr. HOAR. Of course I shall not insist on a present vote against such a suggestion from the chairman of the committee, but it is proper to say that early in the week I tried twice to fix the time for a vote, so informed the Senate, and stated that I hoped we should proceed to vote on Thursday. I thought there was general acquiescence in that purpose, and I have thought every Senator on both sides of the Chamber understood that there should be a vote, as no one expressed a wish to the contrary. So I am not pressing the resolution unduly. Of course, I shall not object to its going over if the honorable Senator does not desire to speak to-day; but I wish we may have an understanding when he has concluded his speech, or within some short time after, as to taking the vote.

Mr. VANCE. I understood the Senator to say the other day that he did not ask for a binding agreement.

Mr. HOAR. That is true; I did not.

Mr. VANCE. But that it should be understood that we should proceed regularly with the case.

Mr. HOAR. Yes.

Mr. MITCHELL of Oregon. We can not hear the interesting dialogue which is going on between the two Senators.

Mr. VANCE. What I have to say on the question I shall submit to-morrow, and it will be very brief. I should not ask the indulgence if I had known the vote was to be had to-day. Other Senators who wish to speak, I suppose, will understand that they must be prepared to speak to-morrow.

The PRESIDING OFFICER. The Chair understands that the demand for the yeas and nays on the resolution reported by the Committee on Privileges and Elections is withdrawn.

Mr. CHANDLER. I did not understand the Senator from Massachusetts to withdraw the call. I renew the demand, if it is withdrawn, but of course there is no objection to the resolution going over until to-morrow at the request of the Senator from North Carolina. The difficulty is that many Senators on this side of the Chamber could not understand what arrangement the Senator from Massachusetts and the Senator from North Carolina were reaching.

Mr. HOAR. I did not propose to object to the case going over until to-morrow, but I crave leave to say that, by the universal assent of all Senators, the business of this special session of the Senate is of a gravity and importance affecting all sections of the country, affecting every State in the Union, which has scarcely a precedent, and it seems to me that justice to these States requires the prompt determination of their present right to a representation here, and that I ought to press upon the Senate the settling of this question before any other business of importance is transacted. That I propose to do.

Mr. STEWART. Perhaps the Senator from Massachusetts could arrange a time, by common consent, for the taking of the vote, so that Senators may know when the vote is coming off and be here. Ample time should be given.

Mr. HOAR. I ask that we may have a vote to-morrow before the Senate adjourns, say at 5 o'clock.

Mr. STEWART. Let that be done by unanimous consent.

The PRESIDING OFFICER. The Senator from Massachusetts submits a request for unanimous consent that the vote upon the resolution before the Senate be taken to-morrow evening at 5 o'clock. Is there objection?

Mr. VANCE. I object to that.

Mr. HOAR. Will the Senator from North Carolina state a time at which he will consent to the vote being taken?

Mr. VANCE. I am not prepared to do so until I ascertain precisely what number of Senators on this side of the Chamber desire to speak.

Mr. HOAR. I will ask, then, that we may have an understanding that the vote be taken on Monday at 5 o'clock.

Mr. VANCE. I believe I shall agree to that.

Mr. HOAR. Very well.

The PRESIDING OFFICER. The Senator from Massachusetts submits a request that the vote on the pending resolution reported by the Committee on Privileges and Elections be taken on Monday evening at 5 o'clock. Is there objection to the request? The Chair hears none, and it is so ordered.

EXECUTIVE SESSION.

Mr. COCKRELL. I understand, in consequence of what has occurred and announcements made elsewhere, that the Senate will be very soon called upon to adjourn. Prior to that, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session, the doors were reopened.

PAYMENT OF MILEAGE.

Mr. COCKRELL. I have been requested by a number of Senators to call up the joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives, which was objected to by the Senator from Kansas (Mr. PEFFER) the other day. I ask that the Senate proceed to the consideration of the joint resolution, with a simple statement. If any Senator does not desire to draw his mileage now, I am perfectly willing to have a proviso inserted by way of amendment which will excuse such Senator from accepting it.

Mr. ALDRICH. I think the Senator from Missouri the other day sufficiently explained the great exigency which demands immediate action upon the joint resolution.

Mr. COCKRELL. There is no exigency about it at all. The joint resolution explains itself. If the Senator from Rhode Island does not want to take his mileage he will be excused from it, and I will thank him to offer an amendment to that effect.

Mr. ALDRICH. I was satisfied with the explanation the Senator made the other day.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Missouri, that the joint resolution be taken up for consideration?

Mr. PEFFER. It is not my purpose to interpose any further objection to the immediate consideration of the joint resolution; but I wish to state, in withdrawing my objection, that I do so at the earnest request of a number of gentlemen who have spoken to me about it in this and the other Chamber; and the only reason why, in the beginning I objected was that it seemed to me as though we were acting with undue haste in the premises. When we are called together in view of a depressed condition of things in the country and a general clamor for more money and for relief, it seemed to me to be a hasty proceeding, to say the least, that the first joint resolution we should be called upon to pass is one to provide ourselves with money that is now in the Treasury.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

Mr. VEST. Let the joint resolution be read at length.

The joint resolution was read, as follows:

Resolved by the Senate and House of Representatives, etc., That the appropriations for mileage of Senators, Members of the House of Representatives, and Delegates from the Territories made in the legislative, executive and judicial appropriation act for the fiscal year 1894, approved March 3, 1893, be, and the same are hereby, made immediately available and authorized to be paid to Senators, Members of the House of Representatives, and Delegates from the Territories for attendance on the first session of the Fifty-third Congress.

Passed the House of Representatives, August 14, 1893.

The joint resolution was reported to the Senate without amendment.

Mr. VEST. I do not propose to make anything like factious opposition to this measure. I do not like it and I shall vote against it. We know what the law says in regard to the payment of mileage. We are entitled to it at the regular session and not now. We are voting ourselves special favors in a finan-

cial way under circumstances that are not at all pleasant, to say the least. I think it is bad policy on our part; it is acting in bad faith. The amount involved is inconsiderable, but the measure is very objectionable, and I want the privilege of recording my vote against it.

Mr. HARRIS. I wish to inquire of the Senator from Missouri, for I was not a very careful listener to the joint resolution, whether he understands the measure to provide for the payment of mileage to the extraordinary session and also to the regular session.

Mr. VEST. Oh, no. I stated distinctly that we were anticipating our mileage; that is to say, we are changing the operation of the law that gives us the mileage on the first Monday of December, and taking it now. That is what I was speaking of.

Mr. HARRIS. Then I have but to add, Mr. President, that there is no gentleman occupying a seat on this floor who needs the funds more than I do; but I am in full sympathy with the view expressed by the Senator from Missouri, and I think I can wait.

Mr. HOAR. Mr. President, I think the people of the United States understand that a servant, public or private, is entitled to his pay when he has earned it. The arrangement was for this sum to be paid the first Monday of December next, at the beginning of the next session, because that was supposed to be the time when the law was passed that we should do the traveling for which we were to be compensated as a part of our salary. Now we have done it at midsummer, and when we have done it at midsummer we are as much entitled to it at midsummer as any other servant who has done his work.

I do not think that the people of the United States are affected by the small gibes on this subject. The Senators who render this service of legislation to the country, to their States, and to the American people, do it at an immense pecuniary cost. I am one of the least conspicuous in my profession of the law of the members upon this floor, but I could easily earn, working only nine months in the year, never working evenings, selecting only from professional employment offered to me that which was agreeable, without any drudgery, five times the amount of my salary. I could have earned this summer but for this session three times the amount of my salary as a Senator.

There is a great compensation and satisfaction in holding this office of public honor, in the opportunity for large usefulness, in the opportunity to deal with the things which are great and permanent in their importance, which no money can measure; and I am not to be understood as saying that, when any Senator for the living salary with which he can pay his board in Washington, acts as a legislator for 65,000,000 of people, and represents a sovereign State of two or three or five million people, he is making a sacrifice. It is not that the compensation which comes for any useful service here is abundant, but it is not in the line of money. I do not believe that any American citizen whose judgment or opinion is respectable takes any other view of it. When the little hundred or two dollars which is a part of our salary that is assigned under the form of mileage has been earned, I think I am as much entitled to receive it as any workman on a farm or in a mill; and I propose to pursue the same policy in regard to both. I am struggling to bring about a condition of things by which the workmen in our mills and on our farms can get promptly their wages, and that they may have an opportunity to resume their earnings. The same principle applies to me that applies to them.

Mr. VEST. Mr. President, I did not care to discuss this question. I simply desired to state what my own action upon it would be, and not even to call for the yeas and nays. I am utterly indifferent as to what can be said in regard to my motives in the matter, because I am satisfied with those motives for myself. That is the important matter to me.

At a time of great distress, when the people of the country are looking to us for immediate relief if possible, and when, from circumstances I do not care to discuss, it is almost impossible for us to come to a conclusion, I do not think it is in good taste, to use no stronger expression, to attend to our own financial condition when, to say nothing else, we are unable to give relief to the people.

All that the Senator from Massachusetts says is doubtless true as to his being able to make a much larger amount by his professional pursuits outside of the Senate; and yet the fact remains that none of us are here by coercion, and that whenever coercion is employed it is by the people in relieving us from these responsibilities. We assume them voluntarily and generally hold on to them. That is unquestionable. When we took this office we knew the law or we are not fit to be here. We knew that our salaries and our mileage were payable at a certain time, and to change the time of payment is as much an attack upon the principle of observing the law as it is written by the lawmakers as if we should now vote ourselves back salaries or should change the contract as put in the statute between ourselves and the people in any other respect. If we now vote ourselves this mileage, in advance of the time when it is due to us, we change that contract or use the power the people have given us to take money out of the public Treasury before the time when it ought to be taken out under the established law for our own benefit. I need this money as much as any man living. I think I can safely say.

My friend from Kentucky [Mr. LINDSAY] asks me what has been the practice. I do not know that there has been any precedent established on the question. I recollect that I attended a called session the first time I ever appeared in the Senate Chamber. It was the session called by President Hayes in the spring of 1879. We did not vote ourselves any mileage then in advance. I recollect distinctly, and the books of the financial clerk in the Secretary's office will show it, that we got no mileage until we met in regular session in December. I do not want to be either sensational, dramatic, or oratorical; but this country is now in a financial condition unprecedented, the people are demanding bread literally and looking to Congress for relief, and we are unable to do anything except to give ourselves our mileage three months in advance of the time fixed by law.

Mr. VILAS. Mr. President, I suppose it will be by this time pretty generally recognized that this is but an extension in advance of the regular session beginning in December; that as we have paid our mileage expenses in coming, we are here to perform the duties which we should perform at a regular session, so far as they may be now discharged; and we are just as well entitled to our mileage as if it were a regular session.

Mr. VEST. How as to the law?

Mr. VILAS. The law is made by Congress and was intended to be applied according to the circumstances, as was well stated by the Senator from Massachusetts. Now, what is the practical point of this matter to the people? If we anticipate we simply have the money three or four months in advance, practically three. We then might impose a burden on the people if the Treasury was obliged to borrow the money at interest in order to discharge this mileage. If it is shown that the national debt will be increased by the payment of this money out of the Treasury now instead of in December we should be imposing some burden upon the people. Unless bonds are to be issued whereby there is interest to be imposed upon the people it makes no difference whatever to them. It seems to me that the reason is so plain that we ought all to agree upon it without any more discussion.

Mr. ALDRICH. I think the semiofficial statement—I say semiofficial on account of the relation which the Senator from Wisconsin recently held to the Administration—that this is to be a continuous session of Congress, will be more unwelcome to the people of the United States than the payment of any sum to Congress on account of mileage. I am very sorry that a Democratic Senator so near the National Administration as the Senator from Wisconsin should have felt obliged at this time in the session to say that we are here to stay permanently. As I have said, that statement will be very unwelcome to the people of the United States.

Mr. PASCO. The Senator from Missouri speaks of the contract and the law. I do not think it is at all well settled by law that the mileage is not payable until the next session. The act of 1856 so regulates it, but there is a later act, the act of December 23, 1857. I will read both. The first says:

Mileage for two sessions only, to be paid in the following manner, to wit: On the first day of each regular session each Senator, Representative, and Delegate shall receive his mileage for one session; and at the beginning of the second regular session of the Congress each Senator, Representative, and Delegate shall receive his mileage for such second session.

But that was changed in 1857. Both these sections are in the Standing Rules of the Senate, under the head of "Compensation of Members of Congress," on the 59th page. The act of 1857 provides that—

On the first day of the first session of each Congress—

Not the regular, but "the first session of each Congress"—

or as soon thereafter as he may be in attendance and apply, each Senator, Representative, and Delegate shall receive his mileage as now allowed by law; and on the first day of the second, or any subsequent session, he shall receive his mileage as now allowed.

That was the act of December 23, 1857. I do not think it is at all plain that this joint resolution is necessary. I suppose, however, it was considered proper to pass it and it is before the Senate. But it seems to me that the last law, passed in 1857, clearly carries out the views of the Senator from Massachusetts by stating the true object, which is to pay mileage as soon as possible after the Senator and Representatives have paid it out of their own pockets.

Mr. VILAS. I merely wish to add, with reference to what the distinguished Senator from Rhode Island [Mr. ALDRICH] has said, that the observation which I made with regard to the continuance of the present session was neither uttered as a friend of the Administration nor as an expression of judgment on my part of what ought to be done, but merely to indicate that it is obvious we have a good deal of business before us.

Mr. ALDRICH. I feel reassured.

Mr. CALL. Mr. President, according to my view of this matter the law as it stands—the spirit of the law, its proper interpretation—is that the members shall have mileage for coming to Congress to perform the duties required. What else is it given for? If a man is elected to the Senate or the other House of Congress, and charged with the duty of coming here, the law provides him with the means of coming. It is not at one session or another. The term "regular" is employed, but the object of the law is to bring the servants of the people here to the place of performing their duty, and it is a proper law. The people of this country are not disposed to quibble about small matters for the convenience and necessities of public business; they want to see every Senator here and every member of Congress. They are able to pay them a reasonable compensation, and they desire them to be in sympathy with their needs in earnestly seeking some method of relief.

I am willing, Mr. President, to vote for mileage for every servant of the people to perform his duty when the people require him to do it, and to furnish him with the means and appliances to do it. This is not a body of rich men, or the representatives of the wealthy; they are the servants of the people, with the right and duty imposed upon Congress to furnish them every means and every facility to perform their duty to the people.

Mr. PEFFER. I move the indefinite postponement of the further consideration of the joint resolution, and I call for the yeas and nays upon the motion.

The PRESIDING OFFICER. The Senator from Kansas moves that the joint resolution be indefinitely postponed; and on that motion demands the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. GEORGE (when his name was called). I have a general pair with the Senator from Oregon [Mr. DOLPH]. If he were present I should vote "yea."

Mr. QUAY (when his name was called). I am paired on all such questions with the Senator from Alabama [Mr. MORGAN]. If he were present I should vote "nay."

Mr. WALTHALL (when his name was called). I am paired with the Senator from Rhode Island [Mr. DIXON].

The roll call was concluded.

Mr. DAVIS. I am paired with the Senator from Indiana [Mr. TURPIE]. If he were present, I should vote "nay."

Mr. BUTLER. I have a general pair with the Senator from Pennsylvania [Mr. CAMERON]. If his colleague will permit me, I should like to vote.

Mr. QUAY. I have no objection. I have no doubt if my colleague were present he would vote "nay."

Mr. BUTLER. I vote "nay."

Mr. HARRIS. I desire to inquire if the Senator from Vermont [Mr. MORRILL] is recorded.

The PRESIDING OFFICER. The Senator from Vermont is not recorded.

Mr. HARRIS. Having a general pair with the Senator from Vermont, and not being absolutely certain as to how either he or I would vote on this question, I withhold my vote. I am inclined, however, to think that if I should vote at all I should vote "nay."

Mr. PLATT. I have a general pair with the Senator from Virginia [Mr. HUNTON], and I therefore do not vote. If he were present I should vote "nay."

The result was announced—yeas 12, nays 42; as follows:

YEAS—12.

Bate,	Irby,	Mills,	Pugh,
Berry,	Lindsay,	Peffer,	Smith,
Coke,	McPherson,	Perkins,	Vest.

NAYS—42.

Aldrich,	Frye,	Jones, Nev.	Sloop,
Allison,	Gallinger,	Kyle,	Stewart,
Blackburn,	Gibson,	Lodge,	Stockbridge,
Butler,	Gray,	McMillan,	Teller,
Call,	Hale,	Manderson,	Vilas,
Carey,	Hansbrough,	Mitchell, Oregon	Washburn,
Chandler,	Hawley,	Palmer,	White, Cal.
Cockrell,	Higgins,	Pasco,	White, La.
Cullom,	Hill,	Power,	Wolcott.
Dubois,	Hoar,	Roach,	
Faulkner,	Jones, Ark.	Sherman,	

NOT VOTING—31.

Allen,	Dixon,	Mitchell, Wis.	Ransom,
Brice,	Dolph,	Morgan,	Squire,
Caffery,	George,	Morrill,	Turpie,
Camden,	Gordon,	Murphy,	Vance,
Cameron,	Gorman,	Pettigrew,	Voorhees,
Colquitt,	Harris,	Platt,	Walthall,
Daniel,	Hunton,	Proctor,	Wilson.
Davis,	Martin,	Quay,	

So the motion to postpone indefinitely was not agreed to.

The joint resolution was ordered to a third reading, read the third time, and passed.

DEATH OF REPRESENTATIVE CHIPMAN.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, communicated to the Senate the intelligence of the death of the Hon. J. Logan Chipman, late a Representative from the State of Michigan, and transmitted the action of the House thereon.

Mr. McMILLAN. I ask that the resolutions of the House of Representatives be laid before the Senate.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions of the House of Representatives, which will be read.

The Secretary read the resolutions, as follows:

AUGUST 17, 1893.

Resolved, That the House has heard with deep regret and profound sorrow of the death of the Hon. J. Logan Chipman, late a Representative from the State of Michigan.

Resolved, That a committee of nine members of the House be appointed by the Speaker to act with such Senators as may be selected, to attend the funeral of the deceased, and that the Sergeant-at-Arms of the House shall take order for superintending the funeral; and the necessary expenses attending the execution of this order shall be paid out of the contingent fund of the House.

Resolved, That the Clerk be directed to communicate to the Senate a copy of these resolutions.

Resolved, That as a further mark of respect the House do now adjourn.

In accordance with the above resolutions, the Speaker announced the following committee on the part of the House:

Mr. WEADOCK of Michigan, Mr. WHITING of Michigan, Mr. MCMILLIN of Tennessee, Mr. GORMAN of Michigan, Mr. CARUTH of Kentucky, Mr. CANNON of Illinois, Mr. POWERS of Vermont, Mr. HAUGEN of Wisconsin, and Mr. AITKEN of Michigan.

Mr. McMILLAN. Mr. President, I offer the resolutions which I send to the desk, and ask for their adoption.

The PRESIDING OFFICER. The resolutions will be read.

The Secretary read the resolutions, as follows:

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. J. Logan Chipman, late a Representative from the State of Michigan.

Resolved, That the Senate concur in the resolution of the House of Representatives providing for the appointment of a joint committee to attend the funeral of the deceased at his late residence in the State of Michigan, and that the committee on the part of the Senate, consisting of five Senators, be appointed by the Presiding Officer.

Resolved, That the Secretary communicate these resolutions to the House of Representatives.

The resolutions were unanimously agreed to; and the Presiding Officer appointed as the committee on the part of the Senate, under the second resolution, Mr. MCMILLAN, Mr. PROCTOR, Mr. VILAS, Mr. GIBSON, and Mr. WHITE of California.

Mr. McMILLAN. Mr. President, as a further mark of respect to the memory of the deceased, I move that the Senate do now adjourn.

The motion was agreed to; and (at 3 o'clock p. m.) the Senate adjourned until to-morrow, Friday, August 18, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 17, 1893.

ASSISTANT SECRETARY OF THE TREASURY.

Scott Wike, of Illinois, to be Assistant Secretary of the Treasury, to succeed Oliver L. Spaulding, resigned.

FIRST COMPTROLLER OF THE TREASURY.

Robert B. Bowler, of Ohio, to be First Comptroller of the Treasury, to succeed Asa C. Matthews, resigned.

REGISTER OF THE TREASURY.

James F. Tillman, of Tennessee, to be Register of the Treasury, to succeed William S. Rosecrans, resigned.

SECOND COMPTROLLER OF THE TREASURY.

Charles H. Mansur, of Missouri, to be Second Comptroller of the Treasury, to succeed Benjamin F. Gilkeson, resigned.

THIRD AUDITOR.

Samuel Blackwell, of Alabama, to be Third Auditor of the Treasury, to succeed William H. Hart, resigned.

FOURTH AUDITOR.

Charles B. Morton, of Maine, to be Fourth Auditor of the Treasury, to succeed John R. Lynch, resigned.

DEPUTY FIRST AUDITOR.

Robert M. Cousar, of Tennessee, to be deputy first auditor of the Treasury, to succeed Alexander F. McMillan, resigned.

DEPUTY SECOND AUDITOR.

John C. Edwards, of Illinois, to be deputy second auditor of the Treasury, to succeed J. H. Franklin, resigned.

DEPUTY THIRD AUDITOR.

George W. Sanderlin, of North Carolina, to be deputy third auditor of the Treasury, to succeed A. D. Shaw, resigned.

DEPUTY FOURTH AUDITOR.

Elliott N. Bowman, of Indiana, to be deputy fourth auditor of the Treasury, to succeed Andrew J. Whitaker, resigned.

DEPUTY AUDITOR FOR THE POST-OFFICE DEPARTMENT.

William G. Crawford, of Louisiana, to be deputy auditor of the Treasury for the Post-Office Department, to succeed John I. Rankin, resigned.

CONSULS.

H. Clay Armstrong, of Auburn, Ala., to be consul of the United States at Grenoble, France, to which office he was appointed during the last recess of the Senate.

Newton P. Ashby, of Cedar Rapids, Iowa, to be consul of the United States at Dublin, Ireland, to which office he was appointed during the last recess of the Senate, vice John J. Piatt, recalled.

Bennington R. Bedle, of Jersey City, N. J., to be consul of the United States at Sheffield, England, to which office he was appointed during the last recess of the Senate, vice Benjamin Folsom, resigned.

John P. Beecher, of New York City, N. Y., to be consul of the United States at Cognac, France, to which office he was appointed during the last recess of the Senate, vice William S. Preston, recalled.

Frank H. Brooks, of Chicago, Ill., to be consul of the United States at Trieste, Austria, to which office he was appointed during the last recess of the Senate, vice James F. Hartigan, recalled.

Francois X. Belleau, of Lewiston, Me., to be consul of the United States at Three Rivers, Canada, to which office he was appointed during the last recess of the Senate, vice Henry M. Moore, recalled.

George W. Bell, of South Bend, Wash., to be consul of the United States at Sydney, New South Wales, to which office he was appointed during the last recess of the Senate, vice William Kapus, recalled.

Charles H. Benedict, of St. Paul, Minn., to be consul of the United States at Cape Town, Africa, to which office he was appointed during the last recess of the Senate, vice George F. Hollis, resigned.

W. S. Campbell, of New York City, N. Y., to be consul of the United States at Newcastle, England, to which office he was appointed during the last recess of the Senate, vice Horace W. Metcalf, recalled.

Jacob T. Child, of Richmond, Mo., to be consul of the United States at Hankow, China, to which office he was appointed during the last recess of the Senate, vice Henry W. Andrews, recalled.

John W. Coppinger, of Alton, Ill., to be consul of the United States at Toronto, Canada, to which office he was appointed during the last recess of the Senate, vice Charles R. Pope, recalled.

Edward P. Crane, of Pittsburg, Pa., to be consul of the United States at Hanover, Germany, to which office he was appointed during the last recess of the Senate.

Louis S. Delaplaine, jr., of Wheeling, W. Va., to be consul of the United States at Demerara, Guiana, to which office he was appointed during the last recess of the Senate, vice Philip Carroll, recalled.

James A. Demorest, of Plainfield, N. J., to be consul of the United States at Brockville, Canada, to which office he was appointed during the last recess of the Senate, vice James F. Ellis, recalled.

Edward Downes, of New Haven, Conn., to be consul of the United States at Amsterdam, Netherlands, to which office he was appointed during the last recess of the Senate, vice Theodore M. Schleier, recalled.

Otto Doederlein, of Chicago, Ill., to be consul of the United States at Leipsic, Germany, to which office he was appointed during the last recess of the Senate, vice Henry W. Diedrich, recalled.

Matthew M. Duffie, of Princeton, Ark., to be consul of the United States at Winnipeg, Manitoba, to which office he was appointed during the last recess of the Senate, vice James W. Taylor, deceased.

William C. Emmet, of New York, to be consul of the United States at Aix la Chapelle, Germany, to which office he was appointed during the last recess of the Senate, vice Johnson Brigham, recalled.

James C. Fox, of Rochester, N. Y., to be consul of the United States at Antigua, West Indies, to which office he was appointed during the last recess of the Senate, vice John P. Efrich, recalled.

Eugene Germain, of Los Angeles, Cal., to be consul of the United States at Zurich, Switzerland, to which office he was appointed during the last recess of the Senate, vice George L. Catlin, recalled.

Max Goldfinger, of New York City, N. Y., to be consul of the United States at Mannheim, Germany, to which office he was appointed during the last recess of the Senate, vice John F. Winter, recalled.

Michael J. Hendrick, of Union Springs, N. Y., to be consul of the United States at Belleville, Canada, to which office he was appointed during the last recess of the Senate, vice Samuel H. Deneen, recalled.

Norfleet Harris, of Greensboro, Ala., to be consul of the United States at Leeds, England, to which office he was appointed during the last recess of the Senate, vice Francis H. Wigfall, resigned.

J. Hampton Hoge, of Roanoke, Va., to be consul of the United States at Amoy, China, to which office he was appointed during the last recess of the Senate, vice Edward Bedloe, recalled.

J. Courtney Hixson, of Union Springs, Ala., to be consul of the United States at Ningpo, China, to which office he was appointed during the last recess of the Senate, vice John Fowler, recalled.

George Horton, of Chicago, Ill., to be consul of the United States at Athens, Greece, to which office he was appointed during the last recess of the Senate, vice Irving J. Manatt, recalled.

Anthony Howells, of Massillon, Ohio, to be consul of the United States at Cardiff, Wales, to which office he was appointed during the last recess of the Senate, vice Walter E. Howard, recalled.

Theodore Huston, of Macomb, Ill., to be consul of the United States at Paso del Norte, Mexico, to which office he was appointed during the last recess of the Senate, vice Archibald J. Sampson, recalled.

Pulaski F. Hyatt, of Lewisburg, Pa., to be consul of the United States at Santiago de Cuba, to which office he was appointed during the last recess of the Senate, vice Albert S. Twitchell, recalled.

Frank E. Hyde, of Hartford, Conn., to be consul of the United States at Lyons, France, to which office he was appointed during the last recess of the Senate, vice Edmund B. Fairfield, recalled.

William H. Jacks, of Logansport, Ind., to be consul of the United States at London, Ontario, to which office he was appointed during the last recess of the Senate, vice Hiram Z. Leonard, recalled.

Grenville James, of New York, to be consul of the United States at Woodstock, New Brunswick, to which office he was appointed during the last recess of the Senate, vice Walter T. Townshend, recalled.

Alfred C. Johnson, of Philadelphia, Pa., to be consul of the United States at Stuttgart, Germany, to which office he was appointed during the last recess of the Senate, vice Ferdinand C. Gottschalk, recalled.

Harvey Johnson, of Atlanta, Ga., to be consul of the United States at Antwerp, Belgium, to which office he was appointed during the last recess of the Senate, vice George F. Lincoln, recalled.

Ralph Johnson, of Buffalo, N. Y., to be consul of the United States at Fort Erie, Ontario, to which office he was appointed during the last recess of the Senate, vice Ossian Bedell, recalled.

Thomas C. Jones, of Frankfort, Ky., to be consul of the United States at Funchal, Madeira, to which office he was appointed during the last recess of the Senate, vice John F. Healey, recalled.

William F. Kemmler, of Columbus, Ohio, to be consul of the United States at Horgen, Switzerland, to which office he was appointed during the last recess of the Senate, vice Charles A. Vortriede, recalled.

Frederick W. Kickbusch, of Wausau, Wis., to be consul of the United States at Stettin, Germany, to which office he was appointed during the last recess of the Senate, vice James C. Kellogg, resigned.

Warner S. Kinkead, of Shelbyville, Ky., to be consul of the United States at Southampton, England, to which office he was appointed during the last recess of the Senate, vice Jasper P. Bradley, recalled.

John B. Laguaite, of New Orleans, La., to be consul of the United States at Martinique, West Indies, to which office he was appointed during the last recess of the Senate, vice Alfred B. Keevil, recalled.

Peter Lieber, of Indianapolis, Ind., to be consul of the United States at Dusseldorf, Germany, to which office he was appointed during the last recess of the Senate, vice Soren Listoe, recalled.

Benjamin Lenthier, of Lowell, Mass., to be consul of the United States at Sherbrooke, Quebec, to which office he was appointed during the last recess of the Senate, vice James A. Wood, recalled.

Joel Linsley, of Middlebury, Vt., to be consul of the United States at Coaticook, Canada, to which office he was appointed during the last recess of the Senate, vice Alfred W. Street, recalled.

Frank C. McGhee, of Meridian, Miss., to be consul of the United

States at Huddersfield, England, to which office he was appointed during the last recess of the Senate, vice William P. Smyth, recalled.

C. F. Macdonald, of Massachusetts, to be consul of the United States, at Hamilton, Canada, to which office he was appointed during the last recess of the Senate, vice William Monaghan, recalled.

James H. Madden, of Danville, Ill., to be consul of the United States at Smyrna, Turkey, to which office he was appointed during the last recess of the Senate, vice William C. Emmet, transferred to Aix la Chapelle.

George G. Mathews, jr., of Santos, Fla., to be consul of the United States at Para, Brazil, to which office he was appointed during the last recess of the Senate, vice James M. Ayres, recalled.

William J. Maynard, of Chicago, Ill., to be consul of the United States at Milan, Italy, to which office he was appointed during the last recess of the Senate, vice George W. Pepper, recalled.

John R. Mobley, of Waco, Tex., to be consul of the United States at Baracoa, Cuba, to which office he was appointed during the last recess of the Senate, vice William B. Dickey, recalled.

James C. Monaghan, of Lonsdale, R. I., to be consul of the United States at Chemnitz, Germany, to which office he was appointed during the last recess of the Senate, vice John A. Barnes, recalled.

Julius Muth, of Brooklyn, N. Y., to be consul of the United States at Magdeburg, Germany, to which office he was appointed during the last recess of the Senate, vice Albert H. Washburn, recalled.

Charles A. O'Connor, of Manchester, N. H., to be consul of the United States at Yarmouth, Nova Scotia, to which office he was appointed during the last recess of the Senate, vice Grenville James, transferred to Woodstock.

Frederick Opp, of Llano, Tex., to be consul of the United States at Breslau, Germany, to which office he was appointed during the last recess of the Senate, vice Charles W. Erdman, recalled.

D. J. Partello, of the District of Columbia, to be consul of the United States at Sonneburg, Germany, to which office he was appointed during the last recess of the Senate, vice David S. K. Buick, recalled.

John Patton, of Detroit, Mich., to be consul of the United States at Amherstburg, Ontario, to which office he was appointed during the last recess of the Senate, vice James W. Hine, recalled.

Lars S. Reque, of Decorah, Iowa, to be consul of the United States at Rotterdam, Netherlands, to which office he was appointed during the last recess of the Senate, vice Walter E. Gardner, resigned.

Benjamin H. Ridgely, of Louisville, Ky., to be consul of the United States at Geneva, Switzerland, to which office he was appointed during the last recess of the Senate, vice Roland J. Hemmick, recalled.

William H. Robertson, of the District of Columbia, to be consul of the United States at Hamburg, Germany, to which office he was appointed during the last recess of the Senate, vice William R. Estes, recalled.

Alexander S. Rosenthal, of New York City, N. Y., to be consul of the United States at Leghorn, Italy, to which office he was appointed during the last recess of the Senate, vice Radcliffe H. Ford, recalled.

Andrews A. St. John, of Pennsylvania, to be consul of the United States at Batavia, Java, to which office he was appointed during the last recess of the Senate, vice Bradstreet S. Rairden, recalled.

George W. Savage, of Rahway, N. J., to be consul of the United States at Dundee, Scotland, to which office he was appointed during the last recess of the Senate, vice Arthur B. Wood, recalled.

Charles Schaefer, of Sedgwick, Kans., to be consul of the United States at Vera Cruz, Mexico, to which office he was appointed during the last recess of the Senate, vice Harrison R. Williams, transferred to San José, Costa Rica.

W. H. Seymour, of Livingston, Ala., to be consul of the United States at Palermo, Italy, to which office he was appointed during the last recess of the Senate, vice Horace C. Pugh, recalled.

Henry C. Smith, of Birmingham, Ala., to be consul of the United States at Santos, Brazil, to which office he was appointed during the last recess of the Senate, vice Edwin A. Berry, recalled.

Henry M. Smythe, of Graham, Va., to be consul of the United States at Fuchau, China, to which office he was appointed during the last recess of the Senate, vice Samuel L. Gracey, recalled.

Jesse W. Sparks, of Murfreesboro, Tenn., to be consul of the United States at Piedras Negras, Mexico, to which office he was appointed during the last recess of the Senate, vice Eugene O. Fechét, recalled.

James B. Taney, of Wheeling, W. Va., to be consul of the United States at Belfast, Ireland, to which office he was appointed during the last recess of the Senate, vice Samuel G. Ruby, recalled.

Marshall P. Thatcher, of Detroit, Mich., to be consul of the United States at Windsor, Ontario, to which office he was appointed during the last recess of the Senate, vice Charles D. Joslyn, recalled.

Samuel Thanhouser, of Atlanta, Ga., to be consul of the United States at Matamoras, Mexico, to which office he was appointed during the last recess of the Senate, vice John B. Richardson, recalled.

Claude M. Thomas, of Paris, Ky., to be consul of the United States at Marseilles, France, to which office he was appointed during the last recess of the Senate, vice Charles B. Trail, recalled.

Francis H. Underwood, of Boston, Mass., to be consul of the United States at Leith, Scotland, to which office he was appointed during the last recess of the Senate, vice Wallace Bruce, resigned.

Lucien J. Walker, of Birmingham, Ala., to be consul of the United States at Cork, Ireland, to which office he was appointed during the last recess of the Senate, vice Henry G. Kress, recalled.

Wendell C. Warner, of Yorkshire, N. Y., to be consul of the United States at Tunstall, England, to which office he was appointed during the last recess of the Senate, vice William Burgess, resigned.

Charles W. Whiley, jr., of Lewes, Del., to be consul of the United States at St. Etienne, France, to which office he was appointed during the last recess of the Senate, vice Francis B. Loomis, recalled.

John M. Wiley, of Buffalo, N. Y., to be consul of the United States at Bordeaux, France, to which office he was appointed during the last recess of the Senate, vice Horace G. Knowles, recalled.

Harrison R. Williams, of St. Louis, Mo., to be consul of the United States at San Jose, Costa Rica, to which office he was appointed during the last recess of the Senate, vice Beckford Mackey, recalled.

COMMISSIONER OF CUSTOMS.

William H. Pugh, of Ohio, to be commissioner of customs, to succeed Samuel V. Holliday, resigned.

COLLECTORS OF CUSTOMS.

Harry H. Kain, of Mississippi, to be collector of customs for the district of Vicksburg, in the State of Mississippi, to succeed himself. Term expired.

David G. Browne, of Montana, to be collector of customs for the district of Montana and Idaho, in the State of Montana, to succeed Jeremiah Sullivan, whose term of office expired by limitation March 27, 1893.

SURVEYOR OF CUSTOMS.

Richard Dalton, of Missouri, to be surveyor of customs for the port of St. Louis, in the State of Missouri, to succeed James O. Churchill, whose commission expired by limitation April 3, 1893.

CONFIRMATION.

Executive nomination confirmed by the Senate August 17, 1893.

COLLECTOR OF CUSTOMS.

Bradley B. Smalley, of Vermont, to be collector of customs for the district of Vermont, in the State of Vermont.

HOUSE OF REPRESENTATIVES.

THURSDAY, *August 17, 1893.*

The House met at 11 o'clock a. m. The Chaplain, Rev. SAMUEL W. HADDAWAY, offered the following prayer:

Our Father in heaven, we bow before Thee with deep humility of spirit this morning, recognizing that in Thy hands are the issues of life and death. Although we have been here less than two weeks, Thou hast already asserted in our midst Thy right and prerogative by calling away to the skies one of the members of this House. Gracious God! we adore Thee for his life, for his character, for his relations to his State and to his country, for his relations to his family and friends, and his relations to all the various departments of human life and human activity. Wilt Thou graciously regard his family in their sorrow, and comfort them with the comforts of the Holy Ghost. Wilt Thou graciously bless the State and the nation, and grant that his influence may be felt long after he has disappeared from among

us. We beseech Thee, O Lord, our Father, to impress upon our minds that amidst the activities of this life, when we are scheming and planning for the future, in the midst of it we may be suddenly called away. Great God, have mercy upon us and save us for Thy name's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon," and for other purposes.

Mr. DANIELS. Mr. Speaker, I shall not undertake to describe adequately the present state of the country, so graphically depicted yesterday by the gentleman from Iowa [Mr. HENDERSON]; but I may say, in passing, that no greater contrast has ever been exhibited in the affairs of this nation, or perhaps any other civilized nation, than the difference between the business prosperity of this country one year ago and what it is to-day. No period in our history has been characterized by so great a degree of prosperity and success and such promise of the continuation of prosperity and success as the year 1892. But to-day a far different state of affairs has been precipitated upon the country.

Instead of prosperity we have adversity at every point; business is depressed in all localities; manufacturing has been suspended; and capital, for the fear of the future, has been locked up in the vaults of the banking institutions of the country. Why has this change taken place? The people have said to us in their discussions, in their resolutions, and through the public press, that it is owing to the fact that under the laws of the United States a ruinous system for the purchase and accumulation of silver has been brought into existence. The fear has taken hold of the public mind throughout the business interests of the country that disaster is bound to follow from the accumulation of these purchases and from the amount of silver that is finding its way into the Treasury of the United States.

This has been supplemented and voiced by the message of the President of the United States, who has brought Congress together for the purpose of considering this grave subject that has impressed itself so generally on the public mind throughout the United States; and it has been urged upon the attention of Congress by the press of the country, by the resolutions of public and private bodies, and by the industries generally of the country, that Congress should interpose and give promptly some measure of relief to the people by changing this financial system. That is where the fear and apprehension that stimulates the failure of business interests throughout the land has originated. It is attributed to this circumstance, and this circumstance alone, so far as the discussion and consideration of it have been placed before the public, and the expressions which have been voiced, too, by the business interests of the land on the subject.

This accumulation, of course, as is well known and conceded, has been made during a period covered by the last fourteen years. It originated under the act of 1878 providing that the Government should purchase not less than two nor more than four million ounces of silver per month and coin it into silver dollars. The object of this law, of course, Mr. Speaker, I am aware, was to put this silver into a condition to be circulated in the country. It was expected, upon the parity between the metals then adopted and provided for in that act, that it would circulate; that the silver that should be purchased by the Treasury Department under the law and coined into money would, under the circumstances, go into general circulation and become a part of the money of the country. It was no part of this legislation that the silver should be thus purchased and the accumulation should remain in the Treasury; but the expectation was that it should be used when coined, as silver had been previously used in the history of the country, as a part of the circulating medium.

But in this respect a great disappointment has resulted, and unlooked-for trouble has arisen out of the purchase and accumulation of silver in the Treasury. Instead of going into the general circulation of the country, it has gone into the Treasury and there remains as a cold, useless article, so far as the circulating medium of the country is concerned. Comparatively little of it has gone into circulation. The people have rejected it. They have expected from the fall in the value of silver its depreciating effects, until they have become convinced, and the expressions they have used in calling on Congress to repeal the law of 1890 show the fact that only in this manner can relief from the present condition be obtained. Congress is asked to repeal the law of 1890, which supplemented and succeeded the act of 1878. That has been the history of the country with regard to the purchase and accumulation of silver metal in the Treasury.

I read from a report made by the Secretary of the Treasury for the purpose of giving you the figures which he has given to the country up to the 1st day of July as to the accumulation of these purchases and the condition at that date of the Treasury on that account. From that statement it appears that in the Treasury there was on the 1st day of July, 1893, and probably the amount has not been substantially varied from that time, the sum of $374,158,651. The Secretary states that at that time there was of uncoined silver bullion on hand the sum of $118,173,820, making a gross aggregate amount of silver and of silver bullion coined and uncoined in the Treasury of the United States on the 1st day of July, 1893, $482,282,471.

This has appalled the people of the United States—certainly the people engaged in the various business interests and in the financial operations throughout the United States. They apprehend with these startling figures before them that if this continues nothing but bankruptcy and destruction of business can be expected from the accumulation of silver and the uses which are being made of it. For that reason fear has paralyzed business and they have joined—the people who are concerned in these interests have joined in the appeal to Congress to repeal the law and strike from the statute books the provision under which the purchase of silver is made by the act of 1890.

Now, Mr. Speaker, this is a larger amount of silver accumulated in the Treasury of the United States, notwithstanding all that has been said here during this discussion, than is found in the treasury of any government on the face of the earth with which the United States have any relations of trade or business. Reference has been made to France as a country that maintains a large silver circulation, and undoubtedly that is a fact; but it is all on the basis of the value of the silver as it was valued prior to 1873. But the Bank of France contains no such amount of silver as is found in the Treasury of the United States. The amount of silver in the Bank of France is stated by a circular sent out from a bank at San Francisco to amount to the sum of $232,280,000, making less than one-half the amount of silver that has found its way and has accumulated in the Treasury of the United States under existing law. This sum multiplied by two gives a total of $464,560,000, while we have in the Treasury of the United States of silver, coined and uncoined, the sum of $482,282,471.

Now, while these purchases have been going on at the market prices, silver has been steadily falling step by step until it has reached a point where it is vastly inferior in point of value to the standard of value that prevailed at the time the act of 1878 was enacted, and also when the act of 1890 was enacted, and the consequence is that by the mere fall in market value these large purchases and this vast accumulation of silver in the Treasury entails a loss resulting to the Government, and of course to the people of the United States, of more than one hundred millions of dollars, as this amount has been estimated and stated by public sources and in the public press.

Here is a loss which is of course irretrievable, imposed upon the people by the mere purchase of this useless article of silver, as it has proved, by its continuation in the Treasury of the United States, and by the failure of every effort that has been made to force it into circulation or to induce the people of the country to receive and use it as currency. Even those who are here advocating before this House the continuation of this policy of silver purchases are not, in their localities, receiving the silver dollar for which they express so much admiration, and are not putting and keeping it in circulation in their localities; not a bit of it. They reject it as emphatically, as decidedly, and as determinedly as the people of any other part of the United States reject it. They understand that for the purposes of a circulating medium it has objectionable qualities, so far as value is concerned, and so far as its ponderosity is concerned, which render it really impracticable for a large amount of it to go into the circulation of the country.

If the silver dollar that is coined out of the bullion purchased by the Treasury was so acceptable, so advantageous to the country, we would naturally suppose that these gentlemen who represent silver localities, the silver-producing portions of the country, would be the first to endeavor to put this silver into circulation in their own localities; but there is not one of them who is willing to touch it for this purpose. What they desire, and what they have endeavored to maintain and impress upon the institutions and laws of the country, is to furnish a market for the purchase of this silver, utterly regardless of the interests of the purchaser or the use which the purchaser may make of it.

There has been no enterprise with which the Government has been connected in any form, directly or indirectly, since its foundation, that has involved so great a loss out of the transactions through which it has passed as the loss arising out of the purchase of this silver bullion and the coining of these silver dollars; and if these purchases under the act of 1890 are to be continued and protracted indefinitely of course no one can say

how far these losses are yet to be multiplied or to what extent they may be found to operate as a pall upon the business interests of the country.

But this is not the main reason for which the people have risen in their might, because of the disturbances of their business and the disaster to their affairs, to ask Congress to relieve them from the continued purchase of this silver bullion and the coinage of these silver dollars. It has been because they fear that the time is at hand—if not immediately, that it is near at hand—when this silver will be forced upon the country in the way of redeeming silver certificates and Treasury notes, and in that way depreciating necessarily the circulating medium of the land.

This is the menace that has been made to business. Business has felt the effects that have been indicated in the reports we have received from so many quarters of the country, and the people have appealed to Congress to protect them by the repeal of this act of 1890, which is the successor of the law of 1878, to strike out this purchasing power, or to repeal the act entirely, without permitting the preceding law to be restored, so that business will go on upon the lines on which it has previously been transacted, and so that the confidence of the country shall be restored.

That this is not an unfounded fear will be sustained by the last section of the act of 1890, which authorizes the Secretary of the Treasury to go on and coin the silver bullion that may be purchased under its provisions, for the very purpose of redeeming and paying off these silver notes issued by the Treasury Department. The language of the third section is this:

> The Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars, until the 1st day of July, 1891, and after that time he shall coin, of the silver bullion purchased under the provisions of the act, as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

It is true that the executive department, under the preceding Administration, and under the announcement made more recently by President Cleveland, has asserted the determination to redeem these notes only in the gold coin of the United States; but there is a danger, under this authority, although it may be a danger of a remote character, that these bills will be ultimately redeemed in the silver dollars that are coined and to be coined under its provisions; and the greater its increase, the larger the purchases that may be made, the greater the number of these silver dollars that shall be coined for the purpose of meeting this exigency, the more menacing is the situation to the business interests of the country, and the more alarming and the greater the determination therefore of the business interests and of the people generally of the country to resist this possibility, this liability to loss, by asking Congress to repeal this act of 1890.

Now, upon this subject we see by what has transpired during the present year how easily the people are startled by a fear that this silver, debased as it is, deficient as it is in quality, shall be made the basis of paying off these notes. They saw in the early spring it was reported, whether truthfully or not is not a matter to be considered here, that the Secretary of the Treasury had determined to pay off these silver obligations in the silver dollars of the United States under the authority of these two acts; and what was the effect? Why, it startled the business interests of this country throughout its entire limits. It startled the holders of the obligations of the United States in foreign countries, and, upon the assertion that the possibility of this contingency might be reached, our securities were sent home.

Other obligations were placed before the Secretary for redemption to a large amount. Gold was taken out of the Treasury of the United States and found its way into the hands of local creditors and largely into the hands of creditors in foreign countries, until nearly $70,000,000 of gold was taken from the Treasury of the United States, apparently under this fear aroused by this simple statement in the papers that the use of the silver dollar would be made in the redemption of the silver notes and silver certificates of the United States.

It is true that this was followed, very soon afterwards—perhaps as soon as that could be done in the nature of things—by the announcement of President Cleveland that no such redemption of these obligations should take place; that they should be redeemed in the gold coin of the United States, the coin of the business world with which the United States and its people are connected; and, of course, that tended to restore the confidence of the people in the assurance of the Government that there was no immediate danger from this source.

But, after all, it did not remove the fear that had impressed itself upon the minds of the business interests of the country that there would be, or might be, a resort to the silver dollar for the purpose of making these redemptions. A contingency was before the public mind in which that might become necessary—and it is before the public mind to-day—that the gold coin of the Treasury Department may be withdrawn, or withdrawn to such an extent that the Secretary of the Treasury would not feel at liberty to pay out any more of it in the redemption of these silver certificates and silver notes; and then what is the alternative? And it will be remembered that the greater the increase of these accumulations in the Treasury, the greater the circulation of these Treasury notes, the greater must necessarily be the danger.

Why, if this contingency, if this need should occur, then there is nothing in the Treasury by which the Treasurer could pay these obligations except these silver dollars, and necessarily he must resort to them; so that the assurance of President Cleveland, given no doubt in the utmost good faith, for the purpose of sustaining and declaring his own convictions upon this subject, fails to restore the confidence of the people, and fails to restore the prosperity of the business interests of this country. They have continued to be drooping, not simply under the apprehension that a panic might be upon us, but a panic is already here. It has been here for weeks, and it has only been aggravated in its existence from week to week since its inception.

The people are fearful, not of the good intentions of the Executive department of the United States, but fearful that the contingency will arise, that the time will come, when these bills and notes will be redeemed only in silver coin, and the valuation of all merchandise and all property correspondingly diminished in value by the fact that this coin will form substantially the controlling basis of our circulation. It is this fear—no matter what has been said here repeatedly on the floor of this House in this discussion—it is this fear that we may reach this point that prevents the business interests of the country from emancipating themselves from the state of things that have depressed them, and restore confidence to the institutions and finances of the country, by which prosperity would be again assured and the business interests of the country would resume that activity and prosperity that characterized them in some measure in the year 1892.

We have been referred in the course of this discussion to the institutions of other countries—to India, to France, and other countries—that have made silver the basis of their circulation. But there is no country in the world, either ancient or modern, that has been referred to in the course of this discussion that has purshased silver or purchased any other commodity that might be coined into money, and that then coined it at such a ratio and under such circumstances as prevented it from going into circulation and assured its accumulation in the departments of their own government.

These coins are not intended to be purchased for the purpose of accumulating in this manner. They are intended as a basis of circulation, as forming a part of the amount in circulation and exchange in the transactions of the business of the country. But this intention has been entirely frustrated in this instance. These coins have not gone into circulation, with the exception of about 100,000,000, as shown by the Treasury report, which contains the statement in the report to which I have referred. It says:

> The amount of circulation on the 1st day of July was $122,430,011.

And this included not only the silver dollars, but the subsidiary silver which so long has formed a part, and an important part, of the circulating medium of the United States.

Now, it is with this state of facts before us that the people have concluded that the only chance for relief, the only chance for restoring the prosperity of the country, is the repeal of this law that Congress has been called to act in their behalf in this capacity. They look to no other source for relief; they can expect it from no other quarter. If these purchases and these accumulations must go forward the amount of silver that is in the Treasury of the United States must be used, or the property must accumulate as long as this act is allowed to remain in existence.

If this Congress is not disposed to clean it out and arrest these purchases and in that manner terminate, so far as it may be done, this menace to the business interests of the country, other Congresses will be selected by the people of the United States, whose judgment requires this action to be had and the neglect of whose interests may soon exasperate them to such an extent as to bring other Representatives here who, without reluctance, will adopt such measures as will carry out what they believe to be the true policy for the interest of the people and relieve them from this fear that has paralyzed the business of the country.

Now, Mr. Speaker, in view of this state of things what do we see here? Why, the gentlemen who represent the silver interests of the country, or more particularly the silver localities of the country, come here and say to Congress and to the country at large; "We will consent to the repeal of the purchasing clause

of the act of 1890 provided you will permit us to secure a free coinage of silver at the ratio of 16 to 1, or at some other ratio not exceeding 20 to 1."

What is this but an aggravation of the injury? Is there any ground for expecting that if either one of these proposed expedients should be adopted it would relieve the Treasury or relieve the people? Would the country be better off for having more millions of this silver in its Treasury than it is to-day for having nearly five hundred millions of it there? Would the people be induced to take those dollars after they were coined in this manner, if these expedients or one of them should be adopted, when they have not been willing to take them under the existing conditions and provisions of law?

Clearly not. The same objections would stand good in the public mind against taking this coin and using it in the business of the country that have heretofore prevented its going into that use. There has been no time in the history of this land, in the history of this Government, when the people or when the Congress of the United States have been ready to sanction the coinage and circulation of silver, or any other money, upon a basis of that character, expecting that it was going to promote the business interests and the prosperity of the people.

In fact, I may say that there is no land, no government, no people, that ever has tolerated such an abuse of the purchasing power of the Government as that which has arisen under the laws of 1878 and of 1890. Yet, according to the expedients which have been proposed as a substitute for the repeal of this law, if those expedients or any of them should be accepted by this House, that abuse is to be continued.

It is to be continued by the purchase of more silver, not simply 4,500,000 ounces per month as under the act of 1890, but we are to purchase every dollar of silver that may be brought to the Treasury of the United States, no matter whether it is produced in this country or not; no matter whether that purchase is intended to foster and promote the interests of the silver producers of the United States or not, no matter whether it is to be brought from Mexico or from South America or from European countries, wherever silver may be at hand to be sold upon terms that will render it advantageous to send it to our Treasury.

Instead, then, of having about $56,000,000 of silver purchased a year and locked up in the Treasury of the United States we should, if one of these expedients is to be adopted, have probably at least one hundred millions of silver placed in the vaults of the Treasury, which would be practically and utterly as useless as that which has already found its way there under the existing laws.

Mexico has produced nearly the same amount of silver that we have; it produces nearly the same amount now, nearly or about $50,000,000 a year, and certainly other countries are largely producing silver and would have a sufficient surplus to meet any of the wants or demands for silver of the people of the United States. In that way, if this policy should be adopted of coining all the silver that might be brought to the Treasury of the United States, instead of $56,000,000 worth of silver a year, as we now have under the act of 1890, we should have at least $100,000,000 of silver that would go into the Treasury and remain there as so much useless money, failing, on account of the feeling and the interests of the people of the United States, to find its way as a circulating medium in the transaction of business.

No, Mr. Speaker, our people are mainly honest. They are disposed to stand by the rules and principles of integrity, and not to concede or throw away those principles because their doing so may promote the interests of some particular class of individuals or of some special locality or localities. They stand upon the principles of fair dealing and honesty, and they have a natural repugnance to the use of a dollar, coined in silver or coined in gold, that may not be worth in the markets of the world more than 50 or 60 cents. Such a coin is a fraud upon its face. It stands as a direct contradiction of the statement made upon its face when it states that it is "one dollar," and every person who takes it knows that it is not a dollar, that it is at the most no more than six-tenths of a dollar. Our people, I say, are not disposed to accept or maintain such a currency. They have no admiration for artifices or fraudulent deceptions of this character; they stand in the position of having their public business fairly, squarely, and honestly administered. This was the case throughout the entire history of the country until the act of 1878 was enacted.

Why, when the coinage system was first provided for, in 1792, it was put on a basis of 15 to 1 because silver was then of such value as to render it fair to adopt that basis of parity between the two metals. So it continued down to 1834, and then the ratio was changed by act of Congress, so that the ratio became 16 to 1, and it has remained there from that day to this. But neither in 1792 nor in 1834 was the ratio adopted as a matter of mere arbitrary regulation. It was adopted in each case with due relation to the value of gold, which was even then regarded as the standard of value in this and other countries.

But the parity was declared to be in this proportion because it was the fair value of silver as compared with the value of one ounce of gold. This was the principle upon which this parity was established and has continued—not to bring silver before the country as a circulating medium of less value than gold, but to preserve its precise relation of value upon the commercial basis between the two metals. It was deemed proper, therefore, in 1834 to raise the ratio to 16 to 1, because that represented the commercial value of the metals.

But what are we doing now? We are repealing this old ratio; but for what? Simply to keep, or to endeavor to keep, a debased coinage in circulation—not to carry out the principles of honesty that stood at the foundation of all this legislation of the fathers of the country. What they designed and attempted to do was to preserve a fair balance between the value of the two coins; and it was expected when the act of 1878 was passed that this valuation would continue. But the amount of silver that has been produced in the country has prevented this from happening. It has become impossible that such parity, so far as silver is concerned, can be maintained. And is there any honesty, any fairness, in continuing this ratio when the result of it must be to depreciate a large part of the currency of the country—all that part of it which may find its way into coinage of silver—from the commercial value which in 1834, at the ratio then fixed, gave it an equal value with gold, to little if any more than half such value.

It has been said on the floor of this House that we must not consider this question of gold and the gold standard; that it has nothing to do with our affairs. But it has everything to do with the affairs of the people of the United States. During the history of this Government this metal has been the standard by which values have been measured; and whether they are the products of the agriculturists that find a market in the Old World or the cotton of the Southern States or their rice or their tobacco, they must alike be measured in point of value by gold.

And when silver finds its way into circulation and purchases or sales are made by means of this medium they must, even though the law does not declare that to be the case, be referred to the gold standard. That is the standard of the world. We are dealing with the world. Our agricultural products—our wheat, our corn, our beef, our pork—are sent abroad for sale into the Old World.

Our prices are regulated by the prices of the Old World. The nations of the Old World are expected to take our surplus; and they measure the prices by gold—by no other standard. And the people of the United States, in their dealings, in their accumulations, in their sales and shipments, whether made in Omaha, Denver, Chicago, or New York, make them with reference to the prices prevailing on the other side of the Atlantic. Whether cotton is sold in New Orleans, or Savannah, or Charleston, the prices upon the other side of the Atlantic are looked upon for the purpose of determining what it should bring. In this country it is by the gold standard, the gold standard alone, that these prices and these valuations are measured. We may exert ourselves as far as exertion can possibly be carried through the means of legislation—we may deceive ourselves with plausible theories, yet we can not close our eyes finally to the fact, when we come to look the facts fairly and squarely in the face, that notwithstanding all that may be said or done, it is the gold standard that is regulating and declaring the products of our country.

And silver itself is brought in the minds of the people to the same standard. It has been quoted, as I have already said, down to the year 1878 according to that standard. People have become accustomed to this standard. It is a part of their history. They have looked upon it as one of the essentials or necessities for the purpose of maintaining a fair and reasonable standard of silver coin as a part of the currency of this country, and without such a standard it can be of no more use than so much dead clay deposited in the vaults of the Treasury Department. So that, in my judgment, there is no proposition presented as a condition or inducement or excuse on the part of the silver advocates for the repeal of so much of the law of 1890 that these provisions, one or the other, should be accepted as a substitute, in case this law is repealed, for the provisions now existing.

In fact whatever they may be they would simply aggravate the difficulty. They would increase the amount of dead, useless property in the Treasury of the United States, and increase this menace that has proved to be so effectual in disturbing and depressing the business interests of the country.

Another proposition has been made here on the part of the silver interests of the country: and it is that, in case neither of these propositions shall be accepted, the act of 1878 shall be revived. In my judgment that is the least mischievous of all these propositions, for under that act the Treasury Department may

refuse to purchase or coin more than $2,000,000 of silver per month, while if either of these other expedients should become the law of the country, the Treasury Department would be bound to purchase every dollar in silver that may be taken to its doors—not simply $2,000,000 a month, but whatever amount might be presented, if it should be $200,000,000 a year—in order to satisfy the provisions that are suggested or presented here as an inducement for repealing the silver-purchase clause of the act of 1890.

So that in no possible view is any fair system or substitute offered by the gentlemen who maintain these silver interests as an equivalent for the repeal of the purchasing power under the act of 1890. If they had been desirous of supporting the interests of the country, and if silver could be induced by force or otherwise to form a part of the circulating medium of the country to the extent of taking up these purchases and making the coin a part of the medium of exchange, they would at least have come on here and said to Congress, "If you will repeal the purchasing authority embraced in this act of 1890 and give us the power of taking our silver to the Treasury Department and there having it coined without restriction, we will consent that the parity between silver and gold shall be based upon its commercial value."

But no such proposition has been submitted; no such plan has been suggested. That would to some extent probably be considered a palliation of the injury, of the disaster that might follow the continued accumulation of this silver in the Treasury. But, I repeat, that is not the proposition. It is proposed to limit the coinage to this ratio of valuation, this parity that upon its face stamps the silver dollar, and must stamp it in the judgment of the people of the United States, as a fraud with which they do not desire to have anything to do.

Now, it has been said during the discussion here that the Republican party was responsible for the enactment of this law. I do not design to make politics any part of the observations I shall address to this House. But I say if the Republican party was responsible for this action, the Republican party will be the first party to come up to the necessities of the situation and join hands with any party or any persons to repeal and remove this obnoxious legislation from the statute books of the United States. [Applause.] They are not so wedded to theory, they are not so wedded to any system as to be disposed to maintain a dishonest act of legislation to the injury of the people and the menace of the people's business, and to heap up and continue disasters already connected with the purchase and coinage of silver that must necessarily stand in the way of a revival of business prosperity throughout the land. [Applause.]

The only chance of relief, the only avenue of relief that is presented, is for all persons, irrespective of political parties—and I know from the tenor of the feelings that pervade the minds of the Republican party throughout the United States, as well as from the great principles of that party, that they will be ready immediately and at once to join hands with any party or with any individuals to wipe out from the laws of the United States this provision authorizing the purchase of silver by the Treasurer of the United States, and in that way, as far as they are able to do so, to wipe out the effect that the continued exercise and existence of the authority so given may have on the business interest of the country. It is a final resort, so far as the expectations of the people go. They look to Congress for that relief. They have resorted to experiment after experiment for the purpose of settling it themselves.

There is a want of confidence which can only be removed by proper legislation at the hands of Congress; and if relief in this way is not afforded, disappointment must go back to the people with the impression and the conviction that their Representatives here, the members of this body, are not willing to accede to them such a fair measure of justice as to improve their business and financial interests, and in this manner to build up and restore to a great measure the prosperity that seems to have departed from our land.

I do not say, Mr. Speaker, or mean to say, that the purchase and deposit of this immense amount of silver in the vaults of the Treasury is the only cause of the present disturbance of the business interests and of the confidence of the people in the country. It is enough here to say that the people have made up their minds that this is the essential cause that to-day stands in the way of renewed prosperity, and a cause which must be removed in order to restore that prosperity. There is, then, nobody on earth that they can appeal to or ask for its removal, and the abundant relief which they believe will follow from it, except the Congress of the United States.

And, sir, as we all hope to promote the prosperity and success of the country; to build up its interests on as firm and as stable a foundation as possible; to commend our character, our currency, and our credit to all the nations of the earth with whom we have relations of trade or business, it is our duty, and one which I believe will not be neglected by Congress, to say that this little act should be done of repealing so much of the law of 1890 authorizing the purchase of this silver as tends to create this apprehension in the public mind.

I should in the exercise of my individual judgment go farther than the provisions of the bill already introduced, and would provide a prohibition by which the Treasury should be forbidden to coin another dollar of the one hundred and eighteen millions of bullion now in the Treasury until the silver dollars already coined had gone out and become a part of the circulating medium. Relief is to be found here, however, and here alone; and the question is whether this Congress shall exercise the authority conferred on them and confided to them and shall go down with the commendation of the business interests of the people of all classes—of the laborer as well as the capitalist, of the business man as well as the professional man or the person employed—or whether in consequence of its failure it will receive the execration, not only of this generation, but of all the people of the country who may be affected by this vast, this fraudulent purchase and accumulation of silver in the Treasury of the United States. [Applause.]

Mr. COOPER of Florida. Mr. Speaker, I should not intrude for a moment upon the attention of this House, wearied already with the long discussion of what may be called the same question, day after day, if it were not for the fact that I stand here in a position of my own and to some extent with views of my own. Standing as I do as the Representative of a far Southern agricultural district, being as I am a sincere friend of silver, but a sincere believer in bimetallism as well, anxious as I am to vote for any reasonable and practicable measure that would afford to the people of this country from time to time such sound and sufficient increase in currency as their necessities may require, yet in the face of the present situation, exercising my judgment on the facts as I see them, and voting in the interests of my people as I see them, I shall vote for the repeal of the Sherman law as proposed by the gentleman from West Virginia [Mr. WILSON], and shall vote against each and every one of the propositions contained in the proposed amendments suggested by the gentleman from Missouri. (Applause).

Mr. Speaker, I have sat here day after day and listened to abstract discussions of financial theories; and all the time there has been in my mind a question of which I could at no time divest myself; and yet men from my section do not seem to think it worthy of consideration, much less of answer. That question is where, in a few weeks from now, is the money to come from to buy and to move the cotton crop and the other crops of this country? I picked up a paper yesterday, and saw that the merchants and bankers of Savannah are trying to get authority to issue scrip to pay for cotton. Savannah is the cotton market of Florida; and am I to stand here and in the face of the prospects that the farmers of Florida will have to sell their cotton at a depreciated price and for due bills or for scrip, with all that that means to them, with all of inconvenience and all of loss in the shaving of such papers, and am I not even to give them the chance of the only remedy that any one suggests as a means of supplying immediate money?

Mr. Speaker, some gentlemen here have intimated that Southern members who voted for the Wilson bill, and did not vote for any of the specified and limited methods to which they were wedded, of supplying a substitute for the Sherman law, would have an indignant constituency to answer. I say to them that when that day comes I will not be afraid to stand up with them and make my answer while they make theirs. [Applause.] I will say to my people, "I voted to give you the only immediate relief that was possible, at least the only thing which offered a prospect for immediate relief."

Those gentlemen may say to their constituents, what? They may read them their long and more or less learned and more or less eloquent disquisitions upon silver. Perhaps these will be accepted as a sufficient answer, and perhaps those men who have gone down into ruin through their inefficiency and delay will say so them: "We asked you for bread, and you gave us wind." [Applause.]

Mr. Speaker, as I have sat here and looked out upon this House my mind has unavoidably wandered to other scenes far distant. I have seen the farmer coming into his country town to sell his cotton, his money crop, and, unfortunately, too often his only money crop, and finding no buyer, because there is no money to buy it with, or having to sacrifice it at a depreciation because of the inadequate supply of money. I have seen the country merchant who had to carry the farmers through the year, pressed by his creditors, unable to make collections, unable to get accommodation from his local bank, the banks unable to make collections, deposits cut off, and all of those men going down into one common vortex of ruin, while we discuss the views of various

financiers, modern and ancient, upon silver and gold and bimetallism, and so forth, and so on. [Applause.]

Now, my friends, what is the cause of this depression, and what is to be the means of relief? As to its cause, in the first place, we have the statements of nearly all the business men of this country, that it is caused by the Sherman purchase law.

I am a lawyer, to some extent at least, and even in a court room where we are limited to absolute proofs of facts, we at least accept the opinions of experts, and we know that all the experts of this country, except a few gentlemen who are immediately interested in the production of silver, agree that such is the cause, and this goes far toward proving it.

Now, my friends, there has been a little suggestion upon the Republican side of this Chamber that this depression is caused chiefly by the prospect of tariff reform. I am not going to get off into tariff reform, but I will say just this about it, that the weakness of that statement is that it is not true. [Applause.] I do not know the affairs of every mill, or every mercantile or banking concern in this country, but I have inquired far and near, and as far as I could obtain information, the concerns that are shutting up in this country and throwing men out of employment are not closing up for lack or orders. They are not closing up because they can not get orders for future delivery, or arrive at any basis of contract with those who desire to purchase. They are not closing up because they are insolvent concerns, but they are closing up for two reasons—one that they can not get the actual cash to run their business and to pay their men, and the other that on account of this financial stringency they fear to fill future orders, lest their customers will not be able to pay for them. That is it.

Now, my friends, these things demonstrate that the immediate cause at least of this depression is a lack of money, and we have a general agreement that this lack of confidence was brought about by this law. Why, no less eminent an authority on the silver side of this question than Senator JONES of Nevada stated, in a magazine article only the other day that you could maintain government money at par so long as the people believed that the Government could redeem it, or did not apprehend that the Government would be unable to redeem it. Therefore, he said, you can not base money upon gold alone, because the people will soon learn that there is not gold enough in the world to redeem outstanding obligations, and they will go below par.

It has been said that the Sherman law was not an adequate cause for this depression; but we all know, who know anything about it, that the business men of this country, and the business men and most of the financiers of every other country, had anticipated and expected this depression; that they have believed that the country can not continue to carry the accumulation of silver under the Sherman law; and, upon even the authority of Senator JONES, that makes the Sherman law an adequate cause for the present depression. [Applause.]

Mr. LIVINGSTON. Will the gentleman allow me to make a suggestion to him?

Mr. COOPER of Florida. I will, with pleasure.

Mr. LIVINGSTON. If the certificates issued under the purchasing clause of the Sherman act have created a burden upon the Treasury, will you explain why it is that these certificates are at a premium in New York and all over the country?

Mr. COOPER of Florida. I think I can. In the first place I never said that the certificates were a burden upon the people. I said that the want of confidence in the business men originated in a belief that the country would not be able to go on continuously accumulating silver and issuing Sherman notes. I believe that the purchase of silver and the issuing of these notes had broken down the public confidence. [Applause.] Breaking down public confidence caused the people to run upon the banks, caused the banks to lock up their currency, and brought about this present stringency. I am going to answer the gentleman's question further. I say to him that the reason that the currency has gone to a premium is that on account of this lack of confidence money has been locked up; and the very measure, therefore, that was expected to make an abundance of money has created a panic, and stringency has driven out gold and locked up the currency, has brought on the contraction and panic and demoralized all the business interests. [Applause.]

Mr. LIVINGSTON. Is the gentleman aware that these certificates are at par in London? You have not answered my question.

Mr. COOPER of Florida. I think I have.

Mr. LIVINGSTON. These certificates are issued under the operation of the very law you are complaining of, and under which you say the confidence of the business interests has been broken down. Now, so long as these certificates are at par in London and are at a premium in New York, will you explain how it has brought depression upon the country?

Mr. COOPER of Florida. In the first place, as I have said before, I have made my statement and not the statement of the gentleman from Georgia; and he can not put his words in my mouth. In the second place, I have already explained that this money is at a premium because of the panic. The stringency locks it up, and it is locked up because of the lack of confidence in financial operations under the Sherman act; and I say to him further, that the reason it is at par in London is because you can draw gold for it in America. [Applause.]

Now, Mr. Speaker, I had almost gotten involved in the tariff when my friend from Georgia happily rescued me. [Laughter.] I do not want to get into any partisan discussion of this affair either, but I can not refrain, with my naturally combative disposition, from saying to my Republican friends—because I have sat down here for a number of days silently while once in a while they gave the Democratic party a prod and suggested that this was the result of turning the country over to the Democratic party—I can not resist saying this: That when the Democratic party had had this country for four years, at the end of Mr. Cleveland's last term we turned this Government over to you with the people prosperous and the Treasury full to overflowing. You gave it back to us in this condition of depression, in this condition of suffering, with a depleted Treasury and with the country already going over the precipice into this financial abyss; and that is all of politics I am going to bring into this speech.

A REPUBLICAN MEMBER. That is enough; you are doing well.

Mr. COOPER of Florida. Now, Mr. Speaker, I said that was all of politics; but I can not go further in my speech without making some reference, at least—to be in the fashion—to the Democratic platform at Chicago. Gentlemen have stood up here and told us that the man who did not vote for each of their particular fads upon the subject of currency was a traitor to the Democratic platform at Chicago. The Democratic platform of Chicago, in the only sentence where it mentions the coining of money, declares for the coining of gold and silver at equal intrinsic and exchangeable values; and the man who comes in here and undertakes to force me, or to limit me, to vote for the coining of silver at certain ratios, each one of which and the greatest of which is far below the market price, undertakes to drive me off the Democratic platform; and he can not do it. [Applause.]

Now, Mr. Speaker, passing from this question of coining at either of the ratios, is there anything in the Democratic platform that declares we shall repeal the Sherman bill and enact another silver-purchase bill? I believe that the Bland bill in its day was a good measure. I believe it did this country no harm, but did it good, because it enlarged our currency at a time when we needed it; but since that bill was repealed we have had more than $150,000,000 of Sherman money added to our currency.

In dealing with these matters we can only look at the facts as each of us sees them. Now, the question of how much of a certain kind of currency a country can successfully carry is a question of fact.

Gentlemen have been fond of referring here to France as the great authority upon coinage and finance. Do they not know that at the late Brussels conference France, through her delegates, declared that she would coin no more silver; that she would not open her mints to free coinage; and further declared when it was proposed to her that France, the United States, India, and the other countries of the Latin Union should enter into an agreement for the free coinage of silver—that she declared, when that proposition was made, that so many countries could not do it? She said, "You have got to include England and Germany, or else it will be impracticable." Do they not know that the representative of France said, "We have got all the silver coin that we can successfully carry, and we can not agree to coin any more, because the attempt to do so would be disastrous?" Mr. Speaker, that is the pronouncement of the highest authority of the gentlemen on the other side.

Just before I was leaving Florida an old friend of mine who had lived for years on the Pacific slope came to me and said, "I do not know how you stand on silver; I have got one advantage over you with reference to it; I have dug silver and I have dug potatoes, and they are each worth what they will sell for." [Laughter.]

Now, Mr. Speaker, if I am to be called upon to give value to any article by legislation, if that, indeed, is demanded of me by the Democratic platform, or any other controlling agency, I want to get some of the benefits of it. [Laughter.] We all know the story of the old darkey down South who was very much taken with the reports which came to his ears concerning the civil rights bill. He heard a great deal about the "provisions" of the bill, and he got an idea that it was something which would be very beneficial to him. So upon a certain day he went to his county town to draw his share of the "provisions," but when he found that there was no hog and hominy in the bill he took no more interest in it. [Laughter.]

Now, Mr. Speaker, if I am to vote for a bill to give an artificial

value to things, if I am to vote for this measure, I want an amendment adopted by which it shall be enacted that my people shall receive a dollar for every 57 cents' worth of their cotton, and tobacco, and oranges, and pineapples, and vegetables, and logs, and lumber, and turpentine. If our friends will put that into their proposition perhaps—I do not say that I will, but I say perhaps—I will manage to hold my conscience in abeyance. [Laughter.]

An acquaintance of mine was cow attorney for a certain railroad. [Laughter.] His duties consisted in going around and resisting claims for cattle that were killed on the track, and he did it very artfully. He resorted to all the arts that were known, the usual delays and everything else, and he continued in that service for about three years, when the railroad company discharged him, whereupon he became a very active and zealous promoter of like claims upon the other side.

One day, as he was addressing the jury in a justice's court, he became very severe, not only upon the company, but upon the attorney on the other side representing the company. Finally the other counsel could not stand it any longer, and he got up and threw his record at him—as sometimes happens to lawyers and to statesmen. [Laughter.] He said: "Didn't you for three years represent this railroad company and resist just such claims as this, doing what I am doing now, only a good deal more so?" Whereupon the indignant cow attorney replied: "Sir, for three long years I held my conscience in abeyance, but now it has broke loose!" [Laughter.]

I have not held my conscience in abeyance, sir, but if I am to do it, I want to see some direct, immediate, palpable, tangible benefit for my people in this legislation. [Laughter.]

Mr. Speaker, we may theorize as we please as to the future far distant, but we know in fact that this fall, within the next few weeks, the continuance of the present state of affairs means a lower price for every pound of cotton in the South. If it goes on it means a lower price for every box of oranges in Florida; it means a greater diminution of that great stream of tourist travel which to us is not entirely what the overflow of the Nile is to Egypt—because we deny the charge that we live wholly on fish in the summer and Yankees in the winter [laughter]—but we do admit the fact that it is a very material factor, and if there are hard times at the North and a money stringency, if all the money is locked up so that nobody can get any for business, much less for pleasure, shall the corridors of our hotels (which are palaces), shall the beautiful resorts of Florida, shall the lovely walks on the banks of the St. John and the Indian Rivers remain vacant, and shall all the channels of trade be deprived of that necessary supply of nutriment? The hotels, the transportation lines, the farmer who sells them his products, the merchant who sells them his goods, all will suffer. It is right upon us, and if there is not relief, and that speedily, we are going to have a hard winter in Florida, and if my vote can prevent it it is not going to occur. [Laughter and applause.]

Mr. Speaker, it has been said to us, "Are you going to be dictated to by England?" That brings up before us one of the most momentous events in the history of finance, or perhaps in the history of the world, during recent years; I refer to the demonetization of silver, or at least the stoppage of its free coinage, in India. When I say I am a friend of silver I am sincere, but I am not ready to vote in this emergency for the free coinage of a short dollar. And I am pinned right down to that or to another silver-purchase bill. I have no other choice or option. I am somewhat in the position of one of those steers that is shipped from Florida; it is put in a kind of runway; one man holds up the bars on one side and another man holds them up on the other, and it must run right along; there is no escape on either side. In this emergency I have made up my mind what I am going to do, and I have declared it. I am not allowed the opportunity to vote for the coinage of silver at its intrinsic value; it is not proposed to give me any such opportunity.

But, Mr. Speaker, I started to speak of the taunt which comes to us as to our being dictated to by England. Why, sir, at the end of the Franco-German war, when France—as proud a nation as exists upon God's footstool—had been overthrown in war; when every feeling of pride and resentment was aroused; in this situation, when Germany demonetized silver, did France say, "We will not be dictated to by any set of Germans. No Kaiser, nor Bismarck, nor any such set of gold bugs can dictate to us. We have maintained the free coinage of silver always; it is the traditionary policy of France, and we can stand alone?" No, sir; France said nothing of the sort. It said, "When Germany has demonetized silver a great fact has occurred which we must recognize and to which we must conform our action;" and they closed the mints of France to the coinage of silver.

So, when the India council demonetized silver, or at least stopped its free coinage, in an empire of more than 250,000,000 of people and destroyed the greatest silver market of the world, thereby depreciating the price of silver, that was a transaction which we can not ignore—which must influence our action whether we like it or whether we do not. For my part I deplore it. If I had come here at any other time than in the presence of this financial depression and in the presence of that action of the Indian government I should be found voting with the men who will now vote contrary to me when this question comes to an issue. But, sir, I always endeavor to look at things as a sensible, reasonable man. And when, so far from the United States accomplishing anything at the Brussels conference, so far from our country getting the aid of any other nation, India demonetized silver, it was a blow that must be recognized; and to say that in the face of this action the United States alone shall undertake so hazardous an experiment as free coinage at a short ratio seems to me neither wisdom nor courage, but foolhardiness.

Mr. Speaker, various gentlemen who have argued this question have referred us to the reports of the India commission. It is a fact that that commission recommended a stoppage of the free coinage of silver in India. It is also a fact that they recommended that, if limited coinage by the government should be carried on, the ratio should be made 20 to 1. But already that is regarded as a most hazardous experiment. Now, what we are here for is not to try experiments, the effect of which would be that while we are awaiting the result months or perhaps years must elapse before confidence is restored. What we are to do is to bring money out of its hoarding places, and then we can devote such time as may be necessary to establishing the currency of this country on a permanent basis.

I shall be ready, I am ready now, to support any measure which to my mind affords a reasonable expectation of establishing our currency upon a sound, safe, sufficient, flexible, expansive basis. But I do not believe that we can successfully establish the free coinage of silver, even at a ratio of 20 to 1. And I do know that such a measure will not restore confidence. I do know that the only means of supplying the country with sufficient money in time to do any good, in time to stop this stringency, in time to market and move the crops, in time to give idle workmen employment, in time to enable the mills to resume their work of industry and their diffusion of values, in time to save the bankers of this country who are struggling against ruin, and the merchants who are fighting from day to day to keep out of bankruptcy, and the farmers whose homes are mortgaged and who must raise the money to meet their interest and their principal—the only measure to do this in time is a measure that will bring out the millions and millions of money that we already have—that are hoarded, locked up in banks or in old stockings—money which is kept out of circulation by the general want of confidence.

Senator JONES of Nevada says that this condition of confidence will return whenever the people believe that the Government can maintain successfully a financial policy. That the great majority of the American people do now believe that the Government can not maintain the policy of the Sherman bill, I shall not argue, because I believe every man in this House knows it. Then, I say, what are we to do but that which at least the people believe is adequate; and if they believe it is adequate, it is adequate. [Applause.]

Mr. GOLDZIER. Mr. Speaker, it is with a great deal of hesitation and diffidence that I rise to address the House upon this momentous question. Much has been said on this question on both sides, and it is necessarily difficult for me, especially as I am a novice in this House, to add anything of value to the discussion. When I recall the eloquent appeal which my friend from Nebraska [Mr. BRYAN] made to this House yesterday I can not attempt to vie with him in his rhetoric. When I recall the learned discussions of other gentlemen who have addressed this House, I know that I can not compete with them in the citation of learned writers and in demonstrating my position by reference to such expert authorities, although we all know it is possible to demonstrate by expert testimony each side of a question.

And yet, sir, when I pass in review what has been said in regard to the pending issue, it seems to me there is something lacking, and I shall attempt, to the best of my ability, to supply it, or at least to suggest something which some of the gentlemen on this floor have omitted.

Now, Mr. Speaker, it seems to me that under the existing circumstances so vividly described by gentlemen on the floor of this House, the orators who have treated both sides of this question seem to have forgotten one thing, and that is this: when a man is disheartened, discouraged, morose, what is the best thing to do for him? The best thing, of course, is to cheer him up; the best thing is to inspire hope in him; the best thing is to talk brightly to him; the best thing is not to speak to him in a pessimistic manner, but to present the brightest side of the subject of which you treat.

I think that has been omitted by the gentlemen who have discussed this subject on both sides of the question. These gentle-

men have evidenced in this House, in all of the discussion, a tendency to pessimism, which to my mind can not encourage the country. If you listen to those gentlemen who have so ably advocated the passage of a free-coinage law, you will find them declare that we are now at a point where this country is either going to flourish and blossom like the rose, if their views are enacted into law, or where this country, if you turn it over to the shining, glittering "gold bugs," is going to the "demnition bow-wows." If you listen to gentlemen on the other side of the question they admonish you: "Do not listen to the siren song of the silverite; do not hearken to what he says to you; follow him not, for he lures you to an abyss." They declare that if you follow the advocates of free coinage the country will go to wreck and ruin.

Now, I do not, for one, believe that that is the case. I, for one, think that the great American nation, this nation with its vast resources, far above those of any other nation in the world, a nation which has survived so many troubles, trials, and tribulations, and like a phœnix has emerged triumphantly with shining plumage, is not going to destruction, no matter what gentlemen on this floor may determine upon this question. I think that the American people who have withstood the crisis that existed at the time of our war of Independence, who have withstood the onslaught of armies external and internal, the domestic troubles that occurred during the war of the rebellion—that the people who have gone through so many trials of war, of treason, and of pestilence, and have come out unscathed and glorious, that this people will survive this ordeal as it has others; that this nation is not doomed to disappear from the face of the earth, and our prosperity is not to be wiped out by anything that Congress may do, no matter how ill advised or how misguided the action of Congress may be.

A gentleman on this floor on yesterday, the gentleman from Nebraska [Mr. BRYAN], has likened the present condition of affairs in this country to a panic in a crowded playhouse—to alarm in a house crowded from pit to dome where some man present by inadvertence raises the cry of "Fire." I think the likeness is a fitting one and I gladly adopt the illustration. Suppose, gentlemen, that you were in such a crowded playhouse; suppose the cry of "fire" should by inadvertence be raised, what would you think of the manager of such a playhouse who would step out before his audience and say "Flee for your lives; the roof is falling"? Would he not add to the confusion and to the loss of life? Would he not be guilty and culpable? And what else is it that these gentlemen are doing who are going to the extremes to which we find them going in the discussion of this question before the country to-day?

We want a different policy pursued in this particular discussion. We need a bright policy. We need a reassuring policy. The talk of the members on this floor ought to be in line with what the wise manager of such a playhouse under such circumstances would do. You all know that in numerous disasters of the kind described by the gentleman from Nebraska, the man who had his wits about him, the man who was up to the occasion, ordered his band to play a lively air—not because music could subdue the fire; not because of the actual effect of any such action, but simply on account of the moral effect and in order to stop the panic. We ought to have the kind of oratory here which would be reassuring to the people, which would cheer instead of depressing them.

Mr. Speaker, the repeal of the purchasing clause of the Sherman act is proposed as a measure of relief. Let me say at the outset of my remarks that I fully agree with those gentlemen who say on this floor that the workings of the Sherman act are not to the largest extent, are not mainly in fact, responsible for the distressing condition of the country. Let me say further than that, whether right or wrong, the people as a whole, the community as a whole, attribute the condition of affairs in large measure to the existence of the purchasing clause of the Sherman act. What under these circumstances and conditions is our duty? What is the first thing that we ought to do? Another gentleman on this floor has likened the condition of the country to the condition of a man who is not suffering from any disease, but who, being continuously told by his friends that he is looking ill, that he shows symptoms of disease, believes himself to be afflicted with such disease; in other words, he likens the condition of the country to that of the *malade imaginaire*.

Now, call in a wise physician to treat this *malade imaginaire*, and what will he do? He will not say, "There is no trouble with you." He will not say, "You are simply suffering from a disease of the imagination." He will not say there is no necessity for doing anything for you, because knowing, as a physician must know, that under such circumstances the mind is affected, if the body is not, he will know that if he can reach the mind he can cure this imaginary disease of the body.

We have this patient before us. He tells us in language that can not be misunderstood, "I am suffering from the effects of the Sherman act." It will not do for us to stand up here and argue from now till doomsday that there is nothing the matter. We can not argue this patient out of the belief that his disease is the Sherman law. And what we ought to do under the circumstances is to give this patient bread pills, to give the imaginary patient an imaginary remedy; and by so doing you will cure the disease.

I mean exactly what I say; because from all the light that I have been able to gather upon the pending question, I feel satisfied that the repeal of the purchasing clause of the Sherman act is not a permanent cure of any of the diseases from which we are suffering. At the same time, under these conditions I think that the application of this remedy is as necessary, is as much our duty, as though we were satisfied that it would effect a permanent cure.

A great deal has been said upon this floor in regard to the effect of a possible repeal of the Sherman act. And while I am upon this point, I want to say that I have listened with the utmost attention to the whole of this discussion from first to last, and I have yet to find the first man upon the floor of this House who has had a good word to say for the Sherman act. Those who treat it in the mildest manner, those who are inclined to favor it to the utmost, say that it is harmless. They say "We will admit that it is a stupid piece of legislation, we will admit that it is bad financiering and poor politics," but they deem it to be harmless; while the avowed enemies of the act say that it is the cause of a great deal, if not all, of the present financial trouble in this country.

Therefore, I say, we seem all substantially agreed upon one proposition, and that is that this act is not doing the country any particular good. If it is not doing any good, I ask why in the name of good common sense can we not try to do some good by taking it away, by removing it, by obliterating it? We certainly can not do any harm, according to the theory even of those who say it is useless, and if we adopt the theory of the other side we must do a great deal of good.

I wish to say that I deem a discussion of the coinage question upon the floor of this House at this time entirely irrelevant. As I have stated before, I do not believe that a repeal of the purchasing clause of the Sherman act is a permanent remedy, and because I believe that I stand ready, prepared and willing with all my little ability and with the best of intentions, to aid in formulating that kind of a financial system, that kind of a currency system for this country, which will be found the best, after due consideration, and which will aid us in maintaining the country upon its former level of prosperity.

Now, as to the Sherman act I say, as before, why not start in by doing something? Why not give the country to understand that we are about to do something for the benefit of the people? Why not give the country to understand that we have entered upon the road to putting the country upon a sound financial basis? And what better method can you find for doing that than to remove a law which one side declares to be useless and which the other side declares to be absolutely vicious?

In discussing the currency question I have heard upon this floor from gentlemen on both sides a great deal of talk about the debtor and creditor classes in this country; and if you listen to the ardent advocates of silver you will unquestionably be led to the conclusion that the debtor classes of this country are the millions and that the creditor class is confined to a small section of the country.

In fact, if you follow this discussion to the conclusion you may be led to believe that the creditor class is confined to a little corner in Wall street. I boldly advance the proposition that this is not the case, and that the creditor class of the country, about the rights of whom gentlemen who are eloquently advocating silver seem to be entirely indifferent, is much larger than is generally supposed. Who are the creditor classes? Let me mention one small subsection of the creditor class of this country, and let us see its magnitude, and then talk about the fifty people in Wall street who are depicted as the creditor class juggling with the finances of the country.

The last report of the Comptroller of the Currency, in treating of the savings banks in this country, says:

> The condition of the savings banks of the country is of special interest, owing to the enormous volume of funds in their custody, and to the further fact that these funds are largely the savings of people of limited means. Reports have been received from 1,059 savings institutions, including 416 stock savings banks or associations, which associations do both a commercial and savings business. Of this number 643 are conducted presumably in the sole interest of the depositors, and are classified as mutual savings banks. The resources of the latter class amount to $1,605,415,679, being nearly 82 per cent of the total assets of both classes.

The total savings deposits, in accordance with the report of the Comptroller of Currency, amounted in 1892 to $1,712,769,026. What are these savings depositors? Do they not belong to the

creditor class of this country? Are they the large capitalists of Wall street, or are they the small business man, the artisan, the laborer, "people of limited means," as the Comptroller of the Treasury puts it.

A significant fact, showing what composes this number of the creditor class, is furnished by the number of individual depositors in savings banks. The total number is 4,781,605 depositors; or, in other words, taking the population of the United States, including men, women, and children, every thirteenth person belongs to the creditor class of the land by being a depositor in a savings bank; or, going further, and taking the male population, you find that every sixth and one-half male of the population is one of the much-denounced creditor class, by being a depositor in a savings bank; and, going further and taking the wage-earning portion of the male population, those over 21 years of age, you find that one in every four—that every fourth man you meet upon the streets—belongs to this much-reviled and much-denounced creditor class of the population by being a depositor in a savings bank.

But that is not the only manner in which the small people of this country, in which the laborers and workingmen and the small business men deposit their savings and become creditors. Gentlemen upon the floor of this House know beyond a question the vast proportions that have been assumed in recent years by those well-known institutions, the savings and loan associations, the land and loan associations, in which the small man from his weekly earnings deposits weekly certain amounts—for what purpose? For the purpose that it may be loaned out to others in need of money, and thus the people become a part and parcel of this creditor class.

I have not the statistics at hand as to the amounts of money passing through the building and loan associations, and there is but one city in which I am perfectly familiar with the working of these associations, and that is the city from which I hail, Chicago. In that city there are in existence at the present time over two hundred building and loan associations, and those associations have been loaning to such people as were in need of money over $75,000,000 in the city of Chicago alone. I have no doubt, especially in view of the fact that this system is comparatively new in Illinois and comparatively old in older States of the Union, that the figures with respect to the older cities and the older States vastly exceed in proportion the figures I have mentioned to you.

Who are the people who contribute to these funds? Has anyone every heard of large capitalists going into building and loan associations? Has anyone ever heard of men of large means investing their money in that manner? No, gentlemen, the money put out through the agency of building and loan associations is the money of the small people, the money of the small merchant, of the small business man, of the laborer, which he deducts from his weekly wages, and in that manner the body of the people become a part and parcel of this creditor class.

Mr. SIMPSON. I would like to ask the gentleman a question for information.

The SPEAKER *pro tempore* (Mr. REILLY in the chair). Does the gentleman from Illinois yield?

Mr. GOLDZIER. I yield to the gentleman for a question.

Mr. SIMPSON. It bears upon this question, and I am very much interested in it. Has the gentleman made any calculation as to the amount per capita that the laboring class have deposited in these institutions and in these building and loan associations, divided up by the whole number?

Mr. GOLDZIER. Dividing it among the various classes?

Mr. SIMPSON. Yes.

Mr. GOLDZIER. I have not. The only means I have of judging is by comparing the amounts deposited with the number of depositors, and the figures show upon their face that the deposits are small. There are, as I stated before, in the neighborhood of 5,000,000 of these savings-banks depositors.

Mr. SIMPSON. It has been asserted that it amounts to about a hundred dollars for each one of the depositors, if it were distributed among them.

Mr. GOLDZIER. The figures are before the gentleman and, as he is at leisure now and I am not, I will leave him to figure it out. The amount of savings deposits is $1,712,769,000. The number of the savings-bank depositors is 4,781,605. My colleague [Mr. SPRINGER] has called my attention to the fact that the report of the Comptroller gives the average per capita of deposits; but that is not the point about which the gentleman from Kansas asked me. His inquiry was as to the average amount of the deposits.

Mr. SIMPSON. Yes, per capita.

Mr. GOLDZIER. The average amount per capita of depositors?

Mr. SIMPSON. That is what I want.

Mr. GOLDZIER. Well, the gentleman has the figures. Now, Mr. Speaker, to return to my argument. I spoke of these loan associations. I have no doubt that the amounts which are invested in this manner by the small investors of the country through these loan associations, and by which amounts those people become creditors, is at least as great as the amounts deposited in the savings banks. Now, to what does that lead us? I say to you, gentlemen, that when you make your bold attacks upon the "creditor" portion of the country you are attacking the very bone and marrow of the people. The man who has his few dollars invested in a savings bank, though he may be a small creditor, though the amount, in comparison to the amounts invested by bankers and capitalists, may be insignificant, is deeply interested in proportion to his means. His deposit is to him a matter of great importance. It represents to him all that he has been able to save by hard labor.

It represents to him all that he has been able to lay aside by living in the most economical manner. It represents to him the little mite of savings that he has been able to lay by for a rainy day. It represents to him the means of living in case he should be sick. To the laborer or the poor man it represents his sustenance in case he should become unable to work, from age or disability. It is his life insurance, and provides for his family in case of his death. And, sir, speaking on behalf of that portion of the creditor class—and I shall attempt to show you that it is a very important one—I assert that their rights are as sacred as those of any other class, and that their rights are as much entitled to consideration on the part of the members of this body as are those of any debtor class, I care not how numerous they may be.

I think it is a fallacy to say that the population of this country is divided by geographical lines into a creditor class and a debtor class, the one living East and the other living West and South. The statistics do not bear out that view. They show to you, in language that can not be contradicted, that the creditor class is widely distributed over this great country, and that that class does not consist alone of the Wall street banker and financier, but is composed, at least as largely if not more largely, of the men whose interests should be dearest to our hearts because they are the most defenseless.

Now, Mr. Speaker, another point occurs to me which seems to be important in this discussion. We have been convened here to legislate against the evils under which the country is suffering. We have been convened here to legislate in such manner as to restore the confidence of the people. In this discussion I have heard many sneers upon this floor at this hackneyed expression, this "coy maiden," the "confidence of the people." But let me show you, gentlemen, that it is not an airy fiction but a reality, this confidence of the people, which enters into every one of our daily transactions.

The gentleman from Missouri [Mr. HALL] who spoke here the other day, quoting numerous authorities, quoting authorities of men learned upon this subject and of deep wisdom and erudition, stated—and, by the way, it was a silver man who said this—that the circulating medium of any people consists of two things, currency and credit; and he stated the ratio to be as 19 of credit to 1 of currency. I have not gone over his figures but I assume them to be correct.

I assume them all the more to be correct as I think I can show you that the proportion is even a larger one.

Now, which part of our circulating medium is it that has been contracted? Is it the currency, the cash money, or that other vaster, larger, and infinitely more important portion of our circulating medium, the credit of the country? I think I can state without fear of contradiction that the evils under which we are suffering, the financial distress in the midst of which we find ourselves, and which threatens to oppress the country in still greater measure, is due mainly to the contraction of the circulating medium which the gentleman from Missouri has called credit, and which constitutes, as he says, 19 to 1 of the circulating medium. That this is so—that credit is the most important portion of our circulating medium—I think the records of this country which exhibit the banking transactions of the Union will demonstrate beyond a question, and they will demonstrate to anyone who chooses to examine them that, taking into consideration the volume of business done in the country without actual cash, that part of the circulating medium called "credit" is great beyond compare, while that part called "cash" sinks into utter insignificance.

You may theorize and quote authorities fifty, sixty, or one hundred years old from now until doomsday; they will not alter the fact, which is patent, that the bulk of the business of this country—that nine-tenths of this business, ninety-nine one-hundredths of it—is done without the intervention of actual cash. Now, what is the basis of that part of the circulating medium called credit. As necessary as it is that the currency of the country should be reduced to a standard of value as sta-

ble as the possibilities admit—as necessary as it is that everything in the shape of money should be reducible to a standard of value, whatever that standard may be—just so necessary is it that all the credit of the country should be founded upon one standard of value. But that standard of value is known; that standard of value is unchangeable; that standard of value can not be varied; it is the confidence of the people in the institutions of the country.

Mr. Speaker, compare for a moment the business of the country that is done with actual money, with the business of the country done upon credit money—with such money as the people make for themselves—I mean checks and drafts—the people's own money—the money which they make whenever they see any necessity for it, and the money which is stable and is current as long as its basis, confidence, exists. Referring again to the report of the Comptroller of the Currency, it will be found that during the year 1892 the banking business, the check business of the United States—in other words, that part of the business transactions of our country which was done without the intervention of actual cash—was as follows: The total of all the clearing houses of the United States shows the enormous sum of $61,017,839,000 and some odd dollars.

And speaking of an increase in our currency, talking about the beggarly increase which any system we might devise might give to us, these statistics show that within the one year 1892 the people, having need for it, had increased their currency, their circulating medium, by the tremendous sum of $3,836,000,000, that being the increase of the clearing-house business of 1892 over that of 1891. Compare with this, Mr. Speaker, the insignificant volume of our currency; and I think, boiling it all down—coming to the focus of the whole thing—you will agree with me that so far as the actual needs of the business community are concerned, it does not make so great a difference what this Congress may do in the way of increasing the volume of the currency.

I say the impairment in the circulating medium of the country has not been in the shape of withdrawal of cash from the country; this impairment has been in the credit portion of our circulating medium, and has come in the shape of lack of confidence. If you look at the stupendous figures the reason of this must become clear to all. Here we find invested by the small investors of the country—men who do not keep track of the rise and fall of the stocks on Wall street, men to whom the rise or fall of grain or other provisions on the Chicago Board of Trade is of no importance—we find invested by this class of men in the one item of savings deposits the enormous sum of $1,712,000,000. What becomes of this money in case the small investor becomes frightened? He wants his money; he refuses to be a creditor longer; he says, "I have no confidence in the debtor class of this community, and therefore I want my money back." Gentlemen have said on this floor these men are not afraid of the United States, they are afraid of the banks.

It is true; but why are they afraid of the banks? The funds of your mechanic, the funds of the small business man, the funds of your laborer are invested in what? In Government bonds, in bonds of States, in bonds of cities, in securities of all classes; and when you threaten them with legislation which affects those securities you threaten them with legislation which affects their pockets. You make them timid, because they say, "If my bank is injured, if the bonds become more or less worthless, if the securities which my bank holds are not good, then my money is not safe." Therefore the depositor rushes to the bank, demands his money, withdraws it from circulation, and thus creates a condition of affairs such as we see to-day—a state of affairs in which, as has been stated before, without any necessity for it, with business thriving, with factories in full operation, with good crops, with every prospect of success, you are reduced to a condition where New York brokers have to advertise for cash in order to do their business. Whose money is it that becomes timid in this manner?

Do you need to look farther? Is it necessary to go farther if you look at the enormous sum of money held by the small depositors? And who is it who is first seized with the panic? Panic does not break out among the cool, calculating Wall street financier, because, forsooth, he is too small a quantity to create a panic by himself. But when you sow distrust in the minds of the five millions of savings-bank depositors you create a panic greater in extent, more harmful and vicious than any panic brought about through the instrumentality of Wall street.

Now, Mr. Speaker, the question pertinent to be considered is, what is the remedy? I am modest enough to confess that I am not sufficiently versed in finances to be able to state at a moment's notice on the floor of this House the details of a permanent remedy—a remedy which will consist in a stable currency for the country and in a settled financial policy. But that is not the point now. What we must do, what is necessary at the present time, is to bring forth these hidden funds. What we have to do is to open the doors of the safe-deposit vaults and get into circulation the circulating medium of the country there locked up. What we have to do is to restore the standard for the credit portion of our circulating medium by restoring the confidence of the people. Once more, what will do it at a moment's notice? What is it that the people demand most vociferously to-day?

I ask any gentleman here, who does not come from the silver section—I ask any gentleman who comes from a commercial section of the country, who comes from a section where savings-bank depositors are—whether he does not receive twenty petitions asking for a speedy, immediate, and unconditional repeal of the purchasing clause of the Sherman act to one which he may receive to the contrary? I know it is my experience, and believe it is the experience of all gentlemen here. Then, gentlemen, whether the people be right or wrong, this is what the people demand. What is our duty as legislators? What is our duty if we want to restore the confidence of the community? Is it not clear that if in the way of the confidence of the people we find an obstable, and more especially if we all agree that this obstacle in the shape of legislation is useless or worse, that our first duty to our constituents is to remove that obstacle without hesitation?

I have heard in this House during the course of this discussion a great many sentences and words, sentiments and songs, the burden of which was "your platform;" and I find gentlemen on one or the other side of this question hesitating, considering, keeping back, admitting, if you please, that a certain line of action is just and desirable, but restrained from following it by fear of a violation of their "platform."

I do not care about entering into a discussion of the question as to whether what we propose to do now is strictly in accord with the declarations of the Democratic platform or not. I do not care about that. I believe that the needs of the country, that the welfare of the country, is a question of much higher consideration, of vastly greater importance, and must be, or ought to be, nearer to the heart of every legislator than any paper platform that ever was devised by man. [Applause.]

Mr. Speaker, what do you think that the people who are anxiously waiting for this Congress to relieve them care about your platform of 1892? What do you think the laboring man, who is shut out from his work—the artisan, the mechanic who finds himself unable to sustain his family, and has to rely on charity—cares about the paper platform of 1892? We owe a great debt of fealty to our party, and I believe we ought to adhere to our party and its principles as faithfully as we can; but I say to you, gentlemen, that when the question shall confront me, "Here is your duty to your party and here is your duty to your country; they conflict; which road will you follow"? I shall not hesitate for a moment which way to go.

I think that, so far as the present difficulties are concerned, they do not affect the root. I think the country is on a sound basis, and I have beyond all the greatest of faith in the resources of this country. Gentlemen, a country which, like this, has undergone vicissitudes innumerable, has passed through crises of every kind much worse than is the present one, such a country can not be brought to the verge of destruction by a financial flurry like this. I come from a city which shows to you the proud, the unbroken spirit of the American citizen, and which shows to you at the same time that it takes a great deal more than what we are battling with to-day in order to break the spirit of the American people.

On the 9th day of October, 1871, the city of my residence, Chicago, was burned to the ground, countless millions of property were destroyed, and the fruits of long years of toil and labor were wiped from the earth. What was the result? Did the people in that typical American city lie down under the visitation of Providence? Did they lie down and give up? No; for that would have been un-American. In the smoldering ruins of that great city they laid the foundation stones of the present city, and from its ruins arose the typical American city that stands there to-day, a monument to the enterprise, pluck, and perseverance of its people.

And as it was in 1871 with Chicago, so it is, Mr. Speaker, and will be with the American people from this time, I hope, until the end of time. I have abiding faith in the resources of this country; I have faith in the patriotism of the people of this country; and I have faith beyond all in the hard common sense of the people of this country which will deter them from doing anything rash, and which, I sincerely hope, will guide this Congress into the proper path, so that by wise and well-considered legislation the prosperity of our people may be assured. We know what the people want. Let us give it to them. Let us do something to show our good faith in the matter.

Mr. Speaker and gentlemen, I have already spoken longer than

I intended, and I shall not detain the House much further. I sincerely hope that from the few words I have said may spring at least some small good. In all that I have said my motto has been "Let us quit talking and do something." The people expect us to do something. They expect us to take some means to allay their fears. They expect us to do something to restore confidence; and when we get through with that portion of our task they expect us to go beyond that; and, I for one, am prepared to put my shoulder to the wheel. The people expect us to put this great nation upon a sound financial basis, and they expect that it will be such a basis that the country will not be shaken by every change of administration or by every financial flurry.

Will you close your ears to the appeal of the people? I sincerely hope not. I think such a course would be disastrous and fraught with great suffering for those whom it is our duty to protect. I think it would be fraught with great suffering for those who have placed their trust in us. Let us leave behind us all petty jealousies; let us avoid going to one extreme or the other, and let us join hands and work with each other, and give the people to understand that we are prepared to do something to rescue the country from the deplorable state in which it now is.

It is not necessary to make immediate choice upon the question of free coinage or banking. These questions can well be disposed of hereafter and can be taken up at once after we have disposed of the matters requiring our present attention. We must do something to restore confidence, to allay fears, to give to our people an assurance of the stability of the monetary institutions of the country. The people point out to us what they want. The people show us what it is that has aroused their fears. Now, like patriotic men, true to our trust, let us remove this obstacle to prosperity, and in that manner earn and deserve the gratitude of the country and its appreciation. [Applause.]

Mr. PICKLER. Will the gentleman allow me to ask him a friendly question right here?

Mr. GOLDZIER. Yes.

Mr. PICKLER. As I understand the gentleman, he thinks the repeal of the Sherman law will not of itself bring prosperity to the country?

Mr. GOLDZIER. I touched upon that matter before. I do not believe that the repeal of the Sherman act is a radical cure. I do not believe that the repeal of the Sherman act constitutes a monetary system. I believe that the repeal of the Sherman act is simply an anodyne and not a cure.

Mr. PICKLER. Now suppose that Congress does repeal the Sherman law unconditionally. What is the opinion of the gentleman as to whether the President will sign any bill thereafter that will recognize silver in any respect?

Mr. GOLDZIER. Mr. Speaker, a few months ago the people of the United States were called upon at an election to choose between two men, into the hands of one of whom as Chief Executive they would place the destinies of the country. The people of this Union have spoken and have said to the country that they have such confidence, such reliance in the upright, rugged honesty of Grover Cleveland, that they chose to intrust him with the Presidency. There is the answer for the gentleman. I do not know and do not care what the President's action will be. I know that the people who have chosen the gentleman and the people who have chosen me, have at the same time chosen Grover Cleveland as the President of this Republic, and they have chosen him because they have the utmost confidence in him. The question of the signing or the vetoing of a bill is one which affects the Executive. I belong to the legislative branch of this Government; it is sufficient if I shoulder what responsibility rests on me and let the Executive answer for his own acts.

Mr. PICKLER. I was only asking the gentleman's opinion.

Mr. GOLDZIER. I have stated my opinion, which is that the President of the United States will do that which every man in this House is expected to do, namely, his duty; and I believe he knows his duty and will perform it. [Applause.]

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted—

To Mr. LAYTON, for one week, on account of a death in his family.

DEATH OF HON. J. LOGAN CHIPMAN.

Mr. WEADOCK. Mr. Speaker, I offer the resolutions which I send to the Clerk's desk.

The clerk read as follows:

Resolved, That the House has heard with deep regret and profound sorrow of the death of the Hon. J. Logan Chipman, late a Representative from the State of Michigan.

Resolved, That a committee of nine members of the House be appointed by the Speaker to act with such Senators as may be selected, to attend the funeral of the deceased, and that the Sergeant-at-Arms of the House shall take order for superintending the funeral; and the necessary expenses attending the execution of this order shall be paid out of the contingent fund of the House.

Resolved, That the Clerk be directed to communicate to the Senate a copy of these resolutions.

Resolved, That as a further mark of respect the House do now adjourn.

Mr. WEADOCK. Mr. Speaker, at this time I shall say no more than to make formal announcement of the death of a distinguished member of this House, a member of a distinguished family, who, at the ripe age of sixty-three years, goes to his reward. At a later time we will invite the attention of his fellow members and of the country while those who knew him best will pay tribute to his worth. I move the adoption of the resolutions.

The resolutions were agreed to; and the Speaker appointed as members of the committee Messrs. WEADOCK, WHITING, MCMILLIN, GORMAN, CARUTH, CANNON of Illinois, POWERS, HAUGEN, and AITKEN.

And then, pursuant to the terms of the resolution (at 1 o'clock and 43 minutes p. m.), the House adjourned until to-morrow at 11 o'clock a. m.

SENATE.

FRIDAY, *August 18, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Vice-President being absent, the President *pro tempore*, Hon. ISHAM G. HARRIS, of Tennessee, took the chair.

The Journal of yesterday's proceedings was read and approved.

TREASURY NOTES AND GOLD COIN.

The PRESIDENT *pro tempore* laid before the Senate the following communication from the Secretary of the Treasury; which was read and ordered to lie on the table and to be printed:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 17, 1893.

To the President of the Senate:

I have the honor to acknowledge the receipt of the following resolution, adopted by the Senate on the 16th instant, viz:

"*Resolved*, That the Secretary of the Treasury be, and he is hereby, directed to report to the Senate what amount, if any, of the Treasury notes issued under the act of July 14, 1890, commonly called the Sherman act, have been during the present month redeemed by the Government at the request of the holders thereof in silver dollars, and whether the holders of such notes were advised at the time of such redemption that they could have gold instead of silver, if they so desired.

"The Secretary of the Treasury is also directed to inform the Senate whether gold coin has been presented recently to the Treasury Department or any subtreasury and silver dollars asked in exchange therefor, and, if so, if such exchanges have been made, and whether the Department would or could exchange silver dollars for gold coin, if requested to do so by holders of gold."

In response thereto, I have the honor to say that during the present month Treasury notes issued under the act of July 14, 1890, amounting to $714,636, have been redeemed by the Government in silver dollars. While I do not pretend to have knowledge of the degree of information possessed by the holders of the notes so redeemed, I am of the opinion that they were fully advised at the time of such redemption that they could have gold instead of silver, if they so desired. I base this opinion upon the general publicity which has been given to the terms of the act, no less than upon the instructions of this Department to the Treasurer and Assistant Treasurers of the United States, which have been to the effect that such notes were redeemable in silver dollars at the option of the holders. I am also supported in my belief by the fact that in the circular of this Department, issued to the public for their guidance in their dealings with the Treasury, and containing the regulations which govern the issue, redemption, and exchange of the paper currency and the gold, silver, and minor coins of the United States, there is a paragraph which reads as follows:

"4. Gold coin is issued in redemption of United States notes, in sums not less than $50, by the Assistant Treasurers in New York and San Francisco, and in redemption of Treasury notes of 1890, in like sums, by the Treasurer and all the assistant treasurers."

In further response to the resolution, I have to say that recently gold coin has been presented at an office of this Department, and silver dollars asked in exchange therefor, and that the exchange was not made for the reason that all the silver dollars in the Treasury at the time were required under the provisions of the laws relating to the currency to be held in the Treasury to cover outstanding silver certificates and Treasury notes issued under the act of July 14, 1890. At present the Department would not and could not exchange silver dollars for gold coin if requested to do so by holders of gold, for the same reason: but if the condition of the funds of the Treasury were such as to afford a margin of silver dollars in excess of silver certificates and Treasury notes outstanding, such exchanges would be made.

Respectfully, yours,

J. G. CARLISLE, *Secretary.*

EXECUTIVE COMMUNICATION.

The PRESIDENT *pro tempore* laid before the Senate a communication from the Secretary of the Treasury, showing the necessity for the immediate appropriation of $300,000 for continuing the recoinage of fractional silver coins, and recommending that it be made; which, with the accompanying paper, was referred to the Committee on Appropriations, and ordered to be printed.

PROPOSED ADJOURNMENT TO MONDAY.

Mr. FAULKNER. I move that when the Senate adjourn to-day it be to meet on Monday next.

Mr. HOAR. I ask the unanimous consent of the Senate to make a suggestion to the Senator from West Virginia. I should like to ask the Senator whether he understands that the debate on the Lee Mantle case will be finished to-day, and that Senators

who are to speak on it are ready to proceed. I understand that one or two Senators, including the chairman of the Committee on Privileges and Elections, desire to speak on the question. We have unanimous consent to take the vote at 5 o'clock on Monday. I do not think we ought to adjourn over Saturday and deprive any Senator who wishes to speak on that case of an opportunity to do so. I merely call the attention of the Senator from West Virginia to it.

Mr. FAULKNER. While occupying the chair yesterday I understood from the Senator from North Carolina [Mr. VANCE] that he contemplated an adjournment over to-morrow. I understand that but two more speeches are to be made upon the Montana case, and that the vote is not to be taken, by the unanimous agreement, until 5 o'clock Monday evening. Consequently I do not think a failure to hold a session to-morrow would deprive anyone of an opportunity to address the Senate on the Montana case.

Mr. HOAR. I recognize the fact that within the ordinary limits the question of sitting one day or another must be determined by the other side of the Chamber, who have charge of the business, and I do not expect to make any factious opposition to the motion; but I wanted to be sure there was no misunderstanding. I shall insist on carrying out the agreement reached yesterday as to the time of voting on Monday.

Mr. MITCHELL of Oregon. I desire to call attention to the fact that the consent of the Senate has been already given that the senior Senator from Vermont [Mr. MORRILL] shall address the Senate on the financial question on Monday next. How far that may interfere with the controversy about the admission of the appointed Senators I do not know. I suppose we can get through by 5 o'clock on Monday.

Mr. FRYE. I should like to ask the Senator from West Virginia what there is to prevent taking up for consideration to-morrow morning the only bill reported by the Senate Committee on Finance up to the present time, a bill authorizing practically the issue of currency to the amount of $20,000,000 or $30,000,000. The people need it, the mines need it, the furnaces need it, the factories need it, the men out of work need it, and yet here it is on the Calendar waiting day after day and nothing is done with it. Why should we adjourn over and let the people suffer when certainly there is to an extent a remedy in that bill?

Mr. FAULKNER. I supposed that that matter would be controlled entirely by the chairman of the Committee on Finance. If it had been the purpose and desire of the chairman to take that bill up to-morrow, and he thinks the Senate is in a condition to do so, he would certainly have indicated it to the Senate. He has not done so. The amendment presented yesterday by the Senator from Maryland [Mr. GORMAN] may need some additional consideration, as it has not been before the committee, and is a very important amendment to that very bill.

Mr. VOORHEES. Mr. President——

The PRESIDENT *pro tempore*. This debate proceeds by unanimous consent only. The Senator from Indiana will proceed.

Mr. VOORHEES. Day before yesterday, when I sought to bring up the bill in question, I was appealed to by Senators whose wishes I could not disregard, and would not if I could, to let it go over for the purpose of perfecting certain amendments, and with a view to their own discussion of it. Yesterday when I expected to call it up I found the Senator from Florida [Mr. PASCO] on the floor before I reached the point where I supposed I could call it up, and then a very pressing matter took me to one of the Departments for most of the afternoon. I had expected to call up the bill this morning. I should be glad to do it right now, and if there is no objection I will do so. I thoroughly concur in the necessity of action on this measure if we are going to act upon it at all.

I wish to say now, while I am on my feet, I have heard the taunt go around that I was seeking to do something in the interest of the national banks. I am seeking to do nothing of the kind. I am seeking, however, to avail myself of their power and interest—of their cupidity, if you please—to increase the circulating medium of this country and thereby meet the pressing wants of the laboring people. It is not a bill in the interest of the banks, nothing of the kind; there is no feature, no thought, no inspiration of that sort on my part; but I see they have the power, and by appealing to their self-interest, and to no higher or better motive, they will increase the circulation of this country, by virtue of the bonds now on file in the Treasury, about $20,000,000; and by purchasing other bonds I have no doubt the increase will go to $50,000,000—as much needed as the rains are on the parched earth in the midst of a heavy drought. I will ask the Senate to consider the bill now, Senate bill 453.

The PRESIDENT *pro tempore*. The question is on the motion of the Senator from West Virginia.

Mr. COCKRELL. I call for the regular order of morning business.

Mr. McPHERSON. I ask the Senator from West Virginia to withdraw his motion in view of the statement by the chairman of the Committee on Finance that he intends to call up the bill. Perhaps it will take but a few moments to decide it. If this question is decided, which is by far the most important question before the Senate at this time, and if it should be decided without much debate, as I hope will be the case, then the motion of the Senator from West Virginia may be again presented. But surely if we can not reach a decision upon this question to-day, every consideration of right and justice demands that the Senate shall sit to-morrow until such time as a decision and conclusion are reached upon it.

Mr. FAULKNER. In view of the remarks of the Senator from Indiana, as he seems to have given a pledge to the Senate that the bill will be pressed to-morrow as well as to-day, and as we are all anxious to give any relief as promptly as possible that it is in the power of the Senate to extend, I will withdraw the motion I have made.

The PRESIDENT *pro tempore*. The motion is withdrawn. Petitions and memorials are in order.

PETITIONS AND MEMORIALS.

Mr. WASHBURN presented a petition of the Board of Trade of Mankato, Minn., praying for the repeal of the silver-purchasing clause of the so-called Sherman law, and for the appointment of an expert commission to consider and recommend a system of currency; which was referred to the Committee on Finance.

Mr. PEFFER presented a petition of Local Assembly No. 3629, Knights of Labor, of Buffalo, N. Y., praying for the free coinage of silver; which was referred to the Committee on Finance.

Mr. STOCKBRIDGE presented a petition of the New York Hat Trade Association, praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

Mr. TELLER presented a petition of the Pioneer Ladies' Aid Society of Colorado, praying for the free coinage of silver; which was referred to the Committee on Finance.

He also presented a petition of the Brotherhood of Carpenters and Joiners of Colorado Springs, Colo., and a petition of certain iron molders of Denver, Colo., praying for the more extended use of silver as money; which were referred to the Committee on Finance.

He also presented a petition of the miners of Rico, Colo., praying for an investigation of the labor troubles of 1892 in Idaho; which was referred to the Committee on Education and Labor.

He also presented the petition of Smith G. Ward, of Boulder, Colo., praying that the payment of his pension may be made in silver; which was referred to the Committee on Pensions.

He also presented a memorial of Carpenters and Joiners Union No. 515, of Colorado Springs, Colo., remonstrating against a new treaty with Russia; which was referred to the Committee on Foreign Relations.

REPORTS OF COMMITTEES.

Mr. VORHEES, from the Committee on Finance, to whom was referred to bill (S. 50) in aid of the California Midwinter International Exposition, reported it without amendment.

Mr. PALMER, from the Committee on Pensions, to whom was referred the bill (S. 126) extending the privilege of bounty land to persons who served in the Indian wars of the United States subsequent to March 3, 1855, asked to be discharged from its further consideration, and that it be referred to the Committee on Public Lands; which was agreed to.

He also, from the same committee, to whom was referred the bill (S. 104) for the relief of Gen. Napoleon J. T. Dana, asked to be discharged from its further consideration, and that it be referred to the Committee on Military Affairs; which was agreed to.

Mr. VEST. I am instructed by the Committee on Public Buildings and Grounds to report a joint resolution, and if it leads to no debate I should like to ask for its present consideration.

The joint resolution (S. R. 17) providing for the erection of a suitable building for the storage of documents for the use of the Senate was read the first time by its title and the second time at length, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Sergeant-at-Arms of the Senate of the United States is hereby directed to have erected upon the ground owned by the United States, west of the house known as the Maltby House, situated on the southwest corner of New Jersey avenue and B street, northwest, a suitable building for the folding and storage of documents for the use of the Senate, on plans and specifications approved by the Committee on Public Buildings and Grounds: *Provided*, That the expense of erecting said building shall not exceed the sum of $7,500, and which shall be paid from the miscellaneous items of the contingent fund of the Senate upon vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

The PRESIDENT *pro tempore*. The Chair suggest to the Senator from Missouri that the joint resolution must go to the Com-

mittee to Audit and Control the Contingent Expenses of the Senate. It will be so referred.

SILVER COINAGE.

Mr. VOORHEES. I am instructed by the Committee on Finance to report a bill. I ask that it be printed and placed on the Calendar.

Mr. CULLOM. I hope the bill will be read.

Mr. VOORHEES. I ask that it be read.

The bill (S. 570) discontinuing the purchase of silver bullion was read the first time by its title and the second time at length, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That so much of the act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered, in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

Mr. VOORHEES. Let the bill be placed on the Calendar; and I give notice that after the morning hour on Tuesday next I shall ask the Senate to indulge me in making some remarks in regard to it.

The PRESIDENT *pro tempore*. The bill will be placed on the Calendar.

Mr. VEST. On the part of the minority of the Committee on Finance, consisting of the Senator from Tennessee, now in the chair [Mr. HARRIS], the Senator from North Carolina [Mr. VANCE], the Senator from Arkansas [Mr. JONES], the Senator from Nevada [Mr. JONES], and myself, I desire to state that we dissent from the report of the majority, and propose as a substitute for the measure reported by the chairman of the committee what I send to the desk.

Mr. CALL. Let it be read.

Mr. VEST. I ask that it be read, and that the same order may be made in regard to it as was made with the bill reported by the chairman.

Mr. FRYE. It is reported as a substitute?

Mr. VEST. As a substitute.

The PRESIDENT *pro tempore*. The proposed amendment will be read.

The amendment was read and ordered to be placed on the Calendar, as follows:

Strike out all after the enacting clause of Senate bill 570, and insert:

That from and after the passage of this act the silver coins of the United States shall contain the following quantities of silver, that is to say: Each dollar shall contain 464.4 grains of pure silver and 516 grains of standard silver; each half dollar shall contain 232.2 grains of pure silver and 258 grains of standard silver, and each quarter dollar shall contain 116.1 grains of pure silver and 129 grains of standard silver; the dime, or ten-cent piece, shall contain 46.4 grains of pure silver and 51.6 grains of standard silver.

SEC. 2. That the coins mentioned in the previous section shall have on them the devices and superscriptions provided for coins of like denomination now coined, and shall be legal tender at their nominal value for all debts and dues, public and private, except when otherwise expressly stipulated by contract; and any owner of silver bullion may deposit the same at the mints of the United States at Philadelphia, San Francisco, and New Orleans to be coined into dollars, or into half dollars, or quarter dollars, at the option of the Secretary of the Treasury, of 516 grains, 258 grains, and 129 grains, respectively, for his benefit.

SEC. 3. That any holder of the coins authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States in sums of not less than $10 and receive therefor certificates of not less than $10 each, corresponding with the denominations of United States notes. The coin deposited or representing the certificate shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when received may be reissued.

SEC. 4. That the Secretary of the Treasury shall, within two years from and after the passage of this act, cause all the silver coins of the United States hitherto minted of the denominations of one dollar, half dollar, and quarter dollar, as well as the Treasury notes issued under the law of July 14, 1890, to be withdrawn from circulation by exchanging the same, or causing the same to be exchanged at their nominal value for silver certificates of like denominations, representing silver coins of the weight and fineness provided for by this act; and the silver certificates thus issued shall be in all respects similar to those provided for in the preceding section, and shall, like them, be receivable for customs, taxes, and public dues, and when received may be reissued; and that on and after the expiration of the two years above mentioned all the silver coins hitherto minted of the denominations of one dollar, half dollar, and quarter dollar, as well as the Treasury notes issued under the law of July 14, 1890, shall cease to be legal tender.

SEC. 5. That all silver coins coined prior to the passage of this act shall be recoined as early as practicable into coins of like denominations of the weight and fineness authorized by section 1.

SEC. 6. That a sum sufficient to carry out the provisions of this act is hereby appropriated out of any moneys in the Treasury not otherwise appropriated.

SEC. 7. That the Secretary of the Treasury is hereby authorized to adopt such rules and regulations as may be necessary to enforce the provisions of this act.

SEC. 8. That section 1 of an act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, be, and the same is hereby, repealed.

BILLS INTRODUCED.

Mr. COLQUITT (by request) introduced a bill (S. 571) to provide a postal-card letter; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. MORRILL (by request) introduced a bill (S. 572) for the relief of Samuel H. Sentenne; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. WASHBURN introduced a bill (S. 573) for the relief of Christopher Schmidt; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. PLATT introduced a bill (S. 574) for the relief of Dwight Hall; which was read twice by its title, and referred to the Committee on Claims.

Mr. TURPIE introduced a bill (S. 575) for the relief of Sarah K. McLean, widow of the late Lieut. Col. Nathanial H. McLean; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 576) for the relief of Louis Pelham, of Posey County, Ind.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

He also introduced a bill (S. 577) granting an increase of pension to Thomas M. Chill; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 578) granting an increase of pension to Wells Johnson; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. HAWLEY (by request) introduced a bill (S. 579) for the relief of Robert Carrick, late first lieutenant of Eighth United States Cavalry; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. CULLOM introduced a bill (S. 580) to provide for the purchase of a site and the erection of a public building thereon at Joliet, in the State of Illinois; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 581) for the erection of a public building at the city of East St. Louis, Ill.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 582) to provide for the purchase of a site and the erection of a public building thereon at Pekin, in the State of Illinois; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 583) to provide for the purchase of a site and the erection of a public building thereon at Jacksonville, in the State of Illinois; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 584) for the relief of Goff A. Hall; which was read twice by its title, and referred to the Committee on Claims.

Mr. FRYE introduced a bill (S. 585) authorizing the Secretary of the Treasury to settle the indebtedness to the Government of the Sioux City and Pacific Railroad Company; which was read twice by its title, and referred to the Committee on Pacific Railroads.

He also introduced a bill (S. 586) to provide communication from light-ships and outlying light-houses to the shore; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 587) to amend an act entitled "An act to regulate the carriage of passengers by sea," approved August 2, 1882; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 588) to repeal section 4145 of the Revised Statutes of the United States, and to amend sections 4146, 4320; also section 1 of the act amending section 4214 of the Revised Statutes, approved March 3, 1883, and for other purposes; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 589) to extend the time for filing claims in the Court of Claims under the provisions of an act entitled "An act to provide for the ascertainment of claims of American citizens for spoliations committed by the French prior to July 31, 1801:" which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. CAREY introduced a bill (S. 590) granting 5 per cent of the net proceeds from the sale of public lands to several of the States for the support of common schools; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 591) to donate to the county of Laramie, Wyo., certain bridges on the abandoned Fort Laramie military reservation, and for other purposes; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. POWER introduced a bill (S. 592) to extend the time for making final payments on entries under the desert-land act; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. COCKRELL introduced a bill (S. 593) to permit Anna M. Coleman, a widow, to prosecute a claim; which was read twice by its title, and referred to the Committee on Claims.

Mr. WASHBURN introduced a joint resolution (S. R. 17) for the protection of those parties who have heretofore been allowed to make entries for lands within the former Mille Lac Indian Reservation in Minnesota; which was read twice by its title, and referred to the Committee on Public Lands.

INCREASE OF NATIONAL BANK CIRCULATION.

Mr. STEWART. I desire to give notice that I shall offer the amendment which I send to the desk to the bill S. 453 to provide for the issue of circulating notes to national banks. If there is no objection, I should like to have it read. It is short. It is the amendment submitted by Mr. JOHNSON of Ohio in the other House.

The PRESIDENT *pro tempore*. If there be no objection the amendment proposed by the Senator from Nevada will be read.

The amendment was read, and ordered to lie on the table, as follows:

Strike out all after the enacting clause, and insert:

"That any holder of bonds of the United States may, after the passage of this act, deposit such bonds at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and receive therefor their face value in Treasury notes of the United States, as described in the act of July 14, 1890. Such bonds shall be held as a special deposit to the credit of the party depositing them, and during the time they are so held shall draw no interest, and shall be returned on the order of the party depositing them on the payment of their face value in United States currency.

"SEC. 2. The Secretary of the Treasury shall make such regulations as may be necessary to save to the Government the payment of interest on such bonds during the time they are held as a special deposit, and he is hereby authorized to issue Treasury notes to the amount needed, and to provide for the cancellation of an equal amount of such notes on the return of said bonds to their owners, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated."

"SEC. 3. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed."

PENSION INVESTIGATION.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a resolution coming over from a former day, which will be read.

The resolution submitted yesterday by Mr. GALLINGER was read, as follows:

Resolved, That the Committee on Pensions be directed to inquire and report to the Senate whether or not the Secretary of the Interior and the Commissioner of Pensions have conformed to the provisions of existing law in suspending and dropping names from the pension rolls of soldiers duly enrolled thereon.

Mr. GALLINGER. At the request of several Senators who are somewhat interested in this matter, I ask that the resolution may go over until next week.

The PRESIDENT *pro tempore*. The resolution goes over at the request of the Senator from New Hampshire.

ERECTION OF PUBLIC BUILDINGS.

The PRESIDENT *pro tempore* laid before the Senate the following resolution, submitted yesterday by Mr. CHANDLER; and it was agreed to:

Resolved, That the Secretary of the Treasury be directed to inform the Senate as to the condition of the various appropriations for the erection of public buildings; stating what are the gross sums unexpended of appropriations made and of authorizations of final cost conferred by existing law; what buildings are not begun, and what preparations have been made for beginning them; and whether or not any delay in beginning is occasioned by the nonpreparation of the plans and designs, and if so, what action he is taking and what legislation, if any, he recommends in order to expedite the preparation of plans and designs.

ENROLLED BILL SIGNED.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the Speaker of the House had signed the enrolled joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives; and it was thereupon signed by the President *pro tempore*.

INCREASE OF NATIONAL BANK CIRCULATION.

Mr. VOORHEES. I desire whenever it is in order to call up the bill (S. 453) to provide for the issue of circulating notes to national banks. If the proper point in the Order of Business has been reached I make that motion now.

The PRESIDENT *pro tempore*. The Senator from Indiana asks the unanimous consent of the Senate to proceed to the consideration of the bill indicated by him.

Mr. KYLE. I believe that the resolution I introduced yesterday, calling upon the Secretary of the Treasury for certain information, takes precedence at this time.

Mr. VOORHEES. I do not see why the Senator from South Dakota should interpose at this time. There is no necessary connection between his resolution and this measure.

The PRESIDENT *pro tempore*. The Chair will state to the Senator from South Dakota that his request was that the resolution should lie on the table.

Mr. KYLE. Under the rule until to-day.

The PRESIDENT *pro tempore*. The order was that it should lie on the table until called up by the Senator. The resolution is in order. The Chair will lay it before the Senate if the Senator desires.

Mr. KYLE. I wish to have the resolution considered at this time.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a resolution, coming over from a former day, which will be read.

The Secretary read the resolution submitted yesterday by Mr. KYLE, as follows:

Whereas it is currently reported that certain of the national banking associations, organized and carrying on business under and by virtue of the laws of the United States, have heretofore withdrawn from circulation their notes, and subsequently secured an increase of their circulation under existing laws: Therefore, be it

Resolved, That the Secretary of the Treasury be requested to report to the Senate what national banking associations have thus diminished and enlarged their circulation, and the extent thereof, and also whether any and what national banking associations have organized under the banking laws of the United States, and have no outstanding notes in circulation.

The PRESIDENT *pro tempore*. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. VOORHEES. Now, Mr. President——

The PRESIDENT *pro tempore*. The Senator from Indiana asks unanimous consent of the Senate that the bill (S. 453) to provide for the issue of circulating notes to national banks be now considered. Is there objection?

Mr. ALLEN. I desire to have that bill passed over for a day or two, as we have not had time to examine it.

Mr. VOORHEES. With all respect to the Senator from Nebraska, I think his request is a little unreasonable at this time. The bill was reported last Tuesday and to-day is Friday. The Senator says he has not had time to examine it. It is a very short bill, and under the circumstances I think I am hardly warranted in suffering any further delay if I can get the favorable action of the Senate. I say this with real regret, that I can not comply with the desire of the Senator, for I am disposed to defer to any wish expressed by a Senator, but I do not feel warranted in making any further delay in this matter unless something more is to be urged in behalf of delay than I have heard at this time. I desire the action of the Senate to know whether the bill is to be taken up.

Mr. ALDRICH, Mr. CULLOM, and Mr. SHERMAN (to Mr. VOORHEES). Move to take it up.

The PRESIDENT *pro tempore*. Does the Senator from Indiana move to proceed to the consideration of the bill?

Mr. VOORHEES. I do.

The PRESIDENT *pro tempore*. That motion is in order.

Mr. VOORHEES. I make that motion. I undertook to make it at the start, but it degenerated into a request for unanimous consent. I move that the Senate proceed to the consideration of the bill indicated.

The PRESIDENT *pro tempore*. The Senator from Indiana moves that the Senate proceed to the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to the consideration of the bill.

Mr. ALLEN. I desire to have the amendment read which I offered some days ago.

Mr. COCKRELL. I gave notice of an amendment——

The PRESIDENT *pro tempore*. The Senator from Missouri will suspend. Does the Senator from Nebraska offer his amendment at this time?

Mr. ALLEN. I offer an amendment, and ask that it be considered with the bill.

Mr. COCKRELL. I have offered an amendment, to which I hope there will be no objection.

The PRESIDENT *pro tempore*. The amendment offered by the Senator from Nebraska will be first reported.

The SECRETARY. It is proposed to insert at the end of the bill the following:

Provided further, That the bonds used as a basis for the notes issued under this act shall cease to draw interest during the time said notes, or any part thereof, are outstanding and unredeemed; and the issuance of notes under this act shall be deemed and taken to be conclusive evidence that the owner

of such bonds assents to this proviso: *And provided still further*, That nothing in this act contained shall be so construed as to commit the Government to the policy of a permanent national debt, or to prevent the prompt payment of all outstanding interest-bearing obligations as fast as they mature.

The PRESIDENT *pro tempore*. The question is on agreeing to the amendment. [Putting the question.] The noes appear to have it.

Mr. ALLEN. I call for the yeas and nays on the amendment.

Mr. MANDERSON. I should like to ask my colleague to explain the exact meaning of the amendment he offers in this regard. Does he mean that the stoppage of interest shall apply to the 10 per cent, which it is proposed to increase the circulation, or to the entire circulation based upon the bonds? I confess I am unable to understand, not having heard the whole bill read with the amendment, just what the proposition is, and should be glad to have it explained to the Senate.

Mr. ALLEN. Mr. President, it is quite possible that the amendment is open to misconstruction. It was my intention in offering this amendment to cover simply the new issue under the bill reported by the Senator from Indiana [Mr. VOORHEES]. I had no purpose, although I believed it to be a proper subject of legislation, to cover the question of interest upon issues already before the country.

I may be permitted, Mr. President, to say at this time, without entering into any discussion, at least any lengthy discussion of the question, that, in my judgment, the people of this country are unalterably opposed to anything which looks like the continuance of the national banking system in their commerce and as one of the features of our Government. I know of no reason myself, nor have I heard any offered in the Senate Chamber, why the amendment of the Senator from Missouri [Mr. COCKRELL] or the amendment of the Senator from Nevada [Mr. STEWART] should not take the place of this measure.

The adoption of the bill of the Senator from Indiana would put it clearly within the power of the national banks to expand and contract the volume of the currency of this country at their pleasure in the future, exactly as they have been doing in the past. We all realize that this is a dangerous power, that it is a power which ought not to be permitted to reside in the hands of the banking corporations of this country. It is a practical abdication by the Government of the power conferred upon Congress, under the Constitution, to regulate and control the volume of money and fix its value.

Why should these corporations be vested with any special privileges in this respect? Why should not the opportunity be given to every person in this country to deposit bonds, if necessary, and to procure an issuance of notes if the measure is to be adopted? In my judgment, the bill of the Senator from Indiana commits this country to the policy of a continued national banking system.

I believe the time has come in the history of this nation when safety requires us to retrace our steps as rapidly as possible in this direction, and when we should undertake to retire the national banks from existence as rapidly as safety to our commerce will permit.

I desire to say that, in my judgment, the second proviso of the amendment offered by me should be adopted, so that the people of this country may understand that the Congress of the United States is not committed to the policy of the national banks, and that it is the design of Congress to retire the national banks from existence as soon and as rapidly as possible.

I did not offer the amendment because I believed in the doctrines advocated in the bill. I believe they are inimical to our institutions. I believe the doctrines of the bill are hostile to the peace and welfare of this country, certainly to the justice which we should extend to our people; but I proposed the amendment upon the supposition that the banking interests of this country had sufficient strength in the Senate of the United States to pass the bill, regardless of whether there was a protest against it or not.

I desire to say that a majority of the people whom I represent, I will say nine-tenths of the people of the State of Nebraska, are unalterably opposed to anything which looks like a perpetuation of the national banks. The time has come when we should take some radical steps to eliminate them from our institutions, and it occurs to me that this amendment, and especially the second proviso of it, if adopted, would give the country warning that we intend, as soon and as speedily as possible, to drive out of existence the national bank as banks of issue.

The PRESIDENT *pro tempore*. The question is on agreeing to the amendment, upon which the yeas and nays are demanded.

Mr. CALL. Let the amendment be again reported.

The PRESIDENT *pro tempore*. The Secretary will report the amendment:

The Secretary read the amendment proposed by Mr. ALLEN.

Mr. STEWART. Mr. President, I do not know that I fully understand the amendment proposed by the Senator from Nebraska [Mr. ALLEN], or to what extent it goes. I think it a little indefinite.

I regret exceedingly that the question of national banks is involved in legislation to relieve the people. I think that some other scheme ought to be devised which will not involve such a protracted discussion as will very probably arise on this bill.

There is a strong feeling, not only in the Senator's State, but throughout the country, against national banks as banks of issue. The proposition which I sent to the desk this morning to be read as an amendment which I desire to propose, I think would relieve the situation. It was prepared by Mr. JOHNSON, of Ohio, a member of the House of Representatives. It provides that any person having bonds may deposit them in the Treasury and receive their face value in Treasury notes. Those bonds are not to draw interest while they remain in the Treasury. That will give immediate relief, will cost the Government nothing, and will not involve the discussion of national banks.

I think that we ought not to pass any bill which would deprive the national banks from receiving interest on the bonds they have on file, because, of course, under these circumstances they take out no currency, and the legislation would therefore fail of the object desired.

While I am on my feet I must ask the indulgence of the Senate for a few moments to call attention to how the present panic arose, a panic which is doing immense harm. I can not, however, refrain from calling attention to the way the act of 1890 has been executed. I believe that all the trouble we have in this country results from the failure to execute that law according to its spirit and according to its letter.

The act of July 14, 1890, requires the Secretary of the Treasury to purchase 4,500,000 ounces of silver bullion per month, and pay for them by the issuance of legal-tender Treasury notes. The act declares that "upon demand of the holder of any of the Treasury notes herein provided for, the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion."

The third section of the act declares that—

the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act, into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

Two millions a month were coined until the 1st day of July, 1891. The public press representing the banking interest and the gold interest then called attention to the following declaration found in the act:

It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

It was argued that this general declaration of principle, which enacted nothing, nullified the mandatory portion of the act, which required the Secretary of the Treasury to coin silver bullion and provide for the redemption of the Treasury notes. It was assumed that the only way to preserve the parity between the two metals was to pay out gold, and that the use of silver for the same purpose for which gold is used would destroy the parity.

The President of the United States, Mr. Harrison, in the month of August, 1891, made a speech in Albany, N. Y., in which he dwelt with emphasis upon the necessity of making every dollar as good as every other dollar. He in effect declared that his idea of bimetallism was to buy silver with gold and to maintain the two metals at a parity by keeping silver out of circulation. These vague declarations were not satisfactory to foreign investors in American securities. By law such securities are payable in either gold or silver coin. An intimation from the President that the law would not be executed was not sufficient assurance. On the 17th of November, 1891, the bankers of New York invited the Secretary of the Treasury, Mr. Foster, to a dinner at Delmonico's, and required him to declare his intentions. Mr. Foster then and there proclaimed that Treasury notes and greenbacks would be redeemed in gold, and gold alone, and assured the bankers that there would be no deviation from that policy. The President of the United States in his message to Congress of December 9, 1891, said:

Under existing legislation it is in the power of the Treasury Department to maintain that essential condition of national finance as well as of commercial prosperity—the parity in use of the coin dollars and their paper representatives. The assurance that these powers would be freely and unhesitatingly used has done much to produce and sustain favorable business conditions.

Austria at that time owed a debt of about $2,400,000,000, which was evidenced by 5 per cent bonds payable in silver. The debt was principally owed in London. A few weeks after this declaration of Mr. Foster, and the assurance given by the President of the United States, the question of putting Austria on a gold basis was agitated, and the administration of Austria resolved

to adopt a single gold standard. No action was taken, however, until after the Presidential nominations were made in 1892. Both candidates were satisfactory to the gold men. This seemed a sufficient guarantee to the holders of Austrian securities that gold could be obtained in this country to put Austria on a gold basis; but they were very cautious, and were unwilling to take any chances of failure to obtain gold in this country.

On the 15th of August, 1892, the firm of Heidelbach, Ichelheimer & Co., of New York, tendered to the subtreasury in that city $1,000,000 in Treasury notes, issued on account of silver purchases, and demanded for them $1,000,000 in gold for shipment to Germany by the next steamer. Assistant Treasurer Roberts was interviewed, and said:

No steps have been taken by the Administration to prevent or obstruct the export of gold. The Government stands ready to meet all its obligations in gold, and will pay them all in gold. Its free gold balances now amount to $112,000,000.

The Washington Post of August 6, 1893, in commenting upon this subject, says:

The truth of the matter is that the gold at that time was wanted on Austrian account. The exporters had to have gold, because no other form of coin would answer their purpose.

Austria then funded her $2,400,000,000 of 5 per cent silver bonds into 4 per cent nontaxable perpetual gold bonds, and the London syndicate, with Rothschild at the head, undertook to place Austrian bonds and obtain sufficient gold to enable Austria to resume specie payments on the single gold standard.

It may be asked why the syndicate would not undertake this scheme until it was ascertained that the United States would redeem its paper in gold, and gold alone. The answer is plain. The scheme could not be carried out and would not have been undertaken unless the gold could be obtained from the United States, because it could not be obtained elsewhere. France has $900,000,000 of gold and $700,000,000 of silver circulating on a parity at the ratio of 15½ to 1. The Government reserves consist of gold and silver. Over $250,000,000 of those reserves are silver. Whenever the paper money of France is presented for redemption to obtain gold for export the Government exercises its option and pays in silver and retains the gold in the country. The paper circulation in Germany is also redeemable in gold or silver coin at the option of the Government.

Germany exercises that option and refuses to redeem her paper by paying out gold for export. Russia has a very large amount of gold in her war chest, said to be $536,000,000. Russia redeems none of her paper in either gold or silver, but maintains in circulation a large volume of irredeemable paper money. The United Kingdom of Great Britain is supposed to have between $400,000,000, and $500,000,000 of gold. About $135,000,000 of this is in the Bank of England and held as a reserve. The largest part of the remainder is supposed to be in other bank reserves. When the Barings failed the Bank of England was forced to borrow $15,000,000 of gold from France. The chancellor of the exchequer, Mr. Goschen, then informed the banks that they must curtail credit and increase the reserves or disaster would follow; since which time England has, in effect, paid a premium on gold by favorable rates of exchange, and it is the established policy of the Bank of England to raise the rate of interest whenever an attempt is made to draw out large quantities of gold.

Under these conditions the Austrian scheme, which offered such a magnificent opportunity for a speculation, could not be carried out without the assistance of the United States. The advantage to the bondholders in carrying out the scheme will be appreciated when it is known that by the utter demonetization of silver $1 in gold will certainly be worth more than double its value in 1892. The change of $2,400,000,000 of silver obligations into $2,400,000,000 of gold obligations would be an immense gain.

But that is not all. The gold obligations were put out at a great discount and silver obligations taken in at par. It is now stated by the public press that the bonded debt of Austria has been increased $400,000,000, and that the $2,400,000,000 in silver obligations have been changed to $2,800,000,000 of gold obligations.

The reason assigned by the Administration and by the gold press for disregarding the statute which required the coinage of silver for the redemption of Treasury notes was to maintain the parity of the two metals. It was said that the redemption of any of the paper money of the United States in silver would send gold to a premium and ruin the credit of the United States. The fact that both political parties had declared and continue to declare in their platforms that they are in favor of the use of both gold and silver as money would seem to be a sufficient answer to the argument. It can not be denied that the refusal to pay out silver in the discharge of Government obligations is a refusal to use silver as money.

But suppose that the policy of both political parties was wrong, and that the statute was wrong when it required the coinage of silver for the redemption of Treasury notes; what can be said of the object lessons furnished by France and Germany? Both of these nations have refused for the last three years to pay out gold for export. I am not aware that their credit has been injured by such a policy. On the contrary, they are referred to as models of financial honor and business sagacity.

What would have been the effect upon the finances of the United States if the law of 1890 had been executed in the interest of the United States and according to its spirit and intent? The gold reserves would have remained in the Treasury. The securities held abroad would not have been sold, because such sale would not have enabled them to export gold for speculation in the Old World. Why would not our financial standing be as good as that of France? France, as before remarked, has $700,000,000 of silver coin circulating on a par with gold at the rate of $1.33 an ounce. This silver not only serves all the purposes of money in the business of France, but it serves as a protection against the export of gold. The silver of France is more than double the amount of silver per capita which exists in the United States. If the policy of France had been pursued by the administration of the Treasury Department our finances would certainly have been on as solid a foundation as the finances of France.

President Harrison was willing that silver should be used as money in this country, provided Europe would consent. He procured a meeting of a monetary conference at Brussels in the fall of 1892; but before the conference assembled the Salisbury administration, which represented the landed proprietors of Great Britain and was inclined to bimetallism, was put out of power, and the representative of the moneyed aristocracy and the banking interests of London, Mr. Gladstone, became the ruler of England. He immediately took such measures and gave such instructions as to prevent any action on the part of the conference favorable to silver. After the adjournment of the conference, Sir H. Meysey Thompson moved in Parliament a resolution for the reassembling of that conference. His motion was sustained by such able advocates as Messrs. Goschen, Chaplin, and Montagu. Mr. Gladstone himself was the principal opponent of the motion. The concluding portion of his speech reveals the purpose and the animus of the bondholding aristocracy of England, which has dominated that country and suppressed public opinion for many years. He said:

I suppose there is not a year which passes over our heads which does not largely add to the mass of British investments abroad. I am almost afraid to estimate the total amount of the property which the United Kingdom holds beyond the limits of the United Kingdom, but of this I am well convinced, that it is not to be counted by tens or hundreds of millions. One thousand millions ($5,000,000,000) probably would be an extremely low and inadequate estimate. Two thousand millions ($10,000,000,000), or something even more than that, is very likely to be nearer the mark. ["Hear!" "Hear!"] think under these circumstances it is rather a serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice. I have a profound admiration for cosmopolitan principles. I can go a great length in moderation [laughter], in recommending their recognition and establishment, but if there are these two thousand millions ($10,000,000,000) or fifteen hundred millions ($7,500,000,000) of money which we have got abroad, it is a very serious matter as between this country and other countries.

We have nothing to pay to them; we are not debtors at all; we should get no comfort, no consolation out of the substitution of an inferior material, of a cheaper money, which we could obtain for less and part with for more. We should get no consolation, but the consolation throughout the world would be great. [Loud laughter.] This splendid spirit of philanthropy, which we can not too highly praise—because I have no doubt all this is foreseen—would result in our making a present of fifty or a hundred millions ($500,000,000) to the world. It would be thankfully accepted, but I think the gratitude for your benevolence would be mixed with very grave misgivings as to your wisdom. I have shown why we should pause and consider for ourselves once, twice, and thrice before departing from the solid ground on which you have within the last half century erected a commercial fabric unknown in the whole history of the world—before departing from the solid ground you should well consult and well consider and take no step except such as you can well justify to your own understanding, to your fellow-countrymen, and to those who come after us. [Cheers.]—*The Times*, London, March 1, 1893.

The Sherman act was the great obstacle to the consummation of the policy of the bondholders of England, as declared by Mr. Gladstone. At least $2,000,000,000 of the $10,000,000,000 which Mr. Gladstone said foreign nations were owing the United Kingdom were owed by the people of the United States. The banks of New York were the representatives of the London syndicate of bondholders. The debtors to the London syndicate were the railroads and other corporations organized in the United States. Payment was demanded of the faltering. Threats of ruin and bankruptcy were made against the weak. The Sherman law was denounced as vicious. It was charged by the bankers and the press of London and New York that the financial condition of the United States was precarious; that the money issued by the Government was a depreciated currency, and that there was danger of immediate collapse.

This cry was echoed and reëchoed by the press in every commercial city in the United States, until the people became alarmed. No distrust, however, was created as to the validity or value of any money bearing the United States stamp. The

people withdrew silver, silver certificates, Treasury notes, and gold from the banks, and placed them in safe deposits and other hiding places where they would be within reach when wanted. They were alarmed, not because the money was bad, but because they feared the banks would not be able to give them their money when they wanted it.

When business had been deranged and the country was in a state of panic, Mr. Gladstone suspended the coinage of silver in India.

The President of the United States thereupon joined in the hue and cry against the Sherman act, and attributed every disaster to the existence of that law. He disregarded the fact that all that had been accomplished under the law was the issuance of $148,000,000 of legal-tender Treasury notes, which were absolutely required in the business of the country and without which disaster would have come long ago. He called Congress together for the immediate repeal of the act and for no other purpose. The gold press of Europe and America commended his action, and declared that such repeal would restore confidence in the business community on both sides of the Atlantic. They said all that was wanted was confidence, and the Sherman act was the sole disturbing cause.

The junior Senator from Massachusetts [Mr. LODGE] the other day said that the panic was created because our European creditors feared that the gold they had loaned in the United States would be paid in silver. That learned Senator overlooked the fact that foreign investments in this country were made subject to the laws of the United States and payable in the money of the country, and that foreign creditors were now demanding that the laws should be changed and that they should be paid in a different money from the money of the contract. Why should the people be required to pay from 50 to 75 per cent dearer money than they had contracted to pay. The assurance which they desired was that the people of the United States should be compelled to submit to their extortionate demands.

The demonetization of silver in India produced the effect desired. It depressed the price of silver from 10 to 15 cents an ounce, but it produced consequences not anticipated. It stopped silver mining except the working up of ores which had accumulated in smelters. This cut off the supply of silver, and made it impossible for the United States to purchase four and a half million ounces of silver bullion each month without advancing the price of that metal much higher than it was previous to the action of Mr. Gladstone in suspending coinage in India. The dilemma was then presented to the Administration either to disobey the law and refuse to purchase silver, or raise the price of silver and defeat the efforts of English bondholders to force the United States to a single gold standard.

It had been a long time since any sovereign in any civilized country had refused to obey an existing law. The dispensing power is a dangerous power, and was the principal charge against King Charles II when he lost his life. It is a power which no sovereign of England or President of the United States has boldly and defiantly exercised since the revolution in England. The Czar of Russia never exercises such a power. Although he exercises supreme legislative power, yet while the law he has enacted is in force he obeys it. He may change the law in an arbitrary way, but while it is in force he scrupulously adheres to it. The Emperor of Germany does not attempt to disregard the law, but at times exercises the full extent of his imperial power to coerce the legislative department to make new laws.

I do not hold the Secretary of the Treasury responsible, because he belongs to an Administration in favor of the single gold standard, as is manifest by the President's message. He must be in harmony with the Administration or resign.

I do not reflect upon Mr. Cleveland personally. His teachings, surroundings, and associations have led him to believe that the single gold standard is the goal towards which all legislation and administration should tend; that the greatest good to mankind consists not in a measure of value which does justice between debtor and creditor, but in a standard of money which appreciates and constantly grows more valuable. He undoubtedly believes, and honestly believes, that the great concentrated money power of England, controlling the bonds of the world, is wiser and better than all the people, and believing thus he follows with implicit obedience the commands of that colossal concentrated power. It is not the first time that misguided honesty and zeal have inflicted untold misery upon mankind. If there had been no honest fanatics there would have been no martyrs. If there were no honest and zealous advocates of dear money, cheap property, and cheap men and women, there would be no financial distress in the country to-day.

Let no man deceive himself. If the Sherman act is repealed without a substitute, silver is doomed. The money power which repeals that act because silver is depreciated will prevent the use of silver as money when silver is further depreciated by the effect of such repeal.

But let capital take warning. The demonetization of silver and the adoption of the gold standard is a revolutionary movement. Its conception was bold and unscrupulous. The property rights of all the people of the world and their contract obligations were measured and regulated by the volume of metallic money consisting of both gold and silver. The destruction of one of those metals is repudiation of the obligations of contracts, a disregard of the fundamental principles of justice and equal rights which lie at the foundation of civilized society. No socialist or anarchist has ever advocated a more radical, destructive, and revolutionary scheme.

The people of the United States are long suffering and patient. They had faith in their Government and in their trusted servants; but poverty, starvation, and misery will arouse them to action. They will soon learn that the gold standard means want, famine, and misery. They will not submit to its conditions. They may be unable to restore silver, but they will have abundant power to break the chains of slavery produced by gold contraction. They will have money. They can not have gold enough for that purpose. They are refused silver. Their only alternative will be paper, and paper money they will have. The greedy creditor that was unwilling to receive the coin of the Constitution—gold and silver—may, and undoubtedly will, be compelled to receive paper in payment of his demands.

Property ought not to be revolutionary. Its advantage in well-ordered government is sufficient, but when capital enters into revolutionary schemes it must take its chances. It then comes under the maxim "For all they that take the sword shall perish with the sword."

The repeal of the Sherman act is the final demonetization of silver. It is our duty to consider it calmly. We are asked to repeal the act and then consider the question. Why kill the patient and then consider your remedy? No, the Sherman act must not be repealed until this question is investigated and discussed, and it is known what is best to be done. I do not believe that the Senate or the other House have any intention of plunging into the abyss of misery which awaits them on the single gold standard, but some may have been led to believe that this question can be taken up again.

I tell you that this is the last call—this is the end; but while this is being discussed I am exceedingly anxious that our suffering country shall be relieved, and that it shall be relieved without involving the vexed question of bank issues or the silver question. Let those who have bonds and come to the Treasury and get money dispense with their interest for the time being. Let the savings banks have money to pay their depositors. Give them currency, and give it at once. Give it freely. Let the whole national debt be cut down if they are willing to forego their interest, and let it stay there as long as they desire. Do not increase the national debt. Do not go into the cruel experiment of selling bonds to buy gold.

Oh, I have heard of that. When the bonds that are now out can be sold for gold at 3 or 4 per cent premium, where will you get the gold? You will be in the same fix, if you attempt that, which the Austrian syndicate was in a year and a half ago. There will be no place to get gold. You can not get it from Austria, because she pays out none. You can not get it from Russia, because that is held for war purposes. You can not get it in Germany, because she will pay you silver. You can not get it in France, because she will also pay you silver. You can not get it in England, because she will pay a higher premium than you dare to pay.

There is no way of getting gold now. With bonds at 10 per cent, to get $50,000,000 of gold to-day is impossible. You can not get what does not exist. The gold which is not hoarded, which is not dammed up, will go where it will sell for most. Commerce will regulate that. The trouble is that the great mass of gold of the world has been put out of existence so far as money is concerned. It is locked up in strong boxes for war purposes, and it can not be given up. Do not attempt such a folly as that. There is no necessity for it. Let us have currency, and have it now without any further talk. Let us have relief, and let us have it at once, and not let the country go on suffering longer.

I hope the bill will be stripped of every objectionable feature. It is no time for national banks to take advantage of the suffering condition of the country and ask further subsidies. It is no time now for anybody to propose a bill for a selfish purpose, or to carry out any theory, until we have made an effort to relieve the country. If that effort is not made in good faith it will not be the fault of the silver men. They will agree to anything that will give relief. They ask no subsidy, they ask no advantage, they ask no change of policy; but if the gold men insist that the national banks shall have a subsidy out of this relief, that they shall make a lot of money out of it, that proposition must be discussed. I will discuss the silver question more fully hereafter.

Mr. McPHERSON. I had intended, sir, not to say a single word upon this question or, in short, upon any question relating to the finances which are now before the Senate or which may come before the Senate. The people of this country are clamoring for some relief. I am in hearty sympathy with the people, and I do not think that I should employ one single moment of time in preventing a vote being taken upon all the propositions presented. However, I can not permit this bill to be acted upon without calling the attention of the honorable Senator from Nebraska to the fact that his amendment renders nugatory and practically useless every effort thus far proposed by the Finance Committee to relieve the depressed condition of business. Whatever may have been the intention of the honorable Senator, he will not fail to see that if the national banks should take out a circulation of 10 per cent they will forfeit the interest on all the bonds they have now deposited while the 10 per cent of increase shall be in circulation.

Mr. ALLEN. I have modified my amendment so as to cover that point.

Mr. McPHERSON. I would then like to ask the Senator a question.

The PRESIDENT *pro tempore*. The Senator from New Jersey will please suspend and let the amendment of the Senator from Nebraska as modified be read by the Secretary.

The SECRETARY. After the word "the," in line 1 of the amendment, insert the words "margin of the;" so as to read:

Provided further, That the margin of the bond used as a basis for the notes issued under this act shall cease to draw interest, etc.

Mr. McPHERSON. The Senator will not fail to observe from the phraseology of the bill that even the amendment as he now modifies it leaves it equally vicious. Let me read the first line or two of the amendment:

That the bonds used as a basis for the notes to be issued under this act—

What bond? All the bonds. If, for instance, a bank to-day with a capital of $100,000 has $100,000 in bonds, each and every one of those bonds stands for 90 per cent of the circulation now taken out and as well the 10 per cent which we propose to confer upon the bank the privilege of taking out. There is no means of separating them, and if you deprive the banks of the privilege which the bill reported by the Finance Committee proposes to give them, you surely defeat the whole object of the measure. The Finance Committee has in view but one thing. It proposes to offer some inducements to national banks to increase circulation It proposes to give upon bonds already deposited 10 per cent additional circulation, up to the face value of the bonds. There is no reason why this should not be done, because the bonds of the United States are sufficient security for the redemption of these notes. That is all the Senate Committee proposes to do, and to consent to a proposition that will make it nugatory and defeat the whole object and purpose of the bill is simply to contradict ourselves.

Mr. ALLEN. If the Senator will yield for a moment let me ask him why not let the Secretary of the Treasury make the issue direct in lieu of enlarging the powers of the national banks? The power of the Government is behind its issue, and why not issue the Treasury notes or coin the uncoined silver in the Treasury Department at this time?

Mr. McPHERSON. I hope the honorable Senator will excuse me from undertaking to make any answer to either of the propositions, for I distinctly state that my only purpose in rising is to show the Senate how absolutely nugatory his amendment would render the work thus far performed by the Finance Committee, and I further state that I will not be drawn into any debate upon any question outside of the particular thing which I rose to explain.

I do not intend to stand here in my place and occupy one moment of time in reaching a vote upon this question, except to explain it in the briefest and shortest time possible that I can take. I will not be drawn into any debate upon any other proposition than the one before us. If amendments are offered here, as this amendment has been offered, which I think are vicious in the extreme, rendering nugatory the bill itself, I shall simply make that statement.

Mr. ALLEN. If the Senator from New Jersey will permit me, I should like to ask him why we should not issue Treasury notes in lieu of enlarging the powers of the national banks and the bank circulation of this country?

Mr. McPHERSON. I will answer the Senator's question in this way: The Committee on Finance has brought in this measure conscious of the great distress that exists among the business people of the country, with banks closing day after day which were esteemed and considered the strongest in the country, with factory fires and furnace fires out and people out of employment, and even a bread riot reported this morning in the principal city of the United States, and we, the servants and representatives of the people, sit by and talk and talk day after day without offering even this small measure of relief. We are using simply the old and tried instrumentalities, to wit, the national banks, in order that we may be able to obtain some measure of relief and give it to this distressed people who are clamoring for it. This is the only object we have in view.

Mr. ALLEN. What measure of relief will the bill, if it becomes a law, afford in the distressed condition of the country to the laboring people, the people who are to-day clamoring for bread?

Mr. McPHERSON. I will answer that question. I am glad the Senator has asked it. If the bill be passed as reported by the Finance Committee it will increase the circulation on the bonds already deposited to the amount of about $19,000,000. Even prior to the bill having been introduced, I understand that from $18,000,000 to $20,000,000 of new circulation had been asked by the national banks, and that the bills are now being prepared in the Treasury. With the added inducements which this bill will give, in my opinion, it will add $50,000,000 to the circulation of this country, and do it as quickly as the bill passes, or as soon as the Government printing department can print the bills. The $50,000,000 would be distributed to nearly four thousand national banks in this country, giving them 10 per cent additional currency; and then if they desire to increase circulation by a deposit of more bonds, they have that additional inducement, and they can take out circulation to the face value of the bonds afterward deposited.

I do not see how any Senator, it matters not what may be his views touching the repeal of the Sherman law, or any other subject that may be here of a financial character, can delay for a single moment by offering amendments to this bill which have no relevancy to the bill whatever. I do not see how he can withhold from the business interests of this country this needed relief. I have introduced this same bill during my service in the Senate three times. Three times has it been passed, and almost without debate on every occasion. Surely the necessity for its passage was never greater than it is at this moment.

Mr. MANDERSON. Mr. President, my recollection concerning the past history of legislation that is akin to this is quite clear, and I know that the Senator from New Jersey is correct in the statement with which he closes his remarks. This bill, substantially as it is here written, and my recollection is in the identical language that it now presents itself, has passed the Senate of the United States three times, and once surely, I think twice, perhaps, without a word from any source in opposition to its passage. This action was taken by the Senate at times when the financial skies were brighter than now, and when there was not the distress that disturbs the country to-day.

This distress, Mr. President, it seems to be agreed by all, is because of lack of the circulating medium, the want of a sufficient currency with which to do our business. Here is a proposition that proposes to add at once, according to the estimate of the Finance Committee, $20,000,000 of notes that are the equal in value of gold, and with an outlook that there shall be added within a brief space of time perhaps fifty million, making nearly $1 per capita added to the circulating medium of this country. Surely if in times past there was advisability if not to say necessity for this action, that necessity is emphasized by the depressed and the dreadful condition of to-day.

I have voted heretofore for a bill similar to the pending measure. I propose to vote for it again. I propose to vote against any and every amendment to it, even although some of the amendments might commend themselves to my better judgment, because I believe that dispatch is needed, that quick relief is demanded by the people of this country, and the Senate and the Congress of the United States should be quick to act rather than eager to debate.

The inquiry which I made of my colleague was that I might call his attention to the ambiguity of the language of his amendment. I did not believe that he had written that which he intended. I believed that his purpose was to confine the loss of interest upon bonds to the 10 per cent additional that was to be the basis of circulation that was to be permitted to be issued by the banks and not to the whole of the bonds. But surely, as he himself now seems to indicate by the modification of his amendment, if the amendment had been left as it was originally written it would have compelled the banks, if they propose to continue their circulation, to lose interest upon every dollar of the bonds upon which they were based. That surely he did not propose, and it is evident by the modification of his amendment that he did not so propose.

But I suggest to my colleague that even with his modification of the amendment by the insertion of the words "for the margin of the bonds issued," there is still ambiguity that might lead to endless confusion and to uncertainty leading to such dispute between the banks and the officers of the Treasury Department as might render nugatory this provision, even if it was adopted.

But, Mr. President, my desire was first to call my colleague's attention to this, that I believe was a mistake, and next to respond in briefest manner (for I do not propose to go into any discussion or debate as to the advisability of the continuance of the national banking system in this country, nor upon any other matters financial) to the remark dropped by him that he believed that in the State which we together have the honor to represent upon this floor nine out of ten of its citizens were opposed to the national banking system. I have not only great esteem and regard for my colleague personally but respect for his judgment, for his honesty of purpose and directness of manner, but I find myself emphatically disagreeing with him upon that proposition.

Now, Mr. President, what are the facts? Since my colleague took his seat I have sent for the last report of the Comptroller of the Currency that has been printed. Here are the facts that seem to me to show an entirely different condition from that stated by him in the State of Nebraska. In that State there are 130 national banks, and to their credit be it said that in these days of adversity when, because of causes to which I need not now advert, there are practical acts of suspension and of insolvency every day in the great banks of the city of New York, by the repudiation by them of the payment of checks of their depositors, and the practical compulsion upon those depositors that they shall take in lieu of money or currency clearing-house certificates—which are merely another form or evidence of indebtedness—in the State of Nebraska there has not been in any national bank open to-day the repudiation of a single check of any depositor, and that of the 130 national banks which have handled the financial interests of that State but five have closed their doors during the dark days of the last three months, and three of those, I understand from the Comptroller of the Currency, are likely to speedily resume. That, it seems to me, is a record worthy of preservation and worthy to be commented upon and commended.

Now, what else? These banks, I see by this report, have a capital stock of $10,000,000, with a surplus of $1,600,000. Their circulation, with this capital stock of $10,000,000, is $2,000,000, based upon about $2,300,000 of bonds deposited with the Government of the United States for the security of the circulation. The individual deposits in the 130 banks, by the last estimate that I am able to obtain from the Comptroller's report, exceed $20,000,000. That is pretty substantial evidence that nine out of ten of the citizens of Nebraska are not opposed to national banks.

Mr. ALLEN. What is the date of the Comptroller's report?

Mr. MANDERSON. The last report that I can obtain is one that runs up to December 5, 1892.

Mr. ALLEN. May I interrupt my colleague?

Mr. MANDERSON. Certainly.

Mr. ALLEN. In stating that nine-tenths of the people of Nebraska are opposed to the national banking system, I desired to emphasize more especially and particularly that feature of the national banking system which makes them banks of issue. The same thing the Senator says about the national banks of Nebraska, which is true, is likewise true of the other banking institutions of that State.

Mr. MANDERSON. No; not in so marked a degree. Proportionately, far more private banks have closed their doors than national banks.

Mr. ALLEN. We have, I understand, more private banks in the State of Nebraska than national banks.

Mr. MANDERSON. I say a greater proportion of private banks have closed their doors.

Mr. ALLEN. I think I am correct in stating that nine-tenths of the people of Nebraska are opposed to the national banks as banks of issue. They believe that the power to issue money resides in the Government, and that money should be issued directly by it, instead of through the instrumentality of the national banks.

Mr. MANDERSON. Perhaps that is true, and it may be that we will some time meet that desirable result; but this is not a measure that proposes to change the present condition of note issue, and therefore, perhaps, debate upon that question is not what should be had upon the bill proposed by the Committee on Finance which is now under consideration, and to which my colleague offers his amendment.

Mr. ALLEN. Will my colleague permit me to ask him a question.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). Does the Senator from Nebraska yield to his colleague?

Mr. MANDERSON. Of course.

Mr. ALLEN. If we pass this bill, when the bonds which are pledged as security for the preceding issue mature, will not the country be confronted with this proposition: The national bank circulation will have become so embedded in the commerce of the country that it can not be retired without injury, and therefore we shall have to continue the bonds in some form or another?

Mr. MANDERSON. There has been already a very great retirement by payment of bonds, and yet that difficulty has not met us. But that is a stream which can be crossed when it is reached. There is now sufficient bonded indebtedness to form the basis of the national-bank circulation that is now imbedded in our financial policy under a system which this bill does not propose to abolish. It may be that when the subject is properly presented I may agree with my colleague that better than a national-bank circulation or issue is an issue of paper money properly and securely based upon intrinsic metallic value, and not based upon wind or upon water; that that will be better than the present national banking currency. But we have not yet reached that question; and with the inability under existing financial circumstances for the Government of the United States to pay off its bonded debt, it looks as though that question was in the dim and distant future and that we need not disturb ourselves about it now.

But, Mr. President, my statement was that the people of Nebraska have emphasized their confidence in the national banks of that State by individual deposits of over $20,000,000, as shown by the last report I can obtain of the Comptroller of the Currency.

Now, a moment, Mr. President, upon the question of the great profit that has accrued to the national banks by reason of the issue of paper money based upon United States bonds. I do not think there is any subject financial that has been more misrepresented—I might almost say more lied about—than that proposition. I turn to this report of the Comptroller of the Currency, and I find there the cold facts and figures, which are better than figures of speech or figments of the imagination, that show exactly what has been the profit on $100,000 of circulation under the existing law, the circulation or issue being based upon the bonds.

The Comptroller takes the 30th day of June, 1892. That period of time was selected because, as he says, it marked the close of an interest period for Government bonds. He takes the sum of $100,000 of 2 per cent bonds, and what is the profit on the $90,000 of circulation permitted under the existing law to the bank to issue?

Mr. COCKRELL. What page is the Senator reading from?

Mr. MANDERSON. Page 8, volume I, Report of the Comptroller of the Currency, December 5, 1892. He finds that the profit on the circulation upon that $90,000 of issue, based upon $100,000 of 2 per cent bonds, is $31.52, being a total profit on the $21,837,000 of 2 per cent bonds forming the basis of 90 per cent on that amount of circulation of $6,194.72, being a percentage on the maximum circulation obtainable of .032 per cent. Certainly that is not very profitable banking.

Now, let us take the 4 per cent bonds and see what an issue on $100,000 of fours at a premium of 16¾ per cent will profit a bank. It is true that the premium is lower now; 4 per cents to-day are quoted at about 12 per cent premium. Let us see what the result was. The profit on circulation upon $100,000 of 4 per cent bonds and $90,000 of circulation is $330.16, making a total profit on $129,759,000 of bonds of $385,571.09, being a percentage on maximum circulation obtainable of 0.330 per cent.

Mr. COCKRELL. Will the Senator permit me to interrupt him, as he is discussing that point, and ask him to explain how the total profit on $129,759,000 of bonds is $385,571.09? Is that reached by taking the whole amount of the bonds deposited by national banks?

Mr. MANDERSON. I presume it is. I did not write the article. I am reading from the report of the Comptroller as it is written. On the 6 percents he gives the same calculation, and he shows what the profit is on 6 per cent bonds. They were at a premium of 114, and the profit on circulation of $90,000, based upon $100,000 of sixes, would be $1,218.58, being a total profit on $11,600,000 of 6 per cent bonds of $127,219.75, being a percentage on maximum circulation obtainable of 1.218 per cent.

Then he gives on page 9 the recapitulation, showing the total of all bonds to be $163,196,000, with $146,876,400 maximum circulation, at 0.353 per cent, $518,985.55. Now, is it to be wondered that with this as the insignificant profit, constituting a practical loss during the period national banks have existed, the circulation has very largely fallen off? Turning to page 7 of this report, I find——

Mr. COCKRELL. Before the Senator leaves that, if he please, the figures on page 9 give what the banks make upon their circulation and on the bonds, which is 6 per cent and over on 2 per cent bonds, 6.33 per cent on the 4 percents, and 7.218 per cent on the 6 per cent bonds.

Mr. MANDERSON. I see it, and will show what is meant by it.

Mr. ALLEN. Will my colleague yield to me for another question?

Mr. MANDERSON. Certainly. I am in a yielding mood. I would always rather hear somebody else talk than talk myself.

Mr. ALLEN. Why should the privilege be conferred on banks with reference to the issue of money? Why would not Treasury notes or the coinage of silver by the Treasury Department supply the demand?

Mr. MANDERSON. Quite likely it would. It certainly would supply the demand. As to the advisability of such course, as I said to my colleague a moment since, we will meet that question when it confronts us. It does not confront us now.

Mr. ALLEN. Let me ask another question. Does not this measure put in the hands of the national banks the power to contract suddenly or suddenly expand the currency of this country to the injury of our business?

Mr. MANDERSON. It will not just now be a power to contract, but a power to expand. It is expansion that we very greatly desire at this particular moment. A safely based expansion.

Mr. ALLEN. Why should our national banks be banks of issue?

Mr. MANDERSON. You can not force a national bank to become a bank of issue under existing law, and I think until very different conditions exist they may well be.

Mr. ALLEN. Would it not be better for the people at large that the power to issue currency should be retained by the Government?

Mr. MANDERSON. Quite likely, and when the proper time comes perhaps we will agree on that as the wisest policy; but that is not the present proposition. The amendment of my colleague to the pending bill is to render utterly useless the legislation proposed by the Committee on Finance. That is a measure of great relief, both temporary and permanent, and I do not propose to lend myself to the cutting of the throat of the bill.

Mr. VILAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Wisconsin?

Mr. MANDERSON. Certainly.

Mr. VILAS. I simply desire to ask the attention of the Senator from Nebraska to the fact, that in making the calculations to show even the very small per cent of profit the Comptroller appears to have reckoned as constantly and continually at interest for the benefit of the banks the entire amount of the currency issued upon the bonds, less the 5 per cent redemption fund, while it is well known to everyone at all conversant with business that banks never loan to that extent.

Mr. MANDERSON. Of course, they do not, and should not.

Mr. VILAS. That it would be highly imprudent to do.

Mr. MANDERSON. They can not do it. Under the law they must keep a reserve.

Mr. VILAS. They must keep a reserve. Therefore these figures estimate too highly for practical banking the percentage of profit upon the circulation. The fact that the circulation has been reduced by every bank in the country is the most conclusive proof of that result.

Mr. MANDERSON. I was about to call attention to that fact when I was interrupted.

Mr. COCKRELL. Will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Missouri?

Mr. MANDERSON. Certainly; I yield to anybody at any time.

Mr. COCKRELL. In explanation of a partial report read by the Senator from Wisconsin, let us read the whole, on page 9:

> Since the 5-per cent redemption fund counts as part of a bank's reserve as well in hands of the Treasury as in vaults of the banks, it would have been proper not to make the deduction above. This would add materially to the profit of circulation.

Mr. MANDERSON. I will simply call attention to another fact which, it seems to me, is better than speculation, perhaps better than argument. If my friend from Missouri will turn to page 7 he can see that I read correctly.

> Large appreciation of the price——

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Senator from Nebraska will suspend while the Chair lays before the Senate the unfinished business. It will be stated.

The SECRETARY. A resolution providing that Lee Mantle be admitted to a seat as Senator from the State of Montana.

Mr. MCPHERSON. I do not suppose the Senator from Massachusetts intends to press that resolution to-day.

Mr. HOAR. I understand it is the request of the chairman of the Committee on Privileges and Elections, who means to address the Senate on the resolution, and is not well enough to do so to-day, that it shall stand over until to-morrow.

The PRESIDING OFFICER. If there be no objection the unfinished business will be temporarily postponed until to-morrow without losing its place.

Mr. MANDERSON. I turn to page 7 of the report of the the Comptroller, and I read as follows:

> Large appreciation of the price of United States bonds, the basis for circulation, large depreciation of the rates of interest, and onerous taxation, have made circulation unprofitable, and the volume has fallen from $362,889,134, September 30, 1882—the highest amount in circulation at any one time—to $172,426,610 at the close of the last fiscal year.

I suggest that this enormous decrease of nearly $200,000,000 in circulation in about ten years is the best possible evidence of the fact that the national banks have not had the great boon or the tremendous profit that we frequently hear charged upon them.

Mr. FRYE. Will the Senator from Nebraska allow me?

Mr. MANDERSON. Certainly.

Mr. FRYE. Does not the Senator know it is a fact that the profits made by national banks are made on the deposits and not on the circulation?

Mr. MANDERSON. Certainly. I am speaking simply now of circulation. Of course, where they make their profit is upon deposits.

Mr. FRYE. Does the Senator believe there is a national bank in the United States that would do business on circulation alone?

Mr. MANDERSON. Certainly not. It would be impossible to do it. Its stockholders would become bankrupt very speedily. I suggest, Mr. President, in view of these facts, that no man can explore the national banking system of this country and have knowledge of the workings of national banks who will not conclude that, so far as the issue of notes is concerned, the profit and the great boon is to the people of the United States, the citizens in the communities where the banks exist, rather than in those that own stock in the banks. As suggested by the Senator from Maine, the source of profit to the national banks is the same as the source of profit in private or State banks. It comes from the use of the money of their depositors, deposited frequently with them without interest, and loaned at interest, or deposited at a low rate and loaned at a higher rate of interest.

Mr. VILAS. Will the Senator from Nebraska permit me to call the attention of the Senator from Missouri to the mistake under which he was laboring in respect to the Comptroller's report?

Mr. MANDERSON. Certainly.

Mr. VILAS. The Comptroller speaks only of his deduction of 5 per cent from the circulation that would be loaned because that 5 per cent is counted as a part of the reserve; but if he will turn to section 5191 of the Revised Statutes he will find that national banks in the larger cities—I will not stop to indicate them—are required to hold a reserve of 25 per cent of their circulation and deposits. Therefore the proposition I made is exactly correct. He has included in the loanable currency in this calculation what by law banks are required to hold in reserve except as to 5 per cent of the amount.

Mr. MANDERSON. Now, Mr. President, but one word more and I am through. I would have been through a long time ago had it not been for these very pleasant and profitable interruptions, to which I certainly do not object.

Mr. PUGH. Will the Senator allow me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Alabama?

Mr. MANDERSON. Certainly.

Mr. PUGH. The Senator from Maine stated what seems to be admitted as a fact, that no national bank would do business on the amount of the issue it is authorized to make on the bonds of the Government that it deposits in the Treasury. That being an undisputed fact, I should like to be informed why the banks should object to the Government taking away from them the power of issue and leaving them to the original function of banks of deposit and discount, and why the Government should not resume its power of issuing directly to the people the currency that the Constitution enjoins upon the Government as a duty to furnish the people in sufficient quantity to answer their commercial needs.

Mr. MANDERSON. The inquiry seems to be proposed to the Senator from Maine, and I hope he will answer it in his own way. I have simply to suggest as my answer——

Mr. PUGH. The Senator from Nebraska sanctioned it as a fact, and knowing it to be a fact I draw the deduction that there can be no injury in taking away the power of issue from the national banks.

Mr. MANDERSON. I have no doubt that the national banks in time, or by some gradual process by which they could make the change, would be heartily glad to get rid of the issue of national bank currency. I have never heard any experienced banker who desired its continuance, except because of existing pressure and demand. Would the Senator from Alabama desire now by one fell swoop to retire the national-bank circulation? Certainly not. That hardly needs an answer. I know he would not.

Mr. PUGH. I do not agree that the Senator shall make the answer for me.

Mr. MANDERSON. All right. I hope the Senator will make answer for himself.

Mr. PUGH. I do not believe there is any process we could devise by law that would put them in a state of liquidation and retire their circulation all at once, but I am willing now or any day hereafter to relieve them from the burden of carrying this amount of circulation without profit.

Mr. MANDERSON. So am I, when it is safe so to do.

Mr. PUGH. I want the Government itself to exercise its constitutional duty and not to delegate it to these fiscal agents, who have abused the trust and are abusing the trust to-day. I want the Government to resume that power and to exercise it, so as to furnish the people with what currency they need in their legitimate commercial operations. I am willing to pass a law to-day, or at any time it can be formulated, to relieve them from the burden of issuing this circulation.

Mr. MANDERSON. When a time comes that is proper and safe for such action I think the Senator from Alabama will find me in hearty accord with him in that proposition.

Mr. PUGH. I am glad to hear it.

Mr. MANDERSON. And I hope he will not, when that time comes, depart from my side to substitute for the present safe national banking system a system that will reopen, by the repeal of the 10 per cent tax on their circulation, the State banks as banks of issue. That, I know, is the platform of his party. I know that was advocated very strongly upon the stump. It does not appear to be receiving such strong advocacy now; but I hope my friend from Alabama will not leave my side and enter upon any such dangerous experiment as that advocated by the party of which he is a distinguished member.

Mr. PUGH. If the Senator will allow me a minute, I desire to say that is one plank in the Democratic platform that I should like to see some respect paid to. I am in hearty coöperation with the purpose of repealing what I believe to be an unconstitutional tax and giving to the States the right to bank in their own way. I will say to the Senator that I have no doubt there would be less danger from that kind of circulation than there is to-day from the national banking circulation.

I think if the States could be permitted to exercise that power it would relieve this whole trouble in relation to the stringency in our circulation. Being protected, as I have no doubt their circulation would be, to the fullest extent that the circulation of the national banks is, these banks would be under the eye of the whole country and under the supervision of every capitalist. With the amount of their circulation and the security for it furnished every morning through the press and through the telegraph of this country, the people will be advised of the security upon which these notes are circulating as perfectly as they are to-day of the circulation of the national banks. These banks would relieve the stringency and supply the local want of circulation, and would avoid one evil which I think is inseparable from requiring the National Government to supply a currency—that is, an equal distribution of it among the people.

The great objection I have to letting the Government issue directly to the people is, that it would be almost impracticable to have an equal circulation of money. That evil can be avoided through a State bank system, organized and perfected in each State, with the information we have got in relation to banking.

All the talk and apprehension expressed about wild-cat money I think is merely intended to revive an old recollection of a system that nobody proposes to revive, and the evils of which can easily be avoided.

Mr. MANDERSON. Mr. President, the questions that have been propounded to me during the cursory remarks I have been making upon the amendment of my colleague have the admirable quality of length, and they are remarkable in having lost their interrogation points.

I leave my friend from Alabama, when he shall look up the RECORD in the morning, to reconcile for himself the difference there seems to be in his statement a few moments ago and that which has just fallen from his lips. If it is the constitutional power and the constitutional duty of the Government of the United States to issue money to its people—and that is the only source constitutionally from which it can be issued, and therefore we should not issue through the medium of the national banks, but through the Treasury direct—I leave him to reconcile that idea advanced by him with that other when he said but now he would not only repeal the 10 per cent tax on State bank circulation, but he would open the door to the old condition, where any individual under State laws could open a bank and issue circulation. I venture to tell a story that I heard yesterday from my distinguished friend from Connecticut [Mr. HAWLEY] that I think well characterizes the old condition.

I do not want to be understood as saying that my friend from Alabama wants a restoration of that miserable condition. He believes that the State bank issue would be carefully guarded by State laws, and that its basis upon State, municipal, and other securities would make the issue better than it was in olden times. That probably would be so as to some States, but as to others, I venture the assertion that a financial Pandora's box would open that would rival successfully the old condition so well described by the story told me by my friend from Connecticut, of a steamboat captain going down the Mississippi River, being out of wood, had his boat hauled up near to a wood station on the river bank, and asked whether they had wood for sale. "Yes, plenty of it." "Well, will you take bank of Grenada money?" "Yes, we will take that money." "How will you take it?" "Oh," he said, "cord for cord." [Laughter.]

That pretty well exemplifies the old state of affairs with its numerous State banks issuing paper, and I do not desire to see a restoration of anything that smacks of it or is at all like it.

I believe that the Government of the United States should issue money to its people. I see no constitutional objection to the national-banking system by which those banks, under carefully guarded restrictions, have become banks of circulation. Think of their safety and compare it with the lack of security that our Democratic friends seem to desire. Since the formation of the national banks in this country, by reason of the careful guarding of their circulation by the United States Government, there has been issued and redeemed, without the loss of a penny to any man who held the paper, $1,521,437,753. Could anything be better or safer? It seems to me not.

Mr. WOLCOTT. May I ask the Senator a question?

Mr. MANDERSON. Certainly.

Mr. WOLCOTT. The Senator is a compendium of all knowledge upon this as upon many other subjects, and I should like to ask him if he will kindly advise me, for I have been unable to ascertain by an inspection of the law, what authority exists in the national banking act for the issuance of clearing-house certificates? If the authority does exist, as it must, for it met the approval of the Comptroller of the Currency a couple of weeks ago, and the banks in New York have issued such certificates to the extent of $37,000,000, what is the necessity for issuing circulation up to the par of their bonds? If they can discount all their paper and issue clearing-house certificates, what need have they of the issue of additional circulation to the par of their bonds? I ask for information.

Mr. MANDERSON. I do not believe there is any warrant for such circulation in the law. Driven to it by the necessities of the occasion, these banks have made a substitute of clearing-house certificates, which are merely a form of indebtedness, and for them the certificates are practically money. I do not believe there is warrant of law for their circulation as money, but if people are content to take the certificates instead of the cash, which they can not obtain, but are entitled to, I do not see where the remedy is. By common consent these clearing-house certificates seem to be passing as currency. I doubt very much if there is any warrant in law for it. I do not believe it is authorized by any statute, but is in contravention of the law.

Mr. FRYE. Is anyone obliged to take them?

Mr. MANDERSON. No one is obliged to take them.

Mr. WHITE of Louisiana. Has the Senator from Nebraska any authority for the statement that the clearing-house certificates have passed as currency? I have never heard such a statement before.

Mr. MANDERSON. They are passing or are used in this way, as I understand: If I have a depositor's check on a New York bank, payable to my order, and I indorse it and am known at that bank, or, being unknown, am identified as the indorser of the check, that bank will say to me, "We can not give you the currency for this, but we will give you a clearing-house certificate;" and I can, if I please, accept that clearing-house certificate, which, I say, is simply another form of indebtedness; but they can not compel me to take that clearing-house certificate.

If I see fit to do so I can say to the paying teller, "I do not want the certificate and will not take it; I want the money; I am entitled to currency, and if you do not pay it to me it is an act of insolvency, and I will make complaint to the Comptroller of the Currency and have your bank closed and an examiner put in charge."

Mr. WHITE of Louisiana. The fundamental attribute of currency would be the paying in and paying out of these clearing-house certificates as currency by deposit and reissue. That is where the broad line of difference exists. If the Senator knows of any bank taking clearing-house certificates as money and issuing them as money, then his statement would be borne out; but I understand such not to be the case.

Mr. MANDERSON. I do not know how that may be. I am simply stating the fact as I understand it; that is, the clearing-

house certificate is presented to the holder of the check instead of currency, and he takes it if he sees fit.

While I say I can see no warrant of law in the proposition as stated by the Senator from Colorado [Mr. WOLCOTT], I am not sufficiently familiar with the facts as to the clearing-house certificates in the city of New York to be able to state whether the present action of the banks is within or without the law. I have no question from the fact that their action has been received by that great business community in the manner it has, and affording, as it has, very great relief in this dreadful financial distress, that it was one based in wisdom and probably carried out within the purview of the law.

Mr. MCPHERSON. If the Senator will permit me, I have never known clearing-house certificates to be used as currency or any attempt to use such certificates as such, except to expedite and aid clearances in the clearing house or by individual banks. They are used as currency by the banks themselves in making clearances in the clearing house and paying balances.

Mr. MANDERSON. I should almost feel like begging pardon of the Senate for speaking at such great length upon this bill, in which I heartily believe; but I think I am excusable, having had so many interruptions.

Mr. MCPHERSON. Can we not now have a vote, Mr. President?

Mr. PEFFER. Mr. President, I desire to say a few words.

Mr. HARRIS. I ask the Senator from Kansas to yield to me for a moment.

Mr. PEFFER. Certainly.

PERSONAL EXPLANATION.

Mr. HARRIS. I desire that the Secretary shall read from the top of the first column of the paper which I hold in my hand, the New York World, and which I shall send to the desk, down to the point I have marked, in order that the Senate may be informed as to the accuracy of the reports of what is done, not only in the Senate, but in the committee rooms of this body.

The Secretary read as follows:

TO FORCE THE FIGHT—AN UNCONDITIONAL REPEAL BILL TO BE REPORTED TO THE SENATE—VOORHEES CASTS A DECIDING VOTE IN THE FINANCE COMMITTEE—SENATOR HARRIS DENOUNCES HIM AS A TRAITOR.

Unpleasant words spoken by all the silver Senators—They are angry and will try to-day to prevent a report—It is not likely that they will succeed—A long step forward for the repealers—Senator GORMAN introduces an amendment to the bank-circulation bill intended to pacify COCKRELL—The Maryland man's policy—Senator JONES of Arkansas declares there must be a compromise—He quotes Henry Clews to maintain a statement that New York bankers are coming around to a compromise—Senators care for themselves.

[Special to the World.]

WASHINGTON, *August 17.*

The Senate Finance Committee decided to-day by a majority of one to report favorably to-morrow a bill repealing the purchasing clause of the Sherman act. The vote stood as follows:

Yeas—McPherson, Aldrich, Sherman, Allison, Morrill, Voorhees—6.

Nays—Vest, Vance, Jones (Ark.), Jones (Nev.), Harris—5.

The deciding vote was cast by Chairman VOORHEES exactly as predicted in these dispatches on the Sunday before Congress convened. The bill explicitly provides for nothing more than repeal. The second section, however, contains a declaration to the effect that the United States has not abandoned bimetallism as a monetary system and that every effort shall be made to effect an international agreement by which silver shall be restored to its proper place as a part of the currency.

The meeting was the most exciting ever held by the Finance Committee. The silver Senators manifested great surprise when Chairman VOORHEES cast the deciding vote in favor of reporting the bill, and Senator HARRIS made a bitter speech, in which he denounced Senator VOORHEES as a traitor, not only to silver, but to his friends. He continued with sarcastic allusions to the effect that the Administration, by the free disposition of patronage, had apparently succeeded in changing the views which Senator VOORHEES had been supposed to hold hitherto.

Senator HARRIS was excited and did not mince words. Language such as he used was probably never heard before in the Finance Committee room.

Senator VOORHEES maintained as much composure as possible and replied that it was neither the time nor the place for such remarks. The other silver Senators then began to make unpleasant observations, and the committee suddenly adjourned in a very disagreeable mood.

Mr. HARRIS. Mr. President, I simply desire to say that there is not one single word of truth nor is there a shadow of foundation for the statements contained there as to the methods of proceeding in the committee room. It is due to the Senator from Indiana [Mr. VOORHEES], but more due to myself, that I should say distinctly—and every member of the committee would bear testimony if called upon, but I do not choose to call—that there was not an unkind or a disrespectful word used by any member of the committee. Senators interchanged views in a polite and courteous and orderly manner, voted their opinions, and the matter was ended; but no vote was taken yesterday, and that is an account purporting to be of the proceedings of yesterday. The votes that were taken were taken this morning. [Laughter].

But, as I said, my self-respect, my respect for the Senator from Indiana, and, for that matter, every other member of that committee, would forbid the use of the lurid language which is attributed to me in that report. [Laughter.]

INCREASE OF NATIONAL BANK CIRCULATION.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. PEFFER. I shall oppose the passage of this bill, Mr. President, though believing that it would be greatly improved by the adoption of the amendment proposed by the Senator from Nebraska [Mr. ALLEN].

I wish it to be understood in advance that I am not an enemy to banks nor to bankers, nor are the particular political class of people whom I represent opposed to banks or bankers. What we oppose in modern banking is that banks are permitted to exercise a function of sovereignty in the issuing of paper which is to be used among the people as money, while it is not legal tender for the payment of all debts.

We believe that there is a legitimate field for bankers, as much so as there is for merchants and physicians; that bankers in any and every community can be made available for some of the highest purposes of civilization. We believe that banks and bankers are as necessary to the conduct of business under modern conditions as railways and railway managers are.

While that is all true, we have objections to the manner in which modern banking methods are conducted. To illustrate, we do not believe that it is a proper function of banking to issue notes which are to circulate as money. We believe that the Government, as was so well expressed a little while ago by the Senator from Alabama [Mr. PUGH], should issue the money of the people. We do not, however, believe with that Senator that the money should be issued to the people through banking institutions.

That brings us directly to the pending amendment. The national banks were established for a patriotic purpose; they were established at a time when the country was engaged in a great war, at a time when the banks had withdrawn their funds—I mean their gold and their silver—at a time when the Government had no credit except with the people, and the national banking system was established for the purpose of providing a national currency so that the people might have in all parts of the country the same kind of a currency with which to transact their ordinary dealings one with another. No sooner, however, than the banks had an opportunity to make money out of the rise in the value of bonds which they had deposited, did they begin the contraction of their currency. If you will go back to the 30th day of June, 1882, you will find that the circulation of the national banks at that time was $358,000,000 in round numbers. I read from page 39 of the United States Statistical Abstract for 1893.

Mr. PLATT. Was that the highest?

Mr. PEFFER. That was the highest—$358,742,034. There was a period during one or two of the months immediately succeeding when the circulation was a little higher, I would state in answer to the question of the Senator from Connecticut; but, so far as the calendar publication is concerned, this is the highest amount which was ever reached. That was in 1882. Eight years after that time the circulation had dropped to a reported amount of $172,683,850. If you will subtract from that amount the amount which was then in process of withdrawal and for which United States notes had been withdrawn from circulation and placed in the Treasury, you will find that the national-bank circulation on the 30th day of June, 1890, was about $121,000,000.

So, during those eight years the national banks withdrew from circulation money which was then out, which there was only one reason for withdrawing, in the neighborhood of $235,000,000 to $240,000,000 of currency. I understand very well the reason which is given for this withdrawal of money, and it is that to which I wish to call the attention of the Senate as to the dangerous power which the people of the United States have intrusted to this banking system, that at a time when the people needed more money, every day more money, our population was increasing, our business was expanding, our interests were multiplying in every department of industry, and in all the avenues of life the people were needing more money—at that time the banks deliberately began to withdraw their currency, and continued it at the rate of about $32,000,000 a year.

To show that there was no business necessity for doing that I call attention to the fact that in 1879, when resumption was begun, or was said to have begun, until the date in 1882 to which I have referred, the banks had continually increased their circulation at the rate of about nine and a half million dollars a year. If there was any business necessity for increasing the circulation during those four years, there was an added necessity for a continuation of that increase during the remaining eight years and up to the present time.

If a like increase had been continued, we should have had in 1890 an increase from that source alone of about ninety-six or

one hundred million dollars, which, added to what was withdrawn, would have given us largely over $300,000,000 of additional currency. If that had been kept in circulation in connection with the issuing of silver money under the Bland act, as might have been done under that law, there would have been no panic to-day—this extraordinary session of Congress would not have been called in the hottest and most unhealthy season of the year in order to supply the people with money.

Mr. President, returning to the withdrawal of the bank circulation, there was only one reason for it. It was simply the selfishness of the banking people, the selfishness of the bankers. I admit that we are all governed by selfish impulses, and we ought to be. I would not give a farthing for a man or a woman or a boy or a girl who had no love of self and had no disposition to acquire for self. But, as I said at the outset of my remarks, the banking system was provided for the very purpose, and for the only purpose, not of accommodating bankers, but of providing a national currency for the people. At that time the object was largely one of patriotism and devotion to the best interests of the people; but now we find, instead of continuing that policy, when it was to the individual benefit and advantage of the bankers that they might withdraw their bonds and put them upon the open market at 15, 25, or 30 per cent premium, that was done, not to accommodate and benefit the people, but to accommodate and benefit themselves.

So, I repeat that they are a dangerous institution as they are now conducted; they are not a safe depository for either the people's confidence or the people's funds.

But, going on a little—for I shall perhaps have occasion to return to that again before I get through—the Senator from New Jersey [Mr. MCPHERSON], for whom I have the greatest respect, in calling attention to the possible or probable benefits to be derived from the enactment of the pending bill into law, gave us to understand that probably as much as $50,000,000 of additional currency would be given to the people. Mr. President, a few days ago I had the honor to introduce a bill in the Senate providing for the issuance immediately of $300,000,000 of paper money, Treasury notes, just the same as we are now issuing. There is a very simple method of getting money to the people without the intervention of banks.

In addition to that, the bill to which I have referred provides that whenever persons holding Government bonds or any other Government securities desire to exchange them for the money provided under the bill, the Secretary of the Treasury shall have authority to make the exchange. So, if in a spirit of patriotic devotion to the interests of the people, the banks are really anxious to exchange their bonds in order that they may get currency and give it to the people, let us enact this bill which I have spoken of. It is a very short one, and it can be passed in fifteen or twenty minutes. Then we shall have an opportunity to test the patriotism and sincerity of these people as to whether they propose now, as did their predecessors of Wall street in 1861, to prey upon the misfortunes of the people, or whether they are willing to do as the common people of the country did when the President asked for troops, say "Here they are, 100,000 or 300,000 strong, and more if you want them."

But Wall street was ready to come to the rescue of the country by the purchase of depreciated bonds at 12 per cent interest on the loan. That kind of patriotism, Mr. President, at one time surfeited the country, and the people are tired of it.

I am satisfied that I am giving expression to the voice of 75 per cent of the people of the United States at large and 90 per cent of the working people of the country, when I say that the national banks as banks of issue must go, that their time for usefulness has expired, and that they need no longer cumber the earth.

Now, a little further. One friend, a Senator, suggested to me a moment ago that this amendment is probably unconstitutional. I think I have heard that word before. He suggested that possibly if the amendment should be adopted and the bill enacted into a law and bonds were deposited, the interest would have to be paid and the Government would be bound for it. Be that as it may, the banks probably are the only ones who would question the authority of the National Legislature in the premises. All I have to say is, that if they are not willing to accept this new contract which would be provided in the law, they are not obliged to do so. I thank God and the American people that we are able to make our own money, and the people have faith in the Government and the Government's promises, notwithstanding the message we had from the first officer of the Government a few days ago, that the cause of this trouble was that the people distrusted the ability of the Government to make good its promises. Away with such philosophy as that!

But another point—and I wish to impress that especially upon the attention of Senators who are urging this bill—is that there is nothing in the present law to prohibit the banks from increasing their circulation to-day. Under their present capitalization they can, by the bringing in of bonds and depositing them, increase their circulation to somewhere in the neighborhood of $600,000,000. Their capital is greater than that now, and without any action upon the part of Congress, but simply the voluntary action of the banks themselves, if they are moved by patriotic impulses, they can in that way increase their circulation.

Mr. CHANDLER. May I ask the Senator where the banks will get United States bonds on which to base circulation?

Mr. PEFFER. I will answer the Senator as the Oregon man answered the Englishman. You know, Mr. President, that in Oregon there are a great many large, tall pine trees. The whole surface of the earth in some places is practically covered with these immense trees, towering up from 100 to 300 feet in height, leaving interstices perhaps not to exceed 3 feet. After having described one of those wonderful forests to his listening English auditor, an inquiry was put to him as to the game of Oregon, and especially the game that inhabited those forests. The Oregonian began to describe the immense animals in that country, the moose and the elk, whose antlers extend from 10 to 15 feet in width from point to point. When asked how they could manage to get through the forests with those horns, the answer was that that was the elk's business, and not his.

I answer my friend now that that is the bankers' business and not mine. They parted with their bonds when they were not required to do so; they parted with bonds which had cost some of those individual persons in the aggregate not to exceed 60 cents on the dollar. I believe that the average sum which was paid per dollar for the bonds upon which our earlier banks were established was about 60 cents. At any rate, the cost of the bonds at the time I am talking about, when the banks were established, was not to exceed par, but because they could obtain in the markets more for their bonds than par, they sacrificed the interests of the people, sold the bonds on the open market, and used the money for other purposes.

If there is that spirit of patriotism which we are told exists among the bankers of to-day, they can certainly afford to pay a little premium upon bonds which are now out. They can get them somewhere, I do not care where, and supply the people with money.

We are told by the senior Senator from Nebraska [Mr. MANDERSON] that the capitalization of the banks of the State of Nebraska is about $10,000,000 and their circulation about $2,000,000. Those people could very easily increase their circulation a few millions more with a very slight pecuniary effort; but instead of doing that, they and the other bankers of the country insist that they must be fattened still more at the public crib. Their deposits amount to $20,000,000, but they would rather bank upon the money of their depositors than upon their own.

The true policy, Mr. President, it seems to me, so far as the national banking system is concerned as banks of issue, is to get rid of them as soon as we can, and not only not encourage them, but to discourage them, and to place no more dangerous power in their hands.

The Senator from Nebraska called attention to two points in excusing the bankers for selling their bonds and withdrawing their currency: One was that the bonds had increased in value, rendering the circulation based upon them unprofitable, comparatively, of course, and another was that interest rates had been reduced.

Now, I beg leave to call the attention of the Senate to the fact that interest rates were not reduced, and have not been reduced at any time so far as national banks are concerned. The law prescribes what interest national banks may charge, and prohibits them from charging anything more than that. In States where there is a legal rate established, the banks may charge that rate and no more; and in States where no rate has been established by law, banks may charge 7 per cent, and only that. So they are not permitted to go beyond 7 per cent per annum when not regulated by the State law of interest. There has been no decrease in the rates of interest so far as the national banks are concerned, but in practice there has been relatively an increase in the rate of interest. Seven per cent to-day is higher to the farmer and the wage-worker than 10 per cent was ten or a dozen years ago, by reason of the depreciation of property.

Then, our people have fallen—no; I will recall that word "fallen"—I was going to say that we had fallen into the error, but we have simply continued in the error, of supposing that every dollar of money which is provided for the people by the Government must get to them through some kind of an interest-bearing institution, an interest-charging institution. There is no necessity for that whatever.

Senators ask, why not utilize the banks for the purpose of getting circulation out to the people. For the very reason that the

banks are an intermediary agency, charging the people enormous rates of interest before they can obtain the money, and now in this trying time one of the great difficulties we have is that banks are not willing to lend their customers money.

A little while ago we had a very interesting discussion here upon the matter of the issuance of clearing-house certificates. There is no reason whatever for that sort of business transaction, except that the banks were not willing to let their customers have money. From all over the country comes the cry, "We can not get money." The Senator from Georgia [Mr. GORDON] the other day spoke in eloquent terms concerning the condition of his people. We can not get money from our banks.

I have in a very brief period received letters from my own people. In one case I was asked for pecuniary assistance by a friend, for the very reason that no sort of security would be taken in the banks for money; yet there is money lying idle, millions—I was going to say thousands of millions: that would not do—but hundreds of millions of dollars lying idle in the bank vaults to-day that ought to be out doing duty as money among people who are able to give as good security as four or six months ago, and some of them more able to do so; but because of the selfishness of the bankers, because of their dread of something, the people can not withdraw even the money they have in the banks, in many instances, and the savings depositors are compelled to comply with the provision of law which authorizes the banks to require sixty days' notice before their money can be withdrawn. So to-day it is the banking interests of the country that are bringing about this disaster, and no other interest—not one—and yet we are asked to place more power in their hands, more money in their hands, and they are unwilling to pay out what they have. No, Mr. President, not another dollar to the national banks—not one.

I believe in selecting our own agencies for getting money to the people. I will not discuss that point, but doubtless Senators will ask in their own minds, if they do not openly, "What would you give us instead of the banks? How would you manage this thing if you were not willing to intrust it to the banks?" I would adopt a system as simple as the post-office system. I would get money to the people as easily and with a substantial cheapness equal to the delivery of postage stamps. I would establish Government agencies, I would transform our present national banking system into a Government system, relieving about 90 per cent of them and leaving the business to be done by 10 per cent, and we should save money not only in the transaction of the business, but in the reduction of the rates of interest.

I was asked by a very good friend this morning in reference to the bill I introduced a few days ago—he was once governor of the State of Kansas, a gentleman who stands high in point of intelligence and in every other respect—"How would you get your money into circulation; what provision have you made for that in your bill?" "Well," said I, "knowing the aversion that what is commonly called the business interests have to a scheme that I have proposed, and shall again in due time, I have suggested a very simple proviso—that is to say, that the $300,000,000 of Treasury notes should be covered into the Treasury just as fast as they are prepared and ready for issuance; that they shall be charged to the Treasurer, credited to the available funds for use, and paid out the same as other moneys." If there should be any objection to that when it comes to the test, of course we shall hear it in this body.

But it seems to me, Mr. President, there is one way by which we can get this money into circulation. I, however, would take a different course had I the power. I would establish in every State Government agencies, and I would send the money there to the people who are to use it. I would send it to the capital of Rhode Island, to the capital of Connecticut, of Massachusetts, of California, of Minnesota, of Kansas, of Nebraska, of New Hampshire—to where it is needed, and where it will be used by the people.

I would let them have it upon precisely the same terms, so far as security is concerned, that our present much-vaunted system of national banks lets them have it upon—good security, whether real or personal—and I would let them have it at actual cost, the same as we give them the postage stamps at actual cost, and it does not cost a farthing over 1 cent to prepare and issue money when you do not have to borrow it. The business of lending money does not cost more than 1 per cent if you do a business as large as $2,000,000 a year.

I had the honor soon after I became a member of this body to offer a resolution asking the Committee on Finance to inquire into this very subject in view of what is now before us. I asked that the committee be instructed to inquire what it cost to lend money to the people, what it cost banks, what it cost loan agencies, and what it cost every class of people engaged in the business of lending money to the people, so as to get at the actual cost of the business of money lending. The resolution was very politely but decorously side-tracked, to use a Western phrase. I have never heard of it since, and do not expect to unless in the renewed form in which it will come to the Senate after awhile.

This matter has to be met, I say to Senators. We are now face to face with this very question, and it has to be met sooner or later, and the time is not far distant when the people in self-defense, in defending themselves against the power of corporations, the power of the money-changers, and the insolence of Wall street, will be compelled to take this matter into their own hands, prepare their own money, issue it through their own agencies, and then, in my humble judgment, and not until then, we shall have prosperity in this country. So long as we intrust our business affairs and our business policy to the bankers and speculators, we may only expect the increase of slave conditions from this time on until a salutary change is effected.

I shall not occupy the attention of the Senate longer. I expect when we come to discuss the provisions of the bill reported this morning by the majority of the Committee on Finance, as well as the one proposed by the minority, to have something further to say on pertinent points; but, for the present, my object has been simply to express this thought to the Senate, that it was time to get rid of the national bank as banks of issue.

Mr. ALLEN. Will the Senator yield to me for a question?

Mr. PEFFER. Yes, sir.

Mr. ALLEN. If the Government should provide for the issue of a volume of money sufficient to do the money work of this country today—what is demanded by our industries—would not that have the effect of driving the surplus cash in this country out of every banking institution into productive industries, and by that means set the wheels of industry at work?

Mr. PEFFER. Yes, I think it would do that, and I think it would do more. I think it would show to the people of the country that we, as their representatives, have more faith in the whole people, in the power of the Government which expresses the will of the whole people, than we have in a few of the people. It would give to our working people a courage that they will never get until we do take that step, I will say to the Senator from Nebraska.

It is evident this trimming of measures, this evading of the main issue, this disposition to crowd out of sight the interests of the people and pander to the interests of banking corporations, speculators, and gold gamblers, is what, more than any other one thing, has brought this distress upon the country. Nothing would so revive the confidence of the common people of this country—and they are the people of this country, 95 per cent of them—it would show to them that we, their legislators, have faith in them, that we have faith in their power to produce, we have faith in their loyalty, we have faith in their personal and in their communal integrity.

When I use the word "communal" I refer to communities, because I do not want my newspaper friends to quote the word "communal" as the old anti-Quaker quoted the word "abolition." It would give faith to the people in all of their relations that we have confidence in them and in their producing power, and that every obligation we enter into we shall make good.

If Congress will agree at once, or after reasonable debate, to issue even one hundred million of Treasury notes it will go that far toward restoring the confidence of the people.

Mr. CALL. Mr. President, before the vote is taken upon the amendment I think the Senate should have some correct apprehension of the law and the practice in regard to national banks, their reserve, and the amount of currency which is required to be withheld. It has been stated, and the impression has been made in debate, that 25 per cent of the circulation of these banks was required to be held as a reserve. The statute upon this subject, it will be perceived, reads as follows:

SEC. 5191. Every national banking association in either of the following cities: Albany, Baltimore, Boston, Cincinnati, Chicago, Cleveland, Detroit, Louisville, Milwaukee, New Orleans, New York, Philadelphia, Pittsburg, St. Louis, San Francisco, and Washington, shall at all times have on hand, in lawful money of the United States, an amount equal to at least 25 per centum of the aggregate amount of its notes in circulation and its deposits.

It will be easily perceived that the deposits of banks exceed in a vast proportion the amount of the notes in circulation—as, for instance, in New York City, on the 30th day of September, 1892, the deposits were $391,038,400, and the reserve required from this was $43,760,700. The notes in circulation, therefore, practically in this great mass of deposits and circulation were an insignificant amount. Really the entire amount of these notes might well have been and probably were in circulation, the deposits furnishing far more than a sufficient amount to complete the entire reserve required by the law.

I have here a statement from one of the most distinguished and brightest young men in the country, who is vice-president of a national bank, but whose sympathies are largely with the Administration and its policy and the interest of the people as

he regards it. Listening to this debate from the galleries he has sent me the following memorandum, which I present for consideration:

At the present price of United States bonds, circulation of 90 per cent, they would yield the banks on actual investment more than 12 per cent.

Say a bank purchases $100,000 4 per cent bonds at 110	$110,000
If the Voorhees bill passes they will receive interest on $100,000 circulation; say interest at 6 per cent	6,000
Interest from $100,000 bonds at 4 per cent	4,000
	10,000
Less interest, 6 per cent on $110,000 actually invested	6,600
Profit	3,400

In cities outside of reserve cities banks are required to keep 15 per cent of their deposits and circulation available in cash, the balance with reserve agent, and 5 per cent redemption fund; or, in other words, if a bank has an aggregate of 15 per cent, including cash and with reserve agent, and 5 per cent redemption fund, the law is complied with.

So, in point of fact, the reserve of the circulating notes is insignificant and is not to be considered as a factor in diminishing the profits of the bank. I submit this statement for consideration without taking further part in the debate, with the remark that certainly some system can be devised by which an interest of 4 per cent upon bonds and 6 per cent upon the credit of the United States would not be exacted from the people in the interest and for the benefit of a few persons incorporated as banks and engaged in loaning money based on the public credit granted by law exclusively to them.

The PRESIDING OFFICER. The question is on the amendment of the junior Senator from Nebraska [Mr. ALLEN], on which the yeas and nays have been ordered.

Mr. GEORGE. Let it be read.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. It is proposed to add to the bill the following:

Provided further, That the margin of the bonds used as a basis for the notes issued under this act shall cease to draw interest during the time said notes, or any part thereof, are outstanding and unredeemed; and the issuance of notes under this act shall be deemed and taken to be conclusive evidence that the owner of such bonds assents to this proviso: *And provided still further*, That nothing in this act contained shall be so construed as to commit the Government to the policy of a permanent national debt, or to prevent the prompt payment of all outstanding interest-bearing obligations as fast as they mature.

The PRESIDING OFFICER. The Secretary will call the roll on agreeing to the amendment of the junior Senator from Nebraska [Mr. ALLEN].

The Secretary proceeded to call the roll.

Mr. CALL (when his name was called). I am paired with the Senator from Vermont [Mr. PROCTOR]. If he were here I should vote "yea." I do not know how he would vote.

Mr. GEORGE (when his name was called). I have a general pair with the Senator from Oregon [Mr. DOLPH]. He is absent, and I am not advised how he would vote; but if he were present I should vote "yea."

Mr. MANDERSON (when his name was called). I am paired with the Senator from Kentucky [Mr. BLACKBURN]. I understood from him this morning that he is in favor of the bill and opposed to all amendments. I therefore feel privileged to vote, and vote "nay."

Mr. MORRILL (when his name was called). I am paired with the Senator from Tennessee [Mr. HARRIS]. If he were present I should vote "nay."

Mr. PLATT (when his name was called). I am paired with the Senator from Virginia [Mr. HUNTON]. If he were present I should vote "nay."

Mr. VANCE (when his name was called). On this question I am paired with the Senator from Michigan [Mr. MCMILLAN]. If he were present I should vote "yea."

Mr. WALTHALL (when his name was called). I am paired with the junior Senator from Rhode Island [Mr. DIXON].

The roll call was concluded.

Mr. BUTLER. I am paired with the Senator from Pennsylvania [Mr. CAMERON]. If he were present I should vote "yea," and I understand he would vote "nay."

Mr. PUGH. I was requested to state that the Senator from Georgia [Mr. COLQUITT] is absent from the Senate on account of the condition of his health. If he were present he would vote "yea."

Mr. DUBOIS. I am paired with the junior Senator from New Jersey [Mr. SMITH]. Can his colleague [Mr. MCPHERSON] tell me how he would vote on this question?

Mr. MCPHERSON. My colleague would vote "nay."

Mr. DUBOIS. Then I shall vote. I vote "nay."

Mr. ALLISON. I desire to state that my colleague [Mr. WILSON] is absent from the sessions on account of illness. He has a general pair with the Senator from Georgia [Mr. COLQUITT]. If my colleague were here he would vote "nay." I understand from the Senator from Alabama [Mr. PUGH] that the Senator from Georgia [Mr. COLQUITT] would vote "yea."

Mr. PUGH. He would vote "yea."

Mr. MITCHELL of Oregon. I am authorized to announce that the Senator from Washington [Mr. SQUIRE] is paired on this question with the Senator from Alabama [Mr. PUGH].

Mr. PUGH (after having voted in the affirmative). I withdraw my vote and stand paired with the Senator from Washington [Mr. SQUIRE].

Mr. MITCHELL of Oregon. If the Senator from Washington [Mr. SQUIRE] were here he would vote "nay" on this amendment.

Mr. QUAY. I have a general pair with the Senator from Alabama [Mr. MORGAN]. If he were present I should vote "nay." I also desire to announce the pair of my colleague [Mr. CAMERON] with the Senator from South Carolina [Mr. BUTLER]. If my colleague were present he would vote "nay."

Mr. PALMER (after having voted in the negative). I withdraw my vote. I am paired with the Senator from North Dakota [Mr. HANSBROUGH]. I do not know how he would vote. If he were present I should vote "nay."

Mr. VEST (after having voted in the affirmative). I voted inadvertently. I remember now that I am paired upon the pending measure and all amendments with the Senator from Georgia [Mr. GORDON]. I do not know how he would vote on this question. I should vote "yea."

Mr. VILAS. I desire to announce that my colleague [Mr. MITCHELL of Wisconsin] is detained from the Chamber to-day by sickness. If my colleague were present he would vote "nay."

Mr. CHANDLER (after having voted in the negative). I desire to announce that I have a qualified pair with the junior Senator from New York [Mr. MURPHY], who is necessarily absent. I am, however, at liberty to vote upon this question and have voted.

The result was announced—yeas 11, nays 39; as follows:

YEAS—11.

Allen,	Coke,	Kyle,	Peffer,
Bate,	Irby,	Martin,	Roach.
Berry,	Jones, Ark.,	Mills,	

NAYS—39.

Aldrich,	Frye,	Lindsay,	Stewart,
Allison,	Gallinger,	McPherson,	Stockbridge,
Caffery,	Gibson,	Manderson,	Teller,
Camden,	Gorman,	Mitchell, Oregon,	Turpie,
Carey,	Gray,	Pasco,	Vilas,
Chandler,	Hale,	Perkins,	Voorhees,
Cullom,	Hawley,	Pettigrew,	Washburn,
Davis,	Higgins,	Power,	White, Cal.,
Dubois,	Hill,	Sherman,	White, La.
Faulkner,	Hoar,	Shoup,	

NOT VOTING—35.

Blackburn,	Dolph,	Mitchell, Wis.,	Ransom,
Brice,	George,	Morgan,	Smith,
Butler,	Gordon,	Morrill,	Squire,
Call,	Hansbrough,	Murphy,	Vance,
Cameron,	Harris,	Palmer,	Vest,
Cockrell,	Hunton,	Platt,	Walthall,
Colquitt,	Jones, Nev.,	Proctor,	Wilson,
Daniel,	Lodge,	Pugh,	Wolcott.
Dixon,	McMillan,	Quay,	

So the amendment was rejected.

Mr. COCKRELL. I now offer the amendment which I have already sent to the desk, and which was submitted on the 16th instant.

The PRESIDING OFFICER. The amendment proposed by the Senator from Missouri will be read.

The SECRETARY. It is proposed to amend the bill by adding as a new section the following:

SECTION —. That, upon the delivery and surrender of any of the United States bonds known as the funded loan of 1891, continued at 2 per cent interest and payable at the option of the United States, by the holder and owner thereof to the Secretary of the Treasury, the Secretary of the Treasury shall receive, cancel, and destroy such bond or bonds, and shall issue and deliver in exchange and payment therefor an amount of United States legal-tender notes, commonly known as greenbacks, in the same form and words of said United States notes, equal in amount to the face value of such bond or bonds, with the accrued interest thereon.

The PRESIDING OFFICER. The question is on agreeing to the amendment submitted by the Senator from Missouri [Mr. COCKRELL].

Mr. COCKRELL. This amendment simply provides that in voluntary exchange for $25,364,500 of the funded loan of 1891, which was payable in September, 1891, bearing then 4½ per cent, which was then continued at the option of the Government at the reduced rate of 2 per cent per annum, greenbacks, United States legal-tender notes, equivalent to the face value and accrued interest, shall be delivered by the Secretary of the Treasury, and that shall be a payment and extinguishment of the bonds.

There is no compulsion about it; it simply permits the holders

of the bonds to surrender them voluntarily to the Secretary of the Treasury and receive in exchange and in payment and extinguishment of them an equal amount of United States legal-tender notes. The bonds were payable in 1891. There was not money then in the Treasury to pay them, and the bondholders agreed to continue them at the option of the Government at 2 per cent interest.

Mr. WHITE of Louisiana. Do I understand the Senator from Missouri to say that these bonds are now demand obligations of the United States?

Mr. COCKRELL. Yes.

Mr. WHITE of Louisiana. Can the holder of the bonds present them and demand payment now?

Mr. COCKRELL. I said, at the option of the Government.

Mr. WHITE of Louisiana. I thought so.

Mr. BERRY. I wish to ask the Senator from Missouri if, in continuing these bonds, the holder can come in at any time and demand payment on the bonds; or do I understand him to say that it is an indefinite option of the Government never to pay unless the Government wants to do so? Is it not the option of the Government to pay them at any time, but at the same time are not the bonds already past due, and can not payment be demanded at any period?

Mr. COCKRELL. I presume there is no question in the world but that the holders of these bonds may demand payment according to the original terms of the bond; but when the bonds were payable the United States arranged with the holders that they should continue to be paid by the United States at any time, at the option or choice or pleasure of the United States. The reason why they were not paid was because there was not money enough in the Treasury. Had there been money enough in the Treasury they would have been paid. Now, if there was any arrangement between the bondholders and the Government that these bonds should not be presented for redemption by the holders of them, I have never seen any notice of it.

Mr. ALLISON. Mr. President——

The PRESIDENT *pro tempore*. Does the Senator from Missouri yield to the Senator from Iowa?

Mr. COCKRELL. With pleasure.

Mr. ALLISON. I desire to call the attention of the Senator to his answer made to the Senator from Arkansas. I have not seen the conditions upon which the bonds were extended, but I understand they have stamped upon them a statement that they are payable at the pleasure of the United States, and that is an agreement between the holder of the bonds and the United States. Therefore, it is impossible, as suggested by the Senator from Arkansas, that the bonds shall be paid at the option of the holders of them.

Mr. COCKRELL. I am not advised as to that particular point. The particular arrangement the Secretary of the Treasury then made has never been published so far as I have seen. We know the fact that the bonds were due and payable. We know the fact that they were all paid off except these; that there was not money enough in the Treasury then to pay these bonds, and they were continued at 2 per cent interest, with the right on the part of the United States to pay them at any time. Whether that carried with it an obligation on the part of the holders of the bonds that they should not present them is an immaterial question. It is wholly immaterial to this question, because my amendment does not propose to compel the bondholders to present them. All that we are proposing to do is to extend to the bondholder the privilege to voluntarily surrender his bond and take an equivalent amount of United States legal-tender notes, and his bond to be destroyed.

Mr. McPHERSON. Let me state the exact facts. The holder of the bonds surrendered his option to the Government when the bonds were extended, and gave the Government the option to pay when it pleased. That appears to-day upon the face of the bonds. So it is an obligation of the Government which may be paid at any time when the Government has funds to pay it. The effect of the Senator's amendment, I understand, will be simply to exchange notes for an obligation of the Government which is subject alone to the Government's option, upon which to-day the banks have issued circulation. I think each and everyone of these bonds is held by national banks. There is circulation out to-day upon the bonds to the extent of 90 per cent, and if this bill passes it will give the banks 100 per cent of circulation, or up to the face value of the bonds. The proposition of the Senator from Missouri would simply inflict upon the Government, by changing the bond to greenbacks, another demand obligation; it would exchange a postponed obligation for a demand obligation, and call in the circulation which is already out on the bonds.

Mr. MILLS. If the circulation is issued as proposed by the bill, would not the people of the United States get the benefit of $25,000,000, if that is the amount, at the same time that they continue to pay interest on the bonds? Under this amendment the people would get the $25,000,000 of circulation with the bonds and interest extinguished. That is all there is of it.

Mr. McPHERSON. The Senator from Texas is aware of the fact that this proposition opens anew the long-protracted debate that has taken place in the Senate upon the question of an extension of the greenbacks. That is practically what it is.

Mr. SHERMAN. Mr. President, I said about all that it was necessary, I think, for me to say when the pending amendment was first presented. These bonds are now held entirely by national banks. When the Government of the United States had the right to pay them off, when they matured, the banks preferred to continue them at 2 per cent interest, instead of 4, in order to avail themselves of the currency issued upon the credit of the bonds then outstanding.

Mr. COCKRELL. Would it interrupt the Senator to ask him on what authority he says the national banks own them all?

Mr. SHERMAN. Because nobody else in the world except the national banks would do such a thing as that; and they did it because——

Mr. COCKRELL. It is very strange, because in the report of the Comptroller of the Currency it is not put down.

Mr. SHERMAN, I think the Senator will find that everyone was held by the banks.

Mr. COCKRELL. I do not know anything about it, but here is the report of the Comptroller of the Currency. In 1891 there were of these bonds $21,825,350.

Mr. SHERMAN. There were about $24,000,000 outstanding.

Mr. COCKRELL. There were $25,364,500 of these bonds, and they were all registered. Therefore they know where they are, because they have a record of every one of them.

Mr. SHERMAN. As a matter of course I could not say, because I have not inquired where the bonds are, but there is no doubt at all that the arrangement was made to enable the national banks to keep outstanding the circulation that was based upon these bonds. If the Government of the United States had paid off the bonds as a matter of course the circulation of the banks would have had to have been withdrawn and thus reduced the amount of circulation outstanding. Therefore, as a matter of convenience, and it was a very profitable arrangement for the Government, the rate of interest was reduced from 4 to 2 per cent, and the banks were authorized under the law to deposit the bonds and draw out circulation for them.

When I say I have no doubt all these bonds are now withheld by the Treasury as security for circulation, I only say what I believe to be true, because I have not inquired into the matter; but of course no private bondholder would have surrendered the bonds unless he could get some advantage in holding them outside of the interest at 2 per cent. That is very clear. The object of this arrangement would be to relieve the national banks from the necessity of withdrawing about $21,000,000 from circulation; and now the bonds are payable at the pleasure of the United States.

Mr. President, I said the other day that for the Government of the United States, at this time especially, to attempt to pay off these bonds, or to give a holder of the bonds any special privilege, would be a very unbusinesslike transaction. We would save only 2 per cent, and what kind of an obligation would we give in place of that? We would take up the $21,000,000 or $22,000,000, whatever the amount may be. We would have to pay for those, how? By the issue of new greenbacks; by the enlargement of the greenback issue. That raises a question of great difficulty and of great importance, which would have more effect upon the credit and currency of the country than probably almost any other discussion that we could now originate. There are many propositions. The honorable Senator from Kansas [Mr. PEFFER] proposed to issue $300,000,000 of greenbacks.

Now, to increase the volume of greenbacks upon this narrow margin, it seems to me, would be an act of folly. What business man would, in the present condition of the money market, give his note of hand, payable on demand in gold coin, in order to pay off a debt that he is not bound to pay except at pleasure, bearing only 2 per cent interest? Ought not the United States to exercise the same discretion and wisdom, the same care for the public interest, that a private citizen would show in his own affairs? It seems to me the proposition is monstrous. I would a great deal rather vote for the other proposition, that a person owning a 4 per cent bond, bearing interest at 4 per cent a year, twice as much as these bonds bear, shall, upon the demand of the holder of the bond, receive an additional amount of greenbacks.

That proposition, I believe, would be rejected also. It is wrong in principle. The Government of the United States can not now increase its demand liabilities. It is not safe to do it. The very fact that we were increasing our demand liabilities for the purchase of silver bullion which was stored in our Treasury tended somewhat to produce the alarm which was created. It

was the fear, and at one time the announcement, that the United States would pay for the Treasury notes in silver that created the disturbance in the London market and caused the withdrawal of gold and the sending over of our securities. Would it be wise for us to undertake to give our demand liability now for a note bearing only 2 per cent interest, when that note might be presented the next day for payment in coin when it gets into the hands of people, or into the hands of the Shylocks, as they are called, or the bankers or brokers?

Would any prudent man, would any government, would anybody be fool enough to undertake at this period of time, when there is such a demand for currency, to make this exchange, to give current money, which now is at a premium of 2 or 3 cents even over gold or silver, or anything else, for bonds? Sir, they would take these Treasury notes and demand gold for them or sell the Treasury notes at a premium.

Mr. President, I do not think my honorable friend from Missouri, who is generally a very careful man, would do what he has now proposed here to be done by the people of the United States. I am quite sure I would not. Such a proposition as this, by raising the question whether we shall increase the amount of greenbacks in this country at this time of distress, would probably create more distrust, more doubt as to our purpose to maintain all our money at the standard value in gold and silver coin.

I trust, therefore, that this amendment will be promptly voted down, as well as the proposition which I believe originated with my colleague in the other House [Mr. JOHNSON of Ohio], a very worthy member of that body, and which I believe has been offered here as an amendment to the pending bill. It proposes that any holder of the $500,000,000 of bonds outstanding may take those bonds and deposit them in the Treasury of the United States and demand either United States notes for them or Treasury notes under the law of 1890 and convert this interest-bearing bond into a demand liability. Suppose that there was a burden of $500,000,000, or $400,000,000, or even $100,000,000, drawn upon the Treasury of the United States at this time, when currency is scarce. Mr. President, it would shake the foundations of our credit.

It would not be wise to do it. It seems to me that the only way to do it would be to open virtually the issue of greenbacks, to repeal the act for the resumption of specie payments, and to go back to the standard we had after the war, with paper money fluctuating day by day. No one desires that. The Government of the United States is strong, rich, powerful; able to maintain every dollar of its money at par with gold or in silver coin, but it is not able any more than any private citizen is able now to assume new obligations. What manufacturer, what banker, what broker, what citizen will now assume an obligation? Debts are perilous now. No man will contract an obligation who can avoid it, and, therefore, mills are shutting up, all sorts of business is being deranged, railroads are being turned over to receivers. Difficulties of that kind occur on account of debts against parties that they can not pay, or interest which they can not meet.

If the people of the United States should undertake at this time to meet the payment of $500,000,000 of indebtedness and give to the holders of our bonds not now due the option to present them for payment at any moment of time, either in gold or silver coin or Treasury notes, convertible into gold or silver coin, it would be an act of imprudence which could not be measured by money. I think, therefore, that this measure of relief, which I believe will do some good, and a great deal of good, had better be passed just as it is, without any amendment that would embarrass its object. I believe the effect of it will be that immediately $20,000,000 of bank notes will be issued, and very soon $50,000,000.

But my honorable friend from Missouri says we propose to give this privilege to the banks. Ah, but we give it to them under very different conditions. When the banks exercise this privilege, they deposit their bonds in the Treasury of the United States and they get what? Not our notes, not the obligations of the people of the United States, but they get the obligations of banks, secured by these bonds behind them. The banks have to keep them in reserve, and back them with money on hand in the Treasury and with money at home in their safes. They have got to surround them with all the guards and safeties of the national banking system. Then they have got to redeem them. If they are presented to the bank they have got to redeem them. If they fail to redeem them the Government sells their bonds deposited for that purpose and they are redeemed.

It is quite a different thing, therefore, when you propose to banks to issue their own notes upon their own responsibility to pay them on demand from issuing the notes of the Government of the United States on the demand of the holders of bonds not yet due, which they may demand in any form of money now known to be legal tender. There is quite a difference between the two operations. There is no comparison between them. When it is said in a kind of *ad captandum* way that here we are refusing to the citizen that which we grant to the bank, I say we do not grant to the bank the privilege that is proposed to be granted to the citizen. We only grant the banks the privilege to issue their own notes upon their own liability, so as to secure the payment of their notes beyond peradventure, while on the other hand it is proposed that we shall give our note to pay our money for a debt not due, a demand that can not be met by the Government of the United States under the peculiar circumstances by which we are surrounded, a demand that ought not to be thought of being imposed upon the Government of the United States.

It seems to me that amendments which tend to delay this measure and to defeat its beneficial effects ought to be voted down promptly, and I ask the pardon of the Senate for making even so long an explanation about the pending amendment.

Mr. COCKRELL. Will the Senator from Ohio please answer me one question? What does the responsibility of the national bank add to the solvency of the national-bank paper in the estimation of the people of the United States?

Mr. SHERMAN. It is this: The bank is compelled to deposit the debt of the United States, the bond of the United States, and the people of the United States, know that that bond is good, that it is held in the Treasury for the payment of the bank notes, and can be sold in the market at any time for more than enough to pay the notes of the bank. The striking fact exists that although that system of national banking has existed now for more than thirty years the people of the United States never lost one single dollar, but whenever a bank failed the note holder was as safe as he was before, because the United States held the security for the payment of those notes.

Mr. COCKRELL. Has any holder of greenbacks ever lost anything?

Mr. SHERMAN. No, thank God, but he might. For a long period of time the holder of the greenbacks did receive 50 cents, 60 cents, 40 cents on the dollar.

Mr. COCKRELL. Not from the Government; from the money sharks.

Mr. SHERMAN. No, the Government issued its notes and they depreciated more and more day by day.

Mr. COCKRELL. So bonds were sold for 40 cents on the dollar. The Senator knows that bonds were sold for 40 cents on the dollar. The bonds have sold just as low as greenbacks ever sold. The Government is just as much bound for the payment of the greenback as the bond. There is not one particle of difference between the responsibility of the Government for the greenback and its responsibility for the bond.

Mr. SHERMAN. The answer is that we issued the greenback without any promise to pay it then, with the distinct understanding that it was not to be paid until the vicissitudes of the war were over. It was a compliment to my friend on the other side and those engaged with him, that the war was so urged by them at one time, and at other times the future was so dark that the notes of our country depreciated in value, just as the notes of England depreciated in the war with Napoleon, just as the notes of France and of every country in the world which became involved in war and was compelled to resort to paper money. In every instance that history records the notes went down and were measured by the prospect of success. It was a very harsh and a dangerous remedy, but in the war we issued our notes. Unlike our ancestors in the revolution we maintained those notes at par.

During all the war we received those notes for anything that the Government had to buy. We received them for taxes; we received them for everything except duties on imported goods. But the notes fell more and more, because of the doubt that rested upon our success. When the war was over we gradually advanced them to the standard of coin, and now, thank God, for fifteen years they have been as good as gold, and nobody has expressed any want of confidence in them.

But they are a very different liability from a bond the interest of which is paid twice a year. That is a burden which we have been anxious to lift from us, the interest of which we have greatly reduced, until now the bonds and the interest both are practically disappearing. I trust the time is not far distant when our bonds will be paid off and when we may consider with more safety than now the question whether we shall issue more United States notes. If we do that we must provide for additional safeguards; we must back them with gold; we must back them with evidences of our ability to pay them when they are demanded, and make the security so ample that even the timid will not fear their prompt redemption when presented.

Mr. COCKRELL. Mr. President, the Senator from Ohio has utterly failed, as everyone will fail, to draw any distinction between the responsibility of the Government for the legal-tender

notes and its responsibility for the bonds. When the greenbacks were largely depreciated the bonds were depreciated. As the greenbacks appreciated nearer the gold standard the bonds appreciated. To-day the 4 per cent bond is probably worth 109 or 110, and these 2 per cent bonds are barely at par. I understood the other day that they were offered even lower than par.

In other words, I am told that you can not go into the market with these 2 per cent bonds and get dollar for dollar for them because of the scarcity of money; but since the bonds were continued they have been rated, according to the report of the Comptroller of the Currency here, at 100½. That is the way they are quoted in the report of the Comptroller of the Currency. Now, the United States is no more strongly, no more morally or legally bound to honor that bond than it is to honor the greenback which I propose to have issued in exchange for it.

Mr. WHITE of Louisiana. May I ask the Senator a question?

Mr. COCKRELL. In one moment. Let me explain this point and then I will hear the Senator. As to the difference in the responsibility for the bond and for the greenback, the Senator from Ohio says this proposition would incur a very large additional responsibility upon the Government. The national banks issue dollar for dollar for these bonds, and what about responsibility for the national banks? The holder of a national bank note takes it into the bank and demands greenbacks, and they are bound to be paid. He takes the greenbacks to the Treasury and gets gold. Now, what is the difference? Not one particle. It is tweedledum and tweedledee, nothing more, nothing less, and nothing else. The Government of the United States is the responsible party, and its responsibility is the only thing in this world that makes the national bank note current as it is. It is not the responsibility of the national bank that gives one iota of value or circulation to the national bank paper. Now, let me read a little. The Comptroller of the Currency explains this, and the Senator from Ohio had incidentally to admit it. The Comptroller says:

When a bank suspends—

Speaking of national banks now, page 16—

the fact that the note is secured and will be eventually paid is poor consolation to the laborer—

He is speaking of State-bank paper—

who needs his money for his daily use. The note of a failed national bank is as good as that of any bank in the system.

Now, the Senator from Ohio pretends that the responsibility of the bank for the national bank notes gives it added value, when the Comptroller says that the note of a failed, bankrupt bank is just as good as that of the most solvent bank in the United States.

Mr. SHERMAN. Does the Senator from Missouri know that when a bank fails it has to deposit the money in the Treasury to the full amount of its circulation outstanding?

Mr. COCKRELL. The bond is always worth more than the dollars issued, and if the money is not deposited, as a matter of course the bond is sold; but it is the Government bond that gives it value.

Mr. SHERMAN. Who owns the Government bond? Does the Government own it?

Mr. COCKRELL. The United States owns it while it is in the Treasury.

Mr. SHERMAN. It owes it, but it does not own it. It is the bank, the bank stockholders.

Mr. COCKRELL. The Government holds it subject to the right of the bank to redeem it by paying the 90 per cent issued, and if the 90 per cent issued is not paid on demand the Government sells it.

Mr. SHERMAN. It holds it simply as a trustee for the owners of the bank. It has no other interest in it.

Mr. COCKRELL. It holds, to secure the 90 per cent of circulation issued, a first lien upon it, and when the national bank fails and goes into liquidation the $100,000 of bonds are sold for $110,000; $90,000 is left in the Treasury to redeem the notes and $20,000 goes to the bank to pay its indebtedness. The Government has a first lien upon it, and I say, and no man can question it, that the fact a bank note is issued by a national bank gives that note no intrinsic value whatever. Not a particle. I challenge any Senator to show wherein any real value is given to a national bank note by the fact of its being issued by a national bank. The value of the bank note is given to it by the responsibility of the United States for it.

Mr. GRAY. Will the Senator allow me to interrupt him?

The PRESIDENT *pro tempore*. Does the Senator from Missouri yield to the Senator from Delaware?

Mr. COCKRELL. With pleasure.

Mr. GRAY. Is not the difference just this: When a national bank is organized under the national banking law, that law requires that the banking association shall give security itself in advance for the circulation which the law permits it to issue, so that in reality the security comes from the bank under a regulation of law, and the Government acts as trustee in holding that security?

Mr. COCKRELL. What kind of security is it?

Mr. GRAY. It is the debt of the United States.

Mr. COCKRELL. The Government debt; the Government obligation.

Mr. GRAY. Whose money buys that Government debt?

Mr. COCKRELL. It is immaterial whose money buys it; the Government accepts its liabilities for the $100,000 of bonds. It says, "These are my private bonds; I owe these; now, you deposit them and I will give you $90,000 of circulation." Everybody knows that a national bank note can not be issued until a Government bond is issued. But suppose the national bank note was based upon a State bank, and there was no responsibility on the part of the United States in anyway, then you would see what value the liability of the bank would give to it.

Mr. WHITE of Louisiana. I should like to ask the Senator a question, if I do not interrupt him.

Mr. COCKRELL. It is no interruption at all.

Mr. WHITE of Louisiana. The Senator opened his remarks by saying he thought the Senator from Ohio had entirely failed to draw any distinction between the obligation of the bond and the obligation of the greenbacks issued for it. He thought the obligations were identical. That was the Senator's statement. If the Senator owed a promissory note payable at his pleasure, and he owed another payable at the pleasure of the debtor, whilst the obligation to pay might rest upon him, does not the difference in the terms of the obligation make, under the very elementary conception of an obligation, a difference in the obligation itself?

Mr. COCKRELL. Not the slightest in this case.

Mr. WHITE of Louisiana. But in the case I put?

Mr. COCKRELL. The Government of the United States is not an individual. It is 67,000,000 of freemen, with $71,000,000,000 of property owned by them and liable for every obligation the Government creates.

Mr. VILAS. Do I understand the Senator from Missouri to say that the holders of the circulating notes of the national banks have no security for the payment of those notes except the bonds of the United States?

Mr. COCKRELL. None that the people of the country know anything about or care for.

Mr. VILAS. Let me call the attention of the Senator from Missouri to section 5230 of the Revised Statutes, which provides that—

Whenever the Comptroller has become satisfied, by the protest or the waiver and admission specified in section 5226, or by the report provided for in section 5227, that any association has refused to pay its circulating notes, he may, instead of canceling its bonds, cause so much of them as may be necessary to redeem its outstanding notes to be sold at public auction in the city of New York, after giving thirty days' notice of such sale to the association. For any deficiency in the proceeds of all the bonds of an association, when thus sold, to reimburse to the United States the amount expended in paying the circulating notes of the association, the United States shall have a paramount lien upon all its assets——

Mr. COCKRELL. Does the Senator really think that that is anything?

Mr. VILAS. Let me add—

and such deficiency shall be made good out of such assets in preference to any and all other claims whatsoever, except the necessary costs and expenses of administering the same.

Mr. COCKRELL. I do not think the distinguished Senator from Wisconsin can really believe that that clause of the law adds anything to the value of the national-bank paper. The law simply provided that if the bonds of the United States, our bonds, could not be sold for enough to pay 90 per cent of their value, we would hold a lien against the remaining assets of the poor, defunct bank; in other words, a law which acknowledges apparently the insolvency of the United States and its indorsement of the notes would give the insolvent United States the right to go against other assets of the bank. I can not believe the Senator thinks there is anything but the veriest moonshine in that.

Mr. VILAS. I would just like to ask the Senator, then, to explain what he supposes was the deliberate purpose in Congress in enacting that provision.

Mr. COCKRELL. Infinite wisdom may tell, but no human being can.

Mr. MORRILL. Mr. President——

Mr. STEWART. I should like to have the Senator explain——

The PRESIDENT *pro tempore*. Does the Senator from Missouri yield to the Senator from Nevada?

Mr. COCKRELL. Let me yield to my good friend from Vermont.

Mr. MORRILL. I merely want to correct the idea of the Senator from Missouri that the note holder has no other security than that of the United States. There is no bank that takes out

notes to the amount of its capital. This is the case with nearly all the large banks; a bank of $3,000,000 capital may have but $500,000 in notes; yet the whole capital is liable.

Mr. COCKRELL. Will the distinguished Senator tell me whether any holder of a national-bank note since the organization of national banks has ever had to resort or attempted to resort in any shape, manner, or form to the liability of the bank or the stockholders? Has any man, woman, or child ever thought of going back of the bonds to get a national-bank note?

Mr. MORRILL. But will the Senator deny that there is any additional security?

Mr. COCKRELL. I say it is no additional security—not a particle. Nobody pays any attention to it. Nobody ever thought of going upon the directors and stockholders of a bank or its assets for the payment of national-bank notes. They look to the United States, and before the United States parts with the bond it makes the bank deposit dollar for dollar of the entire amount of the circulation outstanding, notwithstanding a large part of that may have been burned up or destroyed. It is dollar for dollar; and under the Sherman silver bullion purchasing law we took $55,000,000 of the money deposited by the national banks for the redemption of the outstanding notes and put it in our pocket and said, "This is our money now; whenever the holders of these notes want them redeemed, just come and we will pay them." So we have virtually assumed by that law all responsibility for outstanding national-bank notes.

Mr. STEWART. Will the Senator from Missouri allow me to make a suggestion?

Mr. COCKRELL. With pleasure.

Mr. STEWART. It is said that the issuance of Treasury notes under the provision of your amendment would be an additional charge upon the gold in the Treasury. I want to know why it would be any more a charge upon the gold in the Treasury than the issuance of bank notes.

Mr. COCKRELL. Not a particle. There is no difference on earth.

Mr. STEWART. But the issue of bank notes is not a charge upon the gold in the Treasury, because they may be redeemed in greenbacks at the bank, and if not, they are redeemed in coin or greenbacks at the Treasury.

Mr. COCKRELL. I explained awhile ago that we issue now dollar for dollar of the national bank notes, and the holders of those national bank notes go and demand greenbacks. They get them. They then go to the Treasury and demand gold and they get it. That is the only liability on earth that the Government is responsible for on account of the greenbacks. Now, as to the idea that anybody at this time will want to present a greenback for redemption, that a greenback will not be valid, I have a letter here that I received from a friend in St. Louis. It is dated the 16th instant, a pretty recent letter, and the writer says:

A gentleman in St. Louis undertook to borrow at one of the banks here $5,000 by hypothecating $35,000 of Government bonds, but was refused the loan on the ground that currency was not to be had. This man should have the privilege of going to the subtreasury here and getting the currency for his bonds, if he so desired.

Mr. President, there is no question about this.

Mr. FAULKNER. I should like to ask the Senator from Missouri whether the bonds mentioned by the writer of the letter were bonds that under his amendment he could present and have exchanged for currency?

Mr. COCKRELL. Oh, I do not know. They were United States bonds, but I do not know whether they were 2 per cent bonds or not. The question now is, do we want more circulation? The Senator from Indiana [Mr. VOORHEES] has very properly said that we do. I agree with him.

The only question before the Senate is whether the necessary increase in currency shall merely be allowed to be percolated to the people through the hands of the national banks, limited simply to their will and preference. I say to the Senator from Indiana, there can be no objection in the world to allowing the national banks to issue dollar for dollar. We know that the Government is responsible for the bonds, dollar for dollar, and we know when the national bank paper is issued the Government is responsible for that. It is tweedledum or tweedledee as to the responsibility. We know the same thing in regard to greenbacks and the other bonds. Why not, in the name of common sense, decency, and honesty, let the $25,000,000 of bonds be surrendered to the Treasury and let the taxpayers have that additional amount of circulation in the country, and save $500,000 of interest every year?

The national banks will do it as a matter of course. There is no question about that. I say to the Senator from Ohio, I think that is a better business proposition for the taxpayers and the honest yeomanry of the United States than his. Let the holders of these $25,000,000 of 2 per cent bonds, now barely at par, come in and surrender them and take out $25,000,000 United States legal tender notes, for the payment of which the honor and integrity of 67,000,000 people, possessing $71,000,000,000 of property, stands pledged; and then we shall save $500,000 interest upon it ever year and loosen the bands which hold the circulation, and let the blood flow through the commercial body freely and easily.

Mr. HAWLEY. Will the Senator allow me?

Mr. COCKRELL. With pleasure.

Mr. HAWLEY. I am curious to know why we should stop in discharging the $21,000,000 of bonds. Why not pay the whole debt, $400,000,000 or $500,000,000, by a practical unlimited issue of our demand notes.

Mr. COCKRELL. That is not the question under discussion.

Mr. HAWLEY. That is the question right here now.

Mr. COCKRELL. It is not involved in this proposition.

Mr. HAWLEY. Gentlemen will not stop at $21,000,000.

Mr. COCKRELL. That is a different question. We are now on a single isolated point, and that is whether this country wants more money or not. The Senator from Indiana says it does. He is right. The Senator from Ohio says it does. He is right. We say let the national banks have additional circulation dollar for dollar; but here are $25,000,000 of 2 per cent bonds, upon which the people of the United States are paying interest. Now, let the holders of these bonds surrender them and take out greenbacks in exchange, and the taxpayers will have saved 2 per cent interest, or $500,000 a year, and $25,000,000 of the obligations of the United States interest bearing will have been exchanged for $25,000,000 of non-interest bearing obligations.

The credit of the United States is ample to sustain ten times that amount at par with anything on God's green earth. The honor and credit of the United States can sustain anything it undertakes. There is no danger on earth about this proposition. There is no harm in it. But the question comes back to the naked one, whether the Senate intends that nobody in this country shall receive any currency in circulation unless it comes through the hands of the national banks.

Mr. VOORHEES. It is obvious that we can not reach a vote to-night.

Mr. MORRILL. I hope so. Let us vote.

Mr. VOORHEES. I know it will be impossible.

Mr. ALDRICH. Let us have a vote.

Mr. VOORHEES. I say it is impossible. Still I will not interfere. ["No!" "No!"] I am told all around that it is impossible to reach a vote to-night, and this is a very close, heavy atmosphere, to me at least. I rose for the purpose of moving to proceed to the consideration of executive business.

Mr. BUTLER. Before the Senator makes that motion, will he permit me to offer an amendment?

Mr. VOORHEES. Certainly.

Mr. BUTLER. I offer an amendment as an additional section to the bill.

Mr. ALLISON. Let it be read.

The PRESIDENT *pro tempore*. The Secretary will read the amendment.

The SECRETARY. Add to the bill the following additional section:

SECTION —. That section 3412 of the Revised Statutes of the United States, the same being section 122 of the national-bank act, imposing a tax of 10 per cent upon the amount of notes of any person or of any State bank or State banking association used for circulation and paid out by them, be, and the same is hereby, repealed.

The PRESIDENT *pro tempore*. The amendment suggested by the Senator from South Carolina will be printed, and lie on the table.

EXECUTIVE SESSION.

Mr. VOORHEES. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twenty minutes spent in executive session, the doors were reopened.

ADJOURNMENT TO MONDAY.

Mr. GORMAN moved that when the Senate adjourn to-day it be to meet on Monday next.

Mr. ALDRICH called for the yeas and nays.

The yeas and nays were ordered; and the Secretary called the roll.

The following pairs were announced:

Mr. HUNTON in the affirmative with Mr. PLATT in the negative.

Mr. CALL with Mr. PROCTOR.

Mr. MURPHY with Mr. CHANDLER.

Mr. SMITH with Mr. DUBOIS.

Mr. HARRIS with Mr. MORRILL.

Mr. MCPHERSON with Mr. HIGGINS.
Mr. BLACKBURN with Mr. MANDERSON.
Mr. MORGAN with Mr. QUAY.
Mr. GIBSON with Mr. STOCKBRIDGE.
Mr. WALTHALL with Mr. DIXON.
Mr. GEORGE with Mr. DOLPH.
The result was announced—yeas 28, nays 21; as follows:

YEAS—28

Allen,	Gorman,	Mills,	Stewart,
Bate,	Gray,	Palmer,	Teller,
Berry,	Irby,	Pasco,	Turpie,
Butler,	Jones, Ark.	Pettigrew,	Vest,
Cockrell,	Jones, Nev.	Pugh,	Voorhees,
Coke,	Kyle,	Ransom,	White, La.
Faulkner,	Martin,	Roach,	Wolcott.

NAYS—21.

Aldrich,	Frye,	Lodge,	Shoup,
Allison,	Gallinger,	Mitchell, Oregon.	Washburn,
Caffery,	Hawley,	Peffer,	White, Cal.
Carey,	Hill,	Perkins,	
Cullom,	Hoar,	Power,	
Davis,	Lindsay,	Sherman,	

NOT VOTING—36.

Blackburn,	Dolph,	Hunton,	Proctor,
Brice,	Dubois,	McMillan,	Quay,
Call,	George,	McPherson,	Smith,
Camden,	Gibson,	Manderson,	Squire,
Cameron,	Gordon,	Mitchell, Wis.	Stockbridge,
Chandler,	Hale,	Morgan,	Vance,
Colquitt,	Hansbrough,	Morrill,	Vilas,
Daniel,	Harris,	Murphy,	Walthall,
Dixon,	Higgins,	Platt,	Wilson.

So the motion was agreed to.
Mr. VOORHEES moved that the Senate adjourn.
Mr. CHANDLER called for the yeas and nays.
The yeas and nays were ordered; and the Secretary called the roll.
The following pairs were announced:
Mr. HUNTON in the affirmative with Mr. PLATT in the negative.
Mr. BUTLER with Mr. CAMERON.
Mr. HARRIS with Mr. MORRILL.
Mr. SMITH with Mr. HIGGINS.
Mr. BLACKBURN with Mr. MANDERSON.
Mr. MORGAN with Mr. QUAY.
Mr. GIBSON with Mr. STOCKBRIDGE.
Mr. GEORGE with Mr. DOLPH.
Mr. WALTHALL with Mr. DIXON.
Mr. CALL with Mr. PROCTOR.
Mr. VILAS with Mr. MITCHELL of Oregon.
The result was announced—yeas 29, nays 14; as follows:

YEAS—29.

Allen,	Hill,	Peffer,	Turpie,
Bate,	Jones, Ark.	Pettigrew,	Vest,
Berry,	Jones, Nev.	Power,	Voorhees,
Cockrell,	Lindsay,	Pugh,	White, Cal.
Coke,	Martin,	Ransom,	White, La.
Dubois,	Mills,	Roach,	
Faulkner,	Palmer,	Stewart,	
Gorman,	Pasco,	Teller,	

NAYS—14.

Aldrich,	Cullom,	Hawley,	Shoup,
Allison,	Davis,	Hoar,	Washburn.
Carey,	Frye,	Lodge,	
Chandler,	Gallinger,	Perkins,	

NOT VOTING—42.

Blackburn,	George,	McMillan,	Sherman,
Brice,	Gibson,	McPherson,	Smith,
Butler,	Gordon,	Manderson,	Squire,
Caffery,	Gray,	Mitchell, Oregon	Stockbridge,
Call,	Hale,	Mitchell, Wis.	Vance,
Camden,	Hansbrough,	Morgan,	Vilas,
Cameron,	Harris,	Morrill,	Walthall,
Colquitt,	Higgins,	Murphy,	Wilson,
Daniel,	Hunton,	Platt,	Wolcott.
Dixon,	Irby,	Proctor,	
Dolph,	Kyle,	Quay,	

So the motion was agreed to; and (at 4 o'clock and 30 minutes p. m.) the Senate adjourned until Monday, August 21, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 18, 1893.

GOVERNOR OF ALASKA.

James Sheakley, of Wrangel, Alaska, who was appointed June 28, 1893, during the recess of the Senate, to be governor of Alaska, vice Lyman E. Knapp, removed.

GOVERNOR OF OKLAHOMA.

William C. Renfrow, of Norman, Okla., who was appointed May 6, 1893, during the recess of the Senate, to be governor of the Territory of Oklahoma, vice Abraham J. Seay, removed.

SECRETARY OF ARIZONA.

Charles M. Bruce, of Benson, Ariz., who was appointed May 6, 1893, during the recess of the Senate, to be secretary of Arizona, vice Nathan A. Morford, resigned.

SECRETARY OF UTAH.

Charles C. Richards, of Ogden, Utah, who was appointed May 6, 1893, during the recess of the Senate, to be secretary of Utah, vice Elijah Sells, removed.

MEMBER BOARD OF REGISTRATION AND ELECTION, UTAH.

Henry C. Lett, of Salt Lake City, Utah, who was appointed June 6, 1893, during the recess of the Senate, to be a member of the board of registration and election in the Territory of Utah, vice Alvin Saunders, resigned.

INDIAN INSPECTORS.

John W. Cadman, of Jackson, Mich., who was appointed June 7, 1893, during the recess of the Senate, to be an Indian inspector, vice James H. Cisney, removed.

Clinton C. Duncan, of Perry, Ga., who was appointed June 6, 1893, during the recess of the Senate, to be an Indian inspector, vice Benjamin H. Miller, removed.

Province McCormick, of Berryville, Va., who was appointed May 26, 1893, during the recess of the Senate, to be an Indian inspector, vice Arthur M. Tinker, removed.

INDIAN AGENTS.

John F. T. B. Brentano, of St. Paul, Oregon, who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Grande Ronde Agency in Oregon, vice Edward F. Lamson, resigned.

Lewis T. Erwin, of Everett, Wash., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Yakima Agency in Washington, vice Jay Lynch, removed.

Ralph Hall, of Carrington, N. Dak., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Devils Lake Agency in North Dakota, vice John H. Waugh, resigned.

William L. Hargrove, of Oakland City, Ind., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Western Shoshone Agency in Nevada, vice William I Plumb, removed.

W. Leven Powell, of Seattle, Wash., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Neah Bay Agency in Washington, vice John P. McGlinn, removed.

Joseph Robinson, of Easton, Mo., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Nez Percés Agency in Idaho, vice Warren D. Robbins, removed.

Thomas H. Savage, of Underhill, Wis., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Green Bay Agency in Wisconsin, vice Charles S. Kelsey, removed.

Frederick Treon, of Crow Creek, S. Dak., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Crow Creek and Lower Brule Agency in South Dakota, vice Andrew P. Dixon, removed.

J. Roe Young, of Louisville, Ky., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Pima Agency in Arizona, vice Cornelius W. Crouse, removed.

Dew M. Wisdom, of Muscogee, Ind. T., who was appointed June 30, 1893, during the recess of the Senate, to be agent for the Indians of the Union Agency in the Indian Territory, vice Leo E. Bennett, removed.

James P. Woolsey, of Rogers, Ark., who was appointed June 19, 1893, during the recess of the Senate, to be agent for the Indians of the Ponca, Pawnee, Otoe, and Oakland Agency in Oklahoma Territory, vice David J. M. Wood, removed.

SURVEYORS-GENERAL.

Charles F. Easley, of Corrillos, N. Mex., who was appointed June 28, 1893, during the recess of the Senate, to be surveyor-general of New Mexico, vice Edward F. Hobart, removed.

Thomas D. Robinson, of Denver, Colo., who was appointed June 15, 1893, during the recess of the Senate, to be surveyor-general of Colorado, vice Emery C. Humphrey, removed.

George W. Snow, of Salt Lake City, Utah, who was appointed June 28, 1893, during the recess of the Senate, to be surveyor-general of Utah, vice Ellsworth Daggett, removed.

Joseph C. Straughan, of Boise City, Idaho, who was appointed June 28, 1893, during the recess of the Senate, to be surveyor-general of Idaho, vice Willis H. Pettit, removed.

PRINCIPAL CLERK OF SURVEYS, GENERAL LAND OFFICE.

Frank Flynt, of Griffin, Ga., who was appointed June 6, 1893, during the recess of the Senate, to be principal clerk of the surveys in the General Land Office, vice Daniel A. Ray, resigned.

REGISTERS OF LAND OFFICES.

John M. Adams, of Potter, Nebr., who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Sidney, Nebr., vice George F. Blanchard, removed.

John G. Brown, of Pocatello, Idaho, who was appointed May 19, 1893, during the recess of the Senate, to be register of the land office at Blackfoot, Idaho, vice Perry J. Anson, resigned.

Bushrod M. Dilley, of Hamilton, Mo., who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Oklahoma, in Oklahoma Territory, vice De Forest D. Leach, removed.

John W. Ferguson, of Minden, Nebr., who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Grand Island, Nebr., vice Franklin Sweet, resigned.

Byron Groo, of Salt Lake City, Utah, who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Salt Lake City, Utah, vice Frank D. Hobbs, removed.

David H. Hall, of Eureka, Nev., who was appointed May 6, 1893, during the recess of the Senate, to be register of the land office at Eureka, Nev., vice John P. Dunkle, resigned.

Joseph W. Jamison, of Versailles, Mo., who was appointed June 15, 1893, during the recess of the Senate, to be register of the land office at Booneville, Mo., vice William McCracken, resigned.

George E. Kuntz, of Ashland, Wis., who was appointed June 15, 1893, during the recess of the Senate, to be register of the land office at Ashland, Wis., vice Henry L. Besse, removed.

Louis Marchetti, of Wausau, Wis., who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Wausau, Wis., vice Everett B. Sanders, removed.

Robert A. Miller, of Jacksonville, Oregon, who was appointed June 30, 1893, during the recess of the Senate, to be register of the land office at Oregon City, Oregon, vice John T. Apperson, removed.

Peter Primeau, of Houghton, Mich., who was appointed May 13, 1893, during the recess of the Senate, to be register of the land office at Marquette, Mich., vice George A Royce, resigned.

Andrew J. Taylor, of Duluth, Minn., who was appointed June 15, 1893, during the recess of the Senate, to be register of the land office at Duluth, Minn., vice Monroe Nichols, removed.

James H. Walker, of Raton, N. Mex., who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at Santa Fe, N. Mex., vice Alexander L. Morrison, removed.

Benjamin F. Wilson, of Union, Oregon, who was appointed June 28, 1893, during the recess of the Senate, to be register of the land office at La Grande, Oregon, vice Alonzo Cleaver, removed.

George R. Young, of White Oaks, N. Mex., who was appointed May 19, 1893, during the recess of the Senate, to be register of the land office at Roswell, N. Mex., vice Winfield S. Cobean, resigned.

RECEIVERS OF PUBLIC MONEYS.

Frank P. Arbuckle, of Denver, Colo., who was appointed June 15, 1893, during the recess of the Senate, to be receiver of public moneys at Denver, Colo., vice Clarence E. Hagar, removed.

Robert W. Banks, of Meridian, Miss., who was appointed May 6, 1893, during the recess of the Senate, to be receiver of public moneys at Jackson, Miss., vice Mrs. Anita H. McKee, resigned.

Thomas H. Corbett, of Frankfort, Ky., who was appointed June 28, 1893, during the recess of the Senate, to be receiver of public moneys at Guthrie, in Oklahoma Territory, vice Cassius M. Barnes, term expired.

William H. Cosgrove, of Roswell, N. Mex., who was appointed May 19, 1893, during the recess of the Senate, to be receiver of public moneys at Roswell, N. Mex., vice Frank Lesnet, removed.

Pedro Delgado, of Santa Fe, N. Mex., who was appointed June 28, 1893, during the recess of the Senate, to be receiver of public moneys at Santa Fe, N. Mex., vice William M. Berger, removed.

Clarence Dennis, of Ashland, Wis., who was appointed June 15, 1893, during the recess of the Senate, to be receiver of public moneys at Ashland, Wis., vice Robert C. Heydlauff, removed.

John W. Jones, of Blackfoot, Idaho, who was appointed May 19, 1893, during the recess of the Senate, to be receiver of public moneys at Blackfoot, Idaho, vice William H. Davidson, resigned.

Enoch Knight, of Los Angeles, Cal., who was appointed June 30, 1893, during the recess of the Senate, to be receiver of public moneys at Los Angeles, Cal., vice George W. Bryant, deceased.

Jacob H. Robbins, of Pendleton, Oregon, who was appointed June 15, 1893, during the recess of the Senate, to be receiver of public moneys at La Grande, Oregon, vice Alexander C. McClelland, removed.

Eugene B. Thayer, of Wausau, Wis., who was appointed June 28, 1893, during the recess of the Senate, to be receiver of public moneys at Wausau, Wis., vice Robert H. Johnson, removed.

Walter C. Wescott, of Amethyst, Colo., who was appointed May 6, 1893, during the recess of the Senate, to be receiver of public moneys at Del Norte, Colo., vice Elmer E. Johnson, removed.

CONFIRMATIONS.

Executive nomination confirmed by the Senate August 16, 1893.

PENSION AGENT.

George W. Skinner, of Big Cove Tannery, Pa., to be pension agent at Pittsburg, Pa.

Executive nomination confirmed by the Senate August 18, 1893.

SURVEYOR OF CUSTOMS.

Richard Dalton, of Missouri, to be surveyor of customs for the port of St. Louis, in the State of Missouri.

HOUSE OF REPRESENTATIVES.

FRIDAY, *August 18, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Platt, one of its clerks, announced that the Senate had passed without amendment joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives.

It also announced that the Senate had passed the following resolutions:

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. J. Logan Chipman, late a Representative from the State of Michigan.

Resolved, That the Senate concur in the resolution of the House of Representatives providing for the appointment of a joint committee to attend the funeral of the deceased at his late residence in the State of Michigan, and that the committee on the part of the Senate, consisting of five Senators, be appointed by the Presiding Officer.

Resolved, That the Secretary communicate these resolutions to the House of Representatives.

Resolved, That as a further mark of respect the Senate do now adjourn.

Pursuant to the foregoing resolution, the Presiding Officer appointed Mr. McMILLAN, Mr. PROCTOR, Mr. VILAS, Mr. GIBSON, and Mr. WHITE of California, members of said committee.

Also:

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound in cloth 6,000 copies of the report of the commission appointed to inquire into the Indian currency, commonly known as the "Herschell Report on the Coinage of Silver in India," with the accompanying correspondence and testimony, of which number 2,000 shall be for the use of the Senate and 4,000 for the use of the House; in which the concurrence of the House was requested.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. PEARSON, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution (H. Res. 3) making immediately available the appropriations for mileage for Senators and Members of the House of Representatives; when the Speaker signed the same.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon," and for other purposes.

Mr. SIBLEY. Mr. Speaker, in common with those who favor bimetallism, I had hoped that, before the consideration of this question should ensue, there would be offered some measure providing for the immediate relief of the business interests of this nation. We have heard from all the speakers that the nation is in a state of panic, and that industry is paralyzed from one commercial center to another can no longer be denied.

I came to Washington before the meeting of this body, in the sincere hope that some financial measure might be provided which should afford adequate relief. Many had been submitted to me by others. I had some peculiar ideas of my own. I found, however, that the distinguished gentleman from Ohio [Mr. JOHNSON] had prepared a measure which seemed to cover the entire ground; a measure which, if acted upon by this body, would set in motion all the industries of this country, and cause every

spindle to hum throughout the length and breadth of this great land within ten days of its enactment.

By the passage of that bill we could have provided relief to the amount of $200,000,000 if necessary. I think I am speaking for all the friends of bimetallism when I say we can not be charged with being obstructionists to the business interests of this nation. The welfare of its citizens are as dear to us as to those gentlemen upon the other side. We were ready for the immediate consideration of a proposition which provided in simple and plain terms that the holders of United States bonds might deposit such securities with the Government, in its Treasury or subtreasuries or Governmental depositories, and receive therefor Treasury notes; the interest on the bonds ceasing during the time the notes were in circulation, the Government saving the interest, and the citizens, the business men, being provided with an abundant capital to carry on the industrial enterprises of the United States. Not a dissenting voice against the measure, or against any proper measure of relief, has been offered by those who stand here to-day as the champions of the people in this cause of bimetallism.

I received, and I presume every member of the House has received, a circular sent out from New York. It is a wonderful fact that all our financial wisdom and intelligence has to come from east of the Delaware River. That circular suggests legislation which provides that different classes of securities may be deposited with the Treasury, and when the great clearing houses of New York, Chicago, St. Louis, New Orleans, and some of the other centers, decide that the country is in a state of panic, then the Government is to put up the money on their securities. Gentlemen, in my judgment the time has come in this nation when the clearing houses of these great cities shall no longer dominate and control the financial policy for sixty-seven million producers in this land. Their control has effected enough woe, enough disturbance, and has caused the shedding of sufficient tears.

Mr. Speaker, if the gentlemen on the other side accept the proposition of the gentleman from Ohio [Mr. JOHNSON], my speech ends right here. We will come together, not as partisans, but as patriots, and will decide this question of relief at this very moment, and relieve more than three million workingmen. You have told us about the trouble of capital; but there are three million of God's American citizens to-day who are vainly waiting for the opportunity to secure bread for their hungry ones. Winter comes on apace, and you will be held responsible for whatever consequences may occur and not ourselves, for we stand on the pledge made in favor of bimetallism, in favor of the money of the people, against your determined opposition.

Mr. Speaker, it may be well for us to come right down to some of the causes of this panic. They have been hinted at, but it is about time we had them as they are. It is stated upon what seems to be the highest authority, before the close of the last Administration, there were prepared in the Bureau of Printing and Engraving $100,000,000 of 4½ per cent bonds, to be sold to the bankers of New York—at what price? At par. And upon what necessity? The necessity of maintaining the gold reserve at $100,000,000. Everybody well knows that the next day after these bonds had been issued and absorbed by these banks in exchange for their gold, they would have commanded a premium of 14, 15, or 16, thus providing a rake off that these people wanted to relieve you of. The stake was a big one. They had $15,000,000 represented on the board.

I tell you, gentlemen, that is a big pile to have in front of men with the average greed and cupidity of the American citizen, assisted by some who are not American citizens. The Administration of Mr. Harrison refused that issue. Mr. Harrison is represented as having said that he wished his Administration to be known as one in which the debt had been reduced rather than increased; and when the new Administration came into power they found a diminished reserve, a reserve below what was called the legal limit of reserve.

Now, my friends, I do not know much about judicial law, but I do know something about the laws of business. In the conduct of my business I maintain a reserve. I consider that the only safe way for me to conduct my enterprises is to maintain a reserve fund in the bank, but when, in the exigencies of business, my deposit account is reduced down to the limit of that reserve, what do I do? Go and issue a mortgage upon my possessions? No, sir. I use the reserve fund that I have placed in the bank for that very purpose, rather than encumber my possessions with a mortgage. Why should not the Government do the same thing? The Secretary of the Treasury wisely "called" their "bluff." He held "a full hand" and they had "a bobtail." [Laughter.]

Further, we commenced to export gold; we exported it in payment of the balance of trade against us. We exported that gold and it went abroad, in part to pay the expenses of the 24,000 men of this nation who to-day own the half of our total wealth. They lived in sumptuousness and riotousness abroad, and our gold went there in part to pay their expenses. Then there were shipped from New York nearly five millions of gold each week. Any gentleman can take his pencil and paper and figure up that at the rates of exchange prevailing at that time, each shipment of a million involved a loss of $2,000.

We sent out that gold, but who sent it? Were they American citizens? I do not know; they may have become so: but I know it was sent out by Heidelbach, Ickelheimer & Co., and by Lazarus Frères & Co. They were the agents of the Rothschilds, who were exporting this gold. It was needed to refund the Austrian debt and place that country upon a gold basis. These men paid their premium of $2,000 on each $1,000,000 of gold, and then proceeded to get even. How did they do it? They went into the stock market and sold that market one hundred thousand shares short and gained a million. The depreciation of the values of securities traded upon in the city of New York since this "bear" campaign began has amounted to over $1,000,000,000.

Do you fear that gold is not going to come back into this country? I never had a doubt about it. They exported gold in pursuance of their unholy design to transfer the wealth of a continent into the coffers of a few English bankers located in Lombard street.

Let me show you, Mr. Speaker, if possible, how this thing has worked, and how it is working. All over the Continent of Europe the Rothschilds have their agencies. There is not a European capital or town where you do not find a branch of that house, and I take it that if matters go on as they have been going heretofore, it will not be long until you can not find a city or a town in this country where the Rothschilds will not have a branch house.

They have drawn off our gold, and securities have depreciated 50, 60, even 90, per cent in value. Dividend-paying stocks have depreciated, and these gentlemen own them to-day, and have them locked up in their coffers.

Do you not think, then, that they are going to let gold flow back? I hold in my hand a copy of the New York World, which, I fear, comes nearer to being the revelation of the Lord Almighty to some of you than any other document that has been before your vision for the last few years. [Laughter.] This paper contains a cartoon which is entitled, "Wall street waiting for the lamb's wool to grow again." No one can claim that the New York World is a bimetallic paper. It is for a "sound and honest" money. [Laughter.] They are sound, honest men that own and control this paper; they were "born so." [Laughter.] This cartoon represents a distinguished lot of individuals, with their names, and their buttonhole bouquets, "waiting for the lamb's wool to grow again." Here is the Stock Exchange, where the poor lamb is standing, while the line of shearers reaches from the Stock Exchange away up as far as Trinity Church. See the length of their shears! Here is the poor lamb, every particle of his wool shorn from him, and they have even gashed into his hide, so that the blood is streaming from him! Of course they have got to wait for the lamb's wool to grow again! [Laughter.]

Why, Mr. Speaker, I raise Angora goats up in Pennsylvania, and I shear them only once a year. I find it more profitable to wait for a second crop. I cut my grass early in the summer, and I do not keep running the mowing machine over it every few days; but I wait until the fall for the aftermath. So these people will wait. There is no fear about the return of gold. They have got our securities, they have got mortgages upon our possessions, and now what do they want? Why, they want to see the wheels of industry revolve and to hear the spindles hum again, so that they may grow a new crop of wool, and then repeat the shearing process.

I see that my New York friends insist that there is but one remedy for this trouble, and that is the issue of bonds to maintain gold and put us upon a "solid financial basis." Well, gentlemen, suppose we agree to issue the $150,000,000 of bonds that you demand, how long will it be before you will want another $150,000,000? If through your conspiracy you can get this $150,000,000 that you say is necessary now, why can not you, three months hence, present your Treasury notes, your legal-tender notes, to the subtreasury and draw out the gold reserve again, and then come here and demand $150,000,000 more of bonds as an additional mortgage on the industries of the nation? And so, indefinitely, you can carry on this process until the wealth of an entire nation will not suffice to feed the greed of these conspirators.

You ask the cause of the panic. I do not know all the causes; but I know this: for two years the distinguished gentleman from Ohio [Mr. HARTER] has been a missionary in the field. The distinguished ex-member of the House, St. George Fred Williams, of Massachusetts, and the other saint from Ohio, have filled the columns of the Arena, the Forum, the North American Review, the American Journal of Politics, and other papers with their

predictions of disaster to come, if we did not get upon a solid gold basis.

The news and editorial columns of the metropolitan papers have contained the paid advertisements of the gold clique. The country weeklies have been sent tons of "boiler plates," accompanied by courteous and wily letters, asking the editors to use the matter as news, "for the good of the country;" and if they refused they were allowed to publish it at advertising rates. I do not blame the papers. They needed the money in these hard times. I only blame them for not marking their editorials and news "1t., head of column, next to reading matter."

The gold-standard men have howled calamity for two years incessantly. And when a member of this House or a citizen of this nation predicted that this attack upon silver, this decrying of the credit of the nation, this lessening of the value of all products, could but bring disaster, you charged us with being calamity howlers. Yet if there has been more calamity howled than has been howled by our distinguished friends of the other side, I do not know where in the pages of literature to find it.

There have been other causes for this panic. They have been numerous. It has not arisen from any one cause. But I will tell you what in my humble judgment is one thing that was responsible for a portion of it. They have a club over in the city of New York called the Reform Club. I think the Speaker knows something about the Reform Club. [Laughter.] And that club undertook in advance of the assembling of this body to fix up and issue to the world what they called a "tariff" for our adoption.

Why, sir, they make our responsibilities easy and our labors light. But the people of this nation have said that they never elected those men to frame a tariff, that they elected us to deal with that question upon business principles, and with exact justice and honesty to all concerned. They have got a little afraid of your Reform Club over in New York, that assumes, sometimes even with the appearance of authority, to be responsible for the whole conduct of governmental affairs. The members of that club have attempted to name members of committees of this House; they have attempted to tell us what shall be our action on this financial question.

Another reason for your panic has been chargeable directly to the action of your Wall-street gamblers, who have circulated rumors by the wholesale. They permitted one of these gamblers to go into their chamber a few weeks ago and announce that one of the greatest banks in New York had failed. And how did that body punish him for putting in circulation this false report? They suspended him for a year; and it is said his profits through bear operations since this panic commenced have netted him in clear cash over $10,000,000. I think he can afford to stand the suspension.

Another thing, my friends, that is responsible for this panic is your own New York bankers. You may stand here, the whole body of you, from that State, and talk about your patriotism and how you will uphold the business interests of the nation. But he who has eyes and has read current events knows better than that. When the Government refused to issue bonds, and when the banks of California, the banks of Chicago, and the great West came to the relief of the Administration by giving it gold, your bankers in published interviews, which are extant to-day in the columns of the New York papers, threatened to give the South and the West a pinch of hard times. I can show you those threats in your metropolitan papers. Your bankers threatened to give the people of the South and West a taste of hard times.

This conspiracy, which has had twenty years for its hatching, has now reached its culmination; and those who have taken part in it believe the time is now ripe for the consummation of these villainies and the wholesale robbery of the people.

Another thing, Mr. Speaker, which I think is responsible is the character and business pursuits of those who demanded this Congress be called in extraordinary session, or induced the Executive of this nation to call it. What genuine business interest in this nation asked for the assembling of Congress at this time? But the New York bankers and stock gamblers, in their interviews in the columns of their papers, day after day, said, "Let the call for an early session be issued, and at once the panic will stop and the country will be all right; business will find its ordinary channels; prosperity will dawn on every home." Was not that your prophecy? And from the day that the proclamation was issued down to this time we know that the financial situation has been getting worse.

Who made the demand for this extra session? Your boards of trade, your stock exchanges, your wreckers upon the shores of commerce, your gamblers, your vampires upon human industry. [Applause.] No body of agriculturists in this nation asked for a special session of Congress. No body of laboring men demanded that Congress should assemble. No, sir; the demand came not from the producers of a nation's wealth, but from the absorbers of a nation's wealth. [Applause.] This demand came not from the 67,000,000 of American citizens, but from the 24,000 who, through this financial villainy, have taken one-half of your total wealth, and now want to gain as quickly as they can the balance of it. [Applause.]

Mr. Speaker, I have heard much about the evils of a high protective tariff. I realize the force of what is said in that direction. But where tariff Saul has slain his thousands this financial David has slain his tens of thousands, and mutilated, maimed, and crippled his tens of millions. [Applause.]

Another reason for financial distrust and doubt is the fear of the people that the designs of those who have determined to destroy one-half of the metallic base of commercial transactions, may prove successful. Bankers want bonds. Why, my friends, here is a proposition which I make to you bankers in this House and the 240 lawyers who are members of this body. I wish you would get together and illustrate to us how it is that a bond which rests only on the faith of the Government is good, is desirable, is wanted, is howled for, is conspired for; and yet a greenback, a Treasury note, which rests upon the same faith of the people in this Government, you denounce as "fiat money." I want to understand where and how you make your distinction.

Mr. LANE. The interest is the distinction.

Mr. SIBLEY. Yes, as my friend from Illinois [Mr. LANE] suggests, one carries interest and the other does not; one goes to a premium and the other maintains its parity.

My friends, it has been amusing to sit in this House and hear the diagnosis that the different schools of physicians and empirics have given of the malady of the patient. And they have got as many different maladies as there are different schools of doctors for their treatment. Here comes one who says the patient is sick, and the trouble with him is that there is lack of confidence. All he needs is to have confidence and he will soon be well again. Why, up in Pennsylvania the other day a bank closed its doors where I had several thousands of dollars on deposit.

Now, I have absolute confidence in the president of that bank; the people of that community have confidence in him, and he has confidence in me; but neither of us has any money. That is what is the trouble. [Laughter and applause.] I want to tell any man who proposes to heal this disease by administering a dose of confidence medicine that he has got to inject that medicine into every patient at the same time, everywhere in the country, or it will not work. You can not give a dose to a man in this community and another to a man in another community, and hope that your confidence medicine is going to cure.

But another says the difficulty arises from overproduction—overproduction of wheat, of wool, of oil, of coal, of corn, of cotton, and beef. Overproduction of cotton! Why, I drove out through the slums of Chicago four weeks ago and saw men, women, and children in tatters. Overproduction of wheat, and we read that in the West people are starving for the very necessities of life. Overproduction of fuel, and yet they froze to death in Pennsylvania, the land of fuel, last year. Overproduction of oil, and a million of our people roam in darkness this night for want of it. No, sir, it is not because of overproduction. It is because of under-consumption, because of the lack of the necessary money to purchase these absolute necessities of human existence. [Applause.]

But there are other classes of doctors, other schools, who tell us that we are getting down to "hardpan," that we have been going through an era of inflation, and that it is necessary for us to get down to first principles; and they say we are going down to hardpan. Why, my friend, the farmers, the workingmen of this country, were down to hardpan fifteen years ago. [Applause.] They got down to bed rock ten years ago. They went down to where they scorched the soles of their shoes five years ago, and they are getting to-day, in this year of our Lord 1893, down to the point where it is scorching their feet and the fumes and odors of hell come up to meet them. [Applause.] And yet we are told we are getting down to hardpan. I want to know how much further towards sheol we have got to go before we get there? [Laughter and applause.]

Mr. Speaker, I have been told, with others, that I must support this measure because it is a Democratic measure. When did the new prophet of the Lord arise, and when did he receive the last revelation of Democracy? [Applause.] Certainly it must have been since the last national platform adopted by the Democratic party at Chicago. [Renewed applause.] My friends, you can not turn to a platform, with one exception, from the consummation of the crime of 1873 down to the present era that does not denounce that crime, that does not designate the men as criminals who perpetrated it, and that one exception is the old Bay State. Every State and every national platform has stood upon that principle, has declared this to be its judgment, this to be its pledge, that this crime against the laboring peo-

ple, this crime against their happiness, should no longer go unpunished.

I may not understand Democracy, Mr. Speaker. I stand for the Democracy which has regard to the interests of the great masses as well as to those of the privileged few. I revere that Democracy which was taught by the fathers of the Republic, the Democracy of Jefferson, who stood for the rights of the people as against the aristocratic tendencies of New York and New England, which existed in those early days. New York and New England denounced him as a socialist, as a communist, and as a demagogue. He is what I call one of the fathers of the Democracy. Thomas Jefferson once wrote: "I can scarcely withhold myself from joining in the wish of Silas Deane that an ocean of fire rolled between the old world and this." Why, how that utterance would make some of our modern anglomaniac statesmen jump.

I stand by the Democracy of Andrew Jackson; and, my friends from New York and New England, Democrats and Republicans, what did you say of Andrew Jackson? He denounced your national banks and your stock exchanges, and said they were leeches and vampires upon the body politic. [Applause.]

What, I ask, did New York and New England say of Andrew Jackson in those days? They assailed him with every vile epithet that could be found and applied in the English language. Demagogue was your pet name for him. Why, your Democracy of New York made medals portraying Andrew Jackson sitting down behind a rail fence with the epaulettes on his shoulders, smoking his old corn-cob pipe, and his head surmounted by asses' ears. These medals are still extant, and you Democrats of New York issued them. And you people of New England, with your boasted seats of learning—your Harvard College conferred the degree of LL. D. on Andrew Jackson and then passed resolutions regretting such action. [Applause.]

Mr. Speaker, I stand by the Democracy of the old fathers of the Republic. I stand by the men whose voices have been raised always for human liberty; a Democracy that has regard to the cries of the suffering that have been heard in this land in all of its decades and history. I have regard for a Democracy that has respect to the man who toils, as well as to the man who absorbs. I have respect for the Democracy that considers the right of the workers in the busy hive of industry, as well as of the drones who bask on the sunny side thereof.

Mr. Speaker, I stand by democracy as exemplified by the first great democrat who ever walked the face of God's fair earth; who said that he who was naked and hungry and sick was my brother; and that when we ministered to such a one we ministered to the very Christ; a democracy which said that he who had fallen among thieves and was grievously wounded was my neighbor. And yet they crucified and put to death that first democrat of the ages. My friends, did you ever think why they crucified the Lord Jesus Christ? They never crucified Him because of any religious ideas that He possessed different from the masses.

Babylon and Nineveh, Rome and Greece, had erected their altars of Pagan worship under the very eyes of the people without a protest; but they crucified that man because He said, "Woe unto you, Scribes and Pharisees, hypocrites." [Applause.] They crucified Him because He had condemned the extortioner and the oppressor, and had dared to scourge the money-changers from the temple of the living God. [Applause.] And whoever boldly stands to-day in the cause of humanity against the greed and rapacity of the few is a marked victim for crucifixion.

I have been asked repeatedly, since I came to Washington, how it occurred that I, a man of some reputed means, and hailing from Pennsylvania, could ally myself with the disordered ideas of bimetallists? Why, my friends, they still print and read Bibles up in the State of Pennsylvania. [Applause.] And on the page of that good old book the command is just as plain as it was the day it was thundered from Sinai, "Thou shalt not steal!" [Applause and laughter.] Why, my friends, if a man from Pennsylvania shall not stand for bimetallism, from what land shall the man hail to stand for it? William Penn came to Pennsylvania and he dealt justly and honestly with the poor red man; and he still has his followers in that blessed Keystone State who are willing to deal honestly and justly with the poor white man. [Applause]. Pennsylvania is rich in treasures of coal and iron, of oil and wheat, but she is richer still in her millions of sons and daughters who "know the right, and knowing dare maintain." [Applause.]

My friends, you tell us that we can not win this fight. Gentlemen get up here and cite the fact that England is against us, that Germany is against us, that Spain is against us, that France is against us, and they even come to me and tell me that the Administration is against us. [Laughter.] But I tell you, you may league all your forces, but you can not destroy the sparks of liberty on this continent. [Applause.] Switzerland has stood for years, a little gem surrounded by the crowned thrones and monarchies of Europe, and maintained her liberty. But you tell us the odds are against us. Well:

> Granted the odds are against us, granted we enter the field,
> When fate has fought and conquered, broken the sword and shield,
> When then? shall we ask for quarter, or say our work is done?
> Say, rather, a greater glory is ours, if the field be won.
> It is war with the wrong of years, with prejudice, pride, and hate,
> Against the world's decrees and the frown of an evil fate.
> A crown to the one who wins, and the worst is only a grave;
> And somewhere, somewhere still, a reward awaits the brave.
> A broken shield without, but a hero's heart within,
> And grasped with the hand of steel the broken blade may win.

[Applause.]

Why, Mr. Speaker, gentlemen tell us that all our arguments are as rot. I quote their exact language. They meet our arguments with subtle sophistries. They hurl walking encyclopedias, loaded to the muzzle, at us, and they justify their conduct upon any pretext or pretense they please. I remember when a boy reading in Æsop the fable of the wolf and the lamb. A wolf met a lamb, and was determined to devour it; but wishing to justify himself even in the sight of the lamb, held converse thus with him:

> "Sir, last year you insulted me."
> "No," meekly bleated the lamb, "last year I was not born."
> "But you eat the grass out of my pasture."
> "O, no; so far I have never tasted grass."
> "But you drink at my spring."
> "No; so far my mother's milk has been both food and drink to me."

Whereupon the wolf seized him and ate him, saying, "My fine fellow, in spite of all your argument you shall not rob me of my dinner."

[Laughter.]

The moral of the tale is that tyrants never lack pleas to justify their crimes.

But you call us cranks. I have heard that term applied to almost every man who in twenty years has stood out in advance of the common horde. Any man who stands in advance of the present is called a crank. They did not then have the name invented, but I fancy Columbus, Luther, Galileo, Garrison, Lowell, Patrick Henry, and the great men who have made lasting impressions on the pages of the past were all denominated cranks or the equivalent term therefor.

You say that we are weak and obscure, and a lot of fanatics from the West that come from the farms, "and what can such men know about finance?" Why, my friends, I do not know but what these men, while they have been turning the furrow, have had as good opportunities as other people to turn over in their minds these great living problems which so closely affect their own well-being. The mechanic has stood at the lathe, and as the shaft revolved has also revolved in his own mind these problems; and I can not for the life of me understand why he can not attain as perfect an apprehension of them as the man who walks into the stock exchange at 10 o'clock in the morning and stays there till 3 o'clock in the afternoon, goes to his office and balances up his accounts, saunters up-town for a dinner at Delmonico's, goes to the theater, takes a box for the evening, and then sits in with the boys and plays draw poker until 4 o'clock the next morning. [Laughter.]

The very best business men, my friends, you have known in your lives came from the farm, and the only argument that I have seen that all those remaining on it were fools, was from those who had not remained. [Laughter.] Oh, you say, that they are a lot of obscure cranks back in the country. Why, your great New England poet, the champion and herald of human liberty, once said:

> Oh, Truth! Oh, Freedom! How are ye still born
> In the rude stable, in the manger nursed;
> What humble hands unbar those gates of morn,
> Through which the splendor of the new day bursts.

[Applause.]

My friends, I am not going to shoot very much longer into the air, but going to come down to something practical.

I want to say a word, first, about the Administration. Men are told, and men have told me, that I have got to be very careful; that my political future was at stake; that they had grand schemes laid out for me for the future; and I had better be very cautious, or assume, at least, a very conservative attitude upon this great question. My friends, I have not got a particle of principle that is not too dear for me to trade for all the patronage that could ever be given out at the White House. [Loud applause.] And that office has never yet been created for which I will barter away any portion of that moral sense of obligation which I owe to my fellow-man and my God. [Renewed applause.]

I have too much respect, I have too much confidence in the honor and the integrity of the man who occupies that house to believe that such things are true. I believe that when he comes to me for an honest expression of opinion concerning the merits of any man that he would rather take the opinion of one who has stood up boldly and told the truth, as it is given him to know

the truth, than to take the opinion of a milk-and-water, namby-pamby man, who is always willing to

> Crook the pregnant hinges of the knee
> Where thrift may follow fawning.

[Loud applause.]

President Cleveland is an honest man from the ground up; he has the courage of his convictions, and I believe he has sincere respect for others who exercise such convictions. [Prolonged applause.]

Mr. Speaker, we have read of wreckers who, in olden days, giving false lights along the dangerous coast, would lure a stately ship, freighted with a valued cargo, upon the sunken rocks, that in the death and ruin they had by their false signals created they might revel in the spoils and plunder of wreck and ruin. And so we see to-day the grand old Ship of State freighted with the hopes and happiness of sixty-seven millions of human souls, sailing through a stormy sea; the blackness of darkness overhead; even the trusted captain of the craft, bewildered by the false signal lights of the wreckers of Wall street, has given orders for steering the craft upon a false course, and gone below. The underofficers of the ship, knowing the perfidy of his advisors, knowing that death and ruin are not six cable lengths ahead, deem it no disrespect to the honest commander in his absence to thwart the designs of the wreckers, assist in putting the helm hard over, and guiding the ship into a smooth and open sea. The members of this House are the second officers in command of the great Ship of State, and charged with equal responsibility for her safety.

The President knows, and every intelligent man must know, that the unconditional repeal of the Sherman act means a further fall in the price of silver bullion, and its utter destruction as a legal-tender metal in this country and all over the world. What, then, must be the opinion of the President touching the honesty and intelligence of those gentlemen on the floor of the House who, to justify themselves to an outraged constituency, state that they are in favor of free-silver coinage, but shall vote against any substitute to accompany the bill for repeal. You are in the attitude of old Pete Jones who said, concerning a stringent liquor law, "I am in favor of yer law, but agin its enforcement." You are in favor of bimetallism; nevertheless, "tu Brute" art willing to give it the death-stab in the back. All humanity admire positive men and, even though they may deem them wrong, honor those who have at all times and under all circumstances the courage of their conscientious convictions. But for the trimmer, for the time server: Thus saith the Lord:

> 14 And unto the angel of the church of the Laodiceans write;
>
> * * * * * * *
>
> I know thy works, that thou art neither cold nor hot: I would thou wert cold or hot.
> 16 So then because thou art lukewarm, and neither cold or hot, I will spew thee out of my mouth.

Mr. Speaker, that is our idea of about what the President must feel like telling some who hold their convictions as a stock of trading capital, and whatever the opinion of the Executive, I am prone to the belief that, throughout the wheat and cotton belts a year hence, there will be a tremendous spewing of loads which rest heavily upon the stomachs of the producers.

I was in the country the other night, driving, and saw a sign stuck out on the side of the road, "Cash paid for hides." [Laughter and applause.] And along on the fence was a string of them, the tails hung over to the road; and I said to myself: "Are men going to sell not only their hides, but bodies, souls, conscience, moral obligations, and sense of duty, to steal from their families and throw them into despair and ruin, and not even get the cash price for it?" [Laughter and applause.] And I imagined, sir, that there would be seen a year from next November, by those who would ride through the rural highways, on the fences of the different sections of the agricultural communities, the hides of many so-called statesmen who think they can curry favor by fulsome fawning. [Laughter and applause.] I will take my chances of loss along those lines if you are willing to take yours. [Renewed laughter and applause.]

Mr. Speaker, the proposition is to repeal the Sherman act, without any attempt to carry out the other pledges of the platform, which demands the free and equal coinage of both gold and silver. Well, we want the Sherman law repealed. It is acknowledged by its author as a mere subterfuge adopted by the enemies of silver to prevent free coinage, which was demanded for the undoing of the villainy of 1873. Every man has joined in execrating that villainy and the villains, and they believe that along with the names of Judas Iscariot and Benedict Arnold will be placed those who were guilty of that crime; that in a blacker page of American history than that in which any American name has been written will be inscribed the authors of that monstrous crime.

We have denounced it, and yet to-day what are we asked to do? We are asked to say that all the Democrats of the past who drew up such platforms were unwise and unpatriotic; that they were mistaken. We have been told by members of this House, who profess to be Democrats, that this plank was made up of pure catchwords; and we are asked to say that there was one man of transcendent genius, who was twenty years ahead of his fellows, and we are asked here at this time and at this hour to come together and bend our knees and offer an apotheosis to that Senator, who sits enshrined at the other end of this Capitol Building. For one, I never will. [Applause.]

Mr. Speaker, when the Lord led the children of Israel out of captivity and the prophet, the leader, and the lawgiver had gone up into the mountain to meet the living God, these same people who to-day demand the unconditional repeal of the Sherman bill, these same people whose chief interests lie along in that direction, erected a golden calf and fell down and worshiped it: but the prophet of the Lord ground that calf into powder and spread it out upon the waters; and the Lord was sorely vexed with Israel because thereof. My friends, you can let them fall down and worship at this shrine. There may be many who still will worship at the shrine of Baal and Moloch, but there are still a majority of the citizens who know not these false gods.

I ask you, my friend, if you are a banker, if you are a manufacturer, an agriculturist, if you are a laboring man, if you own interests in railroads and draw dividends, or if you manage and conduct these affairs, when was your greatest era of prosperity? It was from 1866, or after the close of the war, down to 1873, was it not? Your railroad stocks were dividend-payers at that time. You had no strikes; you had no boycotts, and no granger legislation. All classes of the people were at peace with each other. Your factories were not closed, and you did not have to call out armed forces to keep the employé from the throat of the employer.

Since 1873 what has been the history? Disaster has followed disaster as upon the speed of the whirlwind. The conditions have grown more strained every moment, and are growing more and more so with each recurring year. Statesmen and patriots may well ponder this condition. You have had warnings all along the past which show you the natural trend of such conditions. And now the people, the great producers of the world, come to you and ask for justice.

My farmer friend, when was it that you got $1.50 for your wheat, and when did you get 60 or 70 cents for your corn? In 1873 you received 118 cents per bushel, on an average, for wheat, and in 1873 your silver was demonetized. You planters and growers of cotton, tell me in what year was it that you received 23 cents a pound for your product. It was in 1873: but in that year we demonetized silver, and what happened? Why, we turned over the interests of the producers of this nation into the hands of British financiers. Let us look at it. Silver at that time was worth 129.29 cents per ounce; that was its coinage value. And at that time we had the grain markets and the cotton markets of the world; and in 1873 India exported only 735,000 bushels of wheat.

Now, there has never been a time in the history of India when silver has not been its money, and there has never been a time from the day when they commenced raising wheat down to the present hour that one ounce of silver did not measure the value of one bushel of wheat. It makes no difference what the value of the rupee is. The same number of rupees buy the same number of bushels of wheat all the time. But England could not afford to buy an ounce of silver at 129.29 and take it to India to measure the value of her wheat, so she took our wheat from us and paid us a little less, from 120 to 123 cents, in 1873.

Mr. BRYAN. Mr. Speaker, as the time of the gentleman from Pennsylvania [Mr. SIBLEY] has almost expired, I ask unanimous consent that he be permitted to conclude his remarks without limit.

There was no objection, and it was so ordered.

Mr. SIBLEY. Mr. Speaker, I thank the members of the House for their courtesy.

In 1874 the shipments of wheat from India commenced. England bought her ounce of silver here at 110 cents, and she could take that to India and exchange it for a bushel of Indian wheat: and in five years after the demonetization of silver, England had increased her shipments from 735,000 bushels to 11,900,000 bushels.

In ten years, with the continuous depreciation in the value of silver, the shipments of Indian wheat had increased from 11,000,000 to 26,000,000 bushels. In fifteen years the shipments of Indian wheat to Europe had increased from 735,000 bushels in 1873 to 41,000,000 bushels, and last year she exported 59,000,000 bushels. The same ounce of silver England could not buy, to develop the grain markets of India, at less than 129 cents, before this demonetization and hostile legislation, she now buys at 70 cents, and takes it to India and still gets the same bushel of wheat for it, as when sil-

ver was worth $1.10. We have played all these years into the hands of England against the prosperity of our own American wheat producers. And yet some gentlemen from the Mississippi Valley and from the great wheat-growing States come here and say that this metal must go lower still in order that their constituents may continue to feed the European nations at even a less price than they are able to command to-day.

Mr. Speaker, let us look at cotton, and see if the analogy does not hold true there also. They established cotton mills in India in 1863, and from that year down to 1874 they were never able to export one pound of cotton yarn; eleven years of attempts to introduce cotton-spinning in India, with abject failure as the result. But in 1874, one year after the demonetization of silver, they shipped 1,000,000 pounds of cotton yarn. The next year they shipped 5,000,000 pounds. With each decreasing quotation in the value of the ounce of silver bullion there was an increase in the export of cotton yarn from India. In 1889 it had gone up to 65,000,000 pounds.

In 1891, the last year for which I have been able to secure figures, the exports of cotton yarn from India amounted to 165,000,000 pounds; the same thing has been equally true of the exports of raw cotton. Mr. Speaker, I have observed that the prosperity of the farmers and the railroads went hand in hand, and are there no lessons that the managers and stockholders of railroads can learn from these conditions above described? Which is better for your corporations, to be able to earn money at the expense of Europe or to be able to borrow it from Europe at your own expense? Permit me to show the position of those in England who are so much opposed to bimetallism. At a meeting of the British and Colonial Chambers of Commerce, held in London in 1885, Sir Robert N. Fowler, a member of Parliament, a banker, and an ex-mayor of London, said—

that the effect of the depreciation of silver must finally be the ruin of the wheat and cotton industries of America, and be the development of India as the chief wheat and cotton exporter of the world.

Russia, another silver nation, and the great competitor of America in the production of wheat, has also furnished to European nations her quota of wheat, paid for in the depreciated ounce of silver that we by legislation have degraded and debased. Oh, I tell you, my friends, it is very fine to hear you talk here about a "degraded and debased dollar;" but I would rather have a degraded dollar than a degraded country—rather have a debased coin than a debased people. You have closed the market to American wheat and American cotton; and yet gentlemen from the cotton States stand here and say that the cotton-planter demands that the Sherman act shall be repealed.

The people of the cotton States, I believe, are equal in intelligence to the people of the wheat-producing States and the other great States of this Union where greed for gain and lust for riches are not the one dominating and controlling force. You have seen your cotton crop increase. I will not take time to go into statistics as to the acreage; but you have planted millions more of acres; you have raised hundreds of millions more pounds of cotton; and your net receipts to-day are not one-half what they were in 1873. Every year a little greater shrinkage in value because of the shrinkage of value of silver bullion.

Now, I want to make my friend from Ohio [Mr. HARTER] a proposition. I know he is out for converts. I know the corridors of this Capitol are thronged with a lobby that are trying to make converts; and the hotels are full of them. Now, I want to tell the gentleman how he can make one convert right here. I make this proposition: That silver has not declined in value one iota from 1873 down to this minute; if it has, I will vote on the other side of this proposition. It has maintained its parity and its ratio with every product of human industry, save one. This ounce of bullion silver which to-day you tell me is worth but 70 cents, measures as much wheat and more than it ever measured in the last fifty years; it measures more pounds of beef, more pounds of pork, more pounds of cotton, more pounds of iron, more barrels of oil, more of every product of human industry, save one, than it ever measured even when it sold at its legitimate value, 129 cents an ounce. If you will show me any other than one exception to this proposition, you have a convert right here. The one exception is gold. The 70-cent ounce of silver will not buy as much gold to-day, but it will buy more of every other product of human industry.

Now, then, inasmuch as silver has maintained its ratio—its parity with your wheat, and your corn, and your cotton, with every product of human labor, why do you say that silver has gone down and that this metal is debased? Why do you not say that gold has gone up and has been deified? You cry out in these Halls for an "honest dollar." You do not want an honest dollar—not one of you that makes this cry. [Applause.] You want a scarce dollar. You do not want an honest dollar; if you do, come over and vote with us, and we will give it to you. [Applause.] We will give you a dollar that is as honest to-day as it was in 1873. But you are not going to force your 150-cent dishonest dollar upon the great producers of the necessities of human existence—not if we can prevent the consummation of that effort. [Applause.] Talk about a dishonest silver dollar, when within the last week they have been so scarce as to command a premium of 2 and 3 per cent to assist in moving the cotton and wheat crops.

I love to hear gentlemen talk about "intrinsic value." That word "intrinsic" has a golden sound. I do not know what it means, and I do not think anyone else does; but I will give you my idea of intrinsic value. The intrinsic value of anything is what it will do for you in your hour of direst need, of supremest peril. What is the intrinsic value of a piece of plank 24 feet long, a foot wide, and 2 inches thick? Gentleman may take out their pencils and commence to figure out the intrinsic value of that piece of plank, and their results will vary according to their methods of computation; but, my friends, the intrinsic value of that plank is a million dollars to the man who is drowning.

Men talk about the intrinsic value of gold. A banker told me the other day that he could not assent to my propositions because he believed the time had come when we must join hands with the other great nations and come down to the use of a metal which had intrinsic value behind it. I said to this gentleman: "I do not know that I can raise the funds just at present; I have serious doubts if I can raise a percentage of the amount; but suppose I can get $20,000 worth of gold bullion. You pay 3 per cent on time deposits, do you not?" "Yes, sir." "Well, now I will get $20,000 worth of gold bullion and bring it to you as a deposit. You would rather have that than paper, because paper has no intrinsic value, while gold bullion has. I will deposit this bullion for six months and draw 3 per cent interest on this time deposit." What do you think he said? "Oh," said he, "I can not give you 3 per cent on that." "Why not," said I? "Well, I could not use it." "Well, then," said I, "I will take the bullion down to the mint at Philadelphia and I will get the people there to put upon it the stamp and superscription of the Government of the United States; will you take it then?" He said: "Oh, yes; I would be glad to." "Well, then," said I, "what has your intrinsic value got to do with the matter? What is it gives this metal its power as money so that you are willing to pay me 3 per cent interest upon it? Is it the intrinsic value of the metal? No; it is the image and superscription of Cæsar that makes it money?"

I have been amused to hear gentlemen talk about the impossibility and absurdity of having two yardsticks. Well, my friends, I believe we have two yardsticks. I believe that when you attempt to appreciate gold we will set silver against it at 129 cents an ounce, and we will hold it so that the gold dollar shall be worth just 100 cents; and the gold dollar shall sustain the silver dollar so that it shall stand at 100 cents; so that we can have two measures for the same thing. Why, sir, 32 quarts of oats make a bushel, do they not? And 32 pounds of oats make a bushel. There you have two yardsticks, have you not?

Now these measures are of the same ratio. But 32 quarts of corn make a bushel, and 56 pounds of corn make a bushel. There is the varying ratio. There are 60 pounds of wheat in a bushel, but only 32 quarts. Is there any great discrepancy in using the two measures? Why, one says the seller shall not take a hoop and scoop out down below the level of the rim, and the other says the man who buys it shall not heap up the measure to running over. That is what it is. That is why we place one coin against the other.

Now, my friends say that silver has gone down all over the nations of the world, and that it can not be maintained at a parity or fixed ratio. No wonder it has gone down. What criminal has ever been pursued with such zealous and malignant fury, such thorough and complete conspiracy? What criminal has ever been followed with such relentless hatred? The energies of the entire money power of the whole world has been concentrated against the white metal. Why has this been done? Because they were afraid it was going to be too abundant. The Creator in his loving kindness to this nation, when the foundations of the world were laid, stored our mountains and our hills with great veins of silver and gold, that ought to make us the greatest, the grandest, the noblest, the richest nation on earth, in order that we might enlighten, civilize, and carry glad tidings of great joy to all the dwellers of the earth. They became afraid of the quantity of silver in this country, just as they were frightened about gold in 1857; the only difference was that they got afraid of a different thing.

The discovery of the gold mines of Australia in 1853, following the discovery of those in California in 1849, made these same gold bugs fear that there was going to be too much gold, and they called their monetary conferences together to conspire against gold. They used then precisely the same arguments against gold that they have directed against silver at the present time, and they had a better argument. They said silver was the money

of the common people, adapted to the transaction of small business as well as great; that the people could use it freely and safely; that its size was such as to make it a safer metal for many purposes, and that the loss by abrasion in silver coin was so little and in gold so much that gold ought never to have been made a money metal at all; and that the gold should be used only as bullion and have a basic value.

Listening to this series of arguments which have been put forth by those men who desire to control all human industries and values, several nations in Europe did demonetize gold and take away its legal-tender value no longer ago than 1857. Austria demonetized it, and every state of Germany demonetized it; and now we are told this debased metal, silver, ought to be demonetized merely because they are afraid of such an abundance of it!

What wonder that it is disgraced when every factor, every power not only of the whole American continent but all the world, has been used against it? Your banks have denounced it. Your metropolitan press, under the control of the gold power, have issued column after column attacking it. Your very Director of the Mint, or Acting Director, has discredited it within the last four weeks. He has wiggled and haggled over the price and value of it, and if the holders offered it at 70.71 cents an ounce he would offer them 70.31 cents an ounce. When still lacking 2,000,000 of ounces to comply with the plain terms of the law he would, when his offer was accepted, take 30,000 ounces instead of half a million. Instead of, as an American, being animated by an impulse to maintain its value at parity if possible, he pursued methods which in this nation seldom obtain outside the second-hand clothing shops of Baxter street. That certain elements have conspired against it to degrade it and take away its value in this country, who can longer doubt?

Mr. Speaker, let us place the responsibility for this panic where it belongs. India closed her mints to the free coinage of silver a few weeks ago; and I want to call your attention in this connection to a reputed interview which had a dominating and controlling force in that direction. A member of the Administration, the Secretary of Agriculture of this Union, ostensibly at the head of the agriculturists of the nation and who is said at times to imagine he hears the Presidential bee buzzing in his bonnet, was interviewed a few weeks ago, and in that interview he is reported to have said: "I have recommended to the Secretary of the Treasury that he condemn all the silver in the vaults of the Government and sell it as old junk, for whatever it will bring." He said, "We have a law which allows the appointment of committees to condemn worthless material lying around the Departments." And three days after that interview silver was demonetized in India.

Whether the Secretary of Agriculture spoke seriously or in jest, we know not. If this was a jest it was one that has cost more closing of banks, more foreclosures upon farms and houses, closed more workshops, put out more fires in happy homes, caused more loss, more hunger, more tears, more misery, more woe, than any jest ever recorded on the pages of the past. The utterances of cabinet ministers are supposed to be those of deliberation, and the result of fullest consideration, and presumptively reflecting and outlining governmental policy.

What wonder in the face of such declarations, made upon the authority of one holding so exalted and dignified a position, that the British ministry was suddenly convened to protect the Indian mints from such an avalanche; and from that moment to this, disaster has trod upon the heels of disaster, ever thicker, ever faster. Such sorry jests should entitle the discoverer of Arbor Day to an indefinite leave of absence, where, beneath the umbrageous foliage of his planting, he may repent his costly folly. Silver fell from 82½ cents per ounce to 70 cents as the result of this man's utterance; and wheat, always following the price of silver, declined from 74 cents per bushel to 54 cents per bushel.

A few days since our worthy Secretary was interviewed again, and this is his latest reported utterance of financial wisdom:

> Agricultural products are lower, but this is rather a blessing than otherwise, for if our products are not taken gold will be exported.

This utterance, if correct, ought to make it all right with the farmers, who care nothing whatsoever about the price of the products of their toil, so that the yellow god may not flee from the presence of his devout worshipers.

Mr. Speaker, the farmers have for years been great sufferers from the ravages of bugs. You of the South have had the cotton bug. You of the West have had the chinch bug. We of the North have had the potato bug, and scattered around promiscuously has been the bedbug; but indigenous to Lombard and Wall streets, thrives and fattens another bug. They even break their way into this Capitol at times, and these bugs—gold bugs—have bitten and annoyed more people than all the bedbug tribe, and their ravages in your fertile fields exceed in damage in a single year the damage wrought by the combined efforts of all other bugs for a century.

Mr. Speaker, I like the gentleman from Ohio [Mr. HARTER]. He has got such a frank, manly way of stating things. He states a proposition squarely and fairly, while many others are apt to hedge. He admits the question to-day to be this: Silver is going to be money equal in value to gold in this country and that issue is to be determined now; or silver, its money value, is to be absolutely lost forever. I like the way he states his propositions. He says squarely that to-day we have too much money, and therefore he proposes to take away one-half of it.

Why do not some others stand up on this floor, and say publicly what they say in private conversation? Why do you not announce your intention manfully and boldly from your places here? You have announced privately that your intention is to offer resolutions, after the repeal of the Sherman law, to take away the legal-tender power of silver in all sums in excess of five dollars. Why do you not tell what justification you are going to offer for that? Privately, you say you are going to justify it by the fact that when you have unconditionally repealed this bill, silver will fall to forty cents an ounce or even less, and then you can urge the folly of putting out a twenty-five cent silver dollar and making it a full legal tender.

Why, my friends, the great temple of industry and commerce rests upon two pillars, one of silver and the other of gold. This one of silver has but 6 per cent more strength than the other, and with both these pillars under this temple it is all it can do to maintain its place. Why, every passing financial wind rocks it upon its foundations; and yet you propose to absolutely destroy one of these pillars. There is only 6 per cent more silver on the whole globe than of gold; only $2.58 per capita of silver in the world. Yet you propose to take it away. Over three-fifths of the nations of the world to-day are either upon a silver or a bimetallic basis. Your $3,600,000,000 of gold is inadequate for the use of the nations that are already upon a gold standard, and how are you going to move the wheels of industry when you have destroyed one-half the metallic base of all commercial credits and transactions, the globe around?

But they cite England, old England, and Spain and Germany. Yet they dodge the issue. There is just one country on the face of the globe where they do not have panics, and she has got more money than any other civilized nation on the face of the globe, and that country is France. No financial revolutions or panics or disasters there. The Panama Canal scheme may fail, and it does not make a ripple on the financial surface. It causes great waves to heave and swell upon the political tide, but it never touches the financial situation or affects its stability. They have $54 of money to every man, woman, and child in France. They have an abundance to meet the needs of business in that little nation, smaller than some of our States; and yet in this great nation, whose territory stretches 3,000 miles from ocean to ocean, we are asked to do business with less than half as much per capita. If silver makes panics, why was it that Australia, which is on a gold basis, has a panic worse than ours; a panic in which the bank failures in six weeks amount to over nine hundred millions of dollars? Their panic was only caused, like ours, by Rothschild shearing his sheep.

My friend, let us deal fairly with silver. Supposing that by your legislation here to-morrow you enact a law that no man in this country who possesses wheat shall be permitted to take it to the mill and have it ground. Shut every mill in the land to the grinding of wheat, and what do you think wheat would be worth six months from to-day? Do you think wheat would maintain its value as silver has done? Corn would go up, corn would be king, and wheat would be worth its fodder value for dumb brutes. That is precisely what you have done against silver. You have shut down the mills against it. You have denied it to the public for its use, and yet you cry against it that there are only 53 or 56 cents in the silver dollar.

Now, my friends, I want to make you a little prediction right here, and let us see who tells you the truth, whether it is these people from New York or the friends of free coinage. Oh, I love the New York people! I know them well. It is the State of my nativity. There are grand men and noble women in New York. But I know New York City well, and I know, lying right alongside of New York City, is a place they call Hell Gate, and I think most of you, coming from there, have been through it. [Laughter.] I know our friends from New England, who speak so boldly for the honest dollar, in coming through the Sound, have come through Hell Gate. [Laughter.]

But I want to tell you, my friends, that we have been getting the financial policy of this nation for twenty years from the gates of hell, but we are not going to accept such dictum any longer. [Applause.] Why, did you ever stop to think that when the wise men started out to seek the Saviour of mankind, the Light of the

World, in what direction they traveled? Did they go to the East to look for the light? No; they left the East and came to the West for the source and fountain of all light and truth. [Laughter and applause.]

When Columbus embarked, in which direction did he steer to find a nobler, better, and happier land? Did he turn to the East? No! Misery, woe, monarchs, oppression, crime, and crowns were in the East. He headed his course westward; and so, my friends, to-day you will never find a financial savior who comes up through Hell Gate. [Laughter.] On this rock of justice we have founded our faith, and the gates of hell shall not prevail against us. [Laughter.] They have told us about the great loss that the country submitted to in the purchase of silver, and I want to say right here, my friends, first, that I used to be a monometallist of the monometallists; could not be anything else. All my friends were monometallists. I was a director in a national bank, and they were all monometallists.

Everybody I met in the East was a monometallist. But I one day heard a man talk who astonished me. He read from official documents, and I doubted their accuracy. I said, "That man has the appearance of honesty; he has the courage of truth shining from his soul through his eyes, but he must be mistaken." So I said, "For my part I am going to make a study of this question." And never thinking to be here in political debate and discussion within these Halls, or any other public place, I devoted my time to studying these questions. I sent here to Washington for the reports of your Director of the Mint, Comptroller of the Currency, and Treasurer, and tried to apply business rules and methods to them, and I am no longer a monometallist, because I would rather be honest than be a monometallist. [Laughter and applause.]

My friends, we are told that the Treasury, and the country through the Treasury, has lost vast sums of money in buying 70-cent silver and storing it in our vaults. Now, let us see the facts about that. Maybe we have been driving a better trade than we thought. If that bullion has gone into dollars it will pay the Government's debts. It has done so up to this time, at least, but I do not know what it will do if you succeed in your schemes, but up to this time it will pay a dollar's worth of debt, public or private, anywhere in the nations when it is coined into standard silver dollars.

How much have we lost? Have we lost anything? Every ounce in the Treasury bought below $1.29 an ounce, its coinage value, is so much gain. Instead of issuing bulletins to the people showing the great loss in the purchase of silver, why do not they say that the Government is 50 cents ahead on every ounce of silver that it has purchased, and that the Government is $100,000,000 ahead by the purchase of silver, instead of sending out reports that the Government has been a loser by the transaction.

But, supposing we had been loser. Supposing, Mr. Speaker, that we had as a Government chartered one of the ocean greyhounds sailing from New York and had loaded every ounce of silver in the country that has been produced since 1873 to the present time, had bought that silver for $1.29 an ounce, and had that ship to sail just off beyond the banks of Newfoundland, and gone into sufficiently deep water where you could not reach soundings, and sunk it to the depths of the ocean, where it would have remained forever beyond the reach of man, what would have been the effect on the producers of the United States?

The highest production of silver in any year has been $73,000,000. We will say it is $75,000,000. But we produce 450,000,000 bushels of wheat a year, which, since the demonetization of silver, has fallen from $1.20 to 54 cents per bushel. The American farmers have lost from 60 to 70 cents a bushel on wheat. The price has gone down because England can come here and take 70 cents' worth of silver and measure it against a bushel of wheat in India, just as well as she could do when it was worth $1.29 before we demonetized it by legislation, and degraded and disgraced it by our silly and wicked follies. Now, then, Mr. Speaker, we have a loss of 50 cents a bushel on wheat—I want to make my statement modest. We have a loss of 50 cents a bushel on 450,000,000 bushels of wheat a year, which makes a loss to the American farmer of $225,000,000.

I am not here talking for the silver mine owners of Idaho, Colorado, Nevada, Montana, and Utah. I do not know them. They are only a small factor in this question. I am looking to the producers of wheat and corn, cotton and tobacco, and all the wealth of the nation. We have lost $225,000,000 each year in the value of wheat. Why, if we had bought that 75,000,000 ounces of silver and sunk it in the depths of the sea, so that England could not have got it at 70 cents an ounce, the American wheat-grower would have been a gainer of $225,000,000 annually. We produce 2,000,000,000 bushels of corn, and corn has fallen 26 cents a bushel. Wheat is the great staple, the great leader, and corn is but a follower of wheat among the cereals. Now, then, I will say that we lost 20 cents a bushel on corn; and so our American growers of corn have lost $400,000,000 annually upon their crop of corn, so that if they had bought all this silver and sunk it, the corn-growers would have been $325,000,000 to the good.

We produce 3,212,000,000 pounds of cotton annually, and in 1873 your cotton sold at 22 cents a pound. To-day it is bringing 7 and 8 cents. You have lost 12 cents a pound on every pound of cotton; and if the cotton-producers had bought all the silver and sunk it in the depths of the ocean they would have been each year $210,000,000 ahead on the transaction. In these three leading articles of production in the Union (I will not go through more of them) the loss to the producer each year has been $910,000,000 more than the value of the silver that it would have been necessary to have purchased.

Oh, my friends, they argue against silver. They say that our legislation is for the benefit of a few mine owners. Why, they are the most insignificant factor in the whole problem, although by their industry they have added to our wealth $75,000,000 annually. But this is a drop in the bucket, and yet we can afford to be just, even though they are not a great factor. I sat in Chicago at the Auditorium Hotel a few days ago conversing with a gentleman. I noticed that he was looking rather blue. He finally reached me a copy of the Chicago Tribune, and said: "Mr. Sibley, I want to call your attention to one fact. Here is a statement made, as by authority, showing the cost of production of silver. They have taken the leading mines, and have figured it out here that it only costs 40 cents an ounce to produce it. Now," he says, "I want you to look at that mine, where they say the cost is only 40 cents an ounce. Four weeks ago we took our pumps out of that mine, and the water covers our levels to-day, and there never will be an ounce of silver produced from that mine again. The average cost of mining of silver in that mine is more than $1 an ounce; and we have been running it for the last few years, hoping and praying for better times, until we could get our money out of the production." It is unfair to take four or five of the leading mines in silver producing and, taking the cost of production in those mines, say that that is the cost of the production of silver. It is just as unfair as it would be to come to us in our Commonwealth and take four or five producers of petroleum whose wells yield 300, 500 and even 10,000 barrels a day, and assume that petroleum only costs 10 cents a barrel to produce, because these men who are producing thousands of barrels a day may be making a profit.

To-day the market for petroleum in Pennsylvania is 58 cents, and for two years it has been produced at a loss of not less than 10 cents a barrel. You say, "Then, why don't they shut down?" Why, their case is like that of the fellow who had hold of the bear's tail and wanted some one to help him let go. [Laughter.] If they close down those wells the salt water will flood them, and the oil will never come again; so, in desperation, they have held on to their little wells and pumped them at a loss, waiting and praying for the better times which the Democratic platform promised to give the country. [Applause.]

Now, let us deal fairly with silver. Statistics that are in the hands of gentlemen upon this floor—as authoritative statistics, I presume, as those of the Treasury Department—show that the average cost of production of an ounce of silver has been nearer to $2 than to $1.

Mr. PENCE. If the gentleman will pardon the interruption, I will state to the House, by way of illustrating the point he is making, that the report of the Senate Committee on Mining, which was made to the Senate last March, but is not yet, I believe, generally in the hands of members here, shows that the cost of production of gold and silver is more than its coinage value. Let me say, further, that the verified records show that in the most important silver mining camp in the world, Leadville, Lake County, Colo., where the silver mining industry began in 1879, there were located, recorded, and worked, from 1879 to June 1 of this year, 19,300 mining locations. Upon each of them an average of ten acres, $100 worth of work has been done, at an average cost of $10 per acre. The result has been that but 3,800 of them have been considered of sufficient value to be patented, and for the last twelve months but eighteen of those mines have been worked at a profit. I present these figures as illustrating the gentleman's point.

Mr. SIBLEY. I am much obliged to the gentleman.

Mr. PICKLER [to Mr. SIBLEY]. Will you discuss the ratio before you close?

Mr. SIBLEY. Mr. Speaker, a gentleman near me asks me to discuss the question of the ratio before I sit down. I am not particular about the ratio, but I would rather see it 15½ to 1 than 16 to 1, because I would rather see the people get 11 or 12 cents a pound for their cotton, and $1.10 a bushel for their wheat. I would rather see the ratio 16 to 1 than 17 to 1, because if the people are to be robbed at all I would rather they were robbed of ten cents than of twenty.

I will agree to a ratio of 18 to 1 upon the same principle. I will agree to a ratio of 20 to 1, because I would rather see the farmers get 65 or 70 cents a bushel for their wheat than that they should be compelled to take the price they will get the day you pass this measure of repeal without providing a substitute for the existing law. I will make this prophecy, and we shall see who prophesies correctly: The day you repeal the Sherman act, or within four weeks from that time, if you repeal it without a substitute, silver will strike 45 or 50 cents an ounce and wheat will sell below 45 cents a bushel. When silver strikes 40 cents an ounce your cotton will strike 4 cents a pound.

What had England to gain by stopping the mintage of silver in India? The two great English political parties, the Conservatives and the Liberals, are very evenly divided, and although the gentleman from Ohio [Mr. HARTER] has talked so eloquently about the happiness and prosperity of England, yet we know that for three years past ruin, distress, and starvation have prevailed there. The Liberal party, in order that it might maintain itself in power, jumped at the occasion to stop the silver mintage in India, depressing the price from 82½ to 70 cents an ounce, and you saw how the wheat market followed it from 75 cents to 53 cents per bushel.

You never saw the day when silver went up that wheat did not go up, and cotton also. We know that after the passage of the Sherman law, which men said was going to remedy the then existing evils, silver bounded to 120 cents an ounce, and wheat bounded up with it. If you give us free-silver coinage at a ratio of 16 to 1 we, as the friends of silver, are ready to-day to pledge our faith to the farmers of the West and the cotton-growers of the South that they will get 11 cents a pound for their cotton and $1.10 for their wheat.

Mr. HICKS. May I ask the gentleman a question?

Mr. SIBLEY. Yes, sir.

Mr. HICKS. If limited coinage has reduced the price of wheat in Pennsylvania to 60 cents a bushel, how does the gentleman make out that free and unlimited coinage will raise it to a dollar?

Mr. SIBLEY. Because of the ability of England to take the ounce of silver which she buys here at 70 cents, and go to India and buy as much wheat with it as she ever could buy at any time with an ounce of silver. As I have said, the ounce of silver still measures the value of the bushel of wheat in India. If she has to pay us, as she will under a free-coinage act with a ratio of 16 to 1, $1.29 an ounce for silver, she can not take it to India to exchange for wheat, but must come to us and pay a dollar or more for wheat.

A MEMBER. Laid down in Liverpool?

Mr. SIBLEY. Yes.

Mr. HICKS. One more question. What was the price of wheat when the Sherman law was enacted?

Mr. SIBLEY. Do you mean the law of 1890?

Mr. HICKS. Yes.

Mr. SIBLEY. Eighty-three cents.

Mr. HICKS. What is it worth to-day?

Mr. SIBLEY. It sold last week at 53 cents in Chicago.

Mr. COX. It has sold in South Tennessee for 38 cents.

Mr. HICKS. Now, will the gentleman please answer this question: If limited coinage has reduced the price of wheat from 83 to 53 cents, how can free and unlimited coinage raise the price?

Mr. SIBLEY. Mr. Speaker, I think that is a fair question. We have not had any coinage in the proper sense; we have not coined our silver; we have denied its money value; we have debased it and degraded it and have made it a tool for England to use to destroy the wheat-growers and cotton-growers of this nation. We have coined only a part. Free coinage will do this: You coin fifty-four millions out of a production of seventy-five millions, and the twenty-one millions of surplus determines the value of the balance.

We have said that $54,000,000 of this is money and the balance pig metal; and it has been the pig metal that has fixed the prices all the time, and not the money. I invite the lawyers of this body to jump on that proposition, if they can. The lawyers and the bankers are standing together here pretty solid. [Laughter.] The lawyers came on one occasion to the incarnate God, and thought to confuse him by asking some questions; and I remember he turned to them and said:

> Woe unto you also, ye lawyers! for ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers.
> Woe unto you, lawyers! for ye have taken away the key of knowledge: ye entered not in yourselves, and them that were entering in ye hindered.

[Applause.]

Mr. HICKS. I would like to ask the gentleman another question. He has said, as I understand, that it is the pig-metal silver that has regulated the price of wheat. Am I correct in understanding him that way?

Mr. SIBLEY. I did not catch the gentleman's remark.

Mr. HICKS. Do you say that the price of the pig metal regulates the price of wheat?

Mr. SIBLEY. I say that the price of this disgraced, debased, decried surplus has regulated the value of wheat at all times since 1873. I will maintain that proposition at any and all hazards.

Mr. HICKS. For every bar of silver that has been placed in the Treasury silver notes have been issued, have they not?

Mr. SIBLEY. I do not know that there has been a silver note issued for every bar. I can tell the gentleman the exact amount in a moment if he desires.

Mr. HICKS. I understood the gentleman to say that the silver is lying idle in the Treasury; but I also understand that a note has been issued representing every dollar's worth of silver that is in the Treasury.

Mr. SIBLEY. It is the amount that has not come into the Treasury that has caused the distress to the farmers and producers of this nation.

Mr. HICKS. I am a farmer like yourself, and I am also a lawyer. I farm at long range, just as you do. I am very anxious, however, to know how the repeal of the Sherman law can in any way affect the price of wheat or raise the value of farm lands. If you can convince me that free and unlimited coinage will have the effect that you state, I am ready to vote for it.

Mr. SIBLEY. Well, I am going to convert you right now, if you will stand by your proposition. [Laughter.]

Mr. HICKS. All right.

Mr. SIBLEY. We can only judge of the future by the past and the present. Everything has declined since you demonetized silver, since you commenced hostile legislation against it. Pennsylvania farm lands to-day are not worth 40 cents upon the dollar of what they were in 1873. Is not that correct?

Mr. HICKS. I am sorry to say it is the fact.

Mr. SIBLEY. And none of the products of the Pennsylvania farm—your wheat and corn and beef—bear a higher ratio than that, compared with the price in 1873; is not that the fact? Now, then, we know that something happened in 1873, that permitted England to come here and buy an ounce of silver at 70 or 80 or 90 cents and take it to India and exchange it for a bushel of wheat. And that very fact—that we have not given silver the place that rightfully belongs to it as one of the precious metals of the earth, as one of the foundations of credit, has enabled her to use that depreciated metal—which if we had free silver coinage would at all times be worth 129 cents an ounce—has enabled England to come here and get this metal at 90 cents an ounce, and with it purchase wheat and cotton to come into competition with our products. For the information of the gentleman let me send to the desk to be read an extract from the language of Archbishop Walsh of Dublin:

The Clerk read as follows:

> The classic prediction in this matter is that of the French economist, M. Ernest Seyd. So far back as 1871, two years before the calamitous success of the doctrinaire crusade against the maintenance of the bimetallist system as it was then in operation in France, M. Seyd used the following remarkable words:
>
> "It is a great mistake to suppose that the adoption of the gold (standard of value) by other states besides England will be beneficial. It will only lead to the destruction of the monetary equilibrium hitherto existing, and cause a fall in the value of silver from which England's trade and the Indian silver valuations will suffer more than all other interests, grievous as the general decline of prosperity all over the world will be."

Then comes a singularly noteworthy passage:

> The strong doctrinairism existing in England as regards the gold valuation is so blind that, when the time of depression sets in, there will be this special feature:
>
> The economical authorities of the country will refuse to listen to the cause here foreshadowed; every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters; the workman and his strikes will be the first convenient target; then "speculating" and "overtrading" will have their turn; many other allegations will be made, totally irrelevant to the real issue, but satisfactory to the moralizing tendency of financial writers.

Mr. BRYAN. May I interrupt the gentleman from Pennsylvania [Mr. SIBLEY] a moment?

Mr. SIBLEY. Certainly.

Mr. BRYAN. I would like to read in support of the gentleman's position an extract from the agricultural report of 1890, page 8—a report issued by Mr. Harrison's administration:

> The recent legislation looking to the restoration of the bimetallic standard of our currency, and the consequent enhancement of the value of silver, has unquestionably had much to do with the recent advance in the price of cereals. The same cause has advanced the price of wheat in Russia and India, and in the same degree reduced their power of competition. English gold was formerly exchanged for cheap silver, and wheat purchased with the cheaper metal was sold in Great Britain for gold. Much of this advantage is lost by the appreciation of silver in those countries. It is reasonable, therefore, to expect much higher prices for wheat than have been received in recent years.

Mr. OUTHWAITE. Will the gentleman from Nebraska answer a question?

Mr. BRYAN. Yes, sir.

Mr. OUTHWAITE. Where was this cheap wheat, to which you refer, bought?

Mr. BRYAN. What cheap wheat?

Mr. OUTHWAITE. The cheap wheat that is alluded to in that article?

Mr. BRYAN. In Russia and India.

Mr. OUTHWAITE. What was the currency used in payment at that time?

Mr. BRYAN. Silver. But let me say to the gentleman, the silver price was as high in India then as it is now—that is to say, it was as high in 1873—while the gold price has gone down in this country just as silver has gone down.

Mr. OUTHWAITE. In other words, they got a silver price for silver wheat.

Mr. BRYAN. I was only giving the article as it appears in this report; gentlemen can draw their own conclusions.

Mr. SIBLEY. Mr. Speaker, when I was interrupted first I was about to state the reasons that England desired, especially at that time, to depreciate further the value of silver. Parties were very evenly divided in Great Britain, and in order to maintain a majority Mr. Gladstone found it necessary to feed their people with cheaper food, to be able to put on the markets of England wheat at a lower price, and they accomplished their purpose by shutting up the coinage of silver in the India mint, and made the difference in price between 75 cents and 53 cents per bushel in the cost of wheat.

But you fear that she will not restore the coinage of silver to India. Not the slightest trouble about that. Why did she not put India on a gold basis? She did not allow the gold dollar or an ounce of gold to become a legal tender in India. Let her throw India open to gold coinage, and the whole problem will be solved, and we will not care what disposition we make of this question. Why, it will solve the whole thing in a moment. It will solve itself. There would be no longer a problem as to where India would be.

Mr. Speaker, I have been amused at the attitude of Eastern Democrats on this question. I had to smile the day before yesterday when the gentleman from Ohio [Mr. GROSVENOR] spoke. If I ever heard the old Democratic party ripped up the back, jumped on, trampled on, shaken up, rolled all over the floor, he did it. [Laughter.] But when he wound up his speech with a declaration that as things were he thought he would vote for the unconditional repeal of the Sherman act, I saw one of my Democratic friends on this floor from New York clap his hands long and loud after everybody else had got through; and I could not tell whether he was applauding the first part of the gentleman's speech or the second part. [Laughter and applause.]

Mr. BRYAN. May I interrupt the gentleman from Pennsylvania long enough to insert in the RECORD in this connection what that gentleman from Ohio said in regard to the Sherman bill three years ago?

Mr. SIBLEY. Yes, sir.

Mr. BRYAN. On the 12th day of June, 1890, the gentleman from Ohio just referred to said on this floor:

> The Republican party, true to its faithful guardianship of the people's interests, has determined to give to the people of the country a great increase in the circulation, and you resist, you refuse to have it.

Mr. SIBLEY. They tell us, Mr. Speaker, that if we adopt free-silver coinage at any ratio, or reënact the Bland bill, gold will go out of the country. Well, now, we are not to be forever frightened by the bugaboo of gold. Suppose it does go out of the country. Nations are merely aggregations of individuals, and are governed by much the same laws, the same ideas, and rules that control individuals. No man gets a dollar of gold out of my pocket that I do not think I get an equivalent for in some way, shape, or form. Other countries will not get the gold from us unless they have something to give us that we would rather have than the gold. They must have something to exchange for our gold. And supposing that it does go out and they take it all. What then? They do not want to do it. They hold too many of our bonds, that under the present law are payable in coin of standard value, which means either silver or gold, to run any risks. They want gold in payment of these bonds, and they do not want all the gold to go from our country. But supposing again, I say, they take it all.

Why, what will happen then? They say gold will go to a premium. Well, it has been to a premium for twenty years, and you did not know it. Let it go to a premium, and when the Ward McAllisters and the other Four Hundred want to go to Europe for their summer outings, it will cost them a little more to make their exchanges, and if they bring home fine clothes, the products of European countries, it will cost them a good deal more money; and we will build a better tariff wall round our industries than that builded by the gentleman from Ohio. Why, if they will not take our money, we will not take their goods.

What trade will we lose? What nations do we wish to trade with? England, Germany and France will not buy a dollar's worth of products of American labor. They take only the necessities of life, our wheat, our pork, our corn and our cotton and beef; those they have got to have anyway, and they must pay us in the money we specify. Now, suppose they will not take our money. We will just stop buying of them, and that will start our own factories running, start our own spindles to humming and our own wheels to revolving.

Why, Mr. Speaker, as a man who is somewhat interested in a bank, and wishing to protect it, I say that for the safety of the small banker there is but one course, and that is bimetallism in this country. And whenever you make the foundation too narrow, whenever you set up the great pyramid upon its apex, and build up thereon, the higher you build the greater will be the ruin when some adverse circumstance runs up against your pyramid. You build it on a single standard, and your foundation is too narrow for safety, and whenever a wave of distrust runs over the country your little savings of a lifetime will be swept away.

The census showed that in 1890 twenty-four thousand people owned one-half of the total wealth of the nation; and since the shaking up you have given us over in New York the probabilities are that about fourteen thousand have got it to-day; and if you carry out your designs, four thousand will have it in the year 1900. We are going to save you from your own folly. We propose to help the people, so that they can have money with which to travel on the railroads, with which to transport their products, and so that your stocks will earn you dividends in spite of yourselves.

We are going to make your stocks in railroad securities, or in every legitimate enterprise, pay you dividends whether you want them or no. Your course is to put them into the hands of receivers. Our course is to put the profits into the hands of the stockholders and into the hands of every man who has put an honest dollar into these enterprises. We have respect for the wisbes and the needs and the opportunities and successes of the rich as well as the poor; but we can not divide and say that one class shall have all and the other class none of the benefits of government.

But, Mr. Speaker, I am told that the Republicans are going to join with the Democrats to repeal this bill. And what Republicans? The Republicans of the East and the Democrats of the East. I tell you, the man who thinks over the situation of this nation to-day is forced to the belief that the salvation of this country, if we are to have a country worth saving, depends upon the men living west of the Delaware River and south of Mason and Dixon's line. [Applause.] You can not longer commit your interests to those whose interests are antagonistic to your own. I find that you gold men agree, and you applaud each other, regardless of your politics; and there comes to my mind a scene that is depicted in Holy Writ, the blackest scene, the most cruel and wicked scene, where truth incarnate was betrayed to the rulers, and which tells us that Pilate, finding no fault in Him, sent Him to Herod; but Herod, not having the power of death, sent Him back to Pilate, demanding His crucifixion; and Pilate delivered Him over to death. And right following that comes this passage:

> And the same day Pilate and Herod were made friends together; for before they were at enmity between themselves.

[Laughter.]

Now I can understand how there are no party lines on this question. When you have the people nailed to the cross you can agree to become friends from that day forward. [Laughter.]

My friend from Ohio [Mr. HARTER] told us about the prosperity of England and the prosperity of every nation that had a monometallic standard. He told you how since the stoppage of silver coinage in India prosperity had dawned over the whole nation. Now, I have not got time to answer the gentleman, but I will just read some headings in the New York Sun of yesterday, a good Democratic paper:

> RAN RIOT IN BOMBAY—FURY OF RELIGIOUS HATRED BEYOND MILITARY CONTROL—GREAT LOSS OF LIFE AND PROPERTY—EUROPEANS FLOCK TO THE GOVERNMENT BUILDINGS FOR SAFETY.
>
> A Cabinet Consultation in London—Late Dispatches Indicate that the Government Hopes Soon to Check the Turmoil— * * * —A Bombay Merchant's Opinion—The Silver Situation has Created a Great Army of Unemployed in India.
>
> Damoder Gordhundas, a merchant of Bombay, who is staying at the Fifth Avenue Hotel, was greatly interested in the reports of the rioting in that city. "I feel that the reports are exaggerated," said he. "The action of the government in suspending the free coinage of silver has closed the mints and the mills until the army of the unemployed in Bombay numbers in the thousands. This great body of unemployed laborers and mechanics may have taken advantage of the occasion offered by the religious riot to make a serious demonstration."

Now, against the gentleman from Ohio I set the gentleman from India. [Laughter.] But I enjoy hearing the Ohio man talk, for he comes out and says just what he wants. He argues that the less money a nation has, the happier it is, and the more prosperous; and by a parity of reasoning, the less money the gentleman has, the happier he is; but I do not believe that. [Laughter.] I believe that the gentleman uses this expression in a Pickwickian sense.

Why, my friends, just consider that proposition for a moment.

If we could draw a line about the city of Washington and erect a wall, do you not suppose if you could take away half of all the money in the city of Washington, that the one-half of the money remaining would still buy all the products of industry that are for sale in the city of Washington, just as effectually buy them as the whole would before?

If you could give three hundred men in the city of Washington $100 apiece, and that was all the money there was in this city, all that could get into it, that money would buy every dollar's worth of property in the city of Washington that was for sale. The price goes down to correspond with the volume. That has been the history of the ages.

Let me state some economic axioms: When you double the money of a nation you divide the debt; and if you divide the money you double the debt. Double the money, you double the price: divide the money, you divide the price.

I learned when a boy at school that old mathematical axiom, that when you double sums you double the differences. That twice two is four and the difference between two and four is two, and that twice four is eight, and the difference between four and eight is four. Apply the same reasoning here, and you see that it does not make any difference whether it is little or much, it will just be the same in result. If a man works for a dollar a day and works for thirty days, he will receive $30; and when he pays $5 a barrel for flour, you will say that if he works for $2 a day he receives $60, and if he pays $10 a barrel for flour he would be no better off. Now, if he worked for a dollar a day and paid $5 a barrel for flour he has $25 left; when he has worked thirty days at $2 a day and paid $10 for his barrel of flour he has $50 left, has he not? Now, in which case is he the better off? Especially if he is a debtor. It would not make so much difference if all men were out of debt and paying cash, but there are $32,000,000,000 of indebtedness in the United States, national, State and corporation, municipal and private.

With $3,600,000,000 as the total gold of the whole world, how are we going to pay off this debt? Do you want to double it? You carry out your designs to make silver a mere legal tender for sums of $5, which are your designs, and which you do not hesitate privately to avow—you divide the money, and just as sure as twice two is four you have doubled the debt of every debtor; you have doubled the income of every creditor.

Anglo-American bondholders wish a gold standard because in 1907, only fourteen years hence, some five hundred and fifty millions of bonds now payable by their express terms in coin of standard value will fall due. If we destroy silver as coin of standard value the bond will then by its terms become payable in gold. These people well know that the Government will have enough silver and gold in the Treasury to pay these bonds at maturity, but never enough gold, and they wish to force a new mortgage upon the industry of the nation and dictate their own terms concerning such mortgage.

Mr. Speaker, the Republican party, who have for over thirty years had control of the finances of the nation, proudly point to their successful management thereof. They cite the fact that the indebtedness of the nation in 1866 was about $2,800,000,000 and that now the bonded debt of the nation is only $585,000,000. With their boasting they forget to tell you that in principal, interest, and premium on the bonds we have paid about $4,000,000,000, and that it would take about as much of the products of industry to pay the little balance yet remaining as it would to have paid the whole debt in 1866. It would take to-day to pay off the little balance 312,000,000 pounds more of cotton than would have sufficed to pay off the entire debt in cotton in 1866. Year after year production has been paying off interest and principal, and all the time the debt, instead of diminishing, has been increasing.

Let me entreat, gentlemen, to fully consider the consequences that must ensue if you, by unconditional repeal, further lower the price of silver. Consider what plea shall justify you to the producers of wheat, corn, and cotton. What plea will be accepted by the toilers of the nation who see by your votes their debts doubled and the opportunities for a comfortable existence forever swept away. Mr. Speaker, my vote shall be cast before you as it would be cast before the great white throne which has decreed that I am my brother's keeper.

How I like to hear the gentleman from Ohio [Mr. HARTER] bubble over, because he does it in such an easy, pleasant way. He heaves and pitches, and springs a leak here, and springs a leak there. [Laughter.] The only thing that I can think of that reminds me of my friend is Mark Twain's description of the storm on the Erie Canal. Speaking of the canal boat in a storm, he says:

> She heaved and sot, and sot and heaved,
> And high her rudder flung,
> And every time she sot and heaved
> A mighty leak she sprung.

[Great laughter.]

Mr. Speaker, history has built great monuments upon the plains of the past to mark the point where two roads part. She has erected great light-houses along the shores of Time to warn the passing mariner of the sunken rocks and hidden reefs. Let us observe some of these lights. Moses went down to old Pharaoh, in Egypt, and demanded the deliverance of the people of Israel from the house of bondage, and Pharaoh's answer was the same tale "of brick without straw." Charles the First attempted to coerce Parliament, and he lost his head, and human liberties took a long step forward and upwards. When the people of France cried for bread, a flippant queen asked, "Why they ate not cake." Some day, when a complacent De Breze, knight of the bedchamber, shall enter these Halls and intimate the king's pleasure and our duty, there shall arise some modern Mirabeau, who, driving him hence, will tell him we are here by the will of God and the voice of the sovereign people, to whom alone we owe allegiance and to whose mandates alone we bow.

Our fathers in these colonies pleaded, humbly entreated, of old England to stay the hand of oppression, and asked her to remove the hands of greed which plucked from them the fruits of their toil, and the reply of George III was the imposition of heavier burdens. Our reply was the Declaration of Independence; that wonderful document which embraces the rights of man; if I were to read it in this House I fear it would be a strange message to many. Like the preaching of Paul, "to the Jews a stumbling block, to the Greeks foolishness." [Laughter and applause.] It would be held as a communistic production and its authors demagogues [laughter], because it dared to tell England the truth, and that we were independent and existed without caring either for her crowns or favors.

Why, my friends, to-day all over this land the cry of the people is heard, the banks are failing, not from lack of abundant assets; they have got large surpluses, they even hold great quantities of Government bonds, and yet are forced to suspend. Factories are being closed, mechanics are unemployed, stores are without customers, three millions of idle men are walking up and down asking for an opportunity to earn bread for the hungry ones at home.

Why is this? Is it because of too much money? Is it because of silver money? No; for silver will pay a debt, will buy as much bread, will clothe as many naked as any other dollar. These results come because of the lack of a dollar of any kind; they come from the inability of the people to effect exchanges between one commercial center and another. These New York bankers started their little panic in pursuance of their plan to pinch the West and South and coerce the members of this body into their views. I have read of great masses of rock so nicely poised upon a point that a child could set them in motion, but an army could not stay them after they were once started down the declivity.

So it is with this panic. It is like a conflagration, and we are not here to inquire into the cause of the conflagration. It may be a case of arson [laughter] or it may be a case of "logical evolution," for the gentleman from New York [Mr. HENDRIX] told us that we are "evoluting" toward the gold standard. [Laughter.] I agree with the gentleman that the process of evolution has been going on for twenty years, and it has evoluted the wealth heretofore so evenly distributed among the people of this country into the pockets of the twenty-four thousand. While we have been "evoluting" toward a gold basis we have been "evoluting" toward that condition which confronted all the nations of ancient times just before they lost their liberties. Evolution! It has been said that evolution comes from a full stomach, but there is another thing that comes from an empty stomach, and it is called "revolution." [Laughter and applause.]

I warn you, gentlemen, that the people of to-day are aroused. For years the people have demanded more money, and you meet that demand with a proposition to take away one-half of what they already have! Is that your answer? Can statesmen be so blinded to the interests of the people, the rich and the poor alike, as to carry this design further, in face of the protests of the sixty-seven million toilers of this land?

Oh, Mr. Speaker, in 1776 our forefathers, despite the protests of the Tories of that day, declared their political independence of Great Britain, and so to-day, despite the howling of the "Tories" of this House and their friends in the lobbies, the time has come when by the grace of God we can well declare our financial independence of the same power. [Applause.]

Mr. Speaker, the friends of bimetallism stand here and plead the cause of those who have not easy access to the seat of power, of the men who can not afford to maintain lobbies to throng the corridors of this Capitol building, of the men who can not afford to go to the expensive hotels of this city and sit down to influence the members of this body. But, gentlemen of the other side, you can keep your lobby, if you please, of stock-brokers and

gamblers and *chevaliers d' industrie*. [Laughter.] They can stay here and drink their champagne frappe, eat their canvas-back and terrapin. Very few of those who are back of us are present here, but we have thousands of communications telling us that the people are on their knees in prayer while we are fighting their battles here, and that is more to us than all your packed lobbies.

Mr. Speaker, we have come to the fork of the roads. This means either bimetallism, free silver coinage with 100 cents in every dollar from this time forth, or it means the utter annihilation of silver as money all over the globe. We have indeed come to the fork of the roads. We have traveled the one road before and we have found it safe. It is no experiment. Along this way our fathers saw the nation grow and expand, and from small beginnings become one of the mightiest of the earth. We have been this way before. Along this road our fathers carried to a successful termination two great foreign wars, and on this road was maintained the mightiest conflict of modern ages, which preserved intact the liberties and the unity of the State. This is no new road. This is such a road as was described by the psalmist when he said:

> Her ways are ways of pleasantness and all her paths are peace.

But there is another road that leads, no man knows where. No human foot upon this continent has ever trod its trackless wilds. I am afraid it is the road that old Solomon spoke of when he said:

> There is a way which seemeth right unto a man, but the end thereof are the ways of death.

[Laughter and applause.]

Mr. Speaker, I think this must be the occasion that the prophet Amos had in mind, looking down through the long vista of the future, when he said:

> Hear this, O, ye that swallow up the needy, even to make the poor of the land to fail: * * * making the ephah small and the shekel great, and falsifying the balances by deceit. * * * Shall not the land tremble for this, and everyone mourn that dwelleth therein?

Mr. Speaker, that is pretty nearly prophecy. Our land is in mourning and trembling to-day because these men have made the bushel small and the shekel great.

Mr. McCLEARY of Minnesota. Will the gentleman permit a question?

Mr. SIBLEY. Yes, sir.

Mr. McCLEARY of Minnesota. I beg the gentleman's pardon for interrupting at this point, but I could not sooner get the opportunity. The gentleman has been speaking of prophecy. A short time ago he sent a prophecy to the desk to be read; will he please name the gentleman whose prophecy he had read by the Clerk?

Mr. SIBLEY. That was the prophet of the devil. This is the prophet of God Almighty. [Laughter and applause.] That prophet belonged on your side.

Mr. McCLEARY of Minnesota. I did not ask the gentleman to characterize the prophet; I asked him to name him.

Mr. SIBLEY. Ernest Seyd.

Mr. McCLEARY of Minnesota. Is that the same gentleman whom you accuse of having come over here in 1873 as an emissary to "down" silver?

Mr. SIBLEY. I did not utter such accusation. I will append to my remarks what distinguished gentlemen have said—how, sent here as a friend of silver, that man betrayed it—how he came into this House, went with your committees, and showed his dexter hand all through. That will be incorporated in my remarks. I will try to make it plain to the gentleman.

Mr. McCLEARY of Minnesota. My question is, Is this the same gentleman whom you accuse of that "villainy"?

Mr. SIBLEY. No doubt about it, sir.

Mr. McCLEARY of Minnesota. Then I ask that the Clerk read that prophecy again.

Mr. SIBLEY. Everybody has heard it read. If it is the same quotation——

Mr. McCLEARY of Minnesota. The same.

Mr. SIBLEY. Then why have it read twice?

Mr. McCLEARY of Minnesota. If you object to it, then I ask gentlemen to read it in the quiet of their closets, and ask themselves whether the man who used that language could have done the thing you say he did.

Mr. SIBLEY. Yes, sir; I have seen men sell out within the last two months. [Laughter.] From the time he uttered that prophecy two years had elapsed. I have known men to change their minds in twenty minutes. Wise men, it is said, change their minds often; fools, never.

Mr. McCLEARY of Minnesota. What the gentleman says can not be true of a man who died in the cause of silver, as Ernest Seyd did.

Mr. PENCE. When the gentleman speaks of his having "died" does he mean he changed his colors? [Laughter.]

Mr. McCLEARY of Minnesota. The gentleman from Pennsylvania had sufficient regard for Mr. Seyd to quote him as an authority in behalf of silver. Simple justice demands that his memory be treated with fairness. Both before and after 1873 Ernest Seyd was recognized as one of the foremost champions of silver in Europe, a man whose opinion was eagerly sought by the silver commission of 1876, and of whom Mr. Horton, the bimetallist, said, speaking of Mr. Seyd's death, at the international monetary conference of 1881:

> It was the profound interest which he took in the conference which brought him here and hastened his death.

This unfounded charge against the memory of a man now unable to defend himself (and I believe that the gentleman from Pennsylvania would not willingly do anyone an injustice) has nothing to do with the merits of this discussion, even if it were true; and I am glad that the gentleman from Pennsylvania has selected so good a quotation to show the real position of Mr. Seyd.

Mr. SIBLEY. Thank you. In the name of sixty-seven millions of American citizens we plead for more money; and in the name of twenty-four thousand you not only refuse our demand, but purpose the taking away of one-half of what we have left. Prompted alone by our love for rich and poor, by our love for the welfare and peace of our common country, let us warn you that the masses of the people are aroused. All over this fair land they are on their knees in prayer. Their wails have been heard at the throne of the Almighty. My friends, hunger and cold know no philosophy and respect no laws; and when these twin devils are let loose and you force them out upon the world—

> Then woe to the robbers who gather
> In fields where they never have sown;
> Who have stolen the jewels from labor,
> And builded to Mammon a throne.
>
> For the throne of their god shall be crumbled,
> And the scepter be swept from his hand,
> And the heart of the haughty be humbled,
> And a servant be chief in the land.
>
> For the Lord of the harvest hath said it,
> Whose lips never uttered a lie,
> And his prophets and poets have read it,
> In symbols of earth and of sky;
>
> That to him who hath reveled in plunder
> 'Til the angel of conscience is dumb,
> The shock of the earthquake and thunder,
> And tempest and torrent shall come.

[Loud applause.]

The following are the articles and notes to which Mr. SIBLEY referred in his remarks and which he asked to have appended thereto:

Here is what Mr. Hooper, the chairman of the Committee on Coinage, Weights and Measures, and who reported the bill, said in regard to the measure, and of Mr. Ernest Seyd, on the floor of the House:

"The bill was prepared two years ago, and has been submitted to careful and deliberate examination. It has the approval of nearly all the mint experts of the country and the sanction of the Secretary of the Treasury. Ernest Seyd, of London, a distinguished writer and bullionist, is now here, and has given great attention to the subject of mints and coinage, and after examining the first draft of the bill made various sensible suggestions, which the committee accepted and embodied in the bill. While the committee take no credit to themselves for the original preparation of this bill, they have no hesitation in unanimously recommending its passage as necessary and expedient." (See page 2304, *Congressional Globe*, April 9, 1872.)

Below will be found a few extracts from different United States Senators and Representatives as they appear in the CONGRESSIONAL RECORD. Let us take the words of Senator ALLISON, of Iowa, first. They are:

"But when the secret history of this bill of 1873 comes to be told it will disclose the fact that the House of Representatives intended to coin both gold and silver, and intended to place both metals upon the French relation instead of our own, which was the true scientific position with reference to this subject in 1873, but that the bill afterwards was doctored, if I may use the term, and I use it in no offensive sense, of course——"

* * * * * * *

"I said I used the word in no offensive sense. It was changed after the discussion, and the dollar of 420 grains was substituted for it."—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1085.

"In connection with the charge that I advocated the bill which demonetized the standard silver dollar, I say that, though the chairman of the Committee on Coinage, I was ignorant of the fact that it would demonetize the silver dollar or of its dropping the silver dollar from our system of coins as were those distinguished Senators, Messrs. Blaine and VOORHEES, who were then members of the House, and each of whom, a few days since, interrogated the other: 'Did you know it was dropped when the bill passed?' 'No,' said Mr. Blaine. 'Did you?' 'No,' said Mr. VOORHEES. I do not think that there were three members in the House that knew it. I doubt whether Mr. Hooper, who, in my absence from the Committee on Coinage and attendance on the Committee on Ways and Means, managed the bill, knew it. I say this in justice to him."—*Judge Kelley, of Pennsylvania*, in CONGRESSIONAL RECORD, volume 7, part 2, Forty-fifth Congress, second session, page 1005.

Mr. BECK. Will the gentleman from Massachusetts [Senator Dawes] allow me to say a word? The Senator from Massachusetts will recollect that I have not said a word about the history of the demonetization bill, except in a response to questions from the Senator from Iowa [Mr. ALLISON].

* * * * * * * *

Mr. DAWES. The distinguished Englishman to whom I referred, who was charged with having come over here to do the opposite of what he did, was Ernest Seyd.

Mr. BECK. I observe, if the gentleman will allow me, that on the 9th day of April, 1872, when the bill was read up to its sixth section and laid aside and never taken up again, the gentleman from Massachusetts [Mr. Hooper] remarked:

"The bill was prepared two years ago, and has been submitted to careful and deliberate examinations. It has the approval of nearly all the mint experts of the country, and the sanction of the Secretary of the Treasury. Mr. Ernest Seyd, of London, a distinguished writer who has given great attention to the subject of mints and coinage, after examining the first draft of the bill, furnished many valuable suggestions which have been incorporated in the bill."

"I suppose he is the same person."

Mr. DAWES. There is no doubt about that fact. (See page 125 CONGRESSIONAL RECORD, December 12, 1877.)

Mr. VOORHEES. I want to ask my friend from Maine, whom I am glad to designate in that way, whether I may call him as one more witness to the fact that it was not generally known whether silver was demonetized. Did he know, as the Speaker of the House, presiding at that time, that the silver dollar was demonetized in the bill to which he alludes?

"Mr. BLAINE. I did not know anything that was in the bill at all. As I have said before, little was known or cared on the subject. [Laughter.] And now I should like to exchange questions with the Senator from Indiana, who was then on the floor and whose business, far more than mine, to know, because by the designation of the House I was to put the question; the Senator from Indiana, then on the floor of the House, with his power as a debater, was to unfold them to the House. Did he know?"

"Mr. VOORHEES. I frankly say that I did not."—*Congressional Record*, Feb. 15, 1878, page 1063.

"It passed by fraud in the House, never having been printed in advance, being a substitute for the printed bill; never having been read at the Clerk's desk, the reading having been dispensed with by an impression that the bill made no material alteration in the coinage laws; it was passed without discussion, debate being cut off by operation of the previous question. It was passed, to my certain information, under such circumstances that the fraud escaped the attention of some of the most watchful as well as the ablest statesmen in Congress at the time. * * * Aye, sir, it was a fraud that smells to heaven. It was a fraud that will stink in the nose of posterity, and for which some persons must give account in the day of retribution."—*Mr. Bright, of Tennessee*, in CONGRESSIONAL RECORD, volume 7, part 1, second session Forty-fifth Congress, page 584.

"Why the act of 1873, which forbids the coinage of the silver dollar, was passed no one at this day can give a good reason."—*Senator Bogy, of Missouri*, in CONGRESSIONAL RECORD, volume 4, part 5, Forty-fourth Congress, first session, page 4178.

"It [the bill demonetizing silver] never was understood by either House of Congress. I say that with full knowledge of the facts. No newspaper reporter—and they are the most vigilant men I ever saw in obtaining information—discovered that it had been done."—*Senator Beck, of Kentucky*, in CONGRESSIONAL RECORD, volume 7, part 1, Forty-fifth Congress, second session, page 260.

The coinage act of 1873, unaccompanied by any written report upon the subject from any committee, and unknown to the members of Congress who, without opposition, allowed it to pass under the belief, if not assurance, that it made no alteration in the value of the current coins, changed the unit of value from silver to gold.—*Mr. Buchard of Illinois*, in CONGRESSIONAL RECORD, July 13, 1876, page 581.

I have before me the record of the proceedings of this House on the passage of that measure, which no man can read without being convinced that the measure and the method of its passage through this House was a "colossal swindle." I assert that the measure never had the sanction of this House, and it does not possess the moral force of law.—*Mr. Holman of Indiana*, in CONGRESSIONAL RECORD, volume 4, part 6, Forty-fourth Congress, first session, Appendix, page 193.

This legislation was had in the Forty-second Congress, February 12, 1873, by a bill to regulate the mints of the United States, and practically abolished silver as money by failing to provide for the coinage of the silver dollar. It was not discussed, as shown by the RECORD, and neither members of Congress nor the people understood the scope of the legislation.—*Joseph Cannon*, in CONGRESSIONAL RECORD, volume 4, part 6, Forty-fourth Congress, first session, Appendix, page 193.

Did the people demonetize silver? Never! It can not even be fairly said that Congress did it. It was done in a corner, darkly. It was done at the instigation of the bondholders and other money kings, who now with upturned eyes deplore the wickedness we exhibit in asking the question even, who did the great wrong against the toiling millions of our people? * * *

How will Congress answer these people except to say that the silver dollar weighing 412½ grains was an honest dollar until the 12th of February, 1873, when we destroyed the money in your pockets and left a vast debt hanging over you, since when our bonds have been sold from hand to hand in the markets among stock gamblers. They knew that we had stricken down your rights and trusted to our honor that your rights should be restored. It would be dishonest in us to restore your money to its value and vitality. It is bullion now—mere pig metal—and is no longer money.—*Senator Morgan*, in CONGRESSIONAL RECORD, December 12, 1877, page 144.

Mr. President, I now come to one of the most remarkable and to my mind one of the most fraudulent pieces of legislation this or any other country ever saw. I refer to the manner of the passage of the bill demonetizing silver. I will not occupy the time of the Senate by going over the whole history of this most iniquitous transaction. Mr. Hooper, since deceased, was at the time chairman of the committee having charge of a bill which had been referred to his committee, and on May 27, 1872, reported a substitute and moved to suspend the rules and pass the substitute, upon which motion, among other things, the following occurred, which any Senator can find by turning to the CONGRESSIONAL GLOBE, part 5, page 3883, and is as follows:

Mr. HOLMAN. I suppose it is intended to have the bill read before it is put on its passage.

The SPEAKER. The substitute will be read.

Mr. HOOPER of Massachusetts. I hope not. It is a long bill, and those who are interested in it are perfectly familiar with its provisions.

Mr. KERR. The rules can not be suspended so as to dispense with the reading of the bill.

The SPEAKER. They can be.

Mr. KERR. I want the House to understand that it is attempted to put through this bill without being read.

The SPEAKER. Does the gentleman from Massachusetts [Mr. Hooper] move that the reading of the bill be dispensed with?

Mr. HOOPER of Massachusetts. I will so frame my motion to suspend the rules that it will dispense with the reading of the bill.

The SPEAKER. The gentleman from Massachusetts moves that the rules be suspended and that the bill pass, the reading thereof being dispensed with.

Mr. RANDALL. Can not we have a division of this motion?

The SPEAKER. A motion to suspend the rules can not be divided.

Mr. RANDALL. I should like to have the bill read, although I am willing that the rules shall be suspended as to the passage of the bill.

The question was put on suspending the rules and passing the bill without reading; and (two-thirds not voting in favor thereof) the rules were not suspended.

* * * * * * *

Mr. HOOPER of Massachusetts. I now move that the rules be suspended, and the substitute for the bill in relation to mints and coinage passed; and I ask that the substitute be read.

The clerk began to read the substitute.

Mr. BROOKS. Is that the original bill?

The SPEAKER. The motion of the gentleman from Massachusetts [Mr. Hooper] applies to the substitute, and that on which the House is called to act is being read.

Mr. BROOKS. As there is to be no debate, the only chance we have to know what we are doing is to have both the bill and the substitute read.

The SPEAKER. The motion of the gentleman from Massachusetts being to suspend the rules and pass the substitute, it gives no choice between the two bills. The House must either pass the substitute or none.

Mr. BROOKS. How can we choose between the original bill and the substitute unless we hear them both read?

The SPEAKER. The gentleman can vote "ay" or "no" on this question whether this substitute shall be passed.

Mr. BROOKS. I am very much in the habit of voting "no" when I do not know what is going on.

Mr. HOLMAN. Before the question is taken upon suspending the rules and passing the bill, I hope the gentleman from Massachusetts will explain the leading changes made by this bill in the existing law, especially in reference to the coinage. It would seem that all the small coinage of the country is intended to be recoined.

Mr. HOOPER of Massachusetts. This bill makes no changes in the existing law in that regard. It does not require the recoinage of the small coins.

* * * * * * *

The question being taken on the motion of Mr. Hooper of Massachusetts to suspend the rules and pass the bill, it was agreed to; there being—ayes 110, noes 13.

And so the rules were suspended, and the substitute passed without its ever being read or any member of that body knowing the contents of it. (See speech of Senator Hereford of West Virginia in CONGRESSIONAL RECORD, December 14, 1877, page 206.)

I know that the bondholders and monopolists of this country are seeking to destroy all the industries of this people in their greed to enhance the value of their gold. I know that the act of 1873 did more than all else to accomplish that result, and the demonetization act of the Revised Statutes was an illegal and unconstitutional consummation of the fraud. I want to restore that money to where it was before, and thus aid in preventing the consummation of their designs.—*Speech by Senator Beck*, of Kentucky, page 258, CONGRESSIONAL RECORD, January 11, 1878.

The silver dollar is peculiarly the laboring man's dollar, as far as he may desire specie. * * * Throughout all the financial panics that has assailed this country, no man has been bold enough to raise his hand to strike it down; no man has ever dared to whisper of a contemplated assault upon it; and when the 12th day of February, 1873, approached, the day of doom to the American dollar, the dollar of our fathers, how silent was the work of the enemy! Not a sound, not a word, no note of warning to the American people that their favorite coin was about to be destroyed as money; that the greatest financial revolution of modern times was in contemplation and about to be accomplished against their highest and dearest rights! The taxpayers of the United States were no more notified or consulted on this momentous measure than the slaves on a Southern plantation before the war, when their master made up his mind to increase their task or to change them from a corn to a cotton field.

Never since the foundation of the Government has a law of such vital and tremendous import, or indeed of any importance at all, crawled into our statute books so furtively and noiselessly as this. Its enactment there was as completely unknown to the people, and indeed to four-fifths of Congress itself, as the presence of a burglar in a house at midnight to its sleeping inmates. This was rendered possible partly because the clandestine movement was so utterly unexpected, and partly from the nature of the bill in which it occurred. The silver dollar of American history was demonetized in an act entitled "An act revising and amending the laws relative to the mints, assay offices, and coinage of the United States." (See speech of Senator VOORHEES in CONGRESSIONAL RECORD, January 15, 1878, page 332.)

I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. * * * Experience has proved that it takes about $40,000,000 of fractional currency to make the small change necessary for the transaction of the business of the country. Silver will gradually take the place of this currency, and, further, will become the standard of values, which will be hoarded in a small way. I estimate that this will consume from $200,000,000 to $300,000,000 in time of this species of our circulating medium. * * * I confess to a desire to see a limited hoarding of money. But I want to see a hoarding of something that is a standard of value the world over. Silver is this * * *

Our mines are now producing almost unlimited amounts of silver, and it is becoming a question, "What shall we do with it?" I here suggest a solution which will answer for some years to put it in circulation, keeping it there until it is fixed, and then we will find other markets.—*Extract from a letter written by President Grant to Mr. Coudry*, October 13, 1873, eight months after he had signed the bill demonetizing silver, not knowing what that measure contained. See page 208, CONGRESSIONAL RECORD, December 14, 1877.

Horace Greeley saw what but comparatively few saw as clearly as he did, viz, that the establishment of the British system meant slavery not only to the blacks, but to the whites; and these were the words for which the

bankers of New York drove him from the office of the Tribune with a broken heart to the grave. He said:

"We boast of having liberated 4,000,000 of slaves. True, we have stricken the shackles from the former bondsmen and brought all laborers to a common level, but not so much by elevating the former slaves as by practically reducing the whole working population to a state of serfdom. While boasting of our noble deeds we are careful to conceal the ugly fact that by our iniquitous monetary system we have nationalized a system of oppression more refined, but none the less cruel, than the old system of chattel slavery."

Senator Ingalls said in a speech in this city on February 15, 1878: "No people in a great emergency ever found a faithful ally in gold. It is the most cowardly of all metals. It makes no treaty it does not break. It has no friends it does not sooner or later betray.

Armies and navies are not maintained by gold. It times of panic and calamity, shipwreck, and disaster, it becomes the agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of the greatest peril, it becomes the greatest enemy, more potent than the foe in the field; but when the battle is won and peace has been secured, gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels.

"It was the most invincible enemy of the public credit. Gold paid no soldier or sailor. It refused the national obligations. It was worth most when our fortunes were the lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction.

"But as usual, when danger had been averted and the victory secured, gold swaggers to the front and asserts the supremacy."

CHICAGO PLATFORM.

The following is the full text of the resolutions adopted at Chicago:

"Whereas bimetallism is as ancient as human history; certainly for more than three thousand years gold and silver came down through the ages hand in hand, their relations to each other having varied but a few points in all that vast period of time, and then almost invariably through legislation; and

"Whereas the two metals are named together indissolubly united in the Constitution of the United States as the standard of value of this country, placed there by George Washington, Thomas Jefferson, John Adams, Alexander Hamilton and their associates, and subsequently indorsed and defended by Andrew Jackson and Abraham Lincoln; and

"Whereas silver, one of these ancient metals, was, in the year 1873, without any previous demand by any political party or by any part of the people, or even by any newspapers, and without public discussion, stricken down from the place it had occupied since the days of Abraham and the Pharaohs, under circumstances of such secrecy that Allen G. Thurman, James B. Beck, WILLIAM M. STEWART, DANIEL W. VOORHEES, James G. Blaine, then Speaker of the House; James A. Garfield, William D. Kelley, and others present and voting for the bill, as Senators or Representatives, subsequently, repeatedly and publicly declared that they did not know until long afterward that so great and grave a change had been made in the financial system founded by the fathers of the Republic; and

"Whereas the debates in Congress show that the parentage of the measure was in part ascribed by friends of the bill to one Ernest Seyd, a London banker, who, it is claimed, was sent over to Washington by the moneyed classes of the Old World to secure its passage by secret and corrupt means; and

"Whereas President Grant, who signed the bill, declared long subsequently that he did not know that it demonetized silver; and

"Whereas the purpose of this attack upon one of the two ancient precious metals of the world was, by striking down one-half of the money supply, to wit, silver, to double the purchasing power of the remainder, gold, by making it the equivalent of everything possessed or produced by the labor of man, thus reducing the price of all commodities, arresting enterprise, impoverishing the toiler, and degrading mankind; that these results were not only inevitable but foreseen appears by the following language used at that time by the then president of the Bank of France, who said: 'If by a stroke of the pen they suppress one of these metals in the monetary service they double the demand for the other metal, to the ruin of all debtors;' and

"Whereas the awful consequences thus prophesied are now upon the people of the whole world, we stand in the midst of unparalleled distress and in the shadow of impending calamities which are beyond estimate. The ruling industry of the people who inhabit one-third of the area of this republic has been stricken down, property values destroyed, and the workmen compelled to fly as from pestilence. Everywhere over this broad land the honest toilers, numbering hundreds of thousands, have been thrown out of employment and will have to eat the bitter bread of charity or starve. The products of industry, of the farm and the workshop have depreciated in price, as shown by official and public statistics, until production ceases to be profitable; the money in the country, inadequate for the business of the land, has gravitated to the banks; while the people, distrusting the banks, have demanded their deposits to hoard or hide them; mercantile houses are going to the wall by thousands, because the masses have not the means to buy even the necessities of life; to supply the lack of currency, the banks of the great cities have issued a substitute for money, unknown to the laws, called clearing-house certificates; the movement of the great crops now being gathered demands a vast amount of currency, which the banks are unable to furnish; and in the midst of these conditions the daily press is clamoring for the repeal of the act of July 14, 1890, called the Sherman act, although the repeal of that act means the stoppage of the issue of more than $3,000,000 every month; thus shutting off of the supply of funds for the business of the country in the midst of the terrible conditions which surround us, and ignoring the fact that to hold the balance level between the debtor and creditor classes the supply of currency must increase side by side with the increase of population and business, and that in this nation the growth of population is at the rate of about 37 per cent every ten years, while the increase of business is much greater; and

"Whereas the great expounder of the Constitution, Daniel Webster, said: 'Gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country, and neither Congress nor any State has authority to establish any other standard or to displace that standard;' and

"Whereas the Hon. James G. Blaine, quoting this utterance, adds: 'On the much-vexed and long-mooted question as to a bimetallic or monometallic standard my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in the other countries for a single gold standard would, if successful, produce widespread disaster in and throughout the commercial world. The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly $7,000,000,000 of coin or bullion in the world, very equally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands.'

"Again he said: 'I believe gold and silver coin to be the money of the Constitution; indeed the money of the American people, anterior to the Constitution, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has, therefore, in my judgment, no power to demonetize both. If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of ordering it to be resumed. I am in favor of having it enlarged;' and

"Whereas the present Secretary of the Treasury, the Hon. John G. Carlisle, on the floor of the House of Representatives, February 21, 1878, said: 'I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject, the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of the metallic money in the world;' and

"Whereas Senator JOHN SHERMAN of Ohio, who, more than any other man, is responsible for the demonetization of silver, clearly understood the evil consequences of shrinking currency below the legitimate demand of the business of the country, as evidenced by what he said in the Senate in 1889, to wit: 'The contraction of the currency is a far more distressing operation than Senators suppose. Our own and other nations have gone through that operation before. It is not possible to take that voyage without the sorest distress. To every person except a capitalist out of debt, or a salaried officer or annuitant, it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. It means ruin to all dealers whose debts are one-half their business capital, though one-third less than their actual property. It means the fall of all agricultural production without any great reduction of taxes. What prudent man would dare to build a house, a railroad, a factory, or a barn with this certain fact before him?"

"Therefore, in view of all these facts, we declare:

"1. That there must be no compromise of this question. All legislation demonetizing silver and restricting the coinage thereof must be immediately and completely repealed by an act restoring the coinage of the country to the conditions established by the founders of the nation and which continued for over eighty years without complaint from any part of our people. Every hour's delay in undoing the corrupt work of Ernest Seyd and our foreign enemies is an insult to the dignity of the American people, a crushing burden on their prosperity, and an attempt to place us again under the yoke from which George Washington and his compatriots rescued us.

"We protest against the financial policy of the United States being made dependent upon the opinion or policies of any foreign government, and assert the power of this nation to stand on its own feet and legislate for itself upon all subjects.

"2. We declare that the only remedy for our metallic financial troubles is to open the mints of the nation to gold and silver on equal terms, at the old ratio of 16 of silver to 1 of gold. Whenever silver bullion can be exchanged at the mints of the United States for legal-tender silver dollars, worth 100 cents each, that moment 412½ grains of standard silver will be worth 100 cents, and as commerce equalizes the prices of all commodities throughout the world, whenever 412½ grains of standard silver are worth 100 cents in the United States they will be worth that sum everywhere else, and can not be bought for less. While it will be urged that such a result would enhance the price of silver bullion, it is sufficient for us to know that a similar increase would be immediately made in the price of every form of property, except gold and credits, in the civilized world. It would be a shallow selfishness that would deny prosperity to the mining industries at the cost of bankruptcy to the whole people. The legislation to demonetize silver has given an unjust increase to the value of gold at the cost of the prosperity of mankind. Wheat and all other agricultural products have fallen side by side with silver.

"3. That while the 'Sherman act' of July 14, 1890, was a device of the enemy to prevent the restoration of free coinage, and is greatly objectionable because it continues the practical exclusion of silver from the mints and reduces it from a money metal to a commercial commodity, nevertheless its repeal without the restoration of free coinage would stop the expansion of our currency required by our growth in population and business, widen still further the difference between the two precious metals, thus making the return to bimetallism more difficult, greatly increase the purchasing power of gold, still further break down the price of the products of the farmer, the laborer, the mechanic, and the tradesman, and plunge still further all commerce, business, and industry into such depths of wretchedness as to endanger peace, order, the preservation of free institutions, and the very maintenance of civilization. We, therefore, in the name of the Republic and of humanity, protest against the repeal of the said act of July 14, 1890, except by an act restoring free bimetallic coinage, as it existed prior to 1873. We suggest that the maintenance of bimetallism by the United States at the ratio of 16 to 1 will increase our commerce with all the silver-using countries of the world, containing two-thirds of the population of the world, without decreasing our commerce with those nations which buy our raw material, and will compel the adoption of bimetallism by the nations of Europe sooner than by any other means.

"4. We assert that the unparalleled calamities which now afflict the American people are not due to the so-called Sherman act of 1890; and in proof thereof we call attention to the fact that the same evil conditions now prevail over all the gold standard nations of the world. We are convinced that, bad as is the state of affairs in this country, it would have been still worse but for the Sherman act, by which the nation has obtained to some extent an expanding circulation to meet the demands of a community in process of colonization, and the business exigencies of the most energetic and industrious race that has ever dwelt on the earth, and we insist upon the execution of the law without evasion so long as it is upon the statute books and upon the purchase each month of the full amount of silver that it provides for, to the end that the monthly addition to the circulating medium the law secures shall be maintained.

"5. That we would call the attention of the people to the fact that in the midst of all the troubles of the time, the value of the national bonds and the national legal-tender money, whether made of gold, silver, or paper, has not fallen a particle. The distrust is not on the Government or its money, but of the banks which have, as we believe, precipitated the present panic on the country in an ill-advised effort to control the action of Congress on the sil-

ver question and the issue of bonds. We invite the bankers to attend to their legitimate business and permit the rest of the people to have their full share in the control of the Government. In this way, they will much sooner restore that confidence which is so necessary to the prosperity of the people. It must not be forgotten that, while boards of trade, chambers of commerce, bankers, and money-dealers are worthy and valuable men in their places, the Republic can more safely repose upon the great mass of its peaceful toilers and producers, and that this "business man's age" is rapidly exterminating the business men of this country. The time has come when the politics of the nation should revert as far as possible to the simple and pure condition out of which the Republic arose.

"6. We suggest for the consideration of our fellow-citizens that the refusal of the opponents of bimetallism to propose any substitute for the present law or to elaborate any plan for the future, indicate either an ignorance of our financial needs or an unwillingness to take the public into their confidence, and we denounce the attempt to unconditionally repeal the Sherman law as an attempt to secure gold monometallism in flagrant violation of the last national platform of all the political parties."

HOUSE COMMITTEES.

The SPEAKER. The Chair will state that there is no authority at present for the Speaker to appoint the standing committees of the House. The gentleman from Mississippi [Mr. CATCHINGS] desires to submit a partial report from the Committee on Rules, designating committees and authorizing their appointment. Without objection, the gentleman will be permitted to submit the report.

Mr. HOOKER of Mississippi. Let us hear it read first.

The SPEAKER. The Clerk will read the report.

Mr. CATCHINGS. Before sending the report to the Clerk I desire to make a very few remarks. The only point in which this report in reference to the committees varies from the rules of the last House is that we have raised the membership of the Committee on Ways and Means, the Committee on Appropriations, the Committee on the Judiciary, the Committee on Banking and Currency, the Committee on Coinage, Weights, and Measures, the Committee on Interstate and Foreign Commerce, the Committee on Rivers and Harbors, and the Committee on Agriculture from fifteen to seventeen members; and we have raised the membership of the Committee on Foreign Affairs, the Committee on Military Affairs, the Committee on Naval Affairs, the Committee on Public Lands, the Committee on Indian Affairs, the Committee on Public Buildings and Grounds, the Committee on Pacific Railroads, and the Committee on the District of Columbia from thirteen to fifteen members. These are the only changes made by the report so far as the committees are concerned.

Mr. BLAND. Has not the gentleman made a mistake in relation to the Committee on Coinage, Weights, and Measures? That committee has heretofore consisted of only thirteen members. I understood the gentleman to say it is now raised from fifteen to seventeen members; he should have said, as I understand, from thirteen to fifteen members, as I believe only two members are added.

Mr. CATCHINGS. I find that I made a mistake. I should have said that the Committee on Coinage, Weights, and Measures is raised from thirteen to seventeen members. Under the rules as now proposed the membership will be seventeen.

There is another trivial change to which I will call the attention of the House. By the rules of the last House, if the chairman of the committee should resign or cease to act as chairman from any other cause than death, the next member in seniority on the committee became chairman, unless the committee itself elected a different member. But in case of vacancy in the chairmanship caused by death the Speaker of the House appointed the chairman. There was no sense in making a distinction between the different causes of vacancy; and if the present rule is adopted by the House the chairmanship will go to the member next in point of seniority, unless the committee elect otherwise.

With these explanations, Mr. Speaker, I send the report to the desk, and ask to have it read.

The SPEAKER. The report will be read.

The Clerk read as follows:

Mr. CATCHINGS, from the Committee on Rules, submitted the following report:

The Committee on Rules, to whom were referred the rules of the House of Representatives of the Fifty-second Congress, recommend the adoption of the following rules:

1. Unless otherwise specially ordered by the House, the Speaker shall appoint, at the commencement of each Congress, the following standing committees, viz:

On Elections, to consist of fifteen members.
On Ways and Means, to consist of seventeen members.
On Appropriations, to consist of seventeen members.
On Judiciary, to consist of seventeen members.
On Banking and Currency, to consist of seventeen members.
On Coinage, Weights, and Measures, to consist of seventeen members.
On Interstate and Foreign Commerce, to consist of seventeen members.
On Rivers and Harbors, to consist of seventeen members.
On the Merchant Marine and Fisheries, to consist of thirteen members.
On Agriculture, to consist of seventeen members.
On Foreign Affairs, to consist of fifteen members.
On Military Affairs, to consist of fifteen members.
On Naval Affairs, to consist of fifteen members.
On the Post-Office and Post-Roads, to consist of fifteen members.
On the Public Lands, to consist of fifteen members.
On Indian Affairs, to consist of fifteen members.
On the Territories, to consist of thirteen members.
On Railways and Canals, to consist of thirteen members.
On Manufactures, to consist of eleven members.
On Mines and Mining, to consist of thirteen members.
On Public Buildings and Grounds, to consist of fifteen members.
On Pacific Railroads, to consist of fifteen members.
On Levees and Improvement of the Mississippi River, to consist of thirteen members.
On Education, to consist of thirteen members.
On Labor, to consist of thirteen members.
On the Militia, to consist of thirteen members.
On Patents, to consist of thirteen members.
On Invalid Pensions, to consist of fifteen members.
On Pensions, to consist of thirteen members.
On Claims, to consist of fifteen members.
On War Claims, to consist of thirteen members.
On Private Land Claims, to consist of thirteen members.
On the District of Columbia, to consist of fifteen members.
On Revision of the Laws, to consist of thirteen members.
On Reform in the Civil Service, to consist of thirteen members.
On the Election of President, Vice-President, and Representatives in Congress, to consist of thirteen members.
On Alcoholic Liquor Traffic, to consist of eleven members.
On Irrigation of Arid Lands, to consist of eleven members.
On Immigration and Naturalization, to consist of eleven members.
On Ventilation and Acoustics, to consist of seven members.
On Expenditures in the State Department, to consist of seven members.
On Expenditures in the Treasury Department, to consist of seven members.
On Expenditures in the War Department, to consist of seven members.
On Expenditures in the Navy Department, to consist of seven members.
On Expenditures in the Post-Office Department, to consist of seven members.
On Expenditures in the Interior Department, to consist of seven members.
On Expenditures in the Department of Justice, to consist of seven members.
On Expenditures in the Department of Agriculture, to consist of seven members.
On Expenditures on Public Buildings, to consist of seven members.
On Rules, to consist of five members.
On Accounts, to consist of nine members.
On Mileage, to consist of five members.
Also the following joint standing committees, viz:
On the Library, to consist of three members.
On Printing, to consist of three members.
On Enrolled Bills, to consist of seven members.

2. He shall also appoint all select committees which shall be ordered by the House.

3. The first-named member of each committee shall be the chairman of the committee, and in his absence or being excused by the House, the next named member, and so on, as often as the case shall happen, unless the committee by a majority of its number elect a chairman.

4. The chairman shall appoint the clerk of his committee, subject to its approval, who shall be paid at public expense, the House having first provided therefor.

Mr. REED was recognized.

Mr. HOOKER of Mississippi. Mr. Speaker, I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. HOOKER of Mississippi. Mr. Speaker, I understand the report which has just been made by a member of the Committee on Rules provides for the number of members who shall constitute the various committees, and in that provision is made for a Committee on Rules to consist of five members. It will be remembered the other day, Mr. Speaker, when a proposition was made to appoint the Committee on Rules, that I interposed an objection to limiting the membership to five.

The SPEAKER. The Chair will state that the gentleman from Maine [Mr. REED] has been recognized. The Chair only recognized the gentleman from Mississippi to submit a parliamentary inquiry.

Mr. HOOKER of Mississippi. I am going to make it now.

The SPEAKER. The House has already fixed the membership of the Committee on Rules, and it is stated here in this report because this deals with the rule which relates to the membership of the various committees.

Mr. HOOKER of Mississippi. I beg pardon, Mr. Speaker; I understand, the other day, when my colleague proposed that the Chair should appoint the Committee on Rules, there was only authority given to appoint a committee.

The SPEAKER. But to consist of the same number as under the rules of the last House.

Mr. HOOKER of Mississippi. Objection was then attempted to be made that that membership should be increased. Now, the the same membership is repeated here, and if this report is adopted it will become a part of the rules of the House. I do not believe that we should limit ourselves to that number.

The SPEAKER. What is the gentleman's parliamentary inquiry?

Mr. HOOKER of Mississippi. If that resolution passes now, as introduced by the Committee on Rules, will the House be deprived of the power of determining the membership of that committee?

The SPEAKER. Any resolution which the Committee on Rules can present is only presented, of course, for the action of the House.

Mr. HOOKER of Mississippi. I understand that, and it is

the reason why I am calling attention to that portion of the report. The Committee on Rules should be increased.

The SPEAKER. The Chair does not understand that to be a parliamentary inquiry.

The gentleman from Maine [Mr. REED] is recognized.

Mr. HOOKER of Mississippi. Does the Chair say——

The SPEAKER. The House will please be in order.

Mr. HOOKER of Mississippi. I ask this further question: Will it be in order to move to amend that report in anyway whatever?

The SPEAKER. If the gentleman gets the floor for that purpose before the previous question is ordered, it will.

Mr. HOOKER of Mississippi. I hope the Chair will accord to me that privilege.

The SPEAKER. The gentleman from Maine——

Mr. REED. Mr. Speaker, I do not desire to interpose any objection to the adoption of the rules in question. All I desire to do is to say a word or two in the nature of a personal objection to some of the changes which are proposed. It has been for some time the custom of the House, as its membership increased, to increase the membership of the committees. It is also a very great relief to the Speaker, in the appointment of the committees, to have the numbers of some increased, especially of the prominent committees; but it has seemed to me that the limit has actually been reached already, and that this report passes the limit of what is reasonable and best for the House.

The object of appointing a committee is to have a set of men who will be free from the complications and difficulties that arise from numbers, so that they may give that careful consideration to the business of the House which is absolutely essential to the right conduct of affairs. The tendency has been of late for each part of the committee to go by itself, and to act entirely by itself, and to allow the minority nothing but the poor privilege of recording its vote. In committee work especially this is objectionable; and the increase of numbers has a tendency to cause that fault to increase.

I do not believe that it is wise to have the Committee of Ways and Means any larger than it is now. I do not believe that it is wise to have the Committee on the Judiciary any larger than it is now; and it seems to me in general that it will be a mistake to enlarge the committees. However, I do not desire to insist upon that at all. I do not desire to call for a vote. I only desire to make these remarks, as indicating my belief that it is a mistake to increase the membership of the committees so much as is done in the rule now presented.

Mr. CATCHINGS. Mr. Speaker, it is hardly necessary for me——

Mr. HOOKER of Mississippi. Mr. Speaker——

The SPEAKER. Does the gentleman from Mississippi [Mr. CATCHINGS] yield to his colleague to offer an amendment?

Mr. CATCHINGS. I did not know that he wanted to.

Mr. HOOKER of Mississippi. I did.

The SPEAKER. The Chair understood the gentleman to indicate that wish.

Mr. HOOKER of Mississippi. I would ask whether an objection to entertaining this proposition now would carry it over until to-morrow, and whether it would not be better to have this report published in the RECORD, in order that the House may be apprised of the character of the rules it is going to adopt?

The SPEAKER. This adopts no rules. The Chair would state to the gentleman from Mississippi that it has been the uniform custom, for many years at least, to adopt a resolution to authorize the appointment of the committees. Otherwise no single step can be taken in that direction.

Mr. HOOKER of Mississippi. I beg the pardon of the Speaker. I should be very glad to have that done, and I think it ought to be done, but I think the House ought to have a vote upon the question as to what shall constitute the number of the Committee on Rules.

The SPEAKER. That is precisely what the House is now proceeding to do.

Mr. CATCHINGS. Mr. Speaker, have I the floor?

Mr. HOOKER of Mississippi. Mr. Speaker, I will move——

Mr. CATCHINGS. I have not yielded to my friend to make any motion.

Mr. HOOKER of Mississippi. I see the idea is to cut off the making of any motion——

Mr. CATCHINGS. I want a vote, and demand the previous question.

Mr. HOOKER of Mississippi. That is just the game that was played the other day. You will tie your own hands——

The SPEAKER. The Chair will state that the Committee on Rules can tie no one's hands. It is for the House to take such action as it pleases.

Mr. HOOKER of Mississippi. How is the House to get a vote upon it?

The SPEAKER. If the House refuses to sustain the demand for the previous question, then the whole question will be open; and it is not a question that the Committee on Rules controls. It is for the House.

Mr. HOOKER of Mississippi. I very much hope that the House will do that, in order that we may have the power of amendment.

The SPEAKER. And if not, the complaint is with the House and not with the Committee on Rules.

Mr. CATCHINGS. The gentleman has proposed a similar amendment before, which has been rejected by this House, Congress after Congress. I demand the previous question.

The question being taken on ordering the previous question, the Speaker announced that the "ayes" seemed to have it.

On a division (demanded by Mr. HOOKER of Mississippi) there were—ayes 125, noes 9.

Mr. HOOKER of Mississippi. I ask for tellers.

The SPEAKER. Does the gentleman make the point that no quorum has voted?

Mr. HOOKER of Mississippi. Yes.

The SPEAKER. The gentleman from Mississippi [Mr. HOOKER] makes the point that no quorum has voted, and tellers are ordered. The Chair appoints as tellers Mr. HOOKER of Mississippi and Mr. CATCHINGS.

The House divided; and pending the report of tellers

Mr. HOOKER of Mississippi said: Mr. Speaker, I do not want to interrupt debate any further, and therefore withdraw the point of no quorum.

The SPEAKER. The gentleman from Mississippi withdraws the point of no quorum. The ayes have it, the previous question is ordered, and the question is on agreeing to the report.

The report was agreed to.

SILVER.

The House resumed consideration of the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. BLAND. Mr. Speaker, under the rule governing this debate I believe it is stated that where either side wishes the House will take a recess from 5 o'clock until 8. I wish that order to be made.

The SPEAKER. In that connection the Chair will be glad to state to the House that unless there are some night sessions and gentlemen are willing to speak at these sessions, it will be impossible within the time fixed to accommodate all gentlemen who have expressed a desire to speak upon this question. The Chair is seeking to equalize the time so far as possible, and in that connection would state that such debate as is had at night sessions will not be charged against either side, as would the debate had in the daytime.

Either side may debate at night, and the Chair will try to have an equality of the time at night, but where the speakers are all on one side at night the Chair would not charge that in such a way to effect the debate as to work an unequal division of the day debate. The Chair understands there are at least two speakers for to-night, perhaps more; and, therefore, on the request made by the gentleman to the Chair, the House will take a recess at 5 o'clock until 8, under the order heretofore made.

Mr. HAINES. Mr. Speaker, it is with the greatest diffidence that I rise to address the House on the great question under consideration. I am not unfamiliar with the unwritten law of the House that a new member "should be seen and not heard." I am not unaware of my deficiencies, my inexperience, and the difficulties involved in a question on which so many able men of the same party, and in both parties, differ. I do not flatter myself that I can add much that is material to what has already been said and written on the subject, or that I can anticipate anything yet to be said by the eminent men whom we are to hear before the close of the debate.

But this question is one of such vital importance to my State, and my own immediate constituents take so keen, so anxious, and so active an interest in its proper settlement that I feel constrained to express myself here in regard to it, however conscious I may be of my inability to fully cope with the great and intricate matters involved in the discussion. While the district I have the honor to represent is not by any means the most populous in the State of New York, yet its population is nearly as great as the aggregate population of three Western States which will have six votes in passing on this bill when it reaches the Senate. It is a district that has given to the country two of the greatest Americans of the nineteenth century—Martin Van Buren and Samuel J. Tilden: it exercises within its limits almost all the industries to which the country owes its wealth—agriculture, manufacture, shipping; interests entitled to every consideration and respect. At the present moment its agriculture and its commerce are languishing, its factories are shutting

down, its mechanics and laboring men are suffering in enforced idleness, and their families are in want.

This distress is the result of the semipanic which has prevailed throughout the country for the past six weeks. It is the universal belief in my State that this panic has resulted largely, if not altogether, from the operation of the law which the bill under consideration proposes to repeal. I was amazed when I heard the distinguished member from Missouri [Mr. BLAND] say that this panic is a factitious panic, manufactured by Wall street for the purpose of having Congress pass a measure that would demonetize silver. These attacks on Wall street are pure demagogism, and are unworthy so eminent and so upright a Democrat as the member from Missouri. These attacks are read with amazement in my State, where the operations of Wall street are known and understood and under constant observation.

An attack on Wall street is an attack on the financial system of the country. Wall street is the savings bank of the nation. It is to Wall street that the various sections of the country send their loanable surplus, and from there that surplus is redistributed throughout the country where capital is needed for the development of every industry. It is from Wall street that the silver men of the West procured the capital with which to open up their mines; and it is there they procured many millions of dollars to open up mines which they afterwards forgot to open up.

It is curious that if Wall street is responsible for the prevailing panic that panic should have commenced in the West. It is in the West that nearly all the great failures have taken place. It is there that great commercial houses, innumerable banks, and bankers have closed their doors; and it is to Wall street that those which still remain standing look for aid to save them from disaster. The greater part of the securities of the railroads of the United States are held in Wall street, if by Wall street is meant the money centers of the East, New York, Boston, and Philadelphia. Within the last three months those securities have constantly been depreciating, until now they are down many hundreds of millions below the values they had last April.

To say that the great financiers, the men most vitally and directly interested in such matters, should deliberately undertake to create a panic by which such vast losses should accrue to them and their clients, seems to me a monstrous absurdity. I think, therefore, that these senseless attacks should be discontinued. They serve no useful purpose; they do not enlighten us in regard to the questions we have to dispose of, and they tend to create a sectional feeling which every honest Representative should deplore.

It makes very little difference, however, what may be the section from which the panic started and what may be the cause of it, except in so far as by regarding the cause we may thereby the better be enabled to consider the wisest way out of it. As I have said, in the East it is considered that the principal cause of this condition of things is the enforced purchase of silver by the United States Treasury, pursuant to the Sherman act, and the consequent decrease in the quantity of gold held by the Government and by the banks of the country to meet our obligations which we have undertaken to pay in gold.

The gentleman from Missouri [Mr. BLAND] admits that every piece of paper money issued in this country to-day, every bond, every certificate, is to be redeemed in gold, and that we must procure the gold for their redemption. How it is possible we can pay these obligations in gold, in view of the rate at which gold has been leaving the country for the last six years, is something which thus far nobody has undertaken to show. Three times more gold has been taken out of the country during that period than has been imported, notwithstanding that in the meantime the average balance of trade has been enormously in favor of the United States.

The expert financiers of the country, men whose whole lives have been passed in studying these questions, who were led to study them not for the purpose of fulfilling the duties of a Representative in Congress, but because their most vital interests are involved in them, together with the interests of their clients and patrons—these men, whose opinions, it seems to me, are entitled to as much weight as the opinions of the most eminent experts in this House, unanimously attribute this condition of things to the operation of the Sherman law.

Statistics show that we will be unable to pay our obligations in gold if that law continues. They also show that the capitalists and investors in Europe who had placed their money in our securities, believe that we will be unable to meet our obligations and pay them in gold; and hence they have been disposing of their securities and getting rid of American stocks and bonds before the time comes when, as it is considered inevitable, the American Government and the American railroad companies will be unable to meet the demands made upon them, to fulfill their obligations by the payment of them in the coin which, among capitalists and investors, is considered the only standard of value.

It seems to me that the first thing for this House to do is to repeal the law which has brought about this distrust of American securities. Whether silver shall be demonetized; whether we shall have a single standard or a double standard; whether the United States shall be monometallist or bimetallist, and, if bimetallist, what shall be the ratio between gold and silver, and how the defects in the currency shall be remedied, are all questions which can be determined at the proper time. This extra session was not called for the purpose of determining all these questions. As the immediate cause of the distrust now prevailing is the operation of the Sherman act, it was for the purpose of considering whether or not the purchasing clause of the Sherman act should be repealed that the session was called, and the country regards that as the principal purpose for which this extra session is pending.

The people of my section of the country are for the repeal of the purchasing clause of that act absolutely and without condition; and all these questions collateral to the main issue which have been raised here can be settled in due time. It may be that the repeal of the purchasing clause of this act is an insufficient remedy, and will not bring the country back to the state of prosperity it was in a short time ago. But inasmuch as, whether rightly or wrongly, the people regard the operation of that clause as the main cause of the present distress, the first thing to do is to restore confidence by stopping its operation, and thereby at least take one step towards bringing the country back to a sound financial condition.

The main objection to the bill now before the House, raised by the gentleman from Missouri and those who think with him, is that the result will be to demonetize silver. That is the burden of their remarks, and they threaten to secede from the Democratic party if the platform of the party in that respect is not adhered to. I have been unable to see upon what ground it is claimed by those gentlemen that the Democratic party seeks to demonetize silver. The operation of the Sherman act has been disastrous. The business men of the country, whether Democrats or Republicans, whether monometallists or bimetallists, are clamoring for its repeal; and it seems to me singularly unfortunate that these gentlemen who are acting with the gentleman from Missouri should involve the simple question of repeal or no repeal by calling upon us to discuss their pet theories in regard to silver and gold as standards of value.

These gentlemen may be right or they may be wrong in their ideas in regard to whether gold or silver should be kept upon a parity, and what may be the ratio of value between them; but this is not the time to consider such questions. The Democratic party is not seeking to demonetize silver because it seeks to repeal an act which both Republicans and Democrats consider unjust and monstrous; and while the country is waiting for relief from this iniquitous measure these gentlemen are taking up the time and bewildering the country by raising questions, some of which are not disputed and all of which are out of place in this discussion, as bearing only slightly or collaterally on the main question to be considered.

There are so many people in this country and so many Representatives in Congress, among both Republicans and Democrats, opposed to the demonetization of silver that the fears of the member for Missouri in this respect are altogether unfounded. That gentleman undertakes to say that if this bill is passed it will be regarded by the people of the country as a demonetization of silver, and that thereby the people of the vast regions west of the Mississippi will be deprived of the money to open up new railroads, to establish new factories, to operate new places of business, and to inaugurate new industries; that they will, in fact, be deprived of money and be ruined.

With all due respect to that distinguished gentleman, this talk seems to me absurd; and it would appear to me to be entitled to no consideration at all, if it did not come from a person of his weight and eminence. The capital necessary to build up the new industries of the West must come from the East, and the East is clamoring for the repeal of the law, the repeal of which the gentleman from Missouri [Mr. BLAND] thinks will beggar the West. Is not the prosperity of the East largely dependent upon the prosperity of the West? Has not Wall street vast sums of money invested in the West? Is not Wall street affected by financial disturbances in the West? Is not Wall street bound to uphold the West and to aid it whenever it is in financial distress, for its own sake, if not for the sake of the West?

How, then, can it be truthfully said that the Eastern Democrats, who represent the capital of the East, have been guilty of a trick upon the Democrats of the West and Southwest, in presenting the measure now before the House before tariff reform is brought forward for consideration? The business troubles of the country have an apparent cause, visible to every one. This cause should first be removed before other questions are brought up for consideration; and it will be time enough for the gentleman from Missouri and those who think with him to con-

demn the Democrats of the East when they put themselves upon record in this House, by the presentation of measures or opposition to measures presented by others, in contravention of the pledges of the Chicago platform. It does not appear that these gentlemen, who threaten the Democratic party with secession under certain contingencies, are opposed to the measure before the House, in so far as it repeals the purchasing clause of the Sherman act.

The gentleman from Missouri, in his remarks, either directly or impliedly admitted over and over again that the Sherman act is bad in principle. He admits, for instance, that the value of silver, like that of every other commodity, should be governed by the law of supply and demand; and hence a law which compels the Government, without regard to the law of supply and demand, to purchase a certain quantity of a given commodity is radically vicious. He failed to explain upon what principle he claims that we are bowing our necks meekly to the yoke of Wall street because we are seeking to repeal a law which the gentleman himself condemns. His principal argument, and the principal argument of all those who are of the same opinion, is that the demonetization of silver, which they assume will result from the passage of this act, will contract the currency to an extent that the conduct of the business of the West and the opening up of new enterprises in that section of the country will be no longer possible, and widespread ruin will be the result.

In answer to this argument, it is sufficient to point out the condition of things at present in the principal money centres of the United States. At this moment banks in the city of New York of world-wide reputation, possessing assets which even in times like these are valued at from five hundred to a thousand cents on the dollar, have refused to honor the checks of their depositors by paying them in currency, without regard to the accounts of their depositors. In other words, banks of undoubted responsibility, banks whose assets entitle them to claim that they are able to pay dollar for dollar with as much confidence as the United States can claim that they are able to pay dollar for dollar of their bonds, have in effect suspended payment by reason of a lack of currency to meet the demands made upon them.

If this condition of things has taken place at this date, when silver has not been demonetized, when the Democrats of the East have not yet acted in a manner to lead these gentlemen to believe that they are going to go back on their platform pledges, and when this has apparently been brought about by the operation of a law which these gentlemen concede to be unjust, yet place obstacles in the way of its repeal, it is plainly a deduction suggested by common sense, without regard to financial learning, that, assuming, as it seems to have been generally assumed, that the great financial institutions of the city of New York have been restricted in their operation by reason of a lack of currency in consequence of this obnoxious law, no worse condition of things can happen if the law is repealed; and the repeal, if it will at least restore confidence to that section of the country which has in its possession the largest amount of the currency of the country, that much will be gained by its repeal, that confidence will be restored in the East and reflected back upon the West in a manner that must effectually, if it will accomplish nothing else, at least stop the disasters which are occurring in the West from day to day.

The East is suffering from a lack of currency arising from the operation of the Sherman bill. The gentleman from Missouri anticipates that if the bill is repealed without restriction there will be a lack of currency in the West. The East is appealing to Congress to remedy an evil already existing, and this gentleman opposes their demand from an anticipation of an evil that may never exist; and if, instead of attacking the East and the so-called agencies of the "money kings" of Lombard street, this gentleman and those who think like him would comprehend that the United States is not only a political entity but a financial entity too, and that what is injurious to one section must necessarily reflect back injuriously on the other, they must come to the conclusion that it is just as necessary for the prosperity of the West that the East should be contented with the financial condition of things and the laws by which they are governed as the West itself; and they will then find it easy to come to the conclusion that it was necessary to the prosperity of all sections that the East and the West should be in accord on questions of the character now before us. And where a difference of opinion might arise it is respectfully submitted that it is that section of the country which has the money to expend that should be first considered rather than that section of the country which has not the money, but which looks to the other as the source of its capital.

The question which presents itself, therefore, it seems to me, is this: Both the East and the West, with the exception of the few owners of silver mines, agree that the act which the bill before the House in effect shall repeal is a vicious bill, largely if not altogether responsible for the disasters under which the country is suffering. The East asks that the bill shall be repealed. The West concedes that it ought to be repealed, but should be repealed with restrictions and provisos. The East says that it is necessary, in order that we shall recover stability, that the repeal shall take place at once. These gentlemen from the West say: "No; you must consider these other questions at the same time." And in the meanwhile hundreds and hundreds of thousands of mechanics and laborers are obliged to be idle, values are decreasing or are being wiped out altogether, so that widespread distress is suffered by widows and orphans and by institutions whose income is derived from the various industries that are affected by this confusion. While the two parties are haggling, not over principles, but over questions of expediency, the people are suffering losses that they can never recover.

These very gentlemen who raise the cry against Wall street are playing into the hands of professional speculators; they are wiping out the values on the property of permanent investors and throwing their earnings and their savings into the hands of speculators, who will absorb to themselves the results of the beneficial legislation which will ultimately be carried out, but which is now delayed in order that we may listen to the harangues of theorists, of men governed perhaps by principle, but who have no money at stake, and who are playing to the galleries when they ought to take a broad and liberal view of the interests of the whole country, and act in accordance with the dictates of patriotism and common sense.

It may be asked: If this bill is repealed what shall we do with these questions that have been raised by those who are opposed to its repeal without restrictions? These gentlemen provide the answer themselves, viz: The practice adopted by the most experienced governments of Europe, namely, the appointment of commissions composed of the most intelligent and expert financiers of their respective countries, to whom shall be committed the task of finding an answer to the questions presented. This is what should be done here. Let us repeal the purchasing clause of the Sherman act. Let us appoint a commission composed of the most eminent persons in this House and the Senate, and of the various interests outside Congress to be affected by such matters.

Let them investigate and report their conclusions, and thus we may be enabled to get an intelligent idea as to what should be done for the purpose of maintaining the parity between gold and silver, of ascertaining whether or not an international agreement may not be reached by the nations affected, and a currency created and maintained at once staple and elastic, and such as will command the confidence of the country and the world. Thus, at least, we shall restore confidence. We shall bring from the safes and the safe-deposit vaults the currency which has been taken from the banks within the last six weeks, and this money, once more finding its natural course in the channels of commerce, will place our banks in a normal condition, will open up our factories, our mines, and set our various industries once again in motion. And a wise and conservative Congress, without regard to party affiliations, considering the subsequent questions, not in the face of a panic, but under the normal condition of things which the natural prosperity of the country warrants, will find the remedy for all the evil suggested, and find an answer to all the questions raised by those who are to-day presenting obstacles to the fulfillment of the desires of the business people in all sections of this country—that the purchasing clause of the Sherman act shall be repealed. [Applause.]

Mr. ENGLISH of New Jersey. Mr. Speaker, I stand here in a position peculiar and perplexing. I do not quite agree with the parties on either side of the House. I do not agree with the unometallists of the gold stripe, nor with the unometallists of the silver stripe; for I am a bimetallist, and as such I shall vote for the repeal of the purchasing clause of the Sherman law.

I shall vote for the repeal, because the law is vicious of itself, based on a wrong principle, has defeated the object which its friends assumed it would attain, and is a bar to that international monetary agreement, which, in my judgment, in the condition that England has placed herself by her blundering Indian policy, will otherwise be brought about. Whenever that bar be removed, when the countries of the world agree upon a ratio between gold and silver, then we may safely coin, not the dollar of our fathers, which never was in any great amount, but the silver and gold of our fathers. But when I vote for the repeal of the law I do not vote for it for a moment holding that it will be a panacea for our ills, for its repeal will not restore that confidence which we lack if unaccompanied by other measures.

I have a great respect for the opinion of the President of the United States. I have read his message; but I have read it between the lines. I am satisfied that he is actually and really a bimetallist, whenever we can return to our old system without

injury to the public and without debasing the dollar. I am not in the confidence of the President; I do not know him personally; I have no favors to ask of him, because in my district, happily, there are very few place-hunters; but I have confidence from his record in his sagacity and honor, and I think him sagacious enough to know that the mere repeal of this measure will not reach the causes of the present disaster; and I have such confidence in his honor that I believe at the proper time, so far as he is concerned, he will redeem every pledge of the platform, and these attacks made upon him in this House are ill-timed and unjust.

I have this to say: That not only is the purchasing clause of the Sherman act not the most potent factor in producing the present commercial distress, but, on the contrary, it has been conservative, the only silver lining to the dark cloud, as I shall proceed to show in the few minutes I shall consume of the time of the House.

Look back into the history of this country. Remember that in 1815 we had a panic. We had a lull the next year, followed in 1817 by another and greater panic. Twenty years after, in 1835 and 1837, we had the same. Twenty years later, in 1855 and 1857, we had another. In 1873 it leaped two years, but twenty years after 1873 we have the same condition of things.

The remote occasions which we are apt to lose sight of in these panics are plain enough. They are to be found in the overtrading and overspeculating of the people, and we become optimists: and as Americans, rush into methods and channels of profit which the foreigner does not rush in, or approaches with great caution.

The result is disastrous. We fail to note the remote occasions but merely look at the causes; and you can easily see what are the causes of this disaster—the many causes. The purchasing clause was one, but among the other causes one seems to have been lost sight of in this House. In 1890 our friends, the enemy, created a new tariff policy by regrading the duties on imports. We were told that that would check importation, that it would build up a home market, that it would make American industries prosperous.

The people of the country did not think so, and what has happened has justified them. Mark you, in 1891 there was an increase of importations. That was natural enough. Importers were rushing in to secure the advantage of low duties. But in 1892 it seemed that what the friends of the tariff had claimed for it had come to pass, for in that year there were of imports only $827,000,000, while there were of exports $1,030,000,000. There was a balance of trade in our favor of $203,000,000.

Now, that looked very charming, but in 1893 the importations rose to the enormous amount, unprecedented in our history, of $941,000,000, and the exports shrunk so that there was a balance of trade against us of $94,000,000, making a total in the two years of $297,000,000, change. There is one of the causes of your present distress. But the immediate and the greatest cause lay in the action of the national banks.

In 1882 there were $352,000,000 of national-bank currency. The banks began to contract, to put on the screws regularly year by year, and in 1892 they had contracted their currency $185,000,000. Against that, fortunately, so far as the actual deficiency of currency was concerned, came in the only good result that ever could be credited to the Sherman law; it gave us one hundred and forty-five millions of currency, leaving the actual deficiency only forty millions.

Now, it was this contraction, going on steadily, which the people saw at first without consideration, then with careful thought, and finally with alarm, that produced the hoarding of money. That hoarding withdrew large amounts from the banks and placed them with the safe-deposit companies, and among the masses of the people savings were withdrawn from the banks and placed between mattresses and behind looking-glasses and in other like places of concealment.

That is what has produced the currency famine under which we are suffering to-day, and it is for that reason that the farmers of the West and the South—and I do not blame them for getting wild when they think of it—have lost millions of dollars by the fall of prices, being unable to get currency to move their crops to the seaboard until the prices became so low and beggarly that John Bull began to come in with his gold. Mr. Speaker, what we want are remedies for these evils, practical remedies.

Now that you have thousands and thousands of men out of work, with hunger threatening them and their families, now that you hear the cry of "bread or blood," and when you know that it is based on real suffering and is no mere braggadocio on the part of these desperate men, you have got to resort to some other measures besides the repeal of this law. With it, supplementarily or conjunctively, you have to do it. I am no doctor of finance. There are a great many gentlemen in the country who write D. F. after their names, but I am not ambitious of doing that, because I have sometimes found that the letters do not stand with the populace for "doctor of finance," but are taken to mean two other words which I should not care to have applied to me. [Laughter.]

But, while we have two physicians quarreling over the patient, while the whole country is in the condition of a sick man who is moribund, while Dr. Gold Bug, on the one side, says that the only way to relieve the patient from his sufferings is to administer the gold cure, and Dr. Free Coinage, on the other side, tells us that he never will recover unless he gets large doses of silver—while this controversy between the doctors is going on the patient is dying, or at least his strength is sinking; he needs tonics, and I think that under the circumstances an irregular practitioner may be pardoned for coming in with nostrums. [Laughter]. Therefore, if I may have the privilege, I will suggest what I would do had I the power of controlling the legislation of this House.

In the first place I would not repeal absolutely the tax on the State banks, as has been suggested, I see, in the other House of Congress, but I would make this provision. In my own State of New Jersey, and I believe in New York and other States, recently in Georgia and North Carolina, laws have been enacted by which no bank can issue notes without providing a basis for their redemption in bonds, approved by the governor and the financial officers of the State. From that New Jersey law the national-bank system was borrowed, and it is as good a law to-day as it was then.

Therefore had I the power I would pass a law providing that when banks of any State gave sufficient security for their currency, so as to avoid the danger of inflicting wild-cat or red-dog upon us any more; that when they provided such security to the satisfaction of the Comptroller of the Currency, and it was duly certified and approved by him, the Secretary of the Treasury should be empowered and directed to cause to be paid a rebate of 85 per cent of the 10 per cent tax, thus placing the State banks on a level as to taxation with the national banks.

I would do that in order to hold a rod over the national banks, who are now making the Treasury work night and day in order that there may be brought back some of the money they have withdrawn from circulation. Furthermore, I would have all the bullion in the Treasury that was not there to meet absolute obligations, coined—not into dollars (whose legal-tender power I would not disturb), but into half-dollars of the present weight and fineness. For mark you, there are currencies and currencies.

The currency of everyday life, the currency of trade, is a currency mainly of tokens. Its intrinsic value is of very little consequence. To-day two half-dollars do not contain as much silver as one standard dollar, but do you know any man outside of a lunatic asylum, did you ever find a man anywhere, who when you offered him two half-dollars in purchase of goods would say to you, "My dear sir, there is too little silver in these; give me a standard dollar." These coins come into your hands and they go just as the filthy, disease-breeding notes do; nobody looks at them. How many of you have circulated counterfeited notes without knowing it? I have no doubt I have been within range of the penitentiary unwittingly a dozen times in my life. [Laughter.] But I would also prohibit the issue of any Treasury note or other noninterest-bearing obligation under the denomination of five dollars.

With these measures you would at once bring relief in the way of currency, and you would give confidence by the repeal of this purchasing power. Of course we want in this country, as in every country, a system by which we can regulate the currency according to the needs of the people—expand it as desired and contract it if necessary. I do not know of any better mode of solving that problem than that which was first suggested, I believe, by the late President Garfield, and which has been adopted, I understand, by a distinguished member of this House; that is, that the holder of a United States bond shall be authorized to take it to the Treasury and receive United States notes for it, the interest ceasing from that moment, and when he has no more occasion for the money shall be allowed to come back and buy his bond at the same rate at which he sold it. I think this would be a very excellent thing conjunctively or as a supplement to the other measures.

But I tell you plainly—and you know I have not indulged in crimination or recrimination, because I think with the present distress around us anything of that kind is a very bad thing to do—something like Nero fiddling while Rome was burning—I say plainly that if in the present temper of the public you adjourn this Congress without the repeal of the purchasing clause or repealing it, without supplementary legislation to relieve the wants and distresses of the public and to restore confidence, I tell you plainly you will hear from the people in thunder tones. [Applause.]

Mr. EVERETT. Mr. Speaker, I wish I could convey to you

and to the House the feeling of profound diffidence with which I rise to speak on this question. I do not envy any man his temper, though I may envy him his courage, who could rise and address the House of Representatives of the United States for the first time with a feeling of confidence and boldness and security in himself. It must be, it can not but be, a frightening and depressing task for the moment. It is not merely respect to my distinguished colleagues who have been here, some of them, for many years—it is not merely the memory of the great men who have spoken actually within these walls that overwhelms me, but there comes to me, Mr. Speaker, the thought of those whose honor and whose fame is dearer to me than my own, who spoke in that old Hall that is now filled with the statues of the illustrious dead, and the fear that I may not say what is worthy of those whom I have known and loved, who spoke there of old, that makes me feel like taking my seat before you in the very instant that I arise.

I ought, as a new member, to ask the indulgence of those around me. But I see how readily it is given. I have already found out in these few days that this House is ready with the utmost generosity and kindness to receive every new member and to make him feel like one of yourselves. And I think in behalf of the new members that this confidence is not misplaced. I think that the new members whom we have already heard from on this question have shown that they are worthy of their position.

The gentleman from Colorado [Mr. PENCE] who spoke second in this debate, my friend from New York [Mr. HENDRIX] who represented the banking interest and who showed in his speech that the genius and enterprise of the bankers are not greater than their honor and their candor, my colleague from Massachusetts [Mr. MCCALL] who represents the district in which Harvard College stands, and who, although not a graduate of Harvard, has proved himself thoroughly worthy to speak for the district in which that college stands—all these new members have shown on this floor that they are worthy of the indulgence that the House has so kindly extended to them.

I have to ask greater indulgence than those members, Mr. Speaker. I have had absolutely no experience in legislative life. This is not only the first time I address this House; it is the first time that I stand at my age to speak to any legislative assembly whatever; and I say fairly to the more experienced gentlemen here, I am not their master or their equal or anything like it in legislative fence. It is perfectly possible for any old member here, by judicious questions and well-thought-out interruptions, to deposit me in a cavity out of which I should find it difficult to rise. [Laughter.] If they will allow me, therefore, to make my first effort without resorting to those entirely parliamentary methods of debate, perhaps I shall be able to learn under their experienced tuition to bother and be bothered as well as the oldest member here.

And I feel another difficulty, sir, which many members, I think, must have already felt—that long before I rose my speech has been spoken a great many times over. The work was begun by my friend from Maryland [Mr. RAYNER], in front of whom I have the honor to have a seat. He made my speech in the first quarter of an hour that he spoke. The work was taken up after him by several friends from New York, by my friend from Ohio [Mr. HARTER], who has the reputation of being almost as great a "crank" as I am myself [laughter]; and finally my friend from Florida [Mr. COOPER] made exactly my speech in exactly so many words. And I was delighted to think of it because he, coming from the orange groves of Florida which my father, when I was a child, taught me to think bore the very best oranges in the world, made exactly the same speech; he pictured exactly the same condition of financial suffering; he showed exactly the same distress among all classes, and he drew from it the same inference that I do, representing the old Bay State.

And I am delighted to find that Massachusetts and the extreme Southern State of Florida, that the neighborhood of Boston and the neighborhood of St. Augustine, are suffering in the same way and see the same remedy for their distress. If the extreme South and the extreme Northeast shake hands over this question, I am sure there can be no doubt that we are both in the right.

Now, sir, these gentlemen and many others have presented in a most eloquent and learned way the entire argument as it is derived from books, as it is derived from financial experience, for the repeal of this clause of the Sherman law; and on the other side the gentlemen who are opposed to the repeal of this section, or who favor the free coinage of silver under one ratio or another, or who favor a return to the Bland-Allison law, have presented their economic views and arguments at great length—at great length, sir, and with great ability, and I doubt not with great honesty. I should be ashamed to contest the honesty of the views of any man who is opposed to me. I only claim in behalf of myself and of those whom I represent that we shall be credited with the same honesty of purpose when we advocate the repeal of these clauses and when we oppose the free coinage of silver that they claim for themselves.

I believe that this argument has been stated too often on both sides for the necessity of repeating it. At all events, sir, no one need expect a repetition of these arguments from me. No one need suppose that I get up here as a master of economic science; that I have studied a great many books on the silver question, and other economic subjects, and can lay them on my desk and turn to the dog's-eared pages. It is nothing of the kind. I pretend to no mastery of financial science. I can only give my views of the immediate necessity from what circumstances, that are open to every man to see, have forced upon me. I can only come here and vote as my constituents tell me, because I agree with them and I believe that they are right.

These arguments are well enough, sir, at certain times. If Congress had met at its ordinary time of meeting, on the first Monday in December; if we were called on then to prepare a plan to settle the question of finances in the United States permanently, or even for many years, the arguments to convince one side or the other would no doubt be in place, for the questions to be considered should be heard and discussed at length. But we have been called together for a purpose; not that purpose. We have been called together for no discussion. We have come here to act. From the moment that Mr. Cleveland began his Administration the financial distress began to prevail throughout the land.

It got worse and worse, and presently a popular demand arose that Congress should be called together earlier than the usual time for the purpose of applying an immediate legislative remedy to the distress that has been pressing upon us. The constituency I represent, the section of country I represent, has heard all of these things discussed before. It has heard the arguments of the free silver men, of the bimetallists, and of the gold monometallists. It has read them, it has pondered upon them; and now, having formed its opinion, it comes and calls on Congress to take hold, an immediate hold, and, in a case of pressing need like this, to apply an immediate remedy; and then, later on, when we have had time for more discussion, we can consider more effectively what is to be the permanent treatment of this great subject.

The President, Mr. Speaker, has responded to the call ably. The President as the great Executive of this great country has come up manfully and nobly to the full mark of his duty, as when did he ever fail to do? And now, having done his duty in a way to call forth the admiring remarks from newspapers of every party, and in every part of the country, he leaves it to us to take hold of this great question, to take hold of it and apply a remedy. Now, sir, I repeat, the people want action and that immediately. But how? Who are the people? Why, sir, as near as I can make it out every Representative in this House is firmly convinced that his constituency is the people, that whatever his constituency want the people want, and that the wish of every other member is a matter of no consequence, but that if he could poll them, the people, they would agree with the very constituency he himself represents.

That is fair enough, sir; I am not angry with any member who thinks that his constituency is the whole people. But this is what I claim, that my constituency has just as much right to be considered the whole people as any other man's constituency in the United States.

It is very easy to call hard names, Mr. President—Mr. Speaker, to be Mr. President. [Laughter and applause.—Mr. OUTHWAITE in the chair.] Most unfortunately, Mr. Speaker, the English language, like every other language spoken, is richer in terms of vituperation than in any other substantives, and if anybody has firmly determined that he will ransack the Bible, and Shakespeare, and Byron, and the variety of anonymous writers for vituperative epithets to apply to anybody who differs with him, it is the easiest thing in the world to find a stock of them.

I am determined, sir, to take no such course. Hard words have been thrown at Massachusetts in this discussion. The old Bay State has been subjected to a great many old and to a great many new taunts; and I have been wondering when the burning of witches was to come in, for I thought it must come sooner or later. [Laughter.] Perhaps the antagonists of Massachusetts have found out by this time that we never burned any witches at all.

But, sir, would it not be nice now to get a Massachusetts man, a supporter of Mr. Cleveland, to reply to the hard things that have been said? Would it not be nice, if a man was elected on the Democratic ticket from Massachusetts, and at the same time was voting with the Republicans of Massachusetts—would it not be nice, by a series of hard names, to compel that man to rise to his feet in sharp reply, and either offend his colleagues in the

Democratic party or else offend his colleagues in New England who were all standing together? There again is another cavity in which I do not intend to be deposited, Mr. Speaker. [Laughter.] Massachusetts can afford not to reply to attacks. Massachusetts has been called hard names for considerably more than a hundred years, and when many of the States that she has helped to settle and to build up and bring forward were a howling wilderness. They are not a wilderness now, but I sometimes think some howling comes from them. [Laughter.]

But we do not intend to reply to these hard names. Massachusetts men intend, in their party or out of their party, to go on and do what they believe is for the interests of the whole country, and they believe that in time the whole country will come around to their opinion.

But, sir, it is not right, in this Congress of the United States, this attempt to set up section against section and quarter against quarter, and to be talking of the South and West as if they were something opposed to New England and the Middle States.

Why, Mr. Speaker, these very gentlemen who use that language appeal to our patriotism. They call upon us to stand for America against Europe. They ask us to maintain pure American independent theories against the opinions of foreign countries. And how are they going to have a united America against Europe or against Asia or against Africa? How are they going to make every American act with his brothers if they proceed in the next sentence to array the South and West against New England, and try to show that the Union is divided against itself? We are not divided against ourselves, Mr. Speaker. Massachusetts is not the enemy of the South and the West. She is their friend and their sister.

Why, sir, the people of my State are crowding to the exhibition at Chicago. They delight to see that that great city has the wealth and the power and the will to attract to her white halls on her new and better Venice the delighted spectators from every country of the world. No State rejoices in that exhibition more than Massachusetts does, and she is proud of it, because she remembers that when Chicago sank in the flames, she assisted the starving citizens with immediate aid; and when Chicago began to arise from her ashes, her capital helped that glorious city to revive; and every man from Boston takes a personal pride when he walks along the avenues of that magnificent city and feels that he is as much at home there as he is in his own New England.

No, sir, you can not make us quarrel with you. We will not do it, no matter how much we may differ in opinions.

Just so, I do not like this trying to set class against class; the poor man against the rich man, the debtor class against the creditor class. It is a cardinal principle of the Democracy that there are and can be no classes in this country.

Most of the gentlemen who have spoken in this debate have informed the House very carefully that they were bimetallists, or monometallists, silver monometallists, or gold monometallists.

I wish to announce, Mr. Speaker, in the beginning of my remarks, and to have it remembered in any remarks that in the future I may have the honor of offering to this House, that I am not an "ist" at all. I am not attached to any "ism." I believe the city of Boston and the country around it is supposed to be rife in "isms." I believe there is a theory that all the "isms" that ever existed in the world sprang up in the neighborhood of Boston. I have the honor to live in the city of Quincy, and that, I believe, has produced more cranks than any other city of the same size in the United States. [Laughter.] And among those cranks it produced two Presidents of the United States, who were born and whose bones are buried there.

But, sir, I am not an "ist." I have no views on the subject of currency that I am not perfectly willing to change if the circumstances of the nation require me to. It is entirely in vain to settle the issues of the present day by appeals to what Mr. Jefferson or Gen. Hamilton thought in 1792, or what Mr. Madison thought in 1816, or what Mr. Webster thought in 1835, or what Secretary Carlisle thought in 1878. The question is what we need now. The question is what the present circumstances require to heal the present wounds, and then at the proper time we will try to restore the patient to health. I should like on that point to remind my friends from the Southern States, all the way from North Carolina and Texas, of certain incidents in the life of John C. Calhoun.

Mr. John C. Calhoun was a great friend of the later United States Bank. He was opposed to the policy of Gen. Jackson on finance, and stood side by side with New England and Pennsylvania in those discussions. In the year 1838, when the great crisis of 1837 had turned men's thoughts as they never had perhaps been turned before to the question of the circulating medium, the bill commonly called the subtreasury bill was brought forward by Mr. Van Buren's Administration and those in his confidence.

Mr. Calhoun, who had hitherto been known as an opponent of that policy, came forward and supported the subtreasury policy of Mr. Van Buren's Administration. It caused profound grief in the hearts of his friends. Mr. Webster, in that ancient Chamber, expressed in terms of affectionate banter his regret that the Senator from South Carolina had changed sides.

Well, sir, time went on. The National Bank of the United States that Mr. Calhoun formerly favored went entirely out of public favor, and is utterly a dead thing, a mere matter of history, at the present day. The subtreasury bill, which became an act, and was then, I believe, repealed and reenacted—that subtreasury system that Mr. Calhoun advocated in 1838—became the law of the land, and is practically the law of the land to this day. The fears and hopes of its enemies and friends alike proved fallacious. Now, was Mr. Calhoun to be taunted with his former views? Will anybody say Mr. Calhoun was not honest, when the fact that he was an honest statesman was proved by the confession of his opponents. Will anybody say that Mr. Calhoun was not an able man? Why, he was a statesman of the first order of genius; but he thought in 1838 that a thing was right that he did not think was right in 1833.

Mr. Speaker, that is the way of every great statesman who has had influence and authority in the United States. It is not by tying yourself down to a particular platform and particular utterance that you will be a great man; it is not by adopting a theory and sticking to it through all the revolutions of time; it is not by tying yourself to the anchor that you will be saved when shipwreck is impending; it is by noting which way the gale blows, and setting your sail and helm like the skilfull mariner, that the ship can be guided in the right direction.

Now, in this case I can only vote as my people say. I can only follow their instructions, I may say their orders, when I agree with them, and I believe they are right.

If the gentleman from Pennsylvania [Mr. SIBLEY] is correct in his new census of the United States; if there are 67,000,000 of people who want the free coinage of silver and only 24,000 who wish the unconditional repeal of the purchasing clause of the Sherman act [laughter]; if it is really true that this overwhelming, this uncounted majority of the people are crying and clamoring for the free coinage of silver at the same ratio, and are opposed to the immediate and unconditional repeal of the Sherman act, I would like to know how in New England we have managed to fill over 20 Congressional districts were all the votes that elected all the members to seats to come from his side of the case? I have heard threats—I can not help calling them threats—from the distinguished gentleman from Missouri [Mr. BLAND], who spoke early in the debate, that every member of Congress, every Democratic member of Congress, who voted for the proposition of the gentleman from West Virginia [Mr. WILSON] would lose his seat in the storm of public indignation, if I understood him correctly. I have not been able to read his speech.

Why, sir, every member from our part of the country, elected by constituencies as large, as intelligent, as thoughtful, as honest, as progressive, and as orderly as any in the United States, would sweep in indignation from his seat every member of Congress who did not vote for the unconditional repeal of the Sherman act. Now, sir, the district which I represent, the Seventh Massachusetts, is one that, although it is very small in acreage—and I believe that the acres of Massachusetts are as broad as the broad acres in Colorado of which we heard in the debate; I believe there are just as many square feet in the acre in Massachusetts as there are in Colorado, and yet the population if figured out would show that we raise more men to an acre in Massachusetts—I believe that the population of my district is practically a unit upon this question.

That population, sir, is as varied in its industries and its character as any. It contains the city of Lynn, a city of 60,000 people, the head of the leather industry of the country, and now also the head of the electric manufacturing interest of the country. That city attracts to its works laborers from every part of the world, laborers from every country of the earth, who are attracted by its liberal wages and by the high and generous principles on which its establishments are conducted. There are in that district a comparatively small number of great, rich capitalists; there are a very large number of men who are bettering themselves, who are rising from straitened means to moderate means and from moderate means to wealth, and it contains a vast population of laboring men who depend for their living on their daily wages. These are our creditor class.

If there is a creditor class in this country, it is the day laborers in the great manufacturing establishments, it is the small tradesmen that they employ, it is the physicians they have to send for, it is the salaried teachers, who take care of their children in schools; it is those people who are gradually piling up from day to day with their small daily wages the savings that

they put into the banks, that are the creditor class of the country, and they depend upon sound finances for their living.

The state of the case as presented by the gentleman from Florida [Mr. COOPER] is precisely the case that prevails in my district. The ordinary wages are stopped, the ordinary collections are stopped; the professional men, the small traders, the laboring men, are all as much in want of money as any of the agricultural clients of my friend from Pennsylvania [Mr. SIBLEY.] Aye, sir, I shall call him my friend. I will not reply to his hard language about Massachusetts. I received my name from the family of a Pennsylvania lady whose name was Sibley, and I would not for a moment say a hard thing against him. [Laughter.]

But, Mr. Speaker, my manufacturing constituents, my professional constituents, my laboring constituents, my seafaring constituents, are united in ascribing their distress to the purchasing clauses of the Sherman act. They are united, rightly or wrongly, in the belief that Congress has gone beyond its true powers. Congress is given by the Constitution the power "to coin money, to regulate the value thereof and of foreign coin;" but regulating the value does not mean undertaking to create value, or, going beyond sound regulation, to give money a value that it does not possess. They feel that Congress has put our coinage on an unstable base. They feel that they can not depend from day to day on what the value of the silver certificate will be.

It may be redeemable in gold at this moment. It may be, as we are told, at this moment at a premium at certain business centers. But how long that will last, how long the silver certificate will be as good as the gold certificate, my constituents are utterly unable to determine, and they call upon Congress for what they believe is the immediate remedy—not the future remedy, Mr. Speaker; I do not say that. I do not pretend to say, I do not believe, that the repeal of these clauses of the Sherman law will settle this question as to the money of the United States. The financial system of the United States has got to be recast. It has got to be recast carefully and thoughtfully.

But that is not the work for which we are here now. That is work for the regular session of Congress. My constituents tell me that they want these clauses repealed immediately, to see how that will work. They believe that law to be the immediate cause of the distress, and they say that when this repeal shall have been in operation a few months it will then be time to take up the great question and to settle what the future destinies of gold and silver are to be. And why do they believe that, Mr. Speaker? Because they are convinced that the United States—is it "are" or "is?" Justice Fields says it is "are," but others say it is "is"—they are convinced that the United States is only one nation in the sisterhood of nations.

They believe that we are subject to international laws as well as national laws.

Just as surely, Mr. Speaker, as the Gulf Stream, which is warmed by the churning in the basin of the Gulf of Mexico, affects the climate on the extreme coast of Norway, just as surely as the two hemispheres are bound together by physical laws and the climate of one affects the climate of the other, just so surely the productions, the exchanges, the wages, the financial life of the United States are affected by those of Europe, of Asia, and of Australia; and it is no use talking of our standing outside, whatever our independence and our greatness may be. We are told that we must not be the slaves of England, dependent on England in our financial relations. That is just why I want the purchasing clauses of the Sherman act repealed. It is because I do not want to be at the command of English financiers that I do not want the Treasury to get below its gold reserve and be reduced to a condition of silver monometallism, for then we should indeed be the slave of foreign finance.

We can do nothing with the nations until we go into the sisterhood of nations on the common principles which all nations are adopting, one after another, in a sure and never varying succession. When we do that, then, and not until then, can we pretend to be one among them and to work with them. But we are told that this is against the Declaration of Independence. New England, we are told, has forgotten the Declaration of Independence. The gentleman from Pennsylvania says that if that document were read here it would be strange to some of us.

Why, Mr. Speaker, I had an impression that New England had taken some part in forming the Declaration of Independence. I had an impression that John Adams had had a good deal to do with forcing it upon the unwilling representatives from the State of Pennsylvania, who were doubtful of the propriety of the measure. [Laughter and applause.] No, sir; no, sir! It is these gentlemen who have forgotten where the Declaration of Independence put us. It did not put us outside the sisterhood of nations. It did not put us on another planet. It did not explode this earth and make a collection of little asteroids, on one of which the United States should be set, and on another Africa. It put us among the nations of the earth, then as the weakest, destined to be the strongest, but still as one of them.

It begins with an avowal of "a decent respect to the opinions of mankind;" it ends by saying, "We will regard Englishmen as we regard the inhabitants of other nations—enemies in war; in peace, friends." Why, sir, those who wish the free coinage of silver will not regard England as either a friend or an enemy; they will not have either peace or war with her; they want to preserve a sullen sort of armed neutrality, and not have anything to do with her if they can help it in one way or another. That is not the Declaration of Independence, Mr. Speaker; that is not the position that John Adams and Thomas Jefferson and the representatives from the South put us in when we were all East and there was no West, or Center, or Pacific Slope in the country at all.

In the Revolution, Mr. Speaker, were we ashamed of foreign nations? Were we determined to work out our independence by ourselves? Would we have nothing to do with "the effete monarchies of Europe?" My remembrance is that the proud and independent United States were uncommonly glad when a Bourbon king gave them some troops to help them in the crowning victory at Yorktown. No, sir; we are one among the nations, and we must take warning and advice from their example.

It has been said correctly to-day and on previous days that some nations are on a gold basis, that others are on a silver basis, and that others are endeavoring to keep up bimetallism. Be it so. But what has been the historic tendency? What is the road on which nations have generally advanced? Have they not generally been going in the direction of gold? Have they not shown what they regarded as the better way by abandoning silver after they had used it? And suppose there are silver nations, Mr. Speaker; is it with the silver nations that the United States desires to be ranked? Do such nations furnish the model for free and independent countries? China, the Argentine Republic, Peru—are those the nations which we wish to make our models?

Why, sir, we heard to-day in the remarks of the gentleman from Pennsylvania that Russia—silver Russia—had done so much for the cultivation of wheat by her metallic standard, and then in the next breath we were appealed to to consider the condition of the starving poor; and the "gold bugs" and "shylocks" and "robbers" of New England were told that they ought to think more about the poor man. I should like to know if Russia is the model for the treatment of the starving poor? I should like to know if Russia, with her silver and her promotion of the cultivation of wheat, sets New England the example of how the poor man should be treated. I grant that she makes war upon the Jews as badly as the gentleman from Pennsylvania would; but I think that the way Russia treats the Jews is hardly a model for civilized nations at the present day.

Now, if you want to see a nation that does in some respect furnish an example, Austria, with the danger of national bankruptcy staring her in the face all the time, has passed from a paper basis to a silver basis, and from a silver basis to a gold basis, at tremendous sacrifices; and Austria, in the same period, has gone ahead more in constitutional government than one would believe a despotism would. Austria had Hungary rebellious; she has now got her united on terms of loyalty under her ancient constitution; and the internal state of Austria, in respect of education and the other great elements of social progress, is, I believe, improving every day; and I believe that this improvement is closely connected with her financial improvement.

No, sir; we are not outside the nations. We are one with them in a great republic. Think of that magnificent victory achieved the other day. Think how grand it was when five great nations met together to arbitrate peacefully upon a cause of strife that was all but tearing the United States and Great Britain to pieces. And how peacefully and honorably and candidly we acquiesced in a decision that was against some of our claims, but that gave us the main things in which we were interested. And instead of going to war in the old selfish way, we united in that peaceful settlement of difficulties which it behooves great nations to adopt at this advanced period.

It is a definite thing that we have got to do—to repeal these clauses of the Sherman act; and then I would add, and my constituents would add, to go home and wait. However, it may be well to adopt plans at this moment. I confess that the plan of my friend from Ohio [Mr. HARTER] seems best to me at present. And let me say, as that gentleman from Ohio has been declared by authority to be the only independent member on the floor of the House, the only man who is not a Democrat, or a Republican, or a Populist—I beg to announce myself as just as independent as the member from Ohio. I was not elected upon any platform but President Cleveland. That was the platform upon which I was elected; and he is broad enough and strong enough to uphold any patriot in the country. I never quite clearly made out why I was elected.

Mr. TUCKER. We understand it now.

Mr. EVERETT. There was no man more surprised at my own election than I was myself.

There is one point in this debate, Mr. Speaker, and, I regret to say, in the President's message, too, which my constituents never have been able to understand, and that is this attributing of personality to silver and gold—this talk about the "friends of silver" and the "friends of gold"—"striking down silver," and "trampling on it," and treating it as if it were a sentient being that has a soul, and emotions, and eyes, and nose, and mouth. We do not understand that, sir.

We do not understand how a man can be in love or in hate with a thing. We have no animosity to silver; we have no affection for gold. We are perfectly willing—I say again the people of Massachusetts are perfectly willing—to use silver or gold or both whenever the exigencies of the country demand either condition. If some better form of circulating medium were discovered—if some new metal—some new substance were brought to light—if the spectrum analysis should disclose the fact that indium, nebidium, or thallium would be a better medium of exchange than gold or silver, the people of Massachusetts want the best and are determined to have it.

My gallant friend, the member from Alabama, Gen. WHEELER, who lets me occupy his seat while retaining his own opinions, which are quite positive and just the opposite of mine, said in his speech that if the Sherman law were unconditionally repealed there would be no mention of silver whatever in any coinage act of the United States. His remarks have not yet appeared in the RECORD and I may quote him incorrectly. But that is the idea as I understood it.

Well, sir, supposing that was correct. Supposing silver were not mentioned in any coinage act hereafter. It might be unwise, it might be unfortunate, but where would it be immoral? Let me put a case. Supposing we wished to increase our Navy. Supposing that there was a well-known sentiment that we ought to have more ships of war, what would these ships of war be, as the Secretary of the Navy would be ordered to issue proposals for them? What would they be made of? Why, they would be made of iron and steel. Would wooden ships be mentioned at all? Would the Secretary of the Navy be called on to build any wooden ships? Not one. They would not appear in the act authorizing them. Well, then, should we get up and say you are not friends to wood; you despise live-oak. You have forgotten the glories of our Navy, our ancient Navy; you have forgotten the Bonhomme Richard. You have forgotten the Constitution. You have forgotten the United States, and the Wasp, and the Hornet, and the Enterprise.

You are untrue to the memory of John Paul Jones, and Stephen Decatur, and Isaac Hull, and all of the old heroes who led you to victory in wooden ships in the days that have gone by. They were good, Mr. Speaker, in their time; but at the present moment, under immediate pressure, I believe that, as with the wooden ships, the time for silver has gone by. I am perfectly willing to have it revived again when the time shall come, but not now.

A distinguished member at the other end of the Capitol said—although it may not be strictly parliamentary to allude to a Senate debate, but it has been stated here in the course of this discussion—that if this act is passed no silver will ever be coined again in the United States. If that is really true, Mr. Speaker, it is the strongest argument against silver that has ever been uttered here or elsewhere. If silver depends for its use as a coinage metal forever and a day, on the vote that we pass in this Congress; if it requires our vote in August, 1893, to maintain it for all eternity; if, after our vote, it will disappear for all eternity, then it is utterly unfitted for coinage metal, and has nothing to stand on if it never can be coined.

But it will come up again. There will be a time when gold will not be sought for as eagerly, and silver will be more desirable. These things come by cycles. They go up and down at different times. The tendency of things amongst all nations for many years has been rather toward a gold standard, and that it will go back in the other direction by the discovery of new gold fields, perhaps, seems to be eminently probable.

Now, a few words on the subject of bringing politics into this discussion. I am not going to bring in any politics if I can help it, Mr. Speaker. The President of the United States has told us what to do, and as his loyal supporter, who is not afraid to be called his gentleman usher, if my friends see fit so to characterize me, I have no objection; but I will not bring any politics into the discussion. I am amazed at the determination of some gentlemen of all the three parties, Democrats, Republicans, and Populists alike, to find politics somewhere in some part of this discussion. They have a most wonderful nose for the political cat in every bag of meal presented to them.

Why, sir, it reminds me of what happened in a certain very poor religious congregation in England. There was a congregation in England once that wanted to procure new hymn books, but they were very poor and could not afford to pay for them at the ordinary prices. They understood, however, that a certain great advertising house, a business house that made patent medicines, was willing to furnish them hymn books at a penny each if they would allow some advertisements to be inserted in the books. They thought that would be no special harm, that they might have a few pages of advertisements bound up with Watts and Doddridge. Accordingly they agreed to the proposition. The books came, duly printed, and they got down to the church on the 24th of December.

On Christmas morning the model Christians, who had no thought of anything but religion, got up to sing. Their pastor gave out by the first line a very familiar hymn. They all expected that it would be given out. Immediately the congregation arose to their feet and in a few seconds were aghast to find themselves singing—

Hark! The herald angels sing
Beecham's pills are just the thing.
Peace on earth and mercy mild;
Two for man and one for child.

[Laughter and applause.]

No, sir; I am not going to introduce politics into this discussion. There are two kinds of political victories, two ways of making political capital. Men may try by the examination of platforms, by going back on records, by going back as many years as they please to prove some man has been either untrue to his party or to himself.

They may try to win the victory for Democrat, for Republican, for Populist, by proving something wrong against Republican, Populist, or Democrat.

Mr. Speaker, you never can win a game of base ball solely by catching the other side out. That will not give you any positive score. You have got to make the runs off your own bat before you can really win the victory. And so if a great party is to win a victory it must win it by positive and not negative triumph. A great party may find the country in a strait, as the Democratic party finds it to-day, and power has been put into the hands of the Democratic party. It is called upon to meet a great crisis. It has a great leader. It was chosen to support that leader. It intends to rise, as he has risen, to the occasion. It does not mean to be affected or impaired by any stories of old times and different circumstances that may be told against it. We do not cavil who is responsible for the difficulty in which we find ourselves placed. When a great city is on fire we do not care what old woman's cow kicked over the lantern which may have set fire to it. We care only first to put the fire out, then to clear away the débris, and then to erect in the proper time, after the débris is cleared away, the new buildings that are needed.

Now, sir, if the Republican party choose to help us in this crisis, if they are ready to come forward, as I know many of them are, on the lines that President Cleveland has indicated, as so many of them have generously, in the public press and here, intimated that they would do, we accept and are grateful for their support. If they share the risk and the abuse they will share the glory. We are glad to have them meet us. We shall do our work alone as far as we are able to; but we welcome all honorable allies.

Mr. Speaker, I would say to anyone who hesitates to vote as he thinks right, from the idea that some party platform prevents his doing so, from the idea that he may offend somebody—we do not know how—to anyone who hesitates to go with us when his opinions are with us, I would say, as the mother of the Roman said to him:

If it were so that our request did tend to save the Romans, thereby to destroy
The Volsces whom you serve, you might condemn us,
As poisonous of your honour: No; our suit
Is that you reconcile them: while the Volsces
May say, "This mercy we have showed;" the Romans,
"This we receiv'd;" and each in either side
Give the all-hail to them, and cry, "Be bless'd
For making up this peace!" Thou know'st, great son,
The end of war's uncertain; but this certain,
That if thou conquer Rome, the benefit
Which thou shalt thereby reap in such a name,
Whose repetition will be dogg'd with curses;
Whose chronicle thus writ,—"The man was noble
But with his last attempt he wip'd it out;
Destroy'd his country; and his name remains
To the ensuing age abhorr'd."

We have no threats to make. We have heard threats. We do no threatening back; but we mean to stand firm. We have no feeling of ferocity, no feeling of enmity, no wish to arm one section of the country against the other; but we propose favoring the unconditional repeal of these purchasing clauses, and to stand on our consciences, to stand on our convictions, to stand on the instructions of our constituents.

The gentleman from Nebraska [Mr. BRYAN], in his eloquent peroration, introduced the incident of the battle of Marengo, and told how, when the French army was on the point of retreat, a little drummer boy saved it by beating the charge. I would think of another battle fought by the great Emperor, when his fiery cavalry, under the lead of his own brother and of Marshal Ney, charged, with shout and dash and sabers drawn, up to the hill of Hougoumont, again and again, against the squares of the Iron Duke's army. There they stood, English and Scotch and Irish and Hanoverians, all the loyal subjects of the king, arrayed there for protection of liberty and order, against the common enemy.

There they stood, and charge after charge of the Old Guard and the young guard and the fiery dragoons broke upon them like waves upon the rocks. The French cavalry rode round and round the impregnable squares, and everywhere the steel wall of bayonets was presented against them. At length the charge ended, and those invincible cavalry retired down the slope of the hill. Then at length the "thin red line" arose from the trenches where it had been lying inactive in both sun and rain for ten hours, and charged down the slope in its turn, an unbroken line, and carried victory where victory was never carried before.

Stand firm, friends; do not be dismayed. Maintain your conscience, your opinions, and the directions of your constituencies, and victory will crown our arms too. I thank the House deeply. [Applause.]

PRINTING HERSCHELL REPORT ON THE COINAGE OF SILVER IN INDIA.

Mr. RICHARDSON. Mr. Speaker——

The SPEAKER. The gentleman from Kansas is recognized.

Mr. SIMPSON. Mr. Speaker——

The SPEAKER. The gentleman from Tennessee has a resolution which came over from the Senate relating to the printing and binding of the Herschell Report, which he desires to have considered. The Clerk will report the resolution, after which the Chair will ask if there be objection to its consideration.

The Clerk read as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound in cloth 6,000 copies of the report of the commission appointed to inquire into the Indian currency, commonly known as the "Herschell Report on the Coinage of Silver in India," with the accompanying correspondence and testimony, of which number 2,000 shall be for the use of the Senate and 4,000 for the use of the House.

The SPEAKER. Is there objection to the consideration of this concurrent resolution? [After a pause.] The Chair hears none, and the question is on its passage.

Mr. BLAND. Mr. Speaker, just a moment. I do not think the resolution provides how they shall be distributed. I take it for granted that they will be pro rated among the members as other documents.

Mr. RICHARDSON of Tennessee. The resolution, I will say to the gentleman from Missouri, is in the usual form. It provides 4,000 copies for the members of the House, and they, of course, will be distributed in the usual manner.

The resolution was passed.

On motion of Mr. RICHARDSON, a motion to reconsider the vote by which the concurrent resolution was passed was laid on the table.

SILVER.

The House resumed consideration of the bill for the repeal of the purchasing clause of the Sherman act.

Mr. BAILEY. Will the gentleman from Kansas yield to me a moment of his time?

Mr. SIMPSON. Yes, sir.

Mr. BAILEY. The distinguished gentleman from Massachusetts [Mr. EVERETT], in his speech, states that Mr. Calhoun was "a great friend of the later United States Bank." That statement, important as it is, and coming from a gentleman of great learning and distinction, ought not to pass unchallenged, and I ask the gentleman from Kansas to yield to me while I have read at the Clerk's desk Mr. Calhoun's own refutation of it. He was replying to Mr. Clay, who had charged him with inconsistency

The Clerk read as follows:

If, said Mr. Calhoun, this was a question of bank or no bank; if it involved the existence of the banking system, it would indeed be a question—one of the first magnitude; and, with my present impression, long entertained and daily increasing, I would hesitate, long hesitate, before I would be found under the banner of the system. I have great doubts (if doubts they may be called) as to the soundness and tendency of the whole system, in all of its modifications. I have great fears that it will be found hostile to liberty and the advance of civilization; fatally hostile to liberty in our country, where the system exists in its worst and most dangerous form. Of all institutions affecting the great question of the distribution of wealth—a question least explored, and the most important of any in the whole range of political economy—the banking institution has, if not the greatest, among the greatest, and I fear most pernicious, influence on the mode of distribution. Were the question really before us, I would not shun the responsibility, great as it might be, of freely and fully offering my sentiments on these deeply important points; but as it is, I must content myself with the few remarks which I have thrown out.

Mr. SIMPSON. Mr. Speaker, it is an honor at any time to have the privilege of addressing the members of this House and the country; it is also an honor for one as humble as I, representing the farmers and agricultural classes to some extent, to have the honor of making a speech here; it is also a great honor to have the privilege of following the distinguished gentleman from the great State of Massachusetts [Mr. EVERETT]. I am a little afraid, however, Mr. Speaker, that it does not argue well for the progress of human liberty and human rights that from the great State of Massachusetts there should have come a gentleman to advocate the interests of the money power, and that that gentleman should congratulate a gentleman from the far Southern State of Florida [Mr. COOPER] on taking the same position in society.

Kansas and Massachusetts in the past have been somewhat in accord; but history has proven that when Massachusetts was in accord with Kansas it was right, and stood for human progress. But it is not the first time that Massachusetts has gone a little astray. It is not the first time that the majority, even in Massachusetts, stood on the side of aristocracy. If I remember aright, it was in the city of Boston that old William Lloyd Garrison was dragged through the streets with a rope around his neck, and Wendell Phillips, the great apostle of emancipation, was mobbed in the streets.

On those occasions Massachusetts was on the wrong side; and I fear, after hearing the statement of the gentleman from Massachusetts, that there has come another time in the history of this country when Massachusetts is again on the wrong side; and you will note that whenever Kansas and Massachusetts are not in accord Massachusetts is clearly in the wrong. [Laughter.] I want to read a short extract from a speech of a distinguished gentleman from the State of Massachusetts, one of the greatest men that that State ever produced, and I want to read it in contrast to the language of the gentleman from Massachusetts who has taken his seat.

I consider this gentleman the greatest statesman and orator of modern times—one who clearly succeeded in foreseeing the evils which would come to this country if she persisted in her policy of enslaving so many of the human race—and after that battle was fought and won and liberty restored to the black men, true to his instinct, he took up the side not only of the black slaves, but of the white slaves, and here is his prophecy on that subject, and I will read from Wendell Phillips's speech on the labor question:

The great question of the future is money against legislation. My friends, you and I shall be in our graves long before that battle is ended; and, unless our children have more patience and courage than saved this country from slavery, republican institutions will go down before moneyed corporations. Rich men die, but banks are immortal and railroad corporations never have any diseases.

* * * * * * * *

Our fathers, when they forbade entail and provided for the distribution of estates, thought they had erected a barrier against the money power that ruled England. They forgot that money could combine; that a moneyed corporation is like the papacy, a succession of persons with a unity of purpose. Now, as the land of England in the hands of thirty thousand landowning families has ruled it for six hundred years, so the corporations of America mean to govern; and, unless some power more radical than ordinary politics is found, will govern inevitably. The survival of republican institutions here depends upon a successful resistance of this tendency. The only hope of any effectual grapple with the danger lies in rousing the masses, whose interests lie permanently in the opposite direction.

I put that against the speech of the gentleman from Massachusetts [Mr. EVERETT], who seems to have taken the side of the money power, the power that the great Massachusetts statesman, from whom I have quoted, foretold would try to rule the country. The issue seems to be fairly and squarely drawn. Massachusetts, through the gentleman who has just addressed the House, takes the one side, and Kansas, the child of Massachusetts, stands, as she ought to stand, in defense of the interests and the rights of the people.

Mr. Speaker, it is necessary in the outset in the discussion of a great question like this to have a text to preach from. We ought to understand the true condition of the country and of the people and the causes that have produced that condition. What are the underlying causes? Did these evils come up suddenly, or do they result from the conditions lying far back in the past? This is a question of human progress. The race has been traveling along the same road for thousands of years, history is eternally repeating itself, and we are always fighting over and over again the same old battles.

The story has been told in the history of every nation. It is the old struggle, world-wide and long continued, and which, I fear, will go on until the end of time, if time should ever come to an end. We ought to take a lesson from the past, and where we see like conditions producing like results we should endeavor as statesmen, as patriots, as lovers of our kind, to prevent, if we

can, a repetition of the disasters and catastrophes that have overtaken the human race in every age. I send to the Clerk's desk to have read a short extract from the history of a people who lived many years ago.

The Clerk read as follows:

And there was a great cry of the people and of their wives against their brethren, the Jews.

2. For there were that said, We, our sons, and our daughters, are many; therefore we take up corn for them, that we may eat and live.

3. Some also there were that said, We have mortgaged our lands, vineyards, and houses, that we might buy corn because of the dearth.

4. There were also that said, We have borrowed money for the king's tribute, and that upon our lands and vineyards.

5. Yet now our flesh is as the flesh of our brethren, our children as their children: and, lo, we bring into bondage our sons and our daughters to be servants, and some of our daughters are brought unto bondage already; neither is it in our power to redeem them, for other men have our lands and vineyards.

6. And I was very angry when I heard their cry and these words.

7. Then I consulted with myself, and I rebuked the nobles, and the rulers, and said unto them, Ye exact usury, every one of his brother. And I set a great assembly against them.

8. And I said unto them, We, after our ability, have redeemed our brethren the Jews, which were sold unto the heathen; and will ye even sell your brethren, or shall they be sold unto us? Then held they their peace, and found nothing to answer.

9. Also I said, It is not good that ye do; ought ye not to walk in the fear of our God because of the reproach of the heathen our enemies?

10. I likewise, and my brethren, and my servants, might exact of them money and corn. I pray you, let us leave off this usury.

11. Restore, I pray you, to them, even this day, their lands, their vineyards, their oliveyards, and their houses, also the hundredth part of the money, and of the corn, the wine, and the oil, that ye exact of them.

12. Then said they, We will restore them and will require nothing of them; so will we do as thou sayest. Then I called the priests, and took an oath of them that they should do according to this promise.

13. Also I shook my lap and said, So God shake out every man from his house, and from his labour, that performeth not this promise, even thus be he shaken out, and emptied. And all the congregation said, Amen, and praised the Lord. And the people did according to this promise.—*Nehemiah*, v, 1-13.

Mr. SIMPSON. Now, Mr. Speaker, the American people are traveling the same road as the Israelites traveled, under the same conditions, and unless there is a change in the policy of this country they will arrive at the same end; that is universal bankruptcy and the loss of the liberties of the people.

I have another short extract which I wish to read. I wish to call attention to another government, another republic that was set up among men and started out with as broad precepts as we did, and traveled for a time the same road with probably greater security to human rights and the liberties of individuals. Yet that republic went down under the same conditions, because it in turn failed to carry out the laws of nature, to secure to the residents of the nation their natural and inalienable rights. Froude, the great English historian, in his sketch of the life of Cæsar, writes:

The struggles between plebians and patricians for equality of privilege were over, and a new division had been formed between the party of property and a party who desired a change in the structure of society. The free cultivators were disappearing from the soil. Italy was being absorbed into vast estates, held by a few favored families and cultivated by slaves, while the old agricultural population was driven off the land and was crowded into the towns. The rich were extravagant, for life had ceased to have practical interest, except for its material pleasures; the occupation of the higher classes was to obtain money without labor, and to spend it in idle enjoyment. Patriotism survived on the lips, but patriotism meant the ascendency of the party which would maintain the existing order of things, or would overthrow it for a more equal distribution of the good things which alone were valued. Religion, once the foundation of the laws and rule of personal conduct, had subsided into opinion.

The educated, in their hearts, disbelieved it. Temples were still built with increasing splendor; the established forms were scrupulously observed. Public men spoke conventionally of Providence, that they might throw on their opponents the odium of impiety; but of genuine belief that life had any serious meaning, there was none remaining beyond the circle of the silent, patient, ignorant multitude. The whole spiritual atmosphere was saturated with cant—cant moral, cant political, cant religious; an affection of high principle which had ceased to touch the conduct and flowed on in an increasing volume of insincere and unreal speech.

That was the condition of the Roman republic about the time it was changing from a republican form of government to an empire. That was the time when the Roman people were losing the last vestige of their natural rights; and I ask any candid member of this House whether he does not see in the condition of society in that Roman republic an exact counterpart of what we have here to-day. If that be the case, is it not time that we should have a new Declaration of Independence? Is it not time that we should develop some statesmen with an understanding of the true causes of our present condition, with intelligence enough to dig deep down below the surface and find out what is the real cause of the present condition of the people?—not attributing it, like some of your bankrupt statesmen of to-day, to the fact that the Government is buying some million ounces of silver and coining it and storing the coin in the Treasury.

To my mind, Mr. Speaker, the causes of the condition of our people to-day are numerous; and they did not begin yesterday or the day before, or last year or the year before. This condition had its rise in the bad institutions of government with which we started out. We began wrong. We have failed to secure to human society and to individuals the rights that belong to them. This great nation in the course of its progress has created enormous powers, and instead of fortifying the rights of the people, has granted these vast powers to a privileged class. Every nation that grants vast privileges to a special class builds up in its midst a dangerous class; for every special class is a dangerous class.

To my mind, Mr. Speaker, while the money question is a great question, and one that demands immediate attention and settlement, one that calls for the best efforts of the statemanship of this country to give this nation a permanent system of finance, yet the lack of this is not the only evil that has produced the present lamentable condition of the country. But inasmuch as this discussion turns upon this one evil, and inasmuch as it is brought before the people of the country for settlement to-day, I will confine my remarks mainly to this one evil. I shall go into it but briefly, because there has been so much said on both sides, particularly on the side of those who stand for the free coinage of silver.

I have been somewhat disappointed at the poverty of the case of the opposition. I had expected greater things from them, inasmuch as they assume, and it has been generally credited, that they have the learning and the philosophy on their side. They have had the great metropolitan dailies of the country championing their cause; and if it were a good one they certainly ought to have set forth some better reasons than any of their members have been able to give us since this debate began.

Mr. Speaker, I am reminded of a story I once heard about a gentleman who built a steamboat on the Missouri River. It was at a time when there was great rivalry to see which could have the louder whistle. This gentleman built a steamboat with a 7-foot boiler and put on it a 9-foot whistle; and when he blew that whistle the first time, all the steam went out of the boiler. This seems to be the condition of the opponents of the free coinage of silver. They seem to have blown off every pound of steam they had in their boiler at the very first start, and I expect that they have drifted into the rushes on the shore to get up steam again.

But, Mr. Speaker, I want to look briefly into some of the arguments that have been introduced in this discussion. I want to go over the case a little as it now stands—the reasons they have given to the public, not only in the House, but outside, for the condition the people find themselves in in regard to money matters at this time. You remember a little over four years ago when Mr. Harrison was running for the Presidency of the United States and when we nearly had a panic in Wall street one day, when there was a great scarcity of money, and the use of money ran up in one day to 80 and 90 per cent on call. They said the trouble with the country was—and that was the burden of their campaign speeches on the stump and elsewhere—that it was scarcity of money; that too much money had been taken from the circulation of the country and locked up in the Treasury of the United States, and that the cure for the great scarcity of money among the people was to get rid of the surplus.

Well, the Democrats promised to do it, and the Republicans promised also to get rid of the surplus, and when the Republicans got in office they very speedily fulfilled their promises. [Laughter.] It did not take the Republicans long to get rid of the surplus in the Treasury. I will not go into details as to the manner of its expenditure, or for what purpose they paid out the money. That is pretty well known already to the country; but they got rid of the surplus, the money went out, and yet it is a matter of fact, that all will bear me out in, that from that day to this times have continued to grow worse instead of better. You gentlemen down East did not feel it quite so soon as we did in the West.

As has been said in both the Republican and Democratic platforms, the laborer and the farmer are the first to feel these evils. The calamity struck us some five years ago in Kansas, and we were the best calamity howlers of the country; but I say now, with all due respect, that we take off our hats in acknowledgment of the superiority of the New England calamity howlers at this time. [Laughter.] I will even take off my hat to Mr. LODGE himself, who now occupies a place in the United States Senate, for he has set up a wail of woe in the other end of the Capitol that surpasses any calamity howl that ever came from the plains of Kansas. And yet the doctors prescribe now another remedy when the condition of the patient grows still worse. Your political doctors, your financial doctors, have new theories and new remedies for the pending disease.

While four or five years ago they told the country that the scarcity caused the depression of industries, at that time they said that it was the money locked up in the Treasury. Now they tell us that the trouble is that there is too much money out. If they do not mean that—and they may deny it—but if that is not what they mean, what do they want to destroy one-half of the currency that we have now for? If they do not say that the way to make the people more prosperous is to take a part of the

money out of circulation, what do you mean by wanting to repeal the Sherman law, which puts it in circulation?

The New York World sent a telegram to a number of men who had failed in business, some of them for millions and millions, recently, and asked a reply to the question which concluded the telegram, as to what was the cause of failure. The answer in all cases was, "The scarcity of money," that there was not money enough in the country, and failures resulted because of the "stringency in the money market." What do these Napoleons of finance stand up here and prescribe for the patient at this time? Why, just the same as your quack doctors used to do not very many years ago. When the patient got sick one of these doctors would come in, lay him on his back, take out his lancet, and bleed him. He would let the blood flow as long as the patient could stand it, and then if he survived that operation, he was in good condition, they said, to be treated with proper remedies.

That is exactly what these financial doctors—these political experimenters—are undertaking to do now with the people of this country. Business failures are existing all over the country, manufacturing industries are at a standstill, and there is a complete collapse of commerce, and yet what do they propose to do? Simply to repeal the Sherman law without putting anything in its place. I take it that it is the gold standard that they want. They want to eliminate silver from our circulation, eliminate all sorts of money except gold, and put us upon a monometallic standard of gold. Gentlemen, if you do not mean that, what do you mean?

Now, the conclusion of the doctors is that we must take one-half of the blood from the patient's body. No, my friend, what you want to do is not only to restore the blood which has already been lost, but to give the patient more, give him something to strengthen his system, give him more blood. Put that blood in circulation and you will find speedy relief will follow. Do not adopt the system which you propose here, else the flow of blood will be congested. It will settle in only part of the body, and paralysis of the entire system will ensue.

Now, although the Sherman law has been made the scapegoat for all the existing ills, although there has been a great deal said about its evil effects on the country, I take it to be a fact, although not intended by the framers of that law, that the effect of it is to put more money in circulation, and if it had been fairly carried out, as it was intended, it would have put in circulation a large quantity of silver, as well as silver certificates.

I understand the law to mean that the Government buys from those who produce silver 4,500,000 ounces a month of silver, and that the law says that after the 1st day of July, 1891, the Government shall coin a sufficient amount of that bullion into silver dollars to redeem the outstanding Treasury notes that were issued to buy that silver bullion. I understand that is what the law means.

Now, gentlemen have been put into power whose duty it was to enforce the law, the mandate of the people, but who have not enforced the law. They have disobeyed the law; they have disgraced their own dollar, the child of their own creation, and they have cried from the housetops that this was a debased dollar. And can you expect anybody else to receive it when its own Government disgraces it?

Now, let them fulfill the law and obey its provisions, and the Government, in the line of getting a revenue, will make a clear profit of 40 cents on every dollar's worth of bullion bought. Who gets the benefit? Why, all the people, the taxpayers; and as between the taxpayers and the mine owner, I do not know but I would rather have the benefit and the increased value go to the people themselves; and I believe that the Sherman law to-day, although it has been decried and abused, is really a better law than any that has preceded it in regard to silver from 1873 until to-day. All you want to do is to give the Sherman law a chance, to put it in force, to obey its provisions, to buy the bullion, coin it into dollars, put them into circulation, and let the Government receive the benefit of the increased value of the silver bullion.

I do not believe anybody will refuse this dollar, because it is a dollar and pays a dollar's worth of debts and transacts a dollar's worth of business, and that is what you want dollars for. My friends on the other side take the position, however, in contradiction of this, that a dollar must have 100 cents' worth of value in it in order to be an honest dollar; that a dollar must be a dollar the world over, must be exchangeable for every other dollar.

Now, the trouble with these gentlemen is that they do not understand what a dollar means. A dollar does not mean a commodity at all. It never did, but those gentlemen have lived under conditions where we have had a system of barter and trade, and those old ideas have taken such firm root in their minds that it is very difficult for them to rid themselves of the idea that when you make an exchange a dollar must have a commodity value in it in order to make it a dollar. A dollar is really a representative of value of all things, and need not have in itself a dollar's worth of commodity value. I do not wish you to take my authority alone. Francis A. Walker, a writer upon the money question of undoubted authority in this country, and who is accepted as a standard writer upon this question in the United States, says:

> Not a little of the confusion which has reigned in this department of inquiry has resulted from the failure of writers to fix their attention persistently on the money function, and to treat that as money, all that and only that, which performs this function. Nearly all systematic writers on political economy allow themselves, at a certain stage in their investigation, to be diverted from the contemplation of the office of money, and begin to generalize what they observe as the common features of those numerous forms of money which appear in a primitive condition of industrial society.

My friends from the down-east section of this country used, in the old times, you know, many different things for money. Society has been driven to adopt those means because of the poverty of other means. Down in Massachusetts at one time they used musket balls for currency, and they were the circulating medium. At another time they used codfish, and codfish was the circulating medium of the realm there; and I would not be surprised if on that foundation they built what we call the codfish aristocracy of that part of the country. [Laughter.]

I realize how difficult it is for men who have been used to barter and trade, and who have been brought up in the belief that a dollar, which makes the exchange of all commodities, should have in itself a commodity value. I can easily see how difficult it is for those who have been subjected to such early prejudices to realize that the human race is advancing, and that one of the greatest discoveries of modern times, as a great French statesman has called it, was the use of money in the place of barter and trade.

A friend of mine who lives on Pennsylvania avenue confessed to me that he could never get it out of his mind that Pennsylvania avenue runs east and west, and that every other street runs on an angle. The trouble with him was, he said, he never could realize it until he got off on the other streets to test his compass. Now, in the same way it is difficult for people who have early prejudices to realize that they do not need a commodity value in their dollar.

Francis A. Walker further says:

> Money is that which passes freely from hand to hand throughout the community in final discharge of debts and full payment for commodities, being accepted equally without reference to the character or credit of the person who offers it, and without the intention of the person who receives it to consume it or enjoy it, or apply it to any other use than in turn to tender it to others in the discharge of debts or payment for commodities.

Now let me repeat—

He says—

> money is to be known by its doing a certain work. Money is not gold, though gold may be money; sometimes gold is money and sometimes it is not. Money is not one thing, no group of many things having any material property in common. On the contrary, anything may be money; and anything, in a given time and place, is money which then and there performs a certain function. Always and everywhere that which does the money-work is the money-thing.

Now, those who believe with me and my party hold the position that it does not matter what material your money is made of. We hold to the proposition that money is the representative of value of all things, and so long as society—and I take it all gentlemen here understand the Government to be a mere cooperative society—so long as society agrees by statute law to select one of these things as money and receive it in the payment of all debts, public and private, it will pass for money. That is what we understand it to mean, and so, whether you select gold or silver, or any other commodity, you are sure to have a fluctuating currency, because the article it is based upon will fluctuate according to supply and demand.

That is the trouble; and that is where we all go astray in reasoning from the standpoint that your money is based upon a commodity value, because the commodity value of the article used for money becomes an article of which the speculator gets hold and holds out of circulation, and therefore it fails to perform its function as money.

Now, then, there is another point, and I think it is possibly one that does not seem to have been settled to the satisfaction of a great many people in this country, and probably will not be for some time, that the amount of money in circulation regulates the value of the money itself; and not only that, but, of course, it regulates the value of everything you exchange for money.

Now, we hold that the amount of money in circulation makes the money dear or makes it cheap in comparison with the value of things that you exchange for money. For in the new system, as we have it to-day, in this new discovery, and under the new arrangement of society, where we have what old Adam Smith called a "division of labor," where one man raises a commodity on a farm and exchanges with a manufacturer in a far distant city, you can not lug the commodity that you produce on the farm and exchange for the commodity produced in the factory, but you must

have something, that you call "money,' that represents all of these values. So, society having made this compact, you can select between any of these commodities you desire. That is what money is for.

Now, it follows that if you restrict the amount of money in circulation, and there is not enough to perform the natural exchanges, you naturally increase the demand for money. That is, if there is a million dollars of business to be done and there is only $500,000 worth of money, the volume of trade or business, or the price of the article which you exchange, which is the same thing, must be scaled down until you bring it on an equality with the amount of money in circulation. So I think the amount of money in circulation practically regulates the value of everything you exchange for money; and if you take half of the money out of circulation, of course the products of labor must be scaled down to meet it.

Now, we have had that practically demonstrated all over this country within the last two or three months. Gentlemen will admit it; and you will hear it asserted on the floor from day to day that there is a general business depression, that business is at a standstill, and that the price of everything has gone down below the cost of production. Why? All because there is not enough money in circulation. Let me read an article from a leading paper. It is the New York World, which I think Democrats will take as a good authority upon this question. Upon the value of wheat in Chicago it says:

THE PRICE OF WHEAT.

Cash wheat sold in Chicago on Saturday at 56¼ cents a bushel, the lowest price ever known.

The price was not determined by any consideration of value. It bears no proper relation to the cost of production or to the ratio of supply and demand. It is a price at which the greater part of the American production of wheat would stop, because wheat costs more than that to grow except in a few favored localities.

The price is an effect of the stringency of money and nothing else. Men sell wheat for 56¼ cents cash because they must have the cash and can not get it in any other way. Men who would like the grain even at a much higher price do not buy it simply because in the present condition of the loan market they can not get the money with which to pay for it.

At the same time that cash wheat was selling at 56¼ cents, September options ranged from 60¾ to 63 cents, and December sales were made at 67 and 69. The difference illustrates the situation. There would be a notable profit for anybody having the money in buying cash wheat and selling autumn options at the rates prevailing for each. The only reason that nobody undertook this speculation on such a scale as to narrow this margin is that nobody could get the money with which to buy the cash wheat.

All the prices are abnormally low. Even at the December rate of 67 and 69 cents, if such prices were established for long, wheat production would cease to be profitable over wide areas, and a multitude of wheat-growers would go out of the business. These are panic prices, and if long continued they mean hard times. They must impoverish the farming community, and indirectly the whole population. They must diminish the consumption of all classes of goods, and hurtfully affect all forms of industry. Fortunately they are not likely to continue.

All these evils grow out of the financial situation. The first duty of patriotism and self-interest alike is to take every possible measure for the betterment of that situation, and particularly for the restoration of confidence in the integrity and stability of our money. Lack of such confidence is the chief source of all the trouble.

What is the remedy that the New York World and the followers of that paper would seek—the gold-standard people? What is the remedy that they propose to the people of the country? It is to demonetize silver by the repeal of the Sherman law, which will lessen the circulation of money in the country. I do not assert that it will take out what is in circulation, I do not mean that they will withdraw the silver coins in circulation and melt them up like old silver. I do not suppose they will do that. But you must remember that we continue to have an increase of population and we have a very large increase in the volume of business, and anything that mars or stops the circulation, or if it remains stationary, or is continued in the Treasury so that it can not get out among the people, then we have an inadequate supply of money to carry on the business of the country.

Now, here is a confession by this champion of the gold standard that if you take out a part of the money from the circulation you thereby reduce the price of wheat and every other product, to fit the amount left in circulation. I want to give the House some more evidence on this point, because it is very important in this discussion, and it ought to be settled beyond a doubt in every man's mind.

I have here a speech made by Senator JOHN P. JONES of Nevada in the Senate of the United States in 1890. It contains a collection of evidence on this subject that has never been attacked or disputed. He quotes from the most eminent writers on political economy the world has ever known, and he shows that, without exception, all the great political economists agree that the amount of money in circulation does regulate the value of the money and, consequently, the value of everything that is exchanged for money. I will read one or two of these extracts and will incorporate others in my printed remarks.

John Locke, in his "Considerations," etc., published in 1690, said:

Money, while the same quantity of it is passing up and down the kingdom in trade, is really a standing measure of the falling and rising value of other things in reference to one another, and the alteration in price is truly in them only. But, if you increase or lessen the quantity of money current in traffic in any place, then the alteration of value is in the money.

The historian, Hume, says:

It is not difficult to perceive that it is the total quantity of money in circulation, in any country, which determines what portion of that quantity shall exchange for a certain portion of the goods or commodities of that country. It is the proportion between the circulating money and the commodities in the market which determines the price.

Fichte says:

The amount of money current in a state represents everything that is purchasable on the surface of the state. If the quantity of purchasable articles increases, while the quantity of money remains the same, the value of the money increases in the same ratio: if the quantity of money increases, while the quantity of purchasable articles remains the same, the value of money decreases in the same ratio.

John Stuart Mill (Political Economy) says:

The value of money, other things being the same, varies inversely as its quantity, every increase of quantity lowering the value, and every diminution raising it in a ratio exactly equivalent.

Ricardo (reply to Bosanquet) says:

The value of money in any country is determined by the amount existing. That commodities would rise or fall in price in proportion to the increase or diminution of money, I assume as a fact that is incontrovertible.

Ricardo further says:

There can exist no depreciation in money but from excess; however debased a coinage may become, it will preserve its mint value—that is to say, it will pass in circulation for the intrinsic value of the bullion which it ought to contain, provided it be not too great abundance.

Torrens, in his work on political economy, says:

Gold is a commodity governed, as all other commodities are governed, by the laws of supply and demand. If the value of all commodities in relation to gold rises and falls as their quantities diminish or increase, the value of gold in relation to commodities must rise and fall as its quantity is diminished or increased.

Mr. J. R. McCullough, in commenting on the principles of money laid down by Ricardo, says:

He examined the circumstances which determine the value of money and he showed that its value will depend on the extent to which it may be issued compared with the demand. This is a principle of great importance, for it shows that intrinsic worth is not necessary to a currency, and that, provided the supply of paper notes declared to be a legal tender be sufficiently limited, their value may be maintained on a par with the value of gold, or raised to any higher level. If, therefore, it were practicable to devise a plan for preserving the value of paper on a level with that of gold, without making it convertible into coin at the pleasure of the holder, the heavy expense of a metallic currency would be saved.

It appears, therefore, that if there were perfect security that the power of issuing paper money would not be abused; that is, if there were perfect security for its being issued in such quantities as to preserve its value relatively to the mass of circulating commodities nearly equal, the precious metals might be entirely dispensed with, not only as a circulating medium, but also as a standard to which to refer the value of paper.

Sir Archibald Alison says:

The suspension of specie payment in 1797 making bank notes a legal tender receivable for taxes, by providing Great Britain with an adequate internal currency, averted the catastrophe then so general upon the continent, and gave it at the same time an extraordinary degree of prosperity. Such was the commencement of the paper system in Great Britain, which ultimately produced such astonishing effects, and brought the struggle (of the Napoleonic wars) to a triumphant close.

Now, if this be the fact, that the effect of reducing the volume of money in circulation is to scale down the price of labor and the products of labor, I say that is the robbery of labor. If a man were to go out in the highway with a pistol and confront his neighbor and take away the half of what the man's labor had produced, no one would call it by any other name than robbery, and this is doing exactly the same thing by law. You rob me of half the value of my labor when you scale down the amount of money in circulation so as to reduce the price of my labor one-half.

Now, Mr. Speaker and gentlemen, there must be a motive behind this proposed action. Nearly everybody moves along the lines of least resistance in his efforts to make a living. Ever since man came upon the earth he has been trying to evade the Divine decree, "In the sweat of thy face thou shalt earn thy bread." He has always been trying to make somebody else earn a living for him, and I suppose that effort will continue through all time. The only way that evil can be prevented or corrected is by an ever-watchful people guarding vigilantly their interests and rights, and, in our system of society, the only way we can accomplish that result is by such legislation as will prevent people from preying on one another.

Mr. Speaker, we never heard until a few years ago that there was any necessity for a "money of the world." Gentlemen talk here learnedly about a money of the world; they want a dollar that will be good all the world over, but I challenge them or any of them to point to a single instance where the money used in one country has ever proved to be a bar to commerce with other countries. There has never been a time in the history of this land when it was claimed or thought by anybody that the difference of our money was any barrier to trade with other nations, and none of the advocates of free and unrestricted trade have ever made the discovery hat a difference in money would pre-

vent that desirable result. Trade between countries is barter. Money is not used, and I doubt if it will ever be used. Yet gentlemen talk here about the "money of the world."

England, the great commercial trader of the world, the country that through her system of unrestricted trade has gathered a great part of the wealth of the world, has traded with every nation, civilized and barbarous; but we never heard until lately that the statesmen of England found it necessary to have a money of the world. Lately, however, they have been clamoring for it, and they have used all their influence to get the United States to adopt gold as the standard of that money. Now, what is the motive behind this? I have here an expression from one of the greatest of English statesmen, Mr. Gladstone.

In the House of Commons shortly after the closing of the Indian mint, and in reply to a question as to the intention of the government in this direction, the prime minister said:

But if there are these £2,000,000,000 of money which we have got abroad, it is a very serious matter between this country and other countries. We have nothing to pay them. We are not their debtors. We should get no comfort, no consolation out of a cheaper money which we could obtain for less and part with for more. But the consolation throughout the world would be great. This splendid spirit of philanthropy would result in our making a present of £50,000,000 or £100,000,000 to the world. It would be thankfully accepted, but I think that the gratitude for your benevolence would be mixed with great misgivings as to your wisdom.

Mr. Gladstone says that England has owing to her $10,000,000,000, while she owes no country anything; therefore, it would be suicidal on her part to adopt any system of finance that would so make money plentiful or cheap as to put England in the position of donating £100,000,000 to the civilized world. That is the way the English look at it. It is a proper way to look at it. As men having fixed incomes from investments in the funds or from investments in various countries, they understand it is their interest to have a single gold standard, which practically increases the value of their money.

Again, Mr. Speaker, the London Economist, on the single gold standard, referring to the increasing purchasing power of gold and the consequent decline in the price of commodities produced by the disuse of silver, says:

Nearly every nation on the face of the earth is indebted to us, and the result of an appreciation of gold is, that we obtain a larger quantity of those commodities in settlement of our claims.

Now, I am a practical farmer; I am not a farmer like Horace Greeley, who raised pumpkins that cost a dollar apiece. But I have for fifteen years worked on a farm, producing everything with my own hands. I have on my farm to-day a crop of wheat, or part of a crop, that was raised during the last three years. I have been saving that wheat—what I could save of it—in the hope that some day I could pay with it the mortgage that comes due on the 1st of next April.

What is the condition I find confronting me to-day? By reason of the understanding, or the threat, that we are to return to a single gold standard and to scale down the amount of money in circulation, you have scared money out of circulation; money has become suddenly dear, and when a thing becomes dear everybody wants it to hoard it. I find that at the present time in the county town where I live a bushel of wheat brings only 30 cents. Under these circumstances I see that when the mortgage becomes due I shall fall a long way short of having enough to meet the debt. This is the condition, not only of myself, but of nine-tenths of the people of this country who are in debt and dependent for the payment of their debts on the products of their labor.

Mr. Speaker, I will, for the benefit of those Democrats who advocate the single standard give them some Democratic teachings:

THE HON. ALEXANDER H. STEPHENS ON THE CRASH OF 1873.

There are two great questions before this people, namely, finance and taxation. As to finance, I must say we are poorer than we have been for fifty years, and there are good reasons for it. The present depreciation dates back to the crash of 1873. What caused that crash? The demonetization of silver in Germany did it first, then the Latin states, and then other countries of Europe. We fell into the error too, nobody seems to know how. At that time the money of the world amounted to $8,000,000,000; of this $4,500,000,000 was silver. Gold and silver had borne definite relations to each other ever since civilization began, but here at one blow these relations were changed and over one-half of the world's wealth put under a blight.

A careful calculator told me the other day that shrinkage of values in this country after the fatal act was more than the whole expense of our war. That fatality was worse than war. There is no remedy for us now except in re-establishing the value of silver and its free coinage. We want $900,000,000 in circulation, at least. We have now only $14 per capita in circulation, including all the hoarded gold and silver. We want at least $25 per capita, or as much as we had before the crash of 1873. People fear the silver flood; I would let it come from all the world until we have a thousand millions in circulation.

On the subject of taxation he said that—

The burdens were borne by the poor, the laboring classes; many a poor man who lives from hand to mouth pays more tax than many a bondholder who is worth half a million. The people are oppressed, and the cause that I labor for, that I am willing to die in, is the cause of the people; but there is hope that within the next two years we shall find relief if we are true to ourselves.

Now, gentlemen, you have no right to take this money out of circulation without providing a substitute. What is the substitute which gentlemen who are in favor of the single gold standard propose? What is their declaration made openly in the press and on the floor of this House? They propose to issue a United States bond that shall be sold for gold—presumably for gold that has been in circulation, thus taking so much gold out of circulation and storing it in the Treasury of the United States—for what purpose? To create a still greater demand for gold; because, I take it, gentlemen all understand that every time you make a new want for anything you increase the value of it.

What follows? Why, it is proposed to grant to the national banking men who have gold the special privilege of buying these bonds and using them as the basis upon which to issue bank notes. Then what do the people pay for the money thus put in circulation? First, the bonds will bear interest; that is the interest charge number one; then when these notes are passed out over the banker's counter they bear interest again; that is interest charge number two; and this is what is paid by the people for having a circulating medium with which to carry on the business of this country.

This is the policy which has brought our country to the condition in which we find it to-day. Under the policy we have pursued the Government has parted with its function of issuing currency, has surrendered this as a special privilege to private corporations, which by means of this privilege have drawn from the productive energies of this country over $2,000,000,000 within the last twenty years as interest upon the currency that we have used in transacting the business of the country. The country to-day ought to retrace its steps; it ought to go back over the ground upon which it has traveled.

At the close of the war we had a large quantity of paper currency in circulation and everybody knew that every dollar of it would be received by the Government for taxes and thus would be redeemed. What, then, did you do in the interest of these money mongers? You put out these bonds which were exchanged for this currency; in place of a currency circulating without interest you put a bond, bearing interest. That is what you did. I believe we should now retrace our steps; we should go back over the ground we have traveled. We should take up the bonds and put currency in their place.

Gentlemen have had a great deal to say about cheap money driving out dear money. They quote to you the old Gresham law; they bring up the fact that Sir Thomas Gresham in the reign of Queen Elizabeth declared it to be a fact that cheap money would always drive out dear money.

Francis A. Walker says:

As it is usually stated, namely: the theory that an inferior money will drive out and replace better money, the theorem is false. It is only when a body of money is thus composed of diverse elements, is itself in excess of the wants of trade, that the better part begins to yield place and retire from circulation.

The great economist and financier, Ricardo, also says that it is a mistaken theory to suppose that guineas of 5 pennyweight and 8 grains can not circulate with guineas of 5 pennyweight or less, as they might be in such limited quantity that one or the other might actually pass in currency for a value equal to 5 pennyweight and 10 grains. There would be in such case no temptation to withdraw either of them from the circulation; there would be a real profit in retaining them.

It is by no means certain, then, as is urgently maintained by the opponents of "free silver," that silver even if overvalued will necessarily leave the country.

France, with $700,000,000 coined at rates of 15½ full legal tender, protects her gold from export by paying out silver to those who would take her gold; the Gresham law does not work over there. Germany, with her small stock of silver, imitates the policy of France.

It is only here where we breed coward statesmen, or worse still, those who are more willing to legislate as the mere puppets of a class, that this so-called Gresham law finds the conditions for perfect working; just as cholera germs find filthy towns the places for successful development.

Everybody knows that during the past year gold has flowed out of this country in profuse streams—everybody knows it has gone abroad and yet everybody knows that the Secretary of the Treasury has not paid out any "inferior currency." The fact is, the present stringency is due to the fact that the people are hoarding all kinds of currency—the plebian as well as the aristocratic, simply because, under this nefarious contraction policy instituted in order to lead to the establishment of a single gold standard, everything is falling in value, and the only secure thing to hold is that which increases in value in the precise proportion in which all other things decrease.

The shout goes up that there is a want of confidence, that this Government is going to pay its obligations in cheap silver, and

authorize its citizens to do likewise, and this lack of confidence sturdily maintains itself in spite of the fact that the Government has done and is doing nothing of the kind, but, on the other hand, its servants are acting in precisely the opposite direction. It is very strange that this fear that payments are to be made in silver and the paper redeemable in silver has led the panic-stricken mob to withdraw from the banks the very kind of money they fear to take.

Mr. Speaker, I do not care how soon dear money is driven out, it is money that enables society to do its business with the least cost that I want. If human beings in obtaining their subsistence move along the lines of least resistance, they undoubtedly wish to avail themselves of that money which is easiest to be got; therefore I think cheap money is the best money. What would you say, gentlemen, of a regiment of soldiers that in the midst of battle would retreat from the field and retire to their barracks? Would you call them good soldiers? No, sir. You would say that the troops that stood upon the field and fought the battle and won the victory were the good soldiers.

Now, then, there never was a time when this country got into difficulties but that gold has retreated from the field of battle, and the cheap money of the people has won the victory for them. People use for tools of trade, or to do anything, those things that will accomplish the purpose they desire in the best way, and that is the reason cheap money is best; has always been found to be the best. It is more satisfactory to the people, and it is the duty of the Government to furnish the people with money to transact their business at as low a cost as possible. They have seen in every age of this country that cheap money has always been the best in times of great need.

Of late another precious piece of information has been given to the country by the poor struggling plutocrats who, from motives of pure benevolence and regard for the poor workingman, have been moving heaven and earth to force this Republic to adopt the single standard; and now it turns out that the workingman is not poor at all, that, in fact, he is the creditor; and the gentleman from Illinois [Mr. GOLDZIER] said in his speech that there was $5,000,000 of deposits, all, or most of them, by poor people. On examination of his figures I find that it amounts to but about $93 per capita. Now, sir, he reasons, I take it, that their interests as creditors are greater than as debtors or laborers.

Now, while they have $93 in the bank, and to that extent are interested in increasing the value of the dollar, they also have interests, as investors of houses and lands, and often their humble homes, and they also have an interest in holding up wages, that would be scaled down with other values, so we see at a glance that their interest as producers is many times greater than their interests as money-loaners, and the claim that the other side sets up, that these are the creditor class and these influential gentlemen who have the means to pay newspapers and hire lobbyists are the debtors of the poor depositors in savings banks.

Is it not strange, taking into view the facts regarding human nature, human selfishness, that the nineteenth century is witnessing the debtor class struggling to force a double-valued dollar into the fists of the auditors who have now, by a successful revolution of the tongues and jaws of Plutos, become the great bondholding, money-loaning classes? Surely, it passes understanding. The religious or the comfortable classes are an ever-present probate court to take care of him.

The guardians of the poor always distrust the average conscience, the common sense of the millions.

It seems to me that it is at variance with our idea of government, that the principle underlying our form of government is that the average common sense of the masses is the only safeguard of a free people.

Institutions are but pasteboard against the thoughts of the street, the talk of the sidewalk becomes the law of the land, and to-morrow they may change it, for with us law is nothing unless close behind stands a warm public opinion.

The good sense and conscience of the masses are the only title deeds.

We have this fact to deal with, that we are launched on the ocean of a chained democracy, with no safety except the intelligence of the masses and the instinctive love of the right in the popular heart.

Now, sir, there is another thing that I want to look at, for I see my time is nearly out, and that is this: The Republicans tell us—I believe they know better than that, though, a good many of them do I am certain—that the reason of the depression of the times, the breaking up of things generally, is the loss of confidence—the loss of confidence in the money of the country and the loss of confidence in the business of the country; and they fear also the Democrats will repeal the McKinley law.

Now, my good Republican friends I do not think you need have any anxiety about the Democrats repealing any law. I do not think you need fear any trouble about repealing the McKinley law. There is no danger of that. There are too many personal interests represented here; there are too many men representing their own manufacturing industries and business; and when you come to the point of revising the tariff there will be so many conflicting interests that will jump up all over the House, inside of the Democratic party, that they will be unable to repeal any law. [Laughter.] They will not do it. The Democratic party, as constituted to-day, is not a party of progress, as you all know. It is not the Democratic party any more. That is a misnomer. It is President Cleveland's party. [Applause.] So, you need not be under any misapprehension or a bit afraid as to what they will do in that regard.

Now, Mr. Speaker, I was talking of the loss of confidence, which has been assigned as a reason for this trouble. You want to supply them with a circulating medium that you call "confidence." There is enough money in the country and all that, only you want confidence! But that game of confidence has been played a little to long on the people, and that is the reason we are in the condition we are in to-day. [Laughter and applause.] That was played by a very respectable member of the Republican party himself, a gentleman who was Secretary of the United States Treasury a short time ago. He played that little game of confidence on the depositors in his bank a short time ago to the tune of $135,000, for which he gave them confidence. The depositors got all the confidence and Charley Foster got all the money. [Laughter.] His condition is the exact counterpart of the people of the United States to-day. While you have been running the country on a confidence basis, a few, gorged with their ill-gotten gains, got all of the money and the people all of the confidence.

Another distinguished member of the Republican party fell a victim to the same game himself. He had signed notes to the amount of $90,000 and left them lying in his desk. His business partner found the notes, put his name on the paper, and used them as a circulating medium himself, and Mr. McKinley fell a victim to this game to the extent of the $90,000 of notes he had signed.

I mention these two distinguished people, Mr. Speaker, who fell victims to this game of confidence. I know you do not want a system of finance, my friends, that leaves you to the mercy of the speculators and the sharks.

The distinguished member from Ohio [Mr. HARTER] told you the other day in his speech that we were furnished by the banks of the country, in checks, drafts, bills of exchange, and other devices used as money, four billion six hundred millions of credits, and I want to ask this gentleman if it is not true that the people of the country who used their credits for doing business had to pay for it, or did they get it for nothing? Can you not realize the fact that this amount of money cost the people of this country a large sum in interest, and many paid the interest in advance, which was practically compound interest? That is what is taking all the life out of the industrial classes to-day, this piling interest on interest; and the text read from Nehemiah—"I pray you, my friends, leave off usury"—should be remembered.

This system of finance, this banking system which bases itself on a single gold standard, is calculated to increase the value of the gold dollars at the expense of everything else. If you have a single gold standard, you must use that as a basis. Then, in the process of time, you will be found issuing five to one on gold, and may be ten to one, and the difference must be made up in the confidence of the people. That is what you will do if you make a single gold standard the rule in this country.

How did the people come to lose their confidence? Why, it was, as I believe—and I know in these piping times there is a good deal said about a conspiracy—I believe a part of the conspiracy, as much as I believe I am alive to-day—a conspiracy on the part of these money men to so influence the legislative branch of this Government and to bring about the repeal of this law, which means a return to the single gold standard.

The SPEAKER. The time of the gentleman has expired.

Mr. SIMPSON. Mr. Speaker, I do not know whether the rules permit it or not, but I would ask the privilege of extending my remarks in the RECORD.

The SPEAKER. The gentleman has that authority under the order already adopted.

Mr. BRYAN. I move that the gentleman's time be extended and that the hour of the recess be extended until he shall have finished his remarks.

The SPEAKER. How much time is suggested in the gentleman's request?

Mr. SIMPSON. I should like to have fifteen minutes.

Mr. COOPER of Florida. Mr. Speaker, I think that we

might let the gentleman conclude his remarks in the morning. I have listened to him with a great deal of interest.

The SPEAKER. There is an order for an evening session.

Mr. SIMPSON. Then I will go on to-night, if that will suit gentlemen.

The SPEAKER. If the House gives unanimous consent the gentleman can speak during the remaining five minutes until the hour for the recess.

Mr. SIMPSON. I would not care to go ahead now. I will finish this evening if allowed.

The SPEAKER. That can be done by unanimous consent in the absence of objection.

There was no objection.

The SPEAKER. The Chair would like to understand the request of the gentleman from Kansas [Mr. SIMPSON]. The Chair understands that he desires his time extended fifteen minutes.

Mr. SIMPSON. Yes.

The SPEAKER. The reason why the Chair asks the question is because there are some gentlemen who are down for speeches to-night, and the Chair would like to know as to the disposition of the time.

Mr. SIMPSON. I will conclude in the morning if it is agreeable, so as not to interfere with the arrangement for to-night.

The SPEAKER. There are assignments for the morning also. That is the trouble.

Mr. SIMPSON. Well, if it is agreeable, then, I will finish to-night.

The SPEAKER. The gentleman will be entitled to fifteen minutes at the opening of this evening's session.

Mr. BLAND. Mr. Speaker, I ask to have printed in bill form, and also in the RECORD, the several amendments proposed to this bill at the different ratios, and the amendment providing for the revival of the old Bland act, so called, so that members may have opportunity to reach the various provisions.

Mr. REED. Are these amendments pending?

The SPEAKER. They are not.

Mr. BLAND. They are to be offered under the rules.

Mr. REED. I should like to hear them read, if there is no objection.

The SPEAKER. The Clerk will report them.

Mr. BLAND. Let them be read.

The Clerk read as follows:

Provided, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same for coinage at the mints of the United States, and to have the same coined into the legal-tender standard silver dollars of 412½ grains standard silver to the dollar, on same terms and conditions on which gold bullion is now deposited and coined.

That silver certificates shall be issued on such dollars in the manner now provided by law for the issuing of certificates on standard silver dollars.

Provided, That all holders of silver bullion of the value of $50 or more and not too base for the operations of the mints shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing —— grains of standard silver to the dollar, on same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

Provided, That the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," requiring the purchase monthly of not less than two million and not more than four million dollars' worth of silver bullion, and the coining of the same as fast as purchased into standard silver dollars, be, and the same is hereby, revived and reënacted into full force and effect.

Mr. BLAND. Mr. Speaker, the first amendment is for free coinage at the ratio of 16 to 1. The second is for free coinage with the ratio left blank, to be filled, up to 17, 18, and 19. The third proposition is a revival of what is called the old Bland act, and these amendments are prepared in accordance with the rules adopted.

Mr. REED. They are provided for under the rule which was made by the House?

Mr. BLAND. Yes.

Mr. TUCKER. What about the ratio of 20 to 1?

Mr. BLAND. The ratio is left blank, so that it can be filled in.

The SPEAKER. Without objection these amendments will be printed in the RECORD, and also printed in bill form.

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. SIPE, for two days, on account of important business.

To Mr. HARTER, indefinitely, on account of sickness in his family.

Mr. ARNOLD. Mr. Speaker, I ask indefinite leave of absence for my colleague, Mr. DE ARMOND, on account of sickness in his family.

There was no objection, and it was so ordered.

The SPEAKER. The gentleman from Tennessee [Mr. RICHARDSON] will discharge the duties of the Chair to-night.

In accordance with the order heretofore made, the House [at 5 o'clock p. m.] stands in recess until 8 o'clock.

EVENING SESSION.

The recess having expired, the House was called to order at 8 o'clock p. m. by Mr. RICHARDSON of Tennessee as Speaker *pro tempore*.

SILVER.

The SPEAKER *pro tempore*. The gentleman from Kansas [Mr. SIMPSON] is entitled to the floor.

Mr. SIMPSON. Mr. Speaker, in resuming my argument of this afternoon, wherein I had been addressing myself to the question of a conspiracy on the part of those interested from personal motives in bringing about a single gold standard in this country, I want to say I believe that to be true; that the conspiracy has lasted for a long time, and they but took advantage of events in order to carry their scheme into action. It is a well-known fact that no one has heard any cry against the Sherman law until recently; but as the conditions were favorable to bring about an impression upon the lawmaking body of this country, they sought the opportunity within the last few months to force Congress to repeal the Sherman law.

I want briefly to go over a few of the conditions that I think have brought the people of this country almost to the verge of bankruptcy, a few of the conditions that have produced paralysis of business and thrown the laboring classes out of employ until I suppose to-day there are not less than 4,000,000 men asking for work in this country.

What are these conditions? The foundation for this trouble, Mr. Speaker, was laid far back, as I stated in the beginning. I will show you that the Sherman law is not the real cause of the events complained of. I have cited the complaints of the people when the Israelites and when the Roman Republic were at the height of their power and glory, showing that the same conditions that exist now had produced the same results then. A change in the form of government had enabled a few to repress the people in their rights. Some years ago a man discovered the power and use of steam, and that discovery led to the building of railroads in this country, so that the whole form of society is changed, and instead of the bartering and trading which prevailed in olden times, when men changed commodities in the neighboring village, the agricultural and producing classes change their commodities in a far distant market, and those commodities, passing over these long lines of transportation and these public highways, for they are really the public highways because of the protection that is afforded by the Government, they have passed into the hands of private corporations until ten or a dozen men in this country can to-day control all these public highways, and by getting together they levy a rate of freight that amounts to a tax far beyond the tax that Congress has ever levied upon the people, and by this process a large part of the wealth of the country has been concentrated in the hands of a few.

That is one of the reasons. Another reason is that special interests and class privileges, through a republican form of government, have worked their way to the front and have been so able to protect and foster their interests. In this way the manufacturing interests have worked their way up to the front, until they have so managed that a law has been passed by which all the farmers and agriculturists of this country, and other people who produce anything that other people want, are prevented from trading with the men who will give them the best bargain, and are forced to buy their goods from the manufacturers in this country in order to build up American industries, so that they are robbed of 50 cents on the dollar for every dollar of produce they may so trade.

Now, then, under this condition of monopolies so built up, the men who create these goods and articles so protected come together, and say "Why should there be opposition among us? Let us enter into a combination, and so limit the supply and output that we will compel the people who have to purchase these articles to pay us tribute, and so increase our profits." And thus another special privilege and special interest has been built up at the cost of the people, so that a large amount of money has been drawn from the people.

When these joint stock companies have been organized, stock has been issued on them, and they have gone out among the people and the price has been increased upon the articles supplied until it has reached a very large amount.

For illustration: In my State the 8,000 miles of railroad in operation cost $14,000 a mile. To-day those railroads are bonded at $97,000 a mile, and by fixing a high rate of freight they are

enabled to pay dividends upon those stocks. They have gone on the markets, and men have piled up large sums of money by speculating in them; and so, in the effort to keep up these railroad institutions and enable them to pay dividends, they have placed upon the people these burdens, which have been shifted from shoulder to shoulder until at last they fall upon the shoulders of the agriculturist and the laboring community. These burdens have become so numerous and onerous that they have broken down at last and collapse has come upon them. This has been expected for years. The last snow-flake which made the great avalanche has fallen, the avalanche has started, no one can stop it, and it has brought the whole house in ruin about them.

A few years ago, when the McKinley bill passed, the merchants of this country, expecting that there would be a large increase in the price of goods because of the protection afforded by that bill, went over to England. That country, being a trading nation, found itself with a large amount of goods and a small amount of money; and so its manufacturers held out inducements to merchants to purchase a large amount of those goods on time. They did so. Finally the day for payment came around, when the balance must be settled; and when the day of settlement came, silver not being a commodity in demand by the English nation, the settlement was made in gold. Then it was that the outward flow of gold began.

Then these people who are in favor of a gold standard saw their opportunity; and wanting you to return to a gold standard, they began a scare, until people withdrew their deposits from the banks and put them in their old stockings. The monometallists said that these silver certificates were drawing out all our money and that the gold was going to Europe. How is it, Mr. Speaker, that, with the same condition of scarcity of money, the gold is coming back to this country? I wish that some of my Republican friends and Democratic friends who are asking us to go to the gold standard will explain this before this discussion is ended. And then, after talking about all this want of confidence, and about this cheap money, the bankers got up a bankers' panic. They have got the scare, and they are so panicky that it got away from them.

It has got loose and they can not stop it. It reminds me of a story told about a man in the olden times, when they believed in magic. The man had a magic ring, and when he touched it he could call up a goblin to do his wish. One day his house got on fire. He touched the ring, the goblin came, and he got him to fetch water to put it out. The goblin carried the water and put out the fire; and when the fire had been put out the goblin kept on carrying water, and the man got mad and drew his sword and cut the goblin in two; but in a minute there were two goblins carrying water, instead of one, and then as he kept on killing them he did but increase the number, doubling the force until finally the water flooded the whole country and drowned him and all his neighbors.

That is the way with this bankers' panic, that they started under the conditions I have described. It has broken loose from them; it has not accomplished what they intended; and I fear that before it is stopped it will breed a revolution in this country that will shake this Government to its very foundation. That is the reason I think the hour has struck when every man in this country with any patriotism in his make-up should forsake his party, should take the party collar off his neck, and stand up for the interests of the people and of his country.

Mr. Speaker, why should we trim our sails to fit the breeze of any country? Gentlemen talk about capital not coming from Europe, about our inability to borrow more English capital. I want to ask those gentlemen this question: If we continue to borrow English capital as we have been doing in the past, paying these high rates of interest for it, who will ultimately own the industries of this country? It is said that the English own to-day fifteen-sixteenths of our railroad stock. They own a great part of the great institutions of this country. That is the result of borrowing English capital.

Mr. Speaker, we have in this country all the resources that are necessary to create wealth for ourselves, a great territory stored by nature with all the materials that are needed to supply human wants. We have the most improved machinery; we have steam power which is doing the work each year of 22,000,000 men; we have millions of able-bodied men, willing and anxious to work that machinery and, by their labor, to produce from our own resources all the wealth that we require. Tell me that with all these materials, all these forces, we still should go abroad to Great Britain, the great creditor nation of the world and ask her to lend us money! Why, sir, such a course is suicidal. I think the true financial policy of this country is to have our own currency, issued by the people, directly to the people, without the intervention of banks or other corporations. The issue of money is a public function which should not be delegated to individuals or private corporations.

Mr. Speaker, I see that my time has nearly expired, but before I sit down I want to say a word on the subject of the ratio. I am opposed to a compromise on the ratio. I am opposed to a compromise on anything that is right. I believe that whenever you commence to compromise you are sure to compromise away what is right, and in this matter you will compromise away the interests of the debtor class. We have had too many compromises already intended to secure what gentlemen are pleased to call an "honest dollar." Five or six times already the contract has been changed, and we have to-day the most dishonest dollar that ever any country submitted to.

I am opposed to compromise, first, because it demoralizes the party that compromises; secondly, because it delays justice; and thirdly, because it demoralizes the community. Now, what is the compromise that these people offer on this question? They say: "Let us increase the ratio; let us put more silver into the dollar;" that is, let us make the dollar dearer. The minute you do that you compromise away the principle that there is effect in the law to give value to money. You treat silver as a commodity, and you set gold up as the arbitrary measure of all values. That is what you do. If you but compromise away one single grain, you do that. If you make the ratio 20 to 1, you put so many more pounds in the bushel of wheat, so many more ounces in the pound of pork; you make the dollar dearer, and you compromise away the right of the debtor class. I want to tell these gentlemen that I did not come here to compromise away the rights of my constituency. I received a letter from a friend of mine to-day that expresses my sentiments exactly. He says: "Jerry, you stand by 16 to 1 until hell freezes over, and we will send you a pair of skates to come home on." [Laughter and applause.]

That is where I stand. I want to warn gentlemen that they will get no compromise out of me when right and justice are at issue. We would never have had a rebellion in this country if our statesmen had not been compromisers—compromising away truth and justice and human rights. Webster and Clay and Seward, all the great statesmen of that era, were compromisers; and it finally ended up in a civil war which shook the country to its foundation and left a debt, with an attendant train of evils, that the youngest man in this House will never see entirely rooted out. That was the result of compromise. I am no compromiser.

There is another thing I want to say before I close. The gentleman from Massachusetts [Mr. EVERETT] said to-day that he wanted the idea of confidence carried out. He told us to have confidence in the Government; to have confidence in the President; to have confidence in the Democratic party. My God, Mr. Speaker, this confidence that the average voter has had in the old parties is what has led us up to this volcano that we are now confronted with. Distrust! Lack of confidence breeds liberty; confidence breeds despotism. Confidence and distrust are opposites. Distrust is the nerves of the mind.

[Here the hammer fell.]

Mr. CUMMINGS. I ask that the time of the gentleman from Kansas [Mr. SIMPSON] be extended indefinitely.

There was no objection.

Mr. SIMPSON. I do not wish more than a minute. I am anxious not to trespass on the time of gentlemen who are to follow me; I know that a number of gentlemen want to speak, and it would not be right for me to take away their time. Besides, everything has been said on our side of this question and said better than I can say it. These gentlemen who are to come after me can present the question more ably than myself.

I took the floor this evening merely for the purpose of expressing the opinion of the people of my district. It is a large district, embracing about 300,000 population. It is 250 miles long and 120 miles wide. It reaches up to the stars and down as far as land reaches. Those people are as good people as any in the United States, and I do not believe you could find in all that vast district or in the great State of Kansas to-day a corporal's guard that would be willing to return to the single gold standard. Yet gentlemen get up here in the halls of Congress and tell you that the people of the country want this law repealed.

The trouble is that some of these gentlemen do not know where the people of this country live. They have never been out West to see the great country that God in his infinite wisdom has scooped out between the Alleghanies and the Rocky Mountains—a country where in the future, according to my belief, there will rise one of the greatest nations that has ever existed in all the world—a nation that will be a nation of freemen, for I do not believe that men who breathe the air that sweeps down from the Rocky mountains over those vast plains will ever become slaves to any kind of aristocracy, much less to a money aristocracy. [Applause.]

I am sorry that Massachusetts and Kansas find themselves in opposition on this question; but I want to set squarely against

the sentiment repeated here to-day by the gentleman from Massachusetts [Mr. EVERETT], and a sentiment that another Representative from Massachusetts has repeated, the expression of that great statesman, hero, and patriot, Wendell Phillips, who said:

Distrust is the nerve of the mind; let us see to it, then, that those sentinel nerves shall be ever on the alert; and if the Alps, piled in still and cold solemnity, are to be the emblems of despotism, then be ours the ever restless ocean, which is always pure because never still.

That is why I believe in the success of this great Government of ours. These questions are always coming up, stirring the masses from one end of the country to the other. They sweep through the country like the wind, moving and putting everything in motion, quickening the sentiments of these democratic masses and through this quickening and this agitation is the only real road to happiness and the perpetuity of free government. [Applause.]

Thanking you, gentlemen, for the time and attention you have given me, I resume my seat.

Mr. MORGAN. Mr. Speaker, the action of this House in the introduction of the Wilson bill, providing for the unconditional repeal of the purchasing clause of the Sherman law, and the Bland substitute, also providing for the same repeal, but coupled with a clause calling for the free coinage of silver at the present ratio of 16 to 1, has made an issue so plain, direct, and simple that it can not be changed, explained away, avoided, or even misunderstood. It is this: Shall we continue the use of silver as money in this country, or shall we abandon it forever, and here, in this present extraordinary session of Congress, adopt the single gold standard system of Great Britain?

Every true friend of silver will vote in favor of the Bland bill, while every true friend of the single gold standard will vote for the Wilson bill. It is possible that a few claiming to be bimetallists will vote against the Bland bill, but such persons will be recognized on this side of the House as gold men at heart, and in the end will be so recognized by their constituents and by the country. All attempts to drag in outside questions to divert attention and confuse the issue, or conceal the real purpose and effect of our action, will fail if tried.

The test vote on this question, showing the real position of the House, will be the vote on the first substitute offered by Mr. BLAND, as that will be the proposition for the repeal of the Sherman law, coupled with the free coinage of silver at the present ratio, 16 to 1.

A short time ago there was no difference of opinion in this country regarding the use of silver as money. The whole people, excepting a few engaged in money-loaning on a large scale, were satisfied with its use, and it responded to their every requirement as a currency; it was, with gold, the money of the Constitution; it had been coined by the Government ever since it became a government on an equal footing with gold, and had received the support of every President and every Congress.

Every political party in every national convention speaking upon this subject had declared in favor of silver money, and never once against it. Every American statesman, living or dead, has ever in his day been a supporter of silver, until within the score of years just passed. The same is true of the press of our country, while the great masses of the people, the farmers, artisans, wage-workers, merchants, and professional men, who are the stay and support of our Government, and whose intelligence and patriotism far surpass that of any nation on earth, not only believe in silver, but have never dreamed that such an idea could be seriously entertained by a Congress of the United States as its destruction for money uses.

When silver was dropped from the coinage act in 1873 it aroused such a storm of honest indignation throughout the entire land that the authors of that infamy sought pardon and obtained it only by pleading ignorance of the effect of their legislation. As late as November, 1892, Senator ALLISON of Iowa, speaking as an American delegate at the opening of the International Monetary Conference held at Brussels, said:

The proposition of the bimetallism put forward by us as our distinct proposition, having the full approval of our Government and the people it represents.

And again in the same address, in speaking of the action of the President of the United States in inviting the nations to that conference, stated that—

He did so in the hope that a method may be agreed upon to secure the enlarged use of silver, if not its full use.

In so doing he has acted upon the opinion of the people of the United States who believe it to be practicable to freely use both metals for monetary purposes, and thus to establish a parity of value between them.

The two principal political parties of the United States are not divided upon this question, and the delegates to this conference represent, not only the party which is now in power, but also that which has been restored to power by the recent election of Mr. Cleveland to the Presidency.

Our view as respects this question is held with singular unanimity by all the people of the United States, as one for the promoting of the common interest of all the nations.

While Mr. Cleveland, now the President, up to the setting of the sun on the 8th of last November—he being a man conspicuous for his honor and courage, incapable of duplicity—must have held the following views:

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination in favor of either metal.

But to-day we must admit there is a change of sentiment in certain quarters.

The powerful metropolitan press of the country either openly opposes the further use of silver as money or advocates measures the enactment of which would encompass the same end.

American statesmen, in and out of Congress, who have grown hoarse denouncing from the stump the Republican party for the demonetization of silver in 1873 are to-day actively in favor of a like policy, while the President, the Democratic President of these United States, has called Congress together for the sole purpose of repealing the only silver law now upon the statute books of our country, carrying out one part of one section of the Democratic platform and leaving another part of the same section, that declaring for the free coinage of silver, unredeemed and disregarded.

This is a most extraordinary change of front, and its extent and magnitude may well appal the serious minded and reflective; yet we have one hope in this unaccountable transformation.

We turn to the people, the sturdy, patriotic masses; to those who have established this nation and maintained it, giving it all of glory it enjoys; and how do we find them? Unchanged they stand, in spite of every opposition. No argument, however plausible, by whomsoever made; no threat so dire has as yet driven them from their devotion to the constitutional money of the Government—silver and gold.

What has brought about this changed condition in some quarters? I will tell you. It is the influence, widespread and subtle, and the machinations, secret, persistent, and conscienceless, of the security-holders of the world, who are determined to convert their holdings into securities payable in gold alone by the complete demonetization of silver.

As stated by my distinguished colleague from Missouri [Mr. BLAND] on Friday last upon the floor of this House:

You are asked to load up the Federal Treasury with gold to redeem every pecuniary obligation of the Government with gold, although the standard silver dollar is the identical dollar on which those obligations were based when they were issued, because they called for coin of the standard value at the time of their issue, and that was the standard. But now I repeat, we shall have to redeem all this bullion, all these Sherman notes in gold; we shall have to sell bonds to get gold to redeem all our greenbacks, all our silver certificates, and we will be compelled to carry our silver dollars as so much dead weight of bullion in the Treasury so that we might as well dump them into the Potomac.

That is what all this means. In other words, every piece of paper money issued in this country to-day, every silver certificate, every greenback, every bond, every Sherman note, is to be redeemed in gold, and we must procure the gold for their redemption.

I go further and add, every State bond outstanding to-day, every municipal bond, every county bond or debt, every school district bond from California to Maine, in fact all forms of State or municipal indebtedness, whether evidenced by bonds or not, are to be made payable in gold instead of legal tender, as they may be paid under the law to-day.

More than all this, if this attempt of capital to overreach the people succeeds, every railroad bond and every railroad debt in the United States must be paid in gold. And who pays all these debts? Not the railroad corporations, but the people. Those who ship freight and travel over the roads. The Lexington branch of the Missouri Pacific Railroad, passing through my district, is bonded and mortgaged for more than twice the prime cost of construction and equipment. Every cent paid on such indebtedness is paid by the people there in the way of freight rates and passenger rates, and you, the people, by the passage of the Wilson bill, and thereby the utter final and complete demonetization of silver, will be forced to pay this enormous railroad debt, so wickedly augumented, in gold, gold alone.

No wonder that Mr. Gould and every other holder of such securities, twice or three times in excess of the property bonded or of its value to-day or any day in the past, is in favor of the repeal of the Sherman law as provided in the Wilson bill, rather than the repeal of the Sherman law as provided in the Bland bill. Such holders are not in favor of the unconditional repeal of the Sherman law on account of its provisions, not because they deem it—as it is, in fact—a most pernicious, undemocratic measure, but because it stands between them and the conversion of their securities, both principal and interest, into gold securities.

And again I reiterate, you, the people and tax payers, are the ultimate payers of every railroad security of this country, whether held here or in Europe, the corporations being the mere collectors and transmitters of the money by them collected to the owners of the securities.

Every other conceivable debt in the United States, public and private, is to be made payable in gold. Every farm mortgage,

note, contract, and debt in the United States is to be made payable in gold by the simple process of the unconditional repeal of the Sherman law as provided in the pending bill.

The last census bulletin shows that we have farm and home mortgages as far east as the State of Maine, in which State the real estate mortgage debt existing January 1, 1890, was $32,627,208, and a per capita debt of $49, and yet Maine makes a much better showing than the other New England States.

On the owned farms in the State of Wisconsin there are liens of $55,304,608, which is 33¼ per cent of their entire value, and this debt bears interest at the average rate of 6.64 per cent.

I will not stop to read, but I will print the farm and home mortgage debt of each State as far as compiled up to date by the Census Bureau, in all estimated to be about $6,000,000,000.

Real estate mortgage debt in Tennessee, January 1, 1890, amounts to $40,421,396, or a per capita debt of $23.

Iowa real estate mortgage debt, $199,774,171, or per capita debt of $104.

Nebraska mortgage debt, $132,902,322, or a per capita debt of $126.

Missouri real estate mortgage debt, January 1, 1890, amounts to $214,609,772, or a per capita debt of $80.

Real estate mortgage debt of Massachusetts, January 1, 1890, was $323,277,668, or a per capita debt of $144.

Total amount of real estate mortgages in Illinois, January 1, 1890, is $384,299,150, or a per capita debt of $100.

Totall amount of real estate mortgage debt in Kansas, January 1, 1890, amounts to $235,485,108, or a per capita debt of $170.

Real estate mortgage debt in Vermont, January 1, 1890, $27,907,687, or a per capita debt of $84.

Real estate mortgage debt of Rhode Island, January 1, 1890, $36,778,243, or a per capita debt of $106.

Real estate mortgage debt of Connecticut, January 1, 1890, $79,921,071, or a per capita debt of $107.

Indiana, $110,730,643; per capita, $51.

New Hampshire, $18,968,259; per capita, $50.

Oregon, $22,928,437; per capita, $73.

Pennsylvania, $613,105,802; per capita, $117.

Minnesota, $197,745,989; per capita, $152.

Arkansas, $14,300,595; per capita, $13.

Mr. DAVIS. Will the gentleman permit me to give him some late information on that subject?

Mr. MORGAN. Yes, sir.

Mr. DAVIS. I notice that according to the table there were in September last $19,000,000,000 and a little over of private debts in the United States.

Mr. MORGAN. Well, the gentleman is doubtlessly correct, but I have here the Census Bulletin obtained since last Monday as far as completed on this question, and going over it with the head of the fourth division of that bureau, we reached the estimate of $6,000,000,000 of home and farm mortgage debt alone.

Will members of Congress knowingly vote to increase the burdens of this vast farm and home mortgage debt by making it payable in gold alone?

It is easily seen who are interested in a contraction of the currency and an unfair increase in its purchasing power by the demonetization of silver, and are to-day actively and aggressively working to secure it, manufacturing public sentiment, and even employing a lobby to influence members on this floor. Who will be benefited by the adoption of the single gold standard and the striking down of silver? I again assert, the holders of securities, the creditors and gold owners of the country.

I solemnly aver that, in my opinion, the Sherman law has had nothing to do with the recent bank panic, and only bears its share with other unwise legislative acts of the Republican party in contributing to the present deplorable condition of the country; nor has it had anything to do with the agitation of the silver question, and if its repeal, unconditionally, would still leave on our statute books a provision for the free coinage of silver at the present ratio, on equal footing with gold, there would have arisen no clamor for its repeal from the gentlemen on the other side, or from those whom you represent, and no extra session would have been called for the specific purpose of its repeal. It is not the Sherman law you are striking at, but through it you are striking what you intend as a death-blow to silver money throughout the world. For so sure as the Wilson bill passes this Congress so sure silver will be demonetized in this nation, and not a member voting for the bill believes for a moment that during this Congress will it be possible to secure the passage of any bill to be approved by the President favorable to silver and its restoration as money.

We are asked why we favor the free coinage of silver at its present ratio. Our reply is, because it is the money recognized by our Constitution—coined and used by the Government since its origin, and because it is a safe, sound, stable, convenient, and honest currency, and to discontinue its use would be a contraction of the currency which would complete the ruin of the producers of this country. And because, as compared with the leading products of the nation, it is less fluctuating than gold—and gentlemen on the other side agree with us that stability of value is one of the essentials of a sound currency—and because, in spite of all the attacks made upon it, it is worth one hundred cents on the dollar or more in every market of every State in the Union.

I have no patience with those who would determine the question of relative stability of values by a comparison of one metal with the other; by such a comparison we may simply ascertain that the value of one metal has fallen or the other has risen.

To properly determine the relative values of two metals we must look elsewhere for tests, and what better test can be made than a comparison of the value of each metal with the value of the leading products of the country during a given length of time. Wheat is the great leading staple of this country, and since 1869 or 1873 compare its price with gold and we find gold has appreciated—wonderfully appreciated. Compare its price with silver for the same time, and we find the white metal has gradually and evenly, but in a much less degree, appreciated also.

The same comparison with corn shows the same result, that the price of silver has remained steady and uniform, while that of gold has radically changed.

This also is true of cotton in the same marked degree; and take the aggregation of all the products of this country, of agriculture, mines, forests, and manufactures, and every conceivable result of human industry for the last twenty years: ascertain the average yearly price of the same, and compare it month after month and year after year with the price of silver, and you will find them side by side, with scarcely a variation or a turn. Institute the same comparison with gold and we will find that metal violently changing, but on the whole rapidly advancing in value; so that as a measure of the values of the world's products it is worthless, so far as stability goes, as compared with silver.

Not only is this true as regards the United States, but if we are to credit the highest authorities it is so the world over; and in this connection I desire to call attention to the fluctuation in the prices of silver and gold and commodities, as compiled by the London Economist, which compares the price of silver and gold with the wholesale prices of twenty-two principal articles in the London market. It will be seen that from 1873 to 1892 the price of silver and these twenty-two principal articles run along side by side, like the gentle undulations of a Missouri prairie, while the price of gold, compared with them, first rises, then falls, then rapidly rises again, like the precipitous heights of the Alps.

I submit the table which was used, and not questioned as to reliability or correctness, at the Brussels Conference.

[See table No. 2, page 496.]

I now refer to the relative appreciation or depreciation of gold and silver since 1873 as measured by the index numbers of the late learned Dr. Soetbeer, whose authority as a political economist and statistician is recognized in America as well as in Europe.

[See table No. 3, page 496.]

These index numbers give the wholesale prices of one hundred Hamburg articles of principal use, together with fourteen articles from England, and include agricultural produce, animal produce, foreign fruits, colonial produce, mineral produce, textiles and miscellaneous articles; and the same remarkable showing is made in favor of the white metal, the price of silver running along evenly with all these productions, while gold, oscillating and erratic, culminates its course by reaching the very topmost heights of appreciation.

I also submit this table and map, which I take from the report of the United States commissioners to Brussels, as published by our Government.

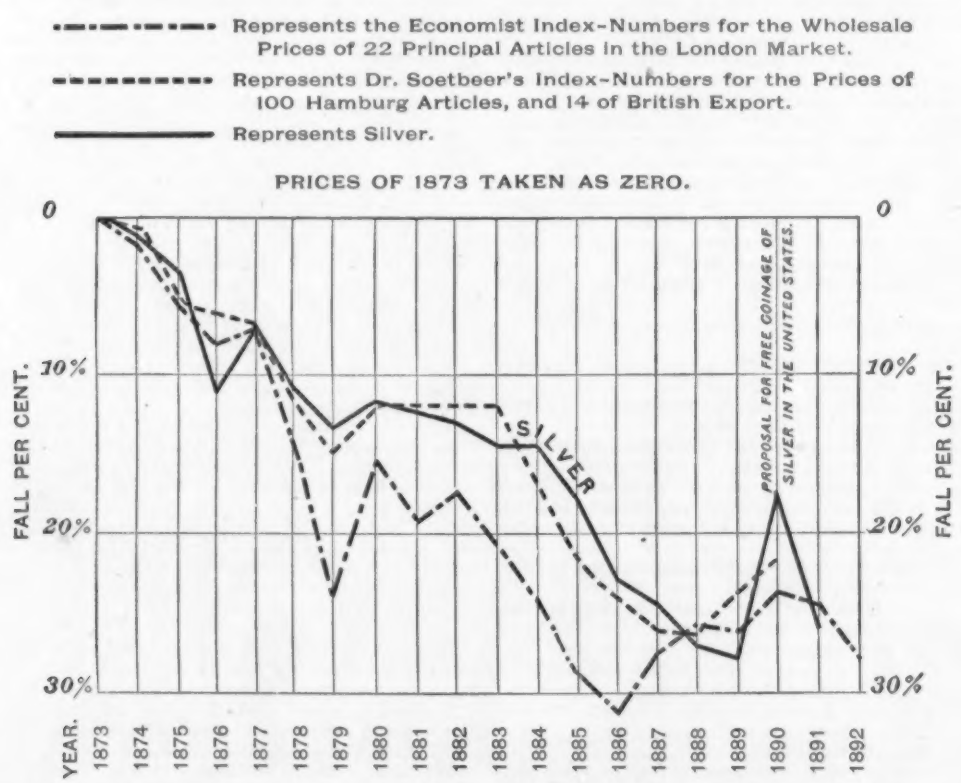
[See table 3A, page 497.]

In view of this showing, the people of the South and West have reached the conclusion that silver has not fallen in value, but that gold, owing to the limit of its production, together with the manipulations of the speculators of Lombard and Wall street, has appreciated.

Does it not follow, then, as the day follows the night, that the honest dollar is the silver dollar?

From the opening of this debate I have heard much about dishonest dollars. I, too, am opposed to dishonest dollars, whether made of gold or made of silver, dishonest to creditor or dishonest to debtor, and in favor of an honest dollar all around, honest to payor as well as payee, and one that does not change in value from year to year, but keeps along in line with the price of common commodities; such a dollar I believe to be the silver dollar of our Constitution. The dishonest dollar I believe to be the gold dollar, whose purchasing power is double what it was twenty years ago, and will be doubled again in the next decade if the present attempt to demonetize silver is successful.

No. 2.—FLUCTUATIONS IN THE PRICE OF COMMODITIES AND SILVER MEASURED BY GOLD.



No. 3.—APPRECIATION OF GOLD MEASURED BY ITS PURCHASING POWER ON THE BASIS OF THE "ECONOMIST INDEX-NUMBERS."

No. 3A.—RELATIVE APPRECIATION OR DEPRECIATION OF GOLD AND SILVER MEASURED BY SOETBEER'S INDEX-NUMBERS* SINCE 1873.

* Soetbeer's Index-Numbers give the wholesale prices of 100 Hamburg Articles, and 14 Articles from England—viz., Agricultural Produce, Animal Produce, Foreign Fruits, Colonial Produce, Mineral Produce, Textiles, and Miscellaneous.

A borrower of 1873, receiving $1,000 in currency under the then condition of finances, paying the same to-day in the same currency, would not only honestly discharge all his obligations, legal and moral, but would in addition deliver to his creditor money of double the purchasing power of that loaned. And yet gentlemen ask for a further increase in the purchasing power of money by striking from the coinage act the silver dollar.

We believe in honest money, and contend that with free and unlimited coinage of silver at the present ratio during the next century the purchasing power of our currency would be no less than it was prior to 1873, when nearly all of the vast indebtedness of our people, public and private, was created, and that it ought to be no less, for we believe in maintaining, so far as it is possible so to do by legislation, the same condition and same prices for all products of labor which existed at the time of the creation of a debt until that debt is paid off and discharged.

This is fair to both sides—creditor and debtor, and therefore honest. What is fair to one side only is dishonest.

A farmer of the West, whose share of the State or Government debt amounted to 50 bushels of wheat, or a given quantity of corn, or live stock, or dairy products, is entitled to such legislation as shall tend to maintain the paying power of such products up to the final day when the debt matures and is paid.

We know that prices are not regulated arbitrarily by legislation, and are largely controlled by the laws of supply and demand—but these laws being the same, he should be compelled to pay no more in labor or in property than he borrowed; nor do I believe he desires to pay less.

It is a mistaken idea, that the Western farmer advocates a financial policy on the part of the Government which will enable him to pay his creditors in cheap money, as partly admitted by Mr. Balfour to be possibly true in some of the States of the West. On the contrary, he would maintain the purchasing power of the currency to its full value, and only objects to such legislation as will compel him to pay his private obligations, or

share of the public debt in money of double or triple the value of that borrowed, as measured by his labor, his sweat, and his sacrifices.

And is it not food for reflection to consider right here that of the vast national debt existing at the close of the war, the people having already paid two-thirds of its principal, as indicated by cold figures, besides paying in interest a sum equal to the entire amount of the principal; and yet under conditions brought about by legislation secured by Wall street and the bondholders, who are again knocking at our doors, there yet remains unpaid, as measured by the labor and products of the people, a greater debt than existed on the day of Lee's surrender at Appomattox, and notwithstanding all the people have paid during these thirty weary years of sacrifice and toil, not one ounce of burden has been lifted from their load.

To pay what exists to-day of this debt will take as many bales of their cotton, as many barrels of their flour, more bushels of their wheat and corn, more head of their horses and cattle, more days of their labor than in 1865, when the debt, as indicated in figures, reached its highest point, and yet we are here to-day pleading only that the load be not further increased, for fear that it may pass beyond the limit of human endurance and suffering.

In the effort of the gold owners of the world to augment the value of their holdings and increase the power of their money, they have sought to and have actually controlled the legislation of Congress. Under their influence the act of 1869, taking from the people their lawful contract privilege of paying the principal of the Government bonds in legal tender was passed, making payment necessary in gold and silver coin. Under the same baneful influence the act of 1873 followed, dropping from the coinage of the country the silver dollar which had been used and recognized through our entire national existence; under the protest of the people silver was partially restored by the Bland-Allison act. An attempt at its full restoration was met by Congress, acting under this same influence, by the passage of the Sherman law and the repeal of the Bland-Allison act, and to-day the same malign influence, the same power, is asking for legislation which will place silver in the same position that it was by the act of 1873—absolutely demonetized.

We look with apprehension at the result of silver demonetization; we are not thinking alone about the recent bank panic, which originated in one of the great banking concerns, Baring Bros., in the great single gold standard nation of England, and extended to her colony, Australia (where no Sherman law exists), and, as many an honest man believes, crossed the waters to this continent only at the dictates of Lombard and Wall streets to take a hand in and to aid in the wicked work of the demonetization of silver; rather are we thinking of the past years of distress which the policy of contraction of the currency, adopted and carried forward by the Republican party, augmented by their so-called protective tariff, has brought us.

The masses of the people to-day are thinking of how they shall save their homes and provide for their children. What may happen by the demonetization of silver I leave to the deliberate judgment of one of America's brightest statesmen, Mr. Carlisle, the Secretary of the Treasury, who, as a Representative on the floor of this House, said in February, 1878:

> I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.
>
> The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

The truth of Mr. Carlisle's prophecy has been partially realized. Demonetization of silver, in a measure, under the Bland-Allison law, perpetuated in a greater degree and in a more objectionable manner by the Sherman law, have produced distress and suffering, as predicted by him, and the total annihilation of silver money would fulfill his prophecy to the uttermost letter.

It is with pride that we reflect upon the conduct of Mr. Carlisle and the other Democratic members of Congress who have hitherto so faithfully fought the battles of silver on the floor of this House.

Under BLAND and Carlisle we stood for free silver in 1878 and under the same leadership in 1890, when the cowardly makeshift known as the Sherman act was passed against a solid Democratic vote in this House.

Upon our plain, outspoken, unmistakable declaration for silver money we made the campaign of 1892 and were restored for the first time since the war to full control.

We have now pending in the bill offered by Mr. BLAND a proposal to carry out in good faith and to the letter the seventh section or plank of the national Democratic platform, upon which we were elected as well as the President and which by every consideration of honor we stand pledged to redeem.

Let me read that plank. It is refreshing reading to this side, but must be gall and wormwood to those who have joined the Republican majority and are struggling to aid what Mr. Carlisle termed a "conspiracy," and which he further and truly denounces as the most "gigantic crime" of this or any other age:

> SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters as well as its author anxious for its speedy repeal.
>
> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

This calls for the repeal of the Sherman act and coinage of silver.

The Bland bill provides for the repeal of the Sherman act and coinage of silver, and thus proposes to carry out the pledges we made to the people, on the strength of which we were given power.

Is there a man on the other side who believes for a moment that we could have carried the country on a platform declaring against the monetary use of silver metal? Why, sir, on such a platform we could not have carried Vernon County, Missouri.

Our platform was for silver, and, as I take it, for silver at the same ratio of the old standard dollar—that is, of 16 to 1. That is the only ratio I favor to-day.

To enlarge it is to discredit silver metal, which has maintained its value with less variation than gold.

Some gentlemen there are who claim to be in favor of a double standard, and yet would measure the quantity of silver metal in a dollar by its value in gold. This would not be a double standard, but a single gold standard.

Is it possible for a sincere free-coinage man, who believes in the present ratio of 16 to 1, in order to secure the coinage of silver at all, to vote for a greater ratio?

If it comes to no coinage at all, or coinage at the ratio of 20 to 1, how shall an honest silver man vote on such a proposition? As far as I am concerned, in such an emergency my course is not yet determined, and I can only say, in such a crisis I will vote as my judgment at the moment dictates for what I deem the best interests of my constituents and the cause of silver money.

Mr. Carlisle's opinion of our duty here to-day may be gathered from what he said in closing his speech from which I have already quoted. It is very suggestive, and I will terminate my remarks by quoting it. Let it be remembered that these words were spoken by him in favor of remonetization of silver on the Senate amendments to the bill of the House of Representatives to authorize the free coinage of the standard silver dollar and to restore its legal-tender character, which afterwards, as amended by the Senate, became a law known as the Bland-Allison law.

> For fifteen years the people have been on the defensive, and although fortified by the plainest provisions of law and the clearest principles of equity, they have been continually driven from one position to another, until they stood at last upon the very verge of financial ruin. Gathering all their energies for this struggle, they have advanced—not very far, it is true—but they have advanced far enough to recover a part of the ground lost in previous conflicts, and, sir, I trust that their representatives will faithfully hold it for them.
>
> Our power of legislation over this subject will not be exhausted by the passage of this measure, and we ought not to halt for a single moment in our efforts to complete the work of relief inaugurated by it. The struggle now going on can not cease, and ought not to cease, until all the industrial interests of the country are fully and finally emancipated from the heartless domination of syndicates, stock exchanges, and other great combinations of money-grabbers in this country and in Europe.
>
> Let us, if we can do no better, pass bill after bill, embodying in each some one substantial provision for relief, and send them to the Executive for his approval. If he withholds his signature, and we are unable to secure the necessary vote, here or elsewhere, to enact them into laws notwithstanding his veto, let us, as a last resort, suspend the rules and put them into the general appropriation bills, with the distinct understanding that if the people can get no relief the Government can get no money.

These are the words of John G. Carlisle. We accept his advice in the spirit in which it was then given. The issue is the same now as then—gold alone—or silver and gold. Men, and patriotic men, are contending on both sides for honest convictions, and he only in this struggle is contemptible who affects to favor bimetallism and who will vote against the free coinage of silver.

The cause of humanity is at stake; let it be decided in favor of humanity, remembering that a question is never finally settled until it is settled right. [Applause.]

Mr. TALBERT of South Carolina. Mr. Speaker, no period ever existed in the history of our country in which the duty was more imperative upon each and every one of us here to lay aside all prejudice and all bitterness and look alone as one man to the present unhappy and distressed condition of our country. No time ever demanded more serious and sober thought of the Representatives of this Union than does the present time. We are confronted to-day, not with any vague theories; we are confronted with conditions; and we have arrived at a crisis in the history of the country when something must be done, and done quickly, and done with decision and judgment.

I have sat here and listened with a great deal of earnestness to speeches upon both sides of this question. I have listened seriously and patiently, and I must admit that sometimes I have been somewhat in the position of the little boy whose mother in making him his first pair of pantaloons put the front in the rear. The little fellow started for school the next morning, and walked cheerfully along until he looked down and discovered the situation, when he burst out into a cry, and said, "I don't know whether I am going to school or going back home." [Laughter.]

I have listened to these arguments, I say, until I have been put almost in a similar position. I rise to-night with some hesitation, first, on account of my inexperience in a body like this, being a new member. Possibly common prudence would have forbidden me to undertake to address this House this evening from the fact that looking around me here I see so many members older and with so much more experience, with so much greater gift of eloquence and oratory, than myself.

But coming as I do from one of the rural districts of the sunny South, and representing as I do a constituency as true, as patriotic, as honorable, as high-minded, as any people that ever lived upon God's green earth, nineteen-twentieths of whom I might say are unqualifiedly in favor of the free and unlimited coinage of silver [applause], I deem that a sufficient excuse for saying at least a few words in their behalf and in advocacy of this measure, which I sincerely believe involves not only the liberties, but the lives of the masses of the people of the United States.

In my remarks I will not rehash what has been already said as to the relative amount of gold and silver in foreign countries, England, France, or Germany, or go into statistics; but will endeavor to prove that it is mere "claptrap" for our opponents to say that the Sherman act is the cause of the depression now prevailing. I shall endeavor to show that it is the monetary system of our country, ending an array of acts culminating in the demonetization of silver.

Although coming as I do from the humbler walks of a farmer's life, having never been anything but a common, plain, practical farmer; representing also as I do the farmers and producers of wealth in common with the other classes of citizens of this great nation; elected though I was upon a platform of principles one plank of which was the free and unlimited coinage of silver—others, Mr. Speaker, can do as they please, but as for me and my house we will serve the Lord, and I shall stand on that platform first, last, and all the time. [Applause.]

Platforms are said to be made to get in on and not to stand on, but it shall not be said of me that I rode in on a platform and deserted it as soon as I got in. And my friends, I contend that here in this House the Democratic party stands pledged to-day by every honest purpose to that plank in the national platform, as well as in twenty-eight or thirty of the Democratic State platforms of this Union in favor of the same system; and not only are the Democrats pledged, but nearly every Representative here is pledged likewise, to bimetallism. And I want to say that I think it is a sad commentary, at least, and can not understand how men who have gone through their several districts all over this nation stumping and promising their constituents to stand by the platforms and the promises of free silver, can now come here and make eloquent speeches against it. I say that at least I can not understand it. And yet I do not impugn their motives, believing, as I do, that the present distressed condition is not chargeable and due to the Sherman act, that "cowardly makeshift," as it has been called.

Mr. Speaker, it is a "cowardly makeshift; when it was passed it was a cowardly makeshift," but it did good. But the trouble is that it is being used in this House to-day as a much more "cowardly makeshift" by these men who want to dodge out of their duty and pretend that they can not stand up to their platform. It is a more "cowardly makeshift" to decry monometallism than it was on the part of those who put it into their platform.

The present distressed condition of our country is due and chargeable to a system of legislation which has been enacted since the beginning of the late war, and is not due to the Sherman act or anything of that sort. And in order to more fully comprehend the situation I want to say that figures enough have been given in regard to what the standing of silver and gold is in England and France and other European countries and all that. But I would ask you to let us go back to the beginning of the war and examine some of the legislation preceding that crowning act of infamy conceived in fraud and brought forth in iniquity, the demonetization act of 1873 that struck down silver, standing to-day as a living monument to the power of money to oppress; that war, which subsequent events have made me believe was not fought to free the negro and save the Union, but to enslave the people of America by a moneyed aristocracy, the most hateful and despotic of all governments possible. [Applause.]

At the beginning of the war the resources of the National Government were taxed to their utmost capacity for the purpose of producing means to carry it on. Vast volumes of money were needed, far beyond the capacity of the mints to supply in coin, and at this time the great Wall street kings and bankers, of whom very much has been said on this floor, came forward and offered to loan the Government sufficient money for the purpose, at what do you suppose? Why, at a rate from 24 to 36 per cent!

They took advantage, Mr. Speaker, of the misfortunes of the Government, and tried to fatten and aggrandize themselves upon its needs and thus saddle upon a nation a debt which, at the end of hostilities, could be used under the European idea led on by English capitalists to make slaves of the American people. These are the same great, "blessed Representatives" that we have heard of to-day who have been talked of so much during this debate as doing so much for the country in its time of need! These are the men who want to take all money out of the country except gold and make you worship the golden calf, the same Wall street kings that took advantage of the needs of the Government to make slaves of the American people. But what did Mr. Lincoln say? Did he accede to their demands?

No, sir. He was not fooled or baffled by them. He said that before he would submit to such a bounty being given to these Shylocks, he would print and issue money until it took a thousand dollars to buy a breakfast! And he did. Reading from the Constitution, he read that Congress shall have the power to declare war. He read again that Congress shall have the power to coin money, issue bills of credit, stamp their value, etc., upon them; and following along after this declaration, on the 17th of July, 1861, and February 12, 1862, there was passed the legal-tender act, and sixty millions of greenbacks were issued with which to pay the soldiers and carry on the war.

My friends, these greenbacks were in the shape of demand notes on which there had been put no exception clause, and this money answered its purpose; and here we have, right here, if you will bear with me, Jefferson's idea of Treasury notes, bottomed on taxes, backed up by all the products of the nation, and secured by the patriotism of the people—the best kind of money that can be issued by any country in the world. [Applause.]

The first issue of greenbacks constituted the demand notes which, unlike all subsequent issues, did not contain the exception clause. Consequently they have always been at par with gold; and this establishes the fact that had it not been for the exception clause on all the subsequent issues they would have always remained at par with gold. Wherever gold went these notes could have gone, even into the coffers of the bondholders. So Congress continued to issue money as necessity demanded, and with an abundance of this money not even could the ravages of war check the prosperity of the country, save in those sections desolated by immediate ravages. Commerce, industry, and education received new impetus, and flourished as never before in the history of the country. In speaking of the war, I do not propose to discuss the right of secession, but in the language of the Supreme Court "the republic that survives the storm is an indissoluble Union of indestructible States." With that motto, let us turn our backs to the past and look to the future. All this talk about hard or soft money is nonsense, when you are talking to a people who have no money at all or a very little at least. Let it be remembered that our forefathers achieved our independence with a continental currency that took a wheelbarrow full to buy a ham.

Now, since Congress had found a provision to supply the people with money, and to supply the Government with money, there was no longer any demand for Shylock's gold. But Shylock did not sleep. It is said that within four days, I believe, after the passage of this legal-tender act there was a bankers' convention held in the city of Washington, consisting of four delegates from New York, three or four from Philadelphia, and three or four from Boston. Shylock was alarmed; he saw in the legal-tender act a friend of the people.

Now, I will not stand up here and pretend to say what was done in this convention, because I am not a banker and was not there. I will not pretend to say what was done, but I suppose they or-

ganized a Bankers' Association of America, and so on; but I will only call your attention to subsequent legislation, and let you do your own thinking in regard to the matter. On February 25, 1862, fifteen days after the legal-tender act was passed, Congress passed an act stipulating that the greenbacks should be a legal-tender for all debts, public and private, except duties on imports and interest on the public debt, which, from that time forward, was paid in coin.

These two sacred things, mind you, greenbacks should not pay. Charity forbids that I should say that Congress was influenced by that convention, but every man can think, if he does not speak, and do his own thinking like the man whose lawyer on one occasion was not talking exactly to suit him in the court room, and he got up to make a few remarks himself. The judge, of course, made him take his seat. He got up again and the judge made him take his seat again. A third and fourth time this happened, and finally the gentleman got up and said: "Well, judge, if you will not let me talk, won't you let me think?" "Why, certainly," said the judge. "Well, judge," he said, "I think you and all these lawyers are a set of grand rascals." [Laughter.]

Now, I do not say that anybody was a rascal, not even a grand rascal, or anything of that sort, but I tell you the time has come for you to put your own construction upon things, and not take the *ipse dixit* of any man, however learned he may be, or whatever profession he may follow, or whatever position he may hold.

This money might pay the soldier for blood, but not the bondholder for interest. Just think of that. This money should be accepted by the farmer, but not for import duties. Thus the greenback was debased from the day of its birth and made a bastard by the edict of its own father. Gold and silver of course retained their normal value as a circulating medium and became the money of the banks, as they circulated between the banks on the one hand and the custom-house on the other. And listen! This debased greenback, falling to 40 per cent of its value as compared with gold, became the money of the people.

Just catch that idea, gentlemen of this House. The bankers, the stock gamblers, and the brokers must have gold, but the laboring people, the servants, the people, must have greenbacks, which they said were good enough for them; and I want to direct your attention to this system as I go along with it. Then followed in one year, February, 1863, the national banking act, it may be, passed with the same influence of the convention in the onward march to attack and strike down silver. Then the 6 per cent nonassessable bonds, whose interest was payable in coin, were sold to the banks, for what? Not for gold. The bankers bought bonds with depreciated greenbacks, which the Government had been compelled to swap with Shylock, almost two for one, as Roark swapped horses with Kilpatrick.

Now, I know you have heard this over and over again, but I am only going to throw this out to you to try to prove to you that it is not the Sherman act that has done the devilment, and that these men who say so do not believe what they say, because they know better when they are telling you that they believe that. Roark was an old Union man that lived up in North Carolina, and after the war, when Kilpatrick came along through there, going home, Mr. Roark, who had a very fine horse, went out to meet Gen. Kilpatrick. He rode up to him and thought Kilpatrick ought to have known him. He said, "Good morning, general." Kilpatrick stopped with his crowd. "Good morning." And before saying anything more, he just said to one of his men, who was riding a very poor horse, "Get off that horse." And then he said to Roark, "Get down off your horse." Roark did as he was told, and then Kilpatrick said, "Change your saddles." Now he said to Roark, "Get up on the poor horse." Roark did as he was commanded, and Kilpatrick started off. Roark said to the general, "Can I speak to you?" "Well," he said, "talk quick; I must be going." Roark said, "I just want to say to you that I have been swapping horses for forty years, but this is the first time I ever traded without I had any say in it." [Laughter].

So it was with the people. They had to swap their money for gold, and they had no say at all because of this legislation which was forced upon them. The Government had no voice in the matter. Bankers paid $40 in gold for $100 in greenbacks. Then they exchanged the $100 in greenbacks for $100 bonds, which paid six gold dollars in interest every year, were subject to no tax, national or State, county or city. So he invested $40 in gold, and he drew six gold dollars in interest, or 15 per cent on his original investment of forty gold dollars.

But this is not all. The banker was allowed to deposit his bond in a vault and draw 90 per cent of its value in money to loan out again at 10 per cent to the people—to loan them their own money. There, gentlemen of this House, is a subtreasury pure and simple for the bondholders; and yet you have heard so much fuss about it when the farmers made a similar kind of a demand.

Mr. DAVIS. Will the gentleman allow me to make an additional statement right there?

Mr. TALBERT of South Carolina. Certainly.

Mr. DAVIS. The banker got his interest in gold twelve months in advance.

Mr. TALBERT of South Carolina. Payable in advance; and sometimes when Wall street got into a scrape, it was anticipated six months in advance. At one time ten millions were paid during Cleveland's former administration; and some time ago, if I mistake not, seven millions were paid out by Mr. Carlisle, the money being sent out to these Wall street gamblers when they got into a scrape. Millions upon the top of millions are appropriated to build navies to rot upon the seas, for railroads and corporations and expositions and all that sort of thing, and a great deal of money paid out for the Indians; but when the white man comes in for anything, why he can not get it. If I am not mistaken, this House did pass at the last term of Congress a resolution of sympathy, not of sincere sympathy, for the farmer, and that is all they got out of the Fifty-second Congress. [Laughter.]

I understand that they actually had the word "sincere" stricken out, so as to give them simply sympathy. Now, I say that the farmers are tired of this kind of sympathy. We have had sympathy from everybody. I am a farmer myself. When the farmer at the end of the year goes to the merchant and pays his bill, the merchant says to him, "I sympathize with you; you are the bone and sinew of the country," but all the time he is poking the money down into the bottom of his pockets, and tells him, as he goes out of the store, "Stay out of politics." Then, when he goes to the lawyer, the lawyer will tell him, as he pays him a nice, big fee, "I hope you will have a better crop next year," and all the time he is poking the money away down in his pocket; and so it is when he goes to the doctor; and finally he goes to the good old minister—and God knows we ought to have more of them; I think this Congress ought to be preached to more from what I have heard and seen—but the good old minister, he, too, will take the contribution, and while he puts it in his pocket he says: "Brother, if you do not get your reward in this world, you will in the sweet by and by." [Laughter.] And that is all we get; but we want something in reality. [Laughter and applause in the House and in the galleries.]

The SPEAKER *pro tempore*. The Chair appeals to occupants of the galleries to preserve order. The galleries are opened for the convenience of the public by the courtesy of the House, and order must be preserved.

Mr. TALBERT of South Carolina. Now, then, starting with forty thousand in gold, the banker gets one hundred thousand in bonds bearing 6 per cent in gold, or six thousand per annum. With this interest flowing on, he draws from the Government ninety thousand, which he loans to the people at 10 per cent, making nine thousand a year; so, on forty thousand he gets fifteen thousand interest, or 37½ per cent. But if this vast harvest of interest that the bankers have been drawing from the people for a quarter of a century were all we could stand it, but it was not all. Other discriminating acts have been passed leading up to the one demonetizing silver, forming the link in the supposed conspiracy of financial legislation systematically impoverishing the people by legalized robbery the most damnable and reprehensible.

In March, 1869, the credit strengthening act was passed, whether by the influence of the same band I can not say; but, like the blind man who received his sight, while he could not answer other questions, said: "One thing I know; that whereas I was blind, now I see." This much I do know, such an act followed along, which act doubled the price of the bonds paid by the bankers at a time when the Government needed no stronger credit; when it had no bonds to sell this act was passed, declaring that the bonds which were payable in currency (the interest only payable in gold) should be paid in coin. This act added over $500,000,000 to the holders of the bonds and that much of a debt was saddled upon the people in addition.

Oliver P. Morton, in a speech on this act, said:

> We should do foul injustice to the Government and to the people of the United States, after we sold these bonds on an average of not more than 60 cents on the dollar, now to propose to make a new contract for the benefit of the bondholder.

The Hon. Thad. Stevens, in speaking of the insatiate demands of the money bond interest, said:

> We were foolish to grant them gold interest, and now they unblushingly demand further advantages. The truth is we can never satisfy their appetite for money.

Ben Wade, in a letter written at Washington, December 13, 1867, expressed himself as follows:

> I am for the laboring portion of our people. The rich will take care of themselves. We never agreed to pay the bonds in gold; no man can find it

in the contract, and I will never consent to have one payment for the bondholder and another for the people. It would sink my party and ought to.

And now I say that the Democratic party, unless it carries out the pledges made when not in power in order to get into power, now that they are in power, will sink their party, and ought to sink it. If that is treason, gentlemen can make the most of it; for one I will stick to the pledges I made. The people are awake, their eyes are open, they are watching the actions of their representatives here, and will no longer submit to broken pledges. I was elected on a platform of principles, as I have said, one plank of which was free and unlimited silver. I intend to stand or fall upon that platform. When we have secured that, as I hope we will, I shall contend for every other plank embodied in the platform on which I was elected. My people expect it; I promised to do it; and I shall do it though the heavens fall.

JOHN SHERMAN said in a speech February 27, 1867:

The bond owner can demand only the kind of money he paid and he is a repudiator and extortioner to demand money more valuable than he gave.

See where JOHN SHERMAN stands to-day. At that time he was a poor man. Now he is a millionaire.

To show, possibly, the hand of conspiracy, shortly after that notable bankers' convention the following circular was issued, signed by their secretary, James Buell. Here is the circular:

DEAR SIR: It is advisable to do all in your power to sustain such daily and prominent weekly newspapers, especially the agricultural and religious press, as will oppose the issuing of greenback paper money, and that you withhold patronage and favors from all applicants who are not willing to oppose the Government issue of money. Let the Government issue the coin and the banks issue the paper money of the country, for we can better protect each other. To repeal the law creating national banks or to restore to circulation the Government issue of money will be to provide the people with money, and will therefore seriously affect your individual profit as banker and lender. See your member of Congress at once and engage him to support our interest that we may control legislation.

This circular is signed by the secretary, James Buell. It speaks for itself, and needs no comment from me.

Connected with this list of acts is also the contraction act of April 12, 1866, and the refunding act of July 14, 1870, a scheme to perpetuate the debt of the nation by funding at a lower rate of interest from year to year, from time to time. To further show the existence of a conspiracy and to show why I said in the outset that this war was not fought to free the negro, but to enslave the white man, I will give here a copy of a circular issued in 1862, after the war had begun in earnest. This circular was issued by English capitalists, who commissioned one Mr. Hazard, a London banker, to propagate its principles among American bankers with a view of having the financial legislation of Congress pave the way for its final adoption as the settled policy of this nation. Here is a copy:

Slavery is likely to be abolished by the war power and chattel slavery destroyed. This I and my European friends are in favor of; for slavery is but the owning of labor and carries with it the care of the laborer, while the European plan, led on by England, is capital control of labor by controlling wages. This can be done by controlling the money. The debt, that capitalists will see to it is made out of the war, must be used as a measure to control the volume of money. To accomplish this the bonds must be used as a banking basis. We are now waiting for the Secretary of the Treasury to make his recommendation to Congress. It will not do to allow the greenback (as it is called) to circulate as money any length of time, for we can not control that.

This circular also speaks for itself. Having established the coin price for bonds, which have not cost their holders more than 60 cents on the dollar, they might have been satisfied; but now here came the silver question, before it was demonetized. They commenced work upon it before it was depreciated at all. To show you that all this talk about depreciation is mere claptrap, they commenced when it was at a premium of 3 or 4 per cent, and to-day it seems that they are making the same cry, looking for a crash to come to the Government, when silver is selling at 2 per cent advance in New York; and I am told that a gentleman went to Secretary Carlisle on last evening (it was so stated in the evening paper) and tried to buy silver with gold, and he would not let him have it.

The rock-ribbed mountains of the West have opened the floodgates of their hidden treasures and poured forth streams of silver that amazed the world and promised abundant money for the country again. Silver then, of course, was coin, and the bonds payable in coin, and had been the money of the world from the time of Abraham. Silver was too base and cheap for Shylock now, and must be demonetized. Then came the act of 1873, passed under a guise and misrepresentation.

It is said that one Mr. Ernest Seyd, of London, was sent over with $500,000 to buy the American Congress. I do not pretend to vouch for this, but ask you to listen and see how easy the act was passed in 1873, which did destroy silver, thus adding the straw to the camel's back by further contraction and increasing the bonded indebtedness, following this with the resumption act of 1879, and fastening upon this nation a financial system which, Mr. Carlisle says, has been productive of more misery and crime to the people of this country than all the wars, pestilence, and famine with which they have ever been afflicted.

The record of the American Congress for the last twenty-five years has been one inimical to the interest of the mass of the people. The acts spoken of completed the infernal machinery by which the money power is crushing out the lives and liberties of the people. Trusts and syndicates have been formed, which have reduced the people to a wage slavery more abject and heartless than any chattel slavery that ever cursed God's green earth. These acts are still upon the statute book; this legislation is still in operation and should be undone, and that is what the people demand.

I refer, Mr. Speaker, to the report of the committee in charge of the bill. The chairman, Mr. Hooper, said:

Mr. Ernest Seyd, of London, a distinguished writer and bullionist, who is now here, has given great attention to the subject of mint and coinage. After having examined the first draft of this bill he made some sensible suggestions, which the committee adopted and embodied in the bill.

The finances of the National Government are so adjusted to-day as to be utilized by one particular class, and a very small class it is, with power to contract and inflate at will, and as they go on with the contraction, of couse it is followed by a corresponding shrinkage in the value of products of labor and everything else in the nature of property. Then the people are obliged to sacrifice their property; they are obliged to sell their products. The speculators get it at the depreciated price; then inflate the currency, and, turning it loose, sell it back at three times what they paid.

This is the system we are living under to-day. It is not the Sherman act. That has done the sick man a great deal of good. If it is a "cowardly makeshift" it has acted like a little quinine. It will cure chills, but they will come back after awhile. The people have been quiet too long. They have stayed quietly at home, trusting to their representatives at Washington to do the nice thing for them, every once in awhile sending up to ask them, "What of the night?" and the good gentlemen here, these great big bushy-headed statesmen, fattening and feasting on the best of the land [laughter], would reply: "All is well. Plow on, boys; we will be down again in the fall; we will want the votes and the fried chickens as usual." [Great laughter.]

That is the way the people have been treated; that is the way I have been treated. I have met these gentlemen on the stump and I have thrown this in their teeth again and again and they could not deny it. I stand here, sir, as a humble representative of my people, and I intend to represent their interests as I promised to do. Every other class can get what they want. The manufacturers can get what they want. The railroads can get what they want. The bankers can get what they want. But as soon as the farmers, the laboring people of the world, the people who make that which feeds and clothes the world, and who are growing poorer and poorer every day of their lives, as soon as they send up a little petition here these great big statesmen sit up and look as wise as owls and say, "It can not be done. It is unconstitutional!" [This was said in a very sarcastic and humorous manner, causing renewed laughter.]

They will appropriate millions to go out into the wild woods to catch Indians and educate them. [Laughter.] They will appropriate millions to take care of the negroes and educate them; but they will do nothing for the poor white men of this country. [Laughter.] I speak here for the poor white people of my country. I want to get something for them, along with the Indians and the negroes, and I am going to stay here until I get it, or know the reason why. [Applause and laughter.]

Now, my friends, these oppressive laws are still on the statute book, and if the gentleman from West Virginia [Mr. PENDLETON] loves the people as much as he tells us he does, he ought to be willing to help to remedy them. Why, he almost cried when he was telling us how he loved the people. Many of these gentlemen have talked so much and so earnestly about their love for the people that I almost thought they were in earnest. [Laughter.] That legislation is on the statute book to-day.

Mr. PENDLETON. Put there by the Republican party.

Mr. TALBERT of South Carolina. Yes, and you helped them to keep it there; that is just as bad. A man who receives stolen goods is as bad as the man who steals them. That legislation is on the statute book to-day. The people having slept until this machinery is perfected, have at last awakened from their dream of freedom to find their liberties fettered and themselves in the grasp of a system of monopolies whose satanic engines are crushout not only liberty, but life itself.

No longer may they boast of living in the land of the free and the home of the brave, where every man may worship under his own vine and fig tree; but the fact stares us in the face that a despotism of corporate wealth has subverted our free institutions, and that we are living to-day under a moneyed aristocracy, so to speak. Who does not tremble for the safety of our civilization? The results of legislation are being universally realized, and fears may be justly entertained that we have already passed

the point beyond which our steps may be retraced and our liberties retrieved.

But God forbid! Although our country is hanging over the brink of an abyss that blinds and dazzles the mortal eye, I yet believe that there is a force at work which will neutralize and stop these destructive influences, that finally the great God who rules the destinies of nations will bend down over His people in mercy and in love, and that "Equal rights for all; special privileges for none" will be again the motto of our country, and the republic will be saved and liberty restored.

The demonetization of silver made all debts and taxes harder to pay by cutting off half the means of payment. Cotton was bringing 18 cents per pound when it was done. In a short time it was bringing 10 cents. So with property and labor—all went down in proportion. The remonetization will add back to the means of payment and lighten the weight of all debts and taxes. Is it not right to undo a wrong? I need not go into details, as others have discussed the silver laws ratios.

I submit that what was done in demonetization should be undone. It is a poor rule that will not work both ways. If the lovers of the people—those men who, by the way they speak here are ready, one would think, to take the people in their arms—if they want to do something for the people let them join with us and help to undo this legislation, by which the country will be placed back to the position in which it was in the good old days when it was prosperous. You know that from the time of George Washington, the tobacco planter, up to 1860 this was a great and prosperous country.

Since 1860 this evil has been coming upon us which is now sapping the very foundations of our civil and religious liberty. The people are awakening, and ask that this legislation be repealed. Why not commence by giving us back silver and letting the repeal of other acts follow. Let us bring back that wing of the Democratic party that is to-day upon the mountain worshipping the golden calf, not the true God. Let them come back and serve the only living God.

Thus we stand to-day. Our grand old ship of state is out upon a tempestuous sea amid the conflicting billows of contending parties; and I might say, judging from the late message of the President of the United States, without a faithful pilot. He has left us out in the wide ocean to do the best we can. But, my friends, let us recollect the words of the dying and lamented Lawrence, "Never give up the ship." Let us keep flying at her masthead the flag of retrenchment and financial reform, the flag of the people—the flag of those who follow the plow, who stand at the anvil, and in the workshop. With strong arms and stout hearts we can and will keep the ship afloat and carry her beyond the breakers out in the smooth and level sea.

But, instead of helping to do this, what are gentlemen trying to do? Trying to repeal the Sherman act. The country is already bleeding to death, and they want to inflict another wound and take more blood. Strange doctrine!

Gentlemen say that their position does not mean opposition to bimetallism. It does not mean anything else, and they know it. I say, without fear of contradiction, they know it is nothing else than monometallism. When Oliver Cromwell was besieging a certain Catholic town citizens came out with terms of capitulation. One of the terms was that they would give up the town if he would not disturb them in their worship. "Granted," he said; "I accept the terms; but the first one of you that is caught attending mass shall be hanged." [Laughter.]

That is something like the position of these gentlemen.

Some of the members on this floor have gone away back to the time of Lycurgus. Lycurgus, I believe, left his people, went off and never came back again. He was something like Hoyle, who, having been beaten in a game of cards, went off and was never heard of again. Lycurgus, I believe, wrote his laws upon iron. I do not profess to be familiar with history; and possibly some of you gentlemen representing boards of trade or chambers of commerce may correct me on some of these points. You are so well equipped in your knowledge, and you know so well how to frame resolutions in favor of the repeal of the Sherman act.

There has been a great deal of such talk, which is simply silly. By such language we are reminded of the man who was inquiring of a little urchin standing on the road, the way to a certain house. He said, "Go this way half a mile to another road; then take that and go a quarter of a mile; then follow a blind path, which will lead you to a swamp; then go out into the middle of the swamp until you find a tremendous big tree; go up into the fork of that tree; then if you ain't lost I'm a Dutchman." [Laughter.] That is about like the talk of my friend from Ohio. I tried to follow him, but he first took me into a swamp, then into the fork of the tree, and finally we were completely lost. You can not lose the people.

Then another has gone into ecstacies about the greatness of this country. Well, Mr. Speaker, it is a great country, and I am proud of it. It is the greatest, richest country on the face of God's green earth. It has trebled itself in the last twenty-five years if I amnot mistaken, and yet from talking of all its greatness and richness they tell us that she can not compete with poor little England, or Germany, or some other foreign country! Why, they talk as if she was a babe that could not get out of sight of her mother in finances. It is all foolish talk.

Truly, this is a great nation. With 156,000 miles of railroads, mines and manufactures in abundance, dense cities, population immense, the great hum of musical industry heard on all sides; and when I stand on the portico of this Capitol and look out over this city I am inclined to agree, Mr. Speaker, that it is a great country. But, sir, when I go to the homes of the American farmers, among whom I live, what do I see there? I see and hear nothing but the song of hard times and worse coming. Go into the homes of the working people, the factory people, and what do you see? Nothing but starvation, poverty, and death. The beginning of all this is found in the fact that the wealth is concentrated in the hands of a few, who use it to grind down the laboring people of the country into the dust—to grind them between the upper and nether millstones of want and usury.

True it is, I repeat, a great country, but beneath all the grandeur and greatness is the canker of a disturbed, distracted, and oppressed people, growing poorer and crying for relief every day.

Now, sir, look at some of the further evils of the contraction which the striking down of silver has produced in this country. An orator has stated, and it is true, that the greatest danger to-day to free government in America is the tendency to concentrate the center of political power at the Federal capital. That is all true. But concurrent with this political tendency to-day is another danger equally formidable, equally dangerous, and that is the concentration of the money of the country in the hands of a few men.

There is no man of reasonable intelligence to-day who has noticed the encroachment of the money power on the rights of the individual, but who is forced to the conviction that the issue is an open one between plutocracy and the people. Why, such pilings up of enormous wealth as are every day seen in this country is even more than the human mind can conceive. Aladdin's lamp becomes dim and Monte Cristo but a trifling, commonplace tale when compared to the magicians of finance in their financial transactions under this system, and not under the Sherman law at all.

The Sherman law is not in it. To-day the capitalist is surrounded by luxuries which have not been seen in all the eras of this Republic of ours before, and which far surpass the glories of Rome or Corinth in their palmiest days, and yet even the first fruits have scarcely put forth. As the President says, "He gives twice who gives quickly," and I ask you to think of that in this respect. These are things, Mr. Speaker, to think of, and to think of seriously. Let us give our attention to them.

The same writer has said that a home that costs $3,000,000 and a breakfast that costs $5,000 are disquieting facts to thousands of people in the United States who live in a hut and dine on a crust, when they know their poverty has not come by laziness in the spring and overproduction in the fall, but that it has come by unjust, iniquitous, and infernal laws that have been passed by the representatives of the very Government they are taxed to keep up and which ought to support and help them along. The fact that a man who twenty years ago from poverty to-day has an income of $20,000,000, and his two associates nearly as much from the arbitrary control and pricing of a single article of necessary consumption, with no limit to the greed or daring, falls heavily and strangely on the ears of men who hear it as they sit empty-handed while their children are crying around them for bread, when they know their poverty came by a system of finance fastened upon us by the laws of the land in the interest of the money power. But that is not the height of this thing. Just think of it, my friends: When the agents of a dozen men who have captured and control a single article of necessary use meet the representatives of a million farmers from whom they have robbed millions the year before, with no more moral right than is behind the highwayman's pistol, and insolently give them the measure of this year's capacity and tell these men who live by the sweat of their brow, standing between God and Nature, that they must submit to the infamy because they are helpless, then the first fruits of this system are gathered.

When a dozen men can get together again in the morning, and fix the price of a dozen articles in common use, with no standard but their arbitrary will, and no limit but their greed or daring, and notify the sovereign people of this free republic how much in the mercy of their masters they shall pay for the necessaries of life, then the point of intolerable shame has been reached. Worse than the brigandage of the Middle Ages is the modern system of finances. Instead of robber kings and brigand chiefs,

we have the money king, gold bug, Wall street gambler, and so forth. Instead of the robber bands of the Rhine we have the trust, the syndicate, the corporation.

Shall this shame at which Europe revolted be repeated in free America? Is it not so, when a trust or syndicate can, by adding 25 per cent of the cost of a single article of common use, levy a forced tribute upon the people, from the surplus of which they can put millions upon the top of the millions in their pockets? And is not that the fact under this system? Wherever we turn we see labor idle, and see starvation staring into desolate homes, and strikes against starvation wages.

Now, with the permission of the House, I would like to read, as a further effect of this system, something in addition to what my friend from Colorado [Mr. PENCE] spoke of partially in his speech the other day.

Let us take twenty-one States—Nebraska, Iowa, Illinois, Kansas, Missouri, Kentucky, Virginia, West Virginia, Arkansas, Tennessee, North Carolina, South Carolina, Mississippi, Louisiana, Alabama, Georgia, Florida, Maryland, and Delaware. These twenty-one States contain 985,635 square miles. Let us take nine Northern and Eastern States, Maine, Vermont, New York, New Hampshire, Massachusetts, Connecticut, Tennessee, New Jersey, and Rhode Island. These contain 168,665 square miles, or nearly six to one in favor of the twenty-one States which I have mentioned in the factor of land. In 1880 the twenty-one States contained 28,242,922 people, and the nine States contained 14,507,407 people, or two to one in favor of the twenty-one States in the factor of labor.

In 1880 the twenty-one States that I have mentioned had an assessed valuation of $6,839,554,628, and the nine States had an assessed valuation of $7,559,928,915. Thus the twenty-one States and the nine States were nearly equal in the factor of capital. That is, the twenty-one States had six times the land to work upon, twice the number of people to do the work, and nearly the same capital with which to do the work. They should have gained nearly twelve times as much, or, say, ten times as much. But let us see. The twenty-one States gained $1,698,195,657, while the nine gained $3,054,762,222, or nearly double for the nine over the twenty-one.

In 1880 the twenty-one States had 56 per cent of the total population, and were able to keep but 23 per cent of the total wealth gained. The nine had 29 per cent of the total population, and were able to save 41 per cent of the total wealth gained. Again, fifteen of these States gained in ten years $1,117,188,213. New York alone gained $1,123,385,932, or $6,000,000,000 more than the fifteen. You have heard a great deal here from New York and Pennsylvania, and you have heard a tremendous amount from Massachusetts this evening. I do not blame gentlemen for speaking up for Massachusetts, considering the way she has fattened and feasted upon these Southern, Western, and Northwestern States. Is it not unfair? Is it not robbery? Has this not been done by means of this financial system spoken of?

Again, twelve of these States gained in twelve years $897,184,160, while Pennsylvania gained $909,382,016, or $12,000,000 more than the twelve States. Just think of that. Nine of these twenty-one States gained $59,441,974, while Massachusetts gained $69,377,924, or $10,000,000 more that the nine States. Now, I just give you that for what it is worth. These facts can not be controverted. Study the question and ask yourself why these nine States have transferred the wealth of twenty-one States into their own coffers.

Again, my eloquent friend from Missouri spoke of the national debt. Before I speak of that, though, I wish to speak of the per capita circulation. In 1866 we had $52.06 in circulation; directly after the war, for each person, that much per capita. Now, I have the list of the per capita circulation all along down, and it is said by some men to-day that there is actually less than $5 per capita in circulation. I know it is contended that there is a larger amount than that; that there is $24; but in order to reach that result they count money held in reserve and which is not in circulation, and there is actually only about $5 per capita in circulation to-day. And I tell you these avaricious men, these gold bugs, will come in and get a part of this, or all of it, if necessary, and take it out of circulation.

It reminds me of the story of the little boy who carried his first sack of corn to the mill to be ground. He carried it to the mill and the miller came out and took the sack and carried it in. He took out the toll and put it into the box. The little fellow did not like that, and he watched the miller, just as the people are watching to-day. Then the miller emptied all the corn into the hopper and put the sack down, and when he turned away for a moment, the little fellow watched his chance, jerked up the sack, and started to run away home. The miller ran him about halfway home, and the little boy reached the house all out of breath. He fell down on the piazza almost exhausted, and the old gentleman said to him, "Why, what is the matter?" The boy said, "Father, that old rascal took every grain of your corn, and he gave me a hell of a race for the sack." [Laughter].

So I tell you these corporations, these gold bugs, have withdrawn all the money from circulation, on the pretense that times are hard. It is no such thing, and I deny it. They have withdrawn the money from circulation, all except $5 per capita, and they are giving us a hell of a race for the $5 [laughter], and if we do not wake up they will get that; but I intend to stay in this House and see that they do not get it from my people, or I will know the reason why.

Mr. SIMPSON. If the gentleman will allow me, I desire to interrupt him at this point.

Mr. TALBERT of South Carolina. Certainly, I will allow the gentleman to do anything.

Mr. SIMPSON. I desire to read a short statement from a New York daily paper, giving a short synopsis of the report of the Comptroller of the Currency, showing the decrease in the amount of currency in circulation. He says that the decrease in the individual deposits in the banks is $193,000,000, on loans and discounts of $137,000,000, and in specie of $21,000,000, of undivided profits of banks of $13,000,000. That is from the 12th of July to the 4th of August, over $300,000,000.

Mr. TALBERT of South Carolina. Worse and worse. [Laughter.]

Now, then, let us go along from these facts to something else. In 1866 there were about $2,000,000,000 in circulation, with a population of only 30,000,000 and with one-fiftieth of the business that is being done to-day. And to-day there is less than one-half of that in circulation, with nearly 70,000,000 of population and business increased to over a hundred-fold from what it was at that time; and yet you see that as business increases, and as we need more money, the money is contracted, so that they cut off circulation, and they "get us," as I believe Mr. Watson said, "a-coming and a-gwine," and get us at both ends; and how are we going to live under such rules and regulations as that?

Now, then, you must all excuse me, for I never wrote a speech in my life, and I never like to be bothered with notes. I undertook to make a speech with notes once, and I got them all stirred up together and made a complete failure. That was like the good old minister, and I hope there are some preachers in the galleries, who told the boys what portion of the Scripture he intended to read for the morning lesson. The boys, finding the place, glued together the two connecting pages. The next morning the old preacher began to read at the bottom of one page:

And Noah, when he was an hundred years old, took to himself a wife, who was—

Then turning over—

A hundred and thirty cubits long and 40 cubits wide, and made entirely of gopher wood, and pitched within and without.

[Great laughter.]

Now, that much puzzled the good old preacher. I hope he will hear it if such an one is in this House. He took off his spectacles, rubbed them again, and read it and verified it. "Well," he says, "brethern, I have not seen it in this book before, but I know it is true, or it would not have been here."

And he said again, "That is an evidence of the assertion that is made in another portion of this book, that man is fearfully and wonderfully made." [Laughter.]

You see his faith. I have faith in what I am trying to do, and in what I am attempting to declare; and I say there are some men who are fearfully and wonderfully made from what we hear them say when they talk about monometallism, and I hope that they will find it out before they proceed much further.

In 1866, if you will excuse me, the Government debt was $2,793,892,000, or thereabout, for fear that some of you will take me up about having the precise figures. Up to this time there has been paid, as the gentleman from Missouri [Mr. BLAND] said, nearly twice that amount, or nearly $5,000,000,000, of principal and interest, and yet there remains $1,685,281,000 unpaid. Now, what I am trying to bring to the attention of the House is this, that this $1,685,281,000 takes three times as much labor and products to pay it to-day as it did in 1866.

Now, you may take me up on that if you want to. I am a new member, I know, but I will answer any question on that, for I used to answer the shorter catechism in the Sunday school. I do not want to submit to a civil-service examination like my friend from Nebraska [Mr. BRYAN] the other day, but I am willing to be questioned on that subject. It is three times as much because of this contraction. As they contract the currency it causes a shrinkage in the value of the products of labor, and so it has caused the shrinkage of three times in the value of the wheat, the corn, and cotton, so that it will take three times as much of those products to make this payment as it would have taken in 1866, and this kind of system bears very heavily upon

the boys who follow the plow on a hot July day. This class I stand here to fight for, and will so long as life lasts and am honored by a seat on this floor.

I have followed it many a day, and I expect my friend from Colorado, Mr. PENCE [putting his hand upon the shoulder of the gentleman who was sitting near him], has followed the plow and knows how it is. It takes three times the labor to pay that debt, and this same rule will apply in the case of private debt. A man having a mortgage on his farm may have paid it over twice, leaving a small balance, which it will now be three times as hard to pay as if he had paid it all at first. So that this system of contraction amounts to confiscating the labor of American workingmen and makes us hewers of wood and drawers of water unless it is checked, nothing more and nothing less.

I will give you an illustration. For instance, by contracting the volume of money it lowered the prices of other property and added that much more to the burdens of the debtor class. For instance, Mr. Burt, a western man, bought a farm for $6,000, when wheat was $2 per bushel. He paid $3,000 cash, and placed upon it a mortgage for the remaining $3,000, which he expected to pay with wheat at $2 a bushel. A part of the $3,000 cash invested in the farm was Mr. Burt's savings from his services in the army. He was a good soldier and bore testimony of having seen active service. He was one of the first to enlist, and stood by the old flag until the last shot was fired, then he returned home, determined to spend the remainder of his days in the enjoyment of that peace so nobly won. Accordingly he purchased his farm, little dreaming of the vicissitudes that awaited him.

Before the first pay day came the money of the country had been contracted 25 per cent, the price of wheat had been reduced in the same ratio, from $2 to $1.50 per bushel. Neither the debt nor interest had in any way contracted, and Mr. B. found it necessary to hire $250 to make up his payment. He had not been disappointed in his wheat crop; it was even better than he expected; but for some inexplicable reason the price was not what he expected. He was told there had been an overproduction of wheat; that the supply was greater than the demand; and yet he knew that one of his neighbors, a day laborer, had never been so hard pushed to keep the wolf from the door. The laborer was sober and industrious. Mr. Burt often employed him, but since the price of wheat had declined he must economize, and the first step in economy was to reduce the wages of his "help."

When the next payment came due wheat brought but $1 per bushel, and Mr. Burt was obliged to hire $500 to meet his payment. In applying to a national banker for assistance, he found that "money was scarce, but he would try and get it for him at 1 per cent a month." Mr. Burt concluded to look farther, and after a long search found a "friend," who decided to let him have the amount at 10 per cent in advance. This, taken from $500, left him $450. The other $50 was made up by selling a few sheep and the best cow. Heretofore the butter had furnished Mrs. B. the means for keeping the children respectably clothed, but now the cow had gone and there was no means of replenishing their clothing. Susan, John, Willie, and even little Mary, were extremely sensitive, and when their clothes began to be shabby their fondness for the Sunday school declined.

Mr. Burt did not renew his church subscription that year, and it was very uncomfortable for him to sit in his pew and hear the minister preach about the worldly-minded man, who thought more about the price of wheat than of his soul's salvation, and who grew so avaricious that he would not subscribe for the support of the gospel. Mr. Burt listened to what the preacher said, but his heart grew hard, his clothes grew shabby, and his attendance at church grew infrequent and finally ceased altogether.

A few weeks before the third and final payment came due, Mr. Burt sold his wheat for 75 cents per bushel; a fine crop, but it failed to meet the requirements of the contract, foreclosure followed, and Mr. Burt and family were turned out penniless into the street. Setting out in search of work, he unfortunately reached Michigan just after a tramp law had taken effect. Wandering from place to place, shabbily dressed and without any visible means of support, he was finally arrested for vagrancy and sent to the penitentiary.

Disheartened and overcome by feelings of disgrace, he soon sickened and died. His friends, ignorant of his whereabouts, knew nothing of his sad fate. Twenty-four hours after his death, on a bleak December day, a rough wooden box was landed at the basement window of a medical department of the Athens of Michigan, and a few days later a subject, with careworn look and locks of prematurely gray, was laid upon a dissecting table. The students jocosely remarked: "The old fellow must have been a soldier, judging from the number of scars upon his person." But there was one student who did not join in the merriment of his companions. He earnestly scanned the features of the dead man, and half an hour after the dismissal of the class a missive was winging its way to the State penitentiary. The next day the expressman brought a little package to the serious student, he opened it with trembling hands; alas, his conjectures were realities.

The package contained a few articles of clothing, and in a little soiled package he found some mementoes from his father's house, among them the picture of a beautiful maiden, his sister Mary, and by her side a young man in a soldier's uniform. The blood curdled in his veins. He remembered when that picture was taken; though only a child the occasion was indelibly fixed upon his mind. It was a day that his sister was married to a soldier—Joseph Burt—the pauper of yesterday, the victim of the dissecting knife, spared from the shot and shell of the battlefield to die a pauper's death, and to suffer a fate that none but criminals ever know. Ah, my country! where is thy gratitude? Through the contraction of the currency Mr. Burt's debt was double, and what is true of this unfortunate death is equally true of the debt of the Government and of every individual.

Many instances of this sort could be given, but I have not time, nor do I wish to take up the valuable time of the House by going any further in this line. Think of this.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. PENCE. Mr. Speaker, I ask unanimous consent that the gentleman may be allowed to continue his remarks until he has concluded.

There was no objection.

Mr. TALBERT of South Carolina. I am much obliged to the House, though not much astonished, for a man ought to be allowed to work in the night in his own time. [Laughter in the House and in the galleries.]

The SPEAKER *pro tempore*. The Chair would remind occupants of the galleries that any approval or disapproval on their part is expressly forbidden by the rules.

Mr. TALBERT of South Carolina. Mr. Speaker, do not trouble the boys; they feel good; they are the laboring boys.

Thus far we have been looking at the evil and the effects resulting from the demonetization of silver and the legislation preceding that act; but no good can be accomplished in merely passively looking at results. Our country has been compared by some of the speakers to a drunken man, or rather the financial system has been so compared, and it has already been denied so far as being drunk was concerned, yet all have agreed that the patient is sick and must have relief. A patient whose vitality is daily depleted by lingering diseases, caused by miasmatic poisons of the swamps, may find temporary relief in abundant doses of quinine, but he can hope for no permanent cure until he removes the cause, and the whole cause, either by draining his swamp or removing the miasma, or remove himself to God's beautiful sunlight or blue grass of the highlands.

So, then, in our distress we have had the Bland-Allison bill of 1878, which gives temporary relief, and then the Sherman act of 1890, which also improved the condition of the country to some extent, but only temporarily. What we want is a permanent cure. Let us have a lasting one, and to get it is an undertaking as formidable, as patriotic, and as heroic as its accomplishment will be grand and glorious. A noted writer has said:

> The great money powers, as they think, safely intrenched within their citadel, look out over their countless ramparts of money bags and see their blood-red flag defiantly waving on the parapet where it has waved for more than a quarter of a century, and adopting as their rallying cry the Vanderbilt motto of "the people be damned," they defiantly command:
>
> Hang out our banners on the outward walls;
> The cry is, still They come! Our castle strength
> Will laugh a siege to scorn. Here let them lie
> Till famine and the ague eat them up.

So thought Macbeth; but his castle fell before the resistless march of the outraged and awakened people. So will fall sooner or later, stormed with the ballots of American freemen, the castles of the moneyed powers. The first thing for the representatives of the people to do is to undo the legislation which has brought about this condition of things. The people have asked for it, the people—not the boards of trade, not the chambers of commerce, but the great masses of the people, who pay 80 per cent of every dollar that is appropriated by this august body—the people have asked to have that legislation undone, that they may be better able to bear their enormous burdens. They have demanded it. Let us first have free and unlimited coinage of silver at a ratio of 16 to 1. This they want and this they will have. Nothing less will satisfy them.

As has been well said by a Representative in this debate, anything less than this nobody but a coward will accept. The Democratic party has promised it. Pay off the bonds; stop the interest; call in the national bank notes and replace them by full legal-tender money issued by the Government, and increase this Government issue of greenbacks if necessary; and this money, in connection with free and unlimited coinage of silver and gold,

will furnish sufficient money to the people of this great country to conduct their business on a cash basis. The fate of the pending question on silver will decide this matter. It embodies all the propositions here, as it was the last act of this conspiracy. Silver has been made the battle ground and the bone of contention in this great fight for the liberties of the people.

In deciding this matter, look at it as you will, mystify it as you will, it resolves itself into this, and the great question of the day is whether the dollar or the citizen shall rule this country; whether manhood or money shall control this Government and make her laws. Upon which side will you stand, gentlemen of the House? Wise men may hesitate and patriotic men divide, but there are no middle grounds. It is the dollar and a centralized government on one hand against the citizen and the States on the other. Where will you stand? Will you stand with the people or will you stand with the money power? The people have asked relief of their Representatives; they have demanded certain measures in their platforms of principles and we are in the midst of a mighty revolution, hitherto bloodless. God grant that it may continue to be so and the revolution prove to be a peaceable one; but God alone knows.

But, my friends, this is a contest between the citizen and the dollar. Men may talk about the greatness and the wealth of this country and about carrying on its business on "confidence" and "sympathy," but confidence and sympathy will not help the working people of this country. Some gentleman has told us here of a transaction between two men, each of whom had plenty of confidence and sympathy, yet they were both in a terrible fix without money. [Laughter.]

I want to say here in behalf of the people whom I represent, in common with the mass of the people of the United States, that they need what they ask for; they deserve what they ask for, and they feel that they deserve it all over this great country; and if their voice is not heard and heeded, sooner or later there will come a time when angry people will appear at the gates of justice in person and demand their rights in a mood incapable of reason, for when the flag of retribution is raised it is then too late to reason. Then, gentlemen of the House, in the name of common sense, in the name of right and justice, in the name of right and reason, give the people what they ask for.

Some men may point to our standing Army, with the fluttering flag and rolling drum, as the point of strength, but the citizen, standing in the doorway of his home, as he spends the evening of a well-spent day amid the sounds and scenes that are dearest, satisfied upon his threshold with his family gathered around his fireside—that man will save his country when the drum-tap is futile and the barracks have been exhausted. Let us stand up to that great middle class which, ever since it met the returning crusaders in England with the demand that the hut of the humble should be made as sacred as the castle of the great—that class who have always been the great bulwark of liberty amongst all English-speaking people.

Then, against the dangers of a centralized government let us interpose the approved and imperishable principle of local self-government. Between the rich and poor, now drifting into separate camps, let us build up this middle class, who, neither drunk with wealth nor embittered by poverty, shall lift up the weak and control the strong. Against the jangling of races and creeds of men oppose the home of the citizens and the faith of our forefathers that led them smiling and serene through the valley of the shadow.

Now, my friends, in conclusion let me say, this is the voice of the people that we hear to-day. They have sent us their petitions. Since I have been here I have received hundreds of letters and petitions from the people of my district and people all over the grand little State of South Carolina, asking that we stand up like men for their rights. They are to-day at their homes watching and praying for relief, expecting us to stand up for them and grant them what they ask.

I want to say in behalf of my people—the people I represent, in common with the laboring people all over this country—that it is their fight, their cause. And this fight, my friends, is not confined to the United States. It has crossed the water, and that mighty man, Gladstone, the greatest man, possibly, that has lived since Jefferson died, is standing up, in contradiction of his education and surroundings, and is appealing to the English people to rise up and snatch the last vestige of usurped authority from the crown and place it with the people, where it belongs. Let the people rule. Give us a government "of the people, for the people, by the people."

And let me say, and I repeat it, unless the voice of our people is heard by their representatives and heeded ("if this be treason make the most of it") there soon will come a time when an angry people will appear at the gates of justice in person and demand their rights in a mood that will be incapable of being reasoned with; for when the flag of wrath and retribution is raised it is then too late to undertake to make terms.

In conclusion, let me appeal to you brave men of the North who wore the blue, who stood by the Stars and Stripes with a devotion and a courage that would have added new luster to the splendor of Rome's legions in her brightest days; and to you, the gallant men of the South who wore the gray, who stood by the sinking stars of a doomed cause, while you bore in your manly hearts a more forlorn hope than that which inspired the six hundred at Balaklava—America's heroes—I appeal to you all, now that the war of twenty-five years is over, which resulted in the emancipation of chattel slavery, to stand up like men in the gigantic struggle of to-day between the classes and the masses, involving the stupendous issues of the freedom of honest labor from the degradation and slavery of plutocratic power. Then give the people the relief that they have asked, and they will rise up and call you blessed. Fail to do this, and you will die as you ought, ignobly, unmourned, unhonored, and unwept. [Loud, long, and prolonged applause in the House and galleries.]

Mr. CURTIS of Kansas. Mr. Speaker, though I do not intend to speak for more than a few minutes, I would prefer to postpone my remarks until to-morrow morning or to-morrow night.

Mr. McRAE. I move that the House adjourn.

The motion was agreed to; and accordingly (at 10 o'clock and 15 minutes p. m.) the House adjourned.

HOUSE OF REPRESENTATIVES.

SATURDAY, *August 19, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. PAGE, for one week, on account of important business.

SILVER.

Mr. McCREARY of Kentucky. Mr. Speaker, an alarming and extraordinary business and financial situation induced the President to call Congress in extra session. No matter how we may differ as to the causes of the critical condition which confronts us, we all agree that the trouble is widespread, all-pervading, and fraught with peril to the whole country. We all agree, too, that some remedy should be speedily applied. There should be no unreasonable delay when factories, furnaces, workshops, and mines are closing and wails of distress come from the unemployed of every State; when the army of idle men and women is daily increasing, and labor and capital, agriculture and manufactures are suffering; when credit has been strained, and more failures have occurred with larger liabilities in three months of 1893 than in six months of any other year of our country's history.

DUTY AND PATRIOTISM.

This is a time for duty and not for dalliance, a time for patriotism and not for partisanship. It is not necessary now to speculate at length as to the cause of the trouble, distress, failures, and shrinkage of values which are so apparent and appalling in every section of our country. The act of July 14, 1890, called the Sherman act, while it is the main cause may not be the only cause of the present woe which afflicts the country. It may be ascribed, also, to the demonetization of silver by European nations, and to the great demand for money in Europe, beginning after the collapse of the Argentine Republic and the failure of the Baring Bros., assisted perhaps by Austria's policy of establishing a gold basis, and increased by the bursting of so many speculative enterprises in our country and in foreign countries, and by the reduction of our gold reserve and the depreciation of our silver currency which caused millions of dollars to hide.

It matters not what the cause is, it is upon our country like an incubus, like a scourge, and it is believed by millions of people that the repeal of the purchasing clause of the Sherman act will restore confidence. The President, in his message, used unmistakable language on this subject when he said:

> Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.
>
> I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.
>
> I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion.

THE SHERMAN ACT AND THE PENDING BILL.

I voted against the Sherman act when it was passed in July, 1890. It has not only been a failure, but a colossal curse to the country.

The bill now pending should be passed. It provides that so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair nor in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

The last report of the Secretary of the Treasury shows that there are 363,000,000 of standard silver dollars in the Treasury, and 57,000,000 of standard silver dollars in circulation, and $76,000,000 of subsidiary silver coin in circulation and in the Treasury, and $120,000,000 of silver bullion in the Treasury, making the enormous amount of $496,000,000 of coined silver and $120,000,000 of uncoined silver now in the Federal Treasury or in circulation, or $616,000,000 in all. When it is remembered that the whole amount of standard silver dollars in our country in 1878 was $8,000,000, the contrast is very plain. And when it is remembered, also, that the excess of gold exports over imports has been in the last year eighty-seven and a half millions of dollars, while in the last three years gold in the Treasury has decreased $132,000,000 while silver has increased $147,000,000, the necessity for action seems plain.

It is important to notice, in this connection, that the pending bill declares that the legal-tender quality of the standard silver dollars heretofore coined shall not be impaired nor in any manner affected, and pledges the faith and credit of the United States to maintain the parity of standard gold and silver coins at the present legal ratio, or such other ratio as may be established by law. I would have preferred that the bill should have provided for the coinage of $2,000,000 worth of silver bullion per month, beginning with the silver bullion in the Treasury, but as there is now an enormous sum of standard silver dollars in the Treasury, amounting to fifty-two times as much as was in circulation or in the Treasury in 1878, when the Bland-Allison act was passed, there is not the same necessity now as there was then for such an enactment, and I will vote for the pending bill, even if the additional coinage is not provided for, as I have no doubt that Congress will hereafter enact a law looking to the further coinage of silver.

When a house is on fire it would not be wise to stop to discuss the question as to whether the fire should be extinguished with buckets of water from the cistern or with water from the lake thrown by the fire engine. Extinguish the fire with every means at hand, then discuss questions afterward. A large majority of the members of this House are in favor of the repeal of the purchasing clause of the Sherman act. Why not remove this vicious legislation without delay, and then proceed to other important business?

THE SITUATION AFTER REPEAL.

Many reckless statements have been made during the debate as regards the effect of the passage of the pending bill. Some have said the bill demonetizes silver, others have said the double standard will be destroyed; both allegations are untrue. The passage of the pending bill, which repeals the purchasing clause of the Sherman act, will not change the volume or the character of the money in the United States Treasury or in circulation. The gold coins, the silver dollars, the greenbacks, and the Treasury notes will remain as they are now, full legal-tender money.

The subsidiary coin will remain the same as at present. The gold and silver certificates will continue as they are now; the national bank notes, whose redemption is secured by the Government's guaranty upon the pledge of bonds, will remain unchanged. To be brief, the repeal of the purchasing clause of the Sherman act will not abolish or retire or reduce the volume of any currency now in our country, or make any change in its character, value, or general acceptability. The only changes it makes is to stop the purchase of four million and a half ounces of silver bullion monthly, for the payment of which currency notes had to be issued, which have been redeemed in gold. It also stops the degradation of silver bullion by preventing its purchase and storage in the vaults of the Treasury like coal, and it stops that brokerage business in silver bullion which the Secretary of the Treasury was compelled by law to engage in, and which, because of the reduction in the price of silver bullion, has made our Government lose about $40,000,000 in a few years and $17,000,000 since July 14, 1890.

BIMETALLISM.

I have always been in favor of bimetallism. I believe in the employment of the two metals (gold and silver) in the currency of the country at a fixed ratio to each other as standard coin and legal tender.

For centuries gold and silver have been recognized as money metals. They are so mentioned in the Bible; they are recognized by the Constitution of the United States, and they were put upon an equality and provided for in the first mint act passed by the American Congress in 1792. There is no inconsistency in supporting bimetallism and also voting for the pending bill, which prevents the repeal of the purchasing clause of the Sherman act from impairing or in any manner affecting the legal-tender quality of four hundred and twenty millions of standard silver dollars now in the Treasury or in circulation, and pledges the faith and credit of the United States to maintain the parity of standard gold and silver coins of the United States at the present legal ratio, or such other ratio as my be established by law.

In 1878 Congressmen did not cease to be bimetallists because they supported the Bland-Allison bill, which only required the coinage of $2,000,000 of silver bullion per month and preserved the legal-tender quality of only $8,000,000. France is still a double standard nation, with $800,000,000 of gold and $650,000,000 of silver, although the coinage of silver was suspended in 1878 and is still abridged.

Mr. BOATNER. Will the gentlemen yield for a question right there?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. BOATNER. Did not both the bills to which the gentleman has referred sacrifice the principle of bimetallism, in his judgment?

Mr. McCREARY of Kentucky. Which bills do you mean?

Mr. BOATNER. The Bland-Allison bill and the Sherman law.

Mr. McCREARY of Kentucky. I think the Sherman act sacrificed bimetallism. I think that the Bland act was the best bimetallism that the friends of silver could get at that time. While it may have been limited bimetallism, it was the best they could get, and I indorsed it at that time. While I would prefer, as I have said before, that the Government should coin silver each month, yet relying on the wisdom of the people and their representatives to provide for the coinage when needed, as was done in 1878, even to the extent of passing the bill over the veto of President Hayes, I can not join those who propose at the time of great financial troubles and supreme business trials to hold the Sherman act as a hostage for the free and unlimited coinage of silver. The sentence of death has been imposed on the Sherman act by its friends as well as its enemies, and it should not now be a hostage.

Bimetallism was indorsed by both the Democratic and Republican parties in their national convention last year, and will necessarily be maintained in our country. The stock of gold now in the world, nor the anticipated supplies from the mines, is not sufficient to satisfy the demand. In the United States, the largest gold-producing country in the world, the products of gold last year was $33,000,000. We produced in 1876 $35,000,000, in 1877, $46,000,000, and in 1878, $51,000,000. We produce now but little over half the amount produced in 1878. The world's production of gold last year was $130,000,000. If from this amount we deduct $65,000,000, which, according to Mr. Burchard and Dr. Soetbeer, represents the annual consumption of gold in the arts and manufactures, there remains but $65,000,000 as the annual and available product of gold.

I presume no candid and well-informed person will claim that this amount is sufficient to meet the increased demands of the world. Mr. Goschen, an eminent authority on this subject, who was chancellor of the exchequer in the Salisbury ministry, said: "If all the nations should resolve on the adoption of the gold standard, would there be sufficient gold for the purpose without a tremendous crisis?" Four nations—France, United States, England, and Germany—have $2,750,000,000 of gold, while all the rest of the world combined has but $900,000,000. These four nations have but $1,600,000,000 of silver, while the balance of the world has $2,350,000,000 of silver. The necessity for the double standard in our country is easily seen.

Mr. BOATNER. Will the gentleman yield to me for one further question?

Mr. McCREARY of Kentucky. Yes, sir; with pleasure.

Mr. BOATNER. You express an opinion that is heard on this floor during this debate. Has the gentleman any hope that after the passage of what is known as the Wilson bill a measure could be carried through this House providing for the continued coinage of silver on any terms whatever?

Mr. McCREARY of Kentucky. I am unable to answer that question as regards the sentiments of other members. I can say, so far as I am concerned, that there would not be any trouble in getting my vote for a bill to recognize silver by the coinage of at least $2,000,000 per month of the silver bullion, commencing with that now in the Treasury.

Mr. BOATNER. If, fortunately, the gentleman could carry a majority of his colleagues with him to pass such a bill, has he any hope that such a measure would receive Executive approval, in the light of the message of the Executive?

Mr. McCREARY of Kentucky. I do not know what the Executive would do, and I do not desire to interrupt my argument by now expressing an opinion; but I will after awhile speak as to what I believe are the wishes of the Executive, although I do not know his views and have no authority to speak for him, and I shall speak also on the requirements of the Democratic platform.

INTERNATIONAL BIMETALLISM PROMOTED.

There can be no doubt but that the passage of the pending bill will help to open the way for international bimetallism on a fixed ratio among the great nations of the world, which is the best remedy of which I have any knowledge for the monetary evils with which all civilized nations are now suffering. Great Britain, Germany, and all the gold-standard countries would be delighted to see our country go to a silver basis so that they might add our gold to their stock. They are now watching with anxiety and interest the Congress of the United States, and on the 3d day of the present month Mr. Balfour, the leader of the Conservative party in England, delivered an address in London in which he forcibly presented the situation in that country. He said:

We are the great upholders of a single gold standard, and yet there is not a man, I venture to say, in the city of London at this moment who would not look with horror and with apprehension at every other nation following so good an example. Was inconsistency ever shown in more ludicrous colors? * * * It is orthodox to have a single gold standard, but let Germany have a gold standard, let India try a gold standard, let the United States go in for a gold standard, and the tremor seizes every one of our commercial magnates.

I earnestly appeal to the portion of my audience whose minds are not yet made up upon this question to reflect whether of all the subjects in the world which deserves international treatment that of currency does not stand in the very first rank.

When I had the honor to address the International Monetary Conference held at Brussels, Belgium, in December of last year, I made no statement which attracted more attention and was more widely commented upon than that both the great political parties of the United States had in national conventions declared opposition to the act of July 14, 1890, known as the Sherman act, and that I was satisfied that act would be repealed.

Mr. STOCKDALE. Will the gentleman from Kentucky allow me to ask him a question?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. STOCKDALE. Was the gentleman a member of the International Monetary Conference?

Mr. McCREARY of Kentucky. Yes, sir; I was one of the commission who represented the United States at the International Monetary Conference held in 1892 at Brussels, in Belgium.

Mr. STOCKDALE. Will the gentleman give the House his opinion, before he sits down, as to when we shall arrive at the free coinage of silver through an international commission?

Mr. McCREARY of Kentucky. I will be very glad to attempt to give what information I have on the subject in answer to the question of my friend from Mississippi.

There have been three international monetary conferences held, two of them by request of the United States, one by the request of the United States and France. The first one was held in 1878, the second in 1881, and the last in 1892.

When the first conference assembled, in 1878, there were but twelve nations represented. When the second conference assembled, in 1881, there were but thirteen nations represented. When the conference was held last year twenty nations were represented and all the delegates were in their seats the very day that the conference was called together. What does that show? It shows the deep interest that all the nations were taking in monetary questions. It shows that that interest had increased as the years had advanced. When that conference assembled at Brussels it was welcomed by the minister of finance of Belgium, Mr. Beernault, who, in his address inaugurating the conference, declared that—

those who will find a remedy for the difficulties and perils of the actual monetary situation will certainly merit well of humanity.

And the able and distinguished president of that conference, Mr. Montefiore Levy, in accepting his high office, said, with much force, "that the delegates had assembled to find, if it exists, a means of palliating by a more general use of silver in monetary circulation the serious inconvenience from which every civilized nation suffers to a more or less degree."

I refer to these statements because when that Conference met the minister of finance of Belgium who greeted us, the president of the Conference who addressed us, and every member who made a statement on that floor, speaking for either of the twenty nations there represented, admitted that there was a serious monetary condition in Europe.

Mr. STOCKDALE. Will the gentleman permit another question for information?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. STOCKDALE. Is it true that during this increasing interest in this subject of which the gentleman speaks those nations have been demonetizing silver?

Mr. McCREARY of Kentucky. I will show the gentleman from Mississippi [Mr. STOCKDALE] that the demonetization of silver by European nations was mainly done twenty years ago. They are now beginning to feel the evil effects of their course and have therefore willingly attended monetary conferences. England legally adopted the gold standard in 1816. Germany, taking advantage of the immense sum of gold paid her as the French war indemnity, started to demonetize silver in 1871, and the law, I believe, was passed in 1873. The Scandinavian states of Sweden, Denmark, and Norway changed to the gold standard in 1874, and the countries forming the Latin Union, consisting of France, Belgium, Italy, Switzerland, and Greece, in 1876 were compelled to suspend the coinage of silver, though silver still circulates there in large quantities. Holland and Spain took similar action about the same time, and Austria-Hungary changed from silver to the gold standard in 1872, and India has lately closed her mints to the free coinage of silver, but the Government still has the right to coin silver.

England has always like a lion blockaded the way to international bimetallism, but the feeling among her people in favor of international bimetallism has greatly increased in the last few years, and if England would lead the way I believe there is no doubt but that the Latin Union countries would unite with the United States in an international agreement.

I have great admiration for Mr. Gladstone as a statesman, as a scholar, and as a leader, but he became attached to the gold standard more than a half century ago and he will not modify or change his views now.

The day will come when he will cease to be prime minister of England; then friends of bimetallism, with such leaders as Balfour, Goschen, Houldsworth, Thompson, Chaplin, Archbishop Walsh, and many others, will show to the world that they appreciate the value of international bimetallism, and a new monetary policy will be inaugurated in England which other countries in Europe will follow, and that is the time, I will say in answer to the question of my friend from Mississippi [Mr. STOCKDALE], when the chance for free coinage will come through international action.

There are many persons who believe that the repeal of the purchasing clause of the Sherman act will force England to look more favorably on another meeting of the monetary conference and strengthen her desire for an international agreement, and that hereafter it will not be the United States who, with beseeching hands, pleads with European nations, but that Great Britain, with all her prestige and power, will be compelled to be an humble supplicant for an international monetary agreement.

Mr. BLAND. I would like to inquire if the gentleman from Kentucky proposes that the American Government shall wait until England changes her ministry before we legislate on this subject? Are we to be governed by America or by the English Parliament?

Mr. McCREARY of Kentucky. My friend from Missouri was chairman of the Committee on Coinage in the Forty-ninth Congress. When I first had the honor to come to Congress I sat as a member of that committee over which he presided with so much ability; I regard him as one of the ablest exponents of the silver question, and I learned much from him eight years ago. But he was mistaken then in some things, as he is mistaken now.

I am not looking to England for anything at present. I am merely using England as an illustration, and I am referring to the position of her leading men to show what can and what will be accomplished after a while. I do not believe free-coinage of silver is advisable now. I believe if a free-coinage bill is passed it will not be approved by the President. If it was approved it would bring us to a silver basis in less than ninety day. I am not in favor of a silver basis; I am in favor of bimetallism; I want both gold and silver. I am trying to travel the road which will through international agreement give us free coinage of silver and free coinage of gold at a fixed ratio, common among the great nations of the world.

I received this morning the London Times. It has an editorial which begins with these significant words:

The silver question may be said this morning to hold the field alike in the new world and in the old world.

While we are discussing silver in America they are in the House of Commons discussing silver in India; and silver, the great giant of the world, is struggling for proper recognition.

The London Telegraph, also received this morning, contains these significant words:

The monometallic controversy has descended from heaven to earth, and, dry as it is in theory, it forces attention when it involves the difference between prosperity and ruin. The silver question, in President Cleveland's forcible language, "vitally concerns every business calling and enters into every household in the land." It is undeniable that European financiers have hoped that the action of the American Government might possibly prevent the silver question from becoming a burning one in older countries. When America has shown that it does not intend any longer to try to counteract the natural laws affecting the values of the metals, Europe may be more ready to resume the attempt to establish some joint understanding on the question.

Mr. BLAND. Will the gentleman inform this House why the meeting of that conference, which was to reassemble in May, has been postponed?

Mr. McCREARY of Kentucky. Yes, sir; I will. The conference adjourned over to meet the 30th day of May. Two or three weeks before that time arrived, many of the leading members of the conference, including the president of the Conference and nearly every bimetallist in it, expressed a desire to have the conference adjourn over until November. June and July are not good months for the holding of a conference in Europe. The cause of bimetallism seemed to be improving in England and in other parts of Europe, and the postponement also gave our country and other countries time to establish through their respective Congresses or Parliaments a definite policy as to monetary questions to be discussed at the Conference.

Mr. BOATNER. Is the gentleman from Kentucky of opinion that the repeal of the Sherman act, without any provision for the unconditional coinage of silver in this country, will facilitate the cause of international bimetallism?

Mr. McCREARY of Kentucky. I am of that opinion.

Mr. BOATNER. Will the gentleman in his remarks hereafter kindly inform us how, in his judgment, the repeal of this law will promote international bimetallism?

Mr. McCREARY of Kentucky. As long as England believes the United States will go to a silver basis and she and other gold-standard countries will get the gold of our country she will not agree to international bimetallism.

The very extract that I read from the speech of Mr. Balfour a few moments ago partially answers the question of the gentleman from Louisiana. Mr. Balfour in his speech at London, one of the greatest speeches that has been made on bimetallism in modern times, said:

It is orthodox to have a single gold standard in England; but let Germany have a gold standard, let the United States go in for a gold standard, and a tremor seizes every one of our commercial magnates.

As I said before, there is not gold enough in the world to maintain the gold standard in all countries.

Mr. BRYAN. Will the gentleman allow me a question?

Mr. McCREARY of Kentucky. I will yield once more, and then I must decline to yield further.

Mr. BRYAN. If the unconditional repeal of the Sherman law will promote the adoption of bimetallism, will the gentleman explain upon what theory every advocate of a gold standard demands such unconditional repeal?

Mr. McCREARY of Kentucky. I can not of course speak for those men, for I am not an advocate of a single gold standard. But I suppose that gentlemen who advocate a single gold standard and who are to-day in favor of the repeal of the purchasing clause of the Sherman act, desire its rapeal because they have found that it has been a curse to the country, that it has been a failure as a law, and that more than anything else it is bringing about a shrinkage of value, and hard times and depression throughout the country. I am giving that simply as my opinion. I am not one of the gentlemen to whom my friend from Nebraska refers.

Mr. Speaker, I shall not attempt to go into a history of the advance of bimetallism in England; but I want to say to my distinguished friend from Nebraska (and I have thought of it since he asked his question) that I listened with regret two days ago to his statement when he spoke lightly of international bimetallism. I regretted to hear him intimate that the friends of international bimetallism were friendly to the gold standard and were the enemies of silver.

Mr. BRYAN. May I correct the gentleman's statement?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. BRYAN. I know the gentleman does not desire to do me injustice. My statement was that we are still waiting for international bimetallism, and that those are waiting most patiently who want a gold standard.

Mr. McCREARY of Kentucky. The gentleman said also that the opponents of the Bland law in 1878 were waiting for international bimetallism. I think the gentleman unintentionally did injustice to the grand army of bimetallists in this country and in Europe.

Mr. PATTERSON. Is it not true that there is a consensus of opinion among the leading bimetallists with whom you conferred in Europe that national bimetallism is impracticable?

Mr. McCREARY of Kentucky. That national bimetallism is impracticable, that bimetallism can not be maintained by a single nation, but that international bimetallism is practicable.

Mr. BLAND. Did they not confine that view to their own little governments, not extending it to ours?

Mr. McCREARY of Kentucky. No, sir.

Mr. BRYAN. Will the gentleman yield for an interruption?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. BRYAN. I would like to ask the gentleman from Kentucky to insert also in his remarks that portion of the report, signed by all of the commissioners, which states that France did maintain bimetallism at a ratio of 15½ to 1 for a period of seventy years, and then explain why, if France did it, this country, with twice its resources, can not do it now at a ratio of 16 to 1.

Mr. McCREARY of Kentucky. In 1876 France suspended the coinage of silver, and that coinage has been suspended ever since.

Mr. BRYAN. But if France, of all nations of Europe, maintained alone for seventy years the parity of the two metals on a basis of 15½ to 1, why can not the United States do the same thing?

Mr. McCREARY of Kentucky. The gentleman from Nebraska is mistaken in saying that France maintained the parity of gold and silver alone. At that time bimetallism existed in Germany, in the Scandinavian States, and in Austria-Hungary, and in Italy and Switzerland and Spain, none of which had gone to a single gold standard at that time.

Mr. BRYAN. But does not the gentleman from Kentucky understand that this report to which he refers gives France credit for maintaining the parity at 15½ to 1?

Mr. McCREARY of Kentucky. I understand exactly what I have stated. I know the fact that the gentleman is well posted on the silver question, and therefore he is too well informed on the subject to say that France was able to maintain bimetallism alone until 1871.

Mr. BRYAN. I will find the passage to which I have referred and hand it to the gentleman, so that he can use it in his remarks.

Mr. McCREARY of Kentucky. The gentleman can put anything in his remarks that he thinks fit. I have already occupied more time than I expected to occupy on the International Monetary Conference. I will close on this subject by saying that the gold and silver commission appointed by the English Government to inquire into the recent changes in the relative value of the precious metals, composed of twelve able and distinguished gentlemen, most of whom were members of Parliament, after an exhaustive examination for nearly two years, declared through six members of the commission as follows:

Neither metal alone exists in sufficient quantities to serve as a sole standard without causing such a change in the level of prices as to amount to a financial and commercial revolution. No settlement of the difficulty is, however, possible without international action. The remedy we suggest is essentially international in its character, and its details must be settled in concert with the other powers concerned. The essential features of the agreement to be arrived at are:

Free coinage of both metals into legal-tender money.

The fixing of a ratio at which the coins of either metal shall be available for the payment of all debts at the option of the debtor.

ARGUMENTS OF THE OPPOSITION ANALYZED.

I desire now to refer to arguments presented by the other side, so far as I have been able to hear them. They say that the passage of a free-coinage bill will make money more abundant among the people and restore prosperity. We already have more money in circulation per capita in the United States than in any other country in the world except one, and we now have 363,000,000 standard silver dollars in the Treasury and 120,000,000 of silver bullion also in the Treasury.

Free coinage will add to the stock of silver lying there by bringing to our mints annually seventy-five millions of silver, the product of American mines, and many millions from foreign countries annually, and would, in my opinion, bring our country to a silver basis in sixty days. No man can get this money without he earns it or furnishes the Government something for it. Free coinage will not put money in the pockets of the poor and needy, and the Secretary of the Treasury is not authorized to give freely to all who will take. The only people who may get a bounty that I know of are the silver mine owners. When a mine owner takes $600 worth of silver to the mint, and the mint gives him 1,000 silver dollars for it, does it benefit the mine owner or the people? Does it increase the wages of the miner who delves in the mines? My opinion is that no man is benefited by this transaction except the man who sells the silver. Our country produced last year 58,000,000 ounces of silver, worth at present about $42,000,000. One million ounces of this

was produced in small lots by several States. All the rest was produced in seven States and Territories, as follows:

States.	Ounces of silver.	Population.
Arizona	1,062,220	59,620
Colorado	24,347,017	412,198
Idaho	3,164,269	84,385
Montana	17,405,093	132,159
Nevada	2,244,000	45,761
New Mexico	1,075,000	153,593
Utah	7,762,257	207,905
Totals	57,059,856	1,095,621

Here we have the remarkable and unprecedented situation of 1,000,000 of people, with a total annual production worth at market price $42,000,000, demanding free-coinage privileges which will enable them at the present prices to get for their product 40 per cent more than its present market value, while 64,000,000 of their countrymen must drink the dregs of misfortune and bear the burdens of hard times in order that 1,000,000 may be prosperous and grow rich.

The foreign commerce of this country aggregates nearly $2,000,000,000 per year. The silver product is only about one-fiftieth of this sum, and this commerce must be conducted with money that is sound, and stable, and international, and as good as gold. But how does it affect the farmer? The value of the silver products in only one-sixteenth of the value of the corn product, or one-tenth of the value of the wheat or hay raised every year. It is worth only one-half as much as the wool or the potatoes annually produced, and about one-sixth as much as the cotton produced annually. I do not believe one class should be enriched while other classes are impoverished. As I understand it, the object of government is "the greatest good to the greatest number," and the old Democratic rule is "equal rights to all and exclusive privileges to none."

The SPEAKER. The time of the gentleman has expired.

Mr. JOHNSON of Indiana. Mr. Speaker, inasmuch as the gentleman from Kentucky [Mr. McCREARY] has been frequently interrupted by questions, I ask that he be permitted to conclude his remarks without limit of time.

There was no objection, and it was so ordered.

Mr. McCREARY of Kentucky. Mr. Speaker, I am very thankful for the courtesy extended to me.

It is said by opponents of the pending bill if we pass a free-coinage bill *silver will soon be on a parity with gold.* For fifteen years we have tried to accomplish that result. In 1878 we provided for the coinage of not less than $2,000,000, nor more than $4,000,000 worth per month, and that law was in force until 1890; but silver steadily declined.

In 1890 the Sherman act provided for the purchase of nearly the entire output of the silver mines of the United States and required Treasury notes to be issued therefor, yet silver declined to less than 60 cents on the dollar, being lower than it had ever been in the history of our country. I can not see, therefore, how the free and unlimited coinage of silver, with our mints open to the whole world, can restore silver to a parity with gold under existing conditions. In 1878 the pure silver in an American dollar was worth $1.03. The ratio was 16 to 1, and the production of silver in the United States was $35,000,000 per annum, and in the whole world the production was $80,000,000 per annum.

At present the pure silver in an American dollar is worth about 60 cents. The ratio is about 27 to 1, and the production of silver in the United States is $75,000,000 per annum, and in the world $185,000,000 per annum. These are stubborn facts, and I submit as a business proposition, when every nation in Europe has suspended the coinage of silver or demonetized it, and India, who purchased from us last year nearly half we produced, having closed her mints to the free coinage of silver, where can we now find a market for our silver, and how can we expect it will go to to a parity with gold by now making its coinage free and unlimited?

Mr. RAWLINS. May I interrupt the gentleman for a question?

Mr. McCREARY of Kentucky. I will permit one more interruption, but will then be compelled, Mr. Speaker, to refuse to yield further.

Mr. RAWLINS. Is it not true that the Secretary of the Treasury has sent to the Senate information that notwithstanding this amount of silver to which the gentleman refers, more silver is demanded than can be supplied by the Treasury; that gold has been offered for silver which can not be furnished? And will the gentleman in connection with that say if the bullion now in the Treasury ought not to be coined?

Mr. McCREARY of Kentucky. I do not know what information the Secretary of the Treasury has sent to the Senate, and I will have to see reports referred to by the gentleman before I will be satisfied.

Responding to his question in regard to coining the silver bullion in the Treasury, I remind him that I have already stated I am in favor of coining the bullion in the Treasury at the rate of $2,000,000 per month.

It is said also that free coinage of silver would raise prices. The lessons of the past fifteen years answer this statement. During this period the amount of money in this country has more than doubled. The circulation per capita has increased nearly 30 per cent, but the general average of prices has fallen.

The demand for money grows with the world's growth of business and trade.

THE PROGRESS OF THE PRESENT AGE.

The immense developments being made, the numerous railways in both hemispheres, the great fleets of ships laden with the commerce of the world, the telegraph lines making all commercial centers convenient markets, and the rapidly growing tendency to international unity, imperatively require large amounts of money; but that money to be useful must be sound, stable, and international, so that when debts are contracted both debtors and creditors will know that payment will be made on the same principle as when the debt was contracted. This is the honest, the fair, the just way of conducting business.

If there is an abundance of money in a country to meet the demands of trade and business and labor, prices will assume a natural and proper position unless there is some other interference. When the monetary systems of the world are examined it will be found, as I have said before, that our country has more gold and silver money than any other country except one, and that no country in the world except one has as large a circulation per capita as the United States. There must then be something else needed to increase prices other than free coinage.

THE DEMOCRATIC PLATFORM.

One of the greatest conventions which ever assembled in the world was held last year at Chicago, and Grover Cleveland and Adlai Stevenson were nominated for President and Vice-President. Those in favor of free coinage say that the Democratic platform should be adhered to, and that they are seeking to comply with the pledges made in that platform. I am as much in favor of keeping the pledges in the national Democratic platform according to the straight letter of the covenant as any man. I know it has been differently construed according to the interests of those who interpret it, but to me there is no ambiguity about it, and I am ready to stand by a fair and just construction of it. I now read from the Chicago Democratic platform:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against metal or charge for mintage; but the dollar unit of coinage must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal dollar of every dollar at all times in the markets and in the payments of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin.
>
> We insist upon this policy as especially necessary for the protection of the farmer and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

It will be observed that the free coinage of silver and gold without discrimination "or charge for mintage" provided for in the platform is that of coins of equal *intrinsic* value. It is not the free coinage of a 60-cent, or 70-cent, or 80-cent silver dollar, but of a silver dollar of equal intrinsic value with the gold dollar. It is further to be observed that the alternative plan of an "international agreement" or "safeguard of legislation" mentioned in the platform must be such as shall insure "the parity of the two metals" and the equally purchasing power and debt-paying power of the two dollars in the markets of the world. The free coinage of silver upon these terms is just as different from the free coinage of light-weight dollars discredited in every market but our own, as is the purchase of silver bullion not for coining but for useless hoarding in Government vaults. This scheme the platform justly denounces as one "*fraught with possibilities of danger in the future.*"

To those who have charged inconsistency and bad faith, I can only say that Mr. Cleveland was nominated by those who had a full knowledge of his Warner letter and of his views on financial questions; and in his letter of acceptance he said:

> Though much is left unwritten, my record as a public servant leaves no excuse for misunderstanding my belief and position on the questions which are now presented to the voters of the land for their decision.

His record as a public servant made him a platform, and the people had no doubt as to his position. Every national platform of the Democratic party since 1880 has demanded honest money,

consisting of gold and silver, and paper convertible into coin on demand without loss. I indorse this fully. I have no right or authority to speak for Mr. Cleveland, but I believe he heartily indorses this time-tried and time-honored doctrine.

THE RATIO OF GOLD TO SILVER.

Many of the opponents of the pending bill advocate a change of the law which has been in force in the United States since 1834 fixing the ratio between gold and silver at 1 to 16—that is, one ounce of gold equal to 16 ounces of silver. They propose that a vote be taken on the ratio of 1 to 17, 1 to 18, 1 to 19, and 1 to 20. The question of the ratio of gold to silver is very important and deserves the most careful and thorough investigation and consideration. Changes in ratio were made in ancient times easily, because there was then but little silver money. In Rome, about the beginning of the Christian era, the relative value of gold to silver was 1 to 9. At the time of the discovery of America the ratio was 1 to 11; in 1600 it was 1 to 13, and it continued to rise until the first mint act of the United States was passed, when the ratio in our country was established at 1 to 15. In 1834 the ratio was changed to 1 to 16, and for about sixty years this ratio has remained unchanged.

When it is remembered that if the ratio of gold to silver should be changed it will take, according to a statement made by the Director of the Mint, ten years to recoin the silver we now have on hand, and if the ratio is fixed at 20 to 1 it will immediately discredit every silver dollar in the United States and cost the Government $89,000,000, as stated by Secretary of Treasury, being the cost of mintage and the additional amount of silver required to make the difference in the ratio, and increase the obligations of debtors millions of dollars and destroy all hope of international bimetallism, the unwisdom of a changed ratio becomes apparent.

MONETARY COMMISSION.

Macauley said "truth is found between two extremes." I have listened attentively to speeches made by members in favor of gold monometallism and by members in favor of free coinage of silver, and I am satisfied that neither will prove to be a remedy for existing financial and business distress. On the contrary, either will aggravate the woes with which our country is at present afflicted.

To continue silver at its present standard as money will not harm the East, but to impair or destroy its value as money would greatly injure the West in its mines and manufactures, and the South in its agriculture and trade. Therefore, I am in favor of an intermediate position. Repeal the purchasing clause of the Sherman act and then arrange for the coinage at our present standard of $2,000,000 of silver per month, beginning with the silver bullion in the Treasury. This will relieve present financial strain and help to restore confidence. Then a monetary commission could be put to work, and after it reports we could take such further action as is needed.

There are certain great questions in our monetary system, including the ratio of gold to silver, which I think should be referred to a monetary commission, to consist of three Senators, to be appointed by the President of the Senate, three Representatives, to be appointed by the Speaker of the House of Representatives, and three experts, to be selected by the President of the United States, who should have authority to take evidence of business men in the South, North, East, and West, before the whole committee or before subcommittees, and to inquire into and report—

First. On the change which has taken place in the relative value of gold and silver, and whether the change is due to the depreciation of silver or the appreciation of gold, and the cause of the change—whether permanent or temporary, the effect thereof upon finance, trade, commerce, agriculture, labor, and other interests of the country, and upon the standard of value in this and other countries.

Second. On the policy of maintaining the double standard in the United States, and what should be the legal ratio between silver and gold when coined, and how many kinds of currency are needed.

Third. On the best means of restoring confidence in commercial and financial circles and promoting international bimetallism.

Such monetary commissions have been appointed in the past, and have always rendered valuable service. The Monetary Commission appointed under an act of the Congress of the United States in 1876 made an able and elaborate report, arousing an interest among the people, and accomplished much of permanent value in the direction of solving the financial difficulties of those times. It opened the way for the remonetization of silver and the passage of the Bland-Allison act in 1878, which took the silver question out of politics until the passage of the Sherman act in 1890.

The gold and silver commission in England, of which Herschel was chairman and Balfour, Holdsworth, and Chaplin were conspicuous members, made favorable and exhaustive reports and furnished much important information to the whole of Europe on financial questions and awakened a feeling in favor of bimetallism which is growing every day.

After the repeal of the Sherman act, conservative and well-advised action is needed, and a few months allowed for the people to recover from the effects of bad financial legislation and for the committee to make a careful examination of questions involving the relative value of gold to silver, the proper ratio to be fixed between the two metals, and the policy of maintaining the double standard and of reducing the number of kinds of currency which we now have, and the best means of promoting international bimetalism will be of immense benefit in aiding Congress to arrive at a proper conclusion on these great questions.

DUTIES WHICH SHOULD BE HEEDED.

Mr. Speaker, some duties stand out so clearly that not to see them is to be blind and not to heed them is folly.

The first I present is that the purchasing clause of the Sherman act should be immediately repealed and the legal-tender quality of the standard silver dollars preserved, and the parity of gold and silver coins of the United States maintained.

The second is that a free coinage bill should not be passed at this time. It would only result in a divided Democracy and the bill will not become a law.

The third is that every patriot should aid so far as he can conscientiously the honest efforts of a patriotic President to relieve the people and restore prosperity to the country.

A heavy responsibility is resting on the representatives of the people at present. We are not here, as some have intimated, to watch the way the wind blows and study only problems that will return us to Congress, but we are here to rise above prejudice and passion, selfish interests and personal ambition, and to legislate in such a way as to benefit the people and promote the welfare of the whole country. We should do what honor and conscience dictate and then submit to the verdict of the people. [Applause.]

[Mr. CATCHINGS obtained the floor.

The SPEAKER. The Chair will announce that there will be a session this evening, at the request of gentlemen who desire to address the House. At 5 o'clock, therefore, a recess will be taken until 8 o'clock, the evening session to be devoted to debate only on the pending measure.

[Mr. CATCHINGS withholds his remarks for revision. See Appendix.]

[Mr. LIVINGSTON withholds his remarks for revision. See Appendix.]

Mr. HUDSON. Mr. Speaker, AND GENTLEMEN OF THE HOUSE OF REPRESENTATIVES: I am conscious of the fact that it will appear presumptuous on my part to occupy the attention of a body containing so many older and abler men, and my only apology for claiming your attention is the fact that I represent a people as much entitled to be heard upon this floor as those of any other district in our common country, and the question now before this House is of such far-reaching and overshadowing importance to them that I feel that I should be recreant to the trust confided in me should I remain silent. My only regret is that I am not better equipped for the discharge of that great responsibility.

It is the first time in the history of our country that the Congress of the United States has been called together in extraordinary session to pass upon a demurrer filed by the Executive branch against the acts of a former Executive and Congress.

It is a well-established rule of practice that a demurrer leveled at the answer or pleading of a defendant may be carried over to the original complaint or initiatory pleading. I therefore propose, Mr. Speaker, to insist upon applying this demurrer to the so-called Sherman silver-purchasing act, to the act of 1873 demonetizing silver, which was the primary pleading in this case—the provoking cause of the Sherman law.

The wrong does not begin, sir, with the Sherman law, but began with the act of 1873, which stopped the coinage of, and consequently debased silver.

A skillful patient in treating a patient seeks for the primal cause of his disease, and, in eradicating that, cures the patient. Therefore, being called together to prescribe for this dreadful Sherman act, let us like good physicians dispose of the whole question by restoring silver to the place it occupied in this Government prior to the 14th day of February, 1873.

The gentleman from Indiana [Mr. BROWN], on the first day of the debate upon this question, made an able appeal to this House for a mere surface treatment of our financial trouble, asking us to ignore for the time being the root of the evil. His plan would

give us no substantial relief, and would leave us, in my judgment, in a worse condition than we are to-day.

I trust, therefore, that we shall not subject ourselves to the criticism of having shirked our whole duty. No, sir; the mere repeal of the purchasing clause of the Sherman law, which is all that is contained in the bill now before us for consideration, will not meet the expectations or the demands of the American people. We should, here and now, either adopt a paper standard or firmly and positively re-establish bimetallism by giving silver her old place under our Constitution and laws, equal with gold at 16 to 1.

The people whom I represent in the Third Kansas district are farmers and miners, and those whose interests are directly dependent upon the success of those two industrial classes; and they know that they want more money; that they must have more money or lose all the property they now possess, together with all hope of future success. While they do not believe that the free coinage of silver will give them the immediate relief which is now needed, they believe that it will gradually, but certainly, give them more money and better prices; that the unconditional repeal of the silver-purchasing clause of the Sherman act will decrease the volume of the currency by reason of the holders of the coin certificates issued under that act taking them to the Treasury and demanding and receiving gold for them, and result in their ultimate retirement from circulation and the checking of the further issue of such notes.

Give us free coinage of silver and the silver miners will at once resume work, and as fast as bullion is taken out it will be taken to the mint by the miners, coined for them, put in circulation by them in the purchase of food and clothing and in supplying their general demands, thereby rapidly increasing the volume of currency in the country, stimulating labor and prices everywhere, giving employment to the idle and unemployed, and bringing back to the country the prosperous times of 1873.

We are told by the gold-stardard advocates that it is not more money that we need, but more confidence. I hope they will permit me to say to them, without any intention on my part to be humorous, that if they will give us their money we will give them our confidence. We have been confiding in them for twenty years and have constantly grown poorer, and the prices of our labor and our products have steadily gone down, with a spasmodic exception here and there.

Confidence without money has deprived tens of thousands of people of their homes, of their property, and of their employment. The gold advocates have maligned and slandered our people through ignorance or malice, the result being the same to us, and charged us with dishonesty in not paying our debts, the interest and principal of mortgages held by them, thoughtlessly assuming that our people were giving up their homes and all they had of this world's goods as a mere pastime, or for the simple enjoyment of hearing the complaints of the mortgage holders.

No people on earth are more intelligent, industrious, or honest, as a whole, than the people of Kansas; and all this talk and newspaper twaddle about the people of Kansas suddenly becoming law-breakers, anarchists, and criminals is the outgrowth of mendacity and want of information. Can any man possessed of reasonable decency expect an intelligent farmer to remain docile with wheat selling at 35 cents, oats at 13 cents per bushel, cattle and horses at less than one-half that which they sold for in 1873, and all other products at about the same ratio—all at less than the cost of production, with here and there a nominal exception—with land constantly falling in price, while bonds, mortgages, interest, and taxes retain all their elephantine proportions?

Will you be kind enough, my gold-standard friends, to tell me how, under such conditions, our people can pay their debts (the securities held by you), their taxes, educate their children, and provide their families with the comforts of life? No, sirs; they are losing their homes, shortening the terms of their schools, buying fewer manufactured articles, and buying less and less of the necessities of life, not because they want to do so, but because they must.

There is not a supporter of the single standard in the United States, or all Europe, that would suffer as patiently the injustice that has been done them as the people of Kansas, and of the West, and of the South. Instead of being maligned and reviled, as they have been, they should receive applause for their moderation. But, sirs, this condition can not continue much longer. We must have relief, and that speedily, or the mutterings that you have heard from the West and the South will break forth so loud that they can be heard not only in Wall street but at Buzzards Bay.

Men recklessly tell us that we are extravagant, and yet these same men would sneer at the cheap clothing and coarse fare of our Western and Southern farmers and laborers, and of their wives and children—and their sensibilities would be terribly shocked if they were compelled to so dress and live. Our farmers' wives, many of them intelligent and well qualified to grace any station in life, are compelled not only to do their own household work and care for their children, but also to go into the field and aid their husbands in farm work, or in taking care of the stock, and a great majority of them are wholly debarred from the time or opportunity to read and cultivate their minds, or otherwise enjoy the amenities of social life.

In the senseless abuse of our people their traducers frequently say that they do not work enough, and then, when driven from that assertion, they say that our want of good prices is brought about wholly by overproduction. In other words, we work too little and produce too much. What a masterpiece of logic! These charges are untrue and wholly unjust.

The whole truth of the matter is that there is not money enough in the country to give profitable employment to our people and enable us to pay our debts and live. Those who growl about our people in the West failing to meet their expectations remind me of a circumstance that occurred when I was in Montana some years ago. Some highwaymen or "road agents," as they were called there, held up a miner at the outskirts of Virginia City, and on examining his pockets they found only $5, which they relieved him of, and then kicked him soundly because he had no more.

I do not expect paid newspapers to stop abusing Kansas and the people of the West, although every word I have uttered can easily be verified by any honest investigator. If they told the truth about us, like Othello, "they would lose their occupation," and yet, strange to say, nearly every one of these maligners of our Western people are advocates of a gold standard, and doing all they can to take away from us more than half of the money which we now have.

Every step we take widens the space between the holders of gold and gold-bearing securities and those who must pay. We must pay all our debts finally with labor and its products. Silver and farm products are all that America can rely upon. The only leverage we have left us to prevent our creditors from absorbing our property is silver, and that is why they are so clamorous against it. Will some supporter of the gold theory please tell us how we are to get the gold of Europe unless we increase our trade with her and have something to buy her gold with? Do they suppose, or do they expect the people to believe, that gold will flow to this country simply because we favor it? Do they regard gold as a sensate being or a cupid to be won by smiles?

Shylock wanted his pound of flesh, but the gold advocates want three pounds where their bonds call for but one, as $1 will now purchase three times as much of the products of the farm and mines as a dollar would at the time our debts were contracted. The holders of the securities say that it is not our fault, and blandly reply that we want our contracts fulfilled to the letter, and we say, "grant it;" but while you demand the fulfillment of our contract, we demand that you accept without complaint the kind of money we contracted to pay you.

The foundation of all wealth, of all business, and of every industry in this country is farming and mining. Consequently, when we get back to the base, the farmers and miners must pay all debts and all interest, and a burden of any kind cast upon this nation or upon any of its people ultimately reaches the farmers and miners, and they are the greatest sufferers. The American silver mines are now producing $75,000,000 coin value of silver. Close the silver mines (and that is what a gold standard means), and the farmers and miners must not only make up that $75,000,000 lost to us, but must supply the 225,000 miners and those dependent upon them with the necessities of life, and have their farm products further depreciated by the loss of the silver, and the further increase of farm products put upon a falling market, should these miners go into the farming business, as they are advised to do by some of the gold advocates. On the other hand, the miner would be compelled to engage in a business of which he knows nothing, his wages would be decreased by more than one-half, and discontent and crime would have thrifty growth among them.

In the face of all this, where is the boasted protection to American labor? Abandoned by the men who so eloquently advocated it a few years ago, while confidence on the part of the workingmen in their sincerity, has vanished like mist before the morning sun. They say truthfully that your talk about protecting the American laborer was simply for the purpose of misleading him and thereby catching his vote, and I warn you that this bait will not catch him again. In the language of Lincoln—

You can fool all of the people some of the time, and some of the people all the time, but you can not fool all the people all the time.

I may be old-fashioned and out of date, but I believe that under the Constitution and laws of this country the rights of the poorest farmer and most destitute miner are just as sacred and

entitled to just as much consideration as the rights of the men who manipulate "Wall street," corner our money, and declare a panic at their sweet will.

SHERMAN LAW.

I believe, and am not alone in that belief, that had the Secretary of the Treasury given a fair interpretation to the Sherman law silver would to-day be on a par with gold at 16 to 1. Immediately after the passage of the act silver went up all over the world; but the Secretary of the Treasury was opposed to silver and at once began to construe the law unfriendly to the white metal, and systematically did all he could to disgrace and degrade it, and that plan is followed to-day by those charged with the execution of the law.

You ask us to save ourselves from national dishonor, to give our creditors more than the contract, to give them gold only, when we have the right to pay in either gold or silver, and you ask our people to do this at a time when our products are lower in the market even than silver. You ask us to wipe out $70,000,000 annually of our money, and to throw out of employment immediately 250,000 miners. You ask us to cut off five-sevenths of our money metal supply at a time when all business and industries all over this land are prostrate.

Let me suggest to you, my Democratic friends, and to you, my Republican friends, that unless you now renounce the single standard heresy and honestly stand by the silver dollar, the money of the laboring and industrial classes, you may write "closed out" in big letters on your banners.

The temper of the people is not to be mistaken for party pride, and empty promises will not deceive them any longer.

This sham nonsense of an honest dollar for labor and for the workingman has grown stale, and he knows that it means for him no dollar at all.

The people want silver dollars, and they want to see them and feel them. No more confidence for them, but dollars—dollars that always supply their needs when they have them. Confidence will not supply homes, clothing, or food. There can be no confidence in business without money or property. Confidence alone is like unto nothing. Confidence and nothing as a copartnership is bankruptcy already. Give us money, more of it, at least $50 per capita, and confidence will be at once restored.

Gold-standard men say, "How will you get it in circulation?" I reply, "Just as any other money is put in circulation." "If it does not get into circulation, why do you object to it?" "It can not possibly hurt you or your foreign abettors." "It is because it will get into circulation that you oppose it."

LAW MAKES MONEY.

What is gold? A metal, an insensate thing, without action or power.

Clothe it in the royal robe of the law and it springs upright into active life, moves the commerce of all nations, employs all labor, controls the tastes and passions of men, mars or gives victory to all human hope and endeavor, and, in fact, like a mighty magician with magic wand, moves the world.

What quality is it, then, that exercises this almost omnipotent influence? Certainly not the cold, lifeless gold. No, sir. It is the law which sustains the same relation to the metal that life, the soul, does to the human body.

Gold is petted, praised, pushed by "Wall street," by England and other European nations, and by the executive branch of our Government, while silver is slandered, abused, and spurned, and yet some weak-minded people wonder that silver does not hold its own with gold.

Silver, clothed in the same robe, would be equally powerful, command the same respect, and exercise the same influence. Those who attack silver, on this floor and elsewhere, are not only illogical, but have not carefully read the history of money; or, if they have, they have forgotten its teachings. I find the following in Appleton's Encyclopedia, which is an acknowledged authority of the very highest character:

> Money is the currency of the realm or of the country; the standard of payment, whether of coins, circulating notes, or any other commodity. Anything which freely circulates from hand to hand, as a common, acceptable medium of exchange in any country, is in such country money, even though it cease to be such, or to possess any value, in passing into another country. In a word, any article is determined to be money by reason of the performance by it of certain functions, without regard to its form or substance. Money has been termed by Mr. Henry C. Cary "the instrument of association," and the same writer has said of it that it is "a saving fund for labor, because it facilitates association and combination, giving utility to billions of millions of minutes that would be wasted did not a demand exist for them at the moment the power to labor had been produced." Baron Storch terms money "the marvelous instrument to which we are indebted for our wealth and civilization." Mr. Thorold Rogers has said: "Just as the development of language is essential to the intellectual growth of a people, so is a medium of exchange to civilization." Aristotle says of it, "that it exists not by nature, but by law."
>
> How true is this doctrine, or, at least, how potent is the law under a civilized government in imparting the quality of acceptability for the payment of debts and the purchase of commodities to that which it recognizes as money, is clearly proved by the operations of the Bank of Venice during several centuries, throughout which time its deposits, which were never payable, but only transferrable on the books of the bank, were at a premium over coins, because they were the standard of payment furnished by the state and used for all large transactions. Indeed, this bank money was that which established the money of account, and in which the value of all coins was expressed. Further, on the testimony of Thomas Baring, we are assured that it was found impossible during the crisis of 1847 in London to raise any money whatever on a sum of £80,000 of silver.
>
> During a similar crisis in Calcutta in 1864 it was equally impossible to raise even a single rupee on £20,000 of gold. The former was not a legal tender above 40 shillings, while the latter was not so for any sum whatever. About 1855 Holland adopted silver as the only legal tender at a fixed value, but attempted to coin gold coins having no such value, this only being regulated by the market price from day to day. After 200,000 florins (about $80,000) had been coined the demand entirely ceased.

Some gentleman possessed of a poetical imagination, more accustomed to the drama than practical everyday life, says with a theatrical flourish, "I want an honest dollar, one worth a hundred cents in gold, and good in Europe." This remarkable apostrophy seems to furnish the opponents of silver a battle cry. Let us examine these cabalistic words; they possess no real significance. There is no dollar containing a hundred cents, or honest dollar, or dollar made by the United States that is good in Europe. Three marine leagues from our shore every coin of the United States of gold or silver is bullion, a commodity, nothing more, unless some European state (and I know of none such) has by law made our coin a legal tender. The word "cents" has no signification in Europe as applied to money, and none in the United States except as established by law. Mountains of forensic eloquence have been wasted in the effort to prove that the Constitution of the United States does not confer upon Congress the power to say what shall constitute a dollar unless the thing mentioned by it is worth a dollar as a commodity.

I propose, Mr. Speaker, for a short time to discuss the legal meaning of the word "dollar." The Constitution of the United States declares, Article I, section 8, clause 5, "That Congress shall have the power to coin money, regulate the value thereof, and of foreign coin to fix the standard of weights and measures," and in section 10, "No State shall coin money, emit bills of credit, make anything but gold and silver a tender in payment of debts."

Stripped of all sophistry this is a plain and direct declaration that whatever Congress declares to be money, no matter what the commodity value may be, that declaration fixes its money value. It is claimed by theorists of the gold standard persuasion that the words "regulate the value thereof" means that Congress shall ascertain its value and then declare what it is, but in the same sentence the Constitution also provides that Congress shall have the power to regulate, not ascertain, the value of foreign coin. The men who framed the Constitution of the United States understood our language, and wrote vigorous English, and had they intended to say "ascertain the value of domestic and foreign coin" they would undoubtedly have done so, and I submit that any man of ordinary intelligence who wishes honestly to ascertain what the framers of the Constitution meant by the words "regulate the value thereof" can have no trouble in arriving at a clear-cut conclusion.

The word "regulate," as used in the Constitution, clearly means to adjust, to fix, to establish, to direct precisely as Congress shall will, and the power to coin money granted to Congress by the Constitution is unlimited; but belongs to Congress alone and can not be delegated. It would be next to impossible to use clearer or stronger language, and as applied to gold and silver the true intent and meaning of the Constitution has never been seriously questioned until recently.

Aristotle, the great Greek philosopher and lawgiver, who flourished about 325 B. C., and who taught Alexander the Great, in speaking of money, says "that it exists not by nature, but by law." But why argue this question? If there is anything settled beyond all cavil by the decisions of the courts, it is that Congress, under the Constitution, has power to coin money and to fix the value of it, without regard to the market value of the substance of which it is made.

The supreme court of Pennsylvania, in 52d Pennsylvania State, page 36, says:

> To regulate the value is to declare by proclamation or statute the value of the coin as a currency, and thus essentially, if not necessarily, make it a legal tender in payment of debts.

The court of appeals of New York, the home of "Wall street," in 27th New York Court of Appeals, page 459, uses the following language:

> It is the lawful money of the United States only (made such by its authority) that can be effectually used for payment of debts, without reference to the intrinsic value of the thing tendered or paid.

For those who care to look it up, I cite the following cases, which are to like effect: Taylor vs. Robinson, 34 Federal Reports, page 681; 47 Wisconsin, page 557; 13 Wallace, page 604; 8 Wallace, pages 603 and 639; 12 Wallace, page 457; 14 Wallace,

page 297; 15 Wallace, page 195; 38 Missouri, page 658; 25 New Hampshire, page 434; 27 New York, page 400; 69 Illinois, page 70; 39 Vermont, page 46, and a great many other decisions too numerous to mention here, hold that the power of Congress is complete to say what shall constitute a dollar.

The Supreme Court of the United States, in 12 Wallace, page 445, says:

It was designed to provide the same currency, having a uniform legal value in all the States. It was for this reason the power to coin money and regulate its value was conferred upon the Federal Government, while the same power, as well as the power to emit bills of credit, was withdrawn from the States. The States can no longer declare what shall be money or regulate its value. Whatever power there is over the currency is vested in Congress. If the power to declare what is money is not in Congress, it is annihilated. * * *

Even the advocates of a strict literal construction of the phrase, "to coin money and regulate the value thereof," while insisting that it defines the material to be coined as metal, are compelled to concede to Congress large discretion in all other particulars. The Constitution does not ordain what metals may be coined, or prescribe that the legal value of the metals when coined shall correspond at all with their intrinsic value in the market. Confessedly the power to regulate the value of money coined, and of foreign coins, is not exhausted by the first regulation. More than once in our history has the regulation been changed, without any denial of the power of Congress to change it, and it seems to have been left to Congress to determine alike what metal shall be coined, its purity, and how far its statutory value, as money, shall correspond from time to time with the market value of the same metal as bullion. * * *

But the obligation of a contract to pay money is to pay that which the law shall recognize as money when the payment is to be made. If there is anything settled by decision it is this, and we do not understand it to be controverted. No one ever doubted that a debt of $1,000 contracted before 1834 could be paid by one hundred eagles coined after that year, though they contained no more gold than ninety-four eagles, such as were coined when the contract was made, and this, not because of the intrinsic value of the coin, but because of its legal value. The eagles coined after 1834 were not money until they were authorized by law, and had they been coined before without a law fixing their legal value, they could no more have paid a debt than uncoined bullion, or cotton, or wheat.

As I have said there is no such thing as an honest dollar. There is not now, and never has been, a dollar coined which was made by law or was in fact a standard of value. Value has no standard, it is an ideal thing; it is like faith or hope, intangible.

Therefore, when the words "honest dollar" are used they must mean a legal dollar; if they do not mean a legal dollar the expression is senseless.

If legal dollar is meant, the silver dollar is legal, therefore honest. The silver dollar is a representation of value made so by law.

In the legal-tender cases, 12 Wallace, page 553, the Supreme Court of the United States says:

It is hardly correct to speak of a standard of values. The Constitution does not speak of it. It contemplates a standard for that which has gravity for extension; but value is an ideal thing. The coinage acts fix its unit as a dollar; but the gold or silver thing we call a dollar is, in no sense, a standard of a dollar. It is a representative of it.

Speaking of the idea that gold was a fixed standard of values, Archbishop Walsh, to whom I shall hereafter refer, says:

The popular notion, then, of the sovereign or pound sterling constituting a fixed standard of value is merely a popular delusion.

The sole foundation for that delusion manifestly is that in these countries the values of all commodities are commonly stated in terms of the pound sterling. * * *

The natural result of this method of expressing the values of commodities other than gold, is that, when prices rise or fall, the impression is conveyed to a superficial observer that it is the value of all other things that changes, the value of the sovereign remaining fixed.

DEMAND FOR MORE MONEY.

There are 1,500,000,000 of people on this globe, probably more. The total amount of gold money is $3,600,000,000, and the supply of gold is rapidly decreasing.

Scientific investigation proves that a gold piece in constant circulation is destroyed in twenty years.

Increasing commerce, developments, inventions, civilization, are each and all rapidly expanding the demand for money. The cry is going up to-day in every nation and among all people for more money, and only a few here and there, not to exceed 3 per cent—the very rich and their attorneys—are resisting that demand; but the few are powerful because they possess the wealth and have a mortgage on the 97 per cent.

All kinds of fallacies are put forth, published, and repeated in behalf of gold; their name is legion. Among others it is claimed that the world is now at a gold standard—this in face of the fact that the last report of the Census Bureau, No. 1, 1892–1893, on imports, exports, etc., but recently issued, page 184, shows that of the gold and silver of the world there is of gold stock $3,656,935,000, while there is a full legal tender of silver of $3,401,100,000, and limited tender $543,600,000, making the total of silver money in use $3,944,700,000, or $300,000,000 more of silver money in use than the entire stock of gold.

Thus it will be seen that of silver and gold combined there is sufficient to furnish only $5 per capita if all in circulation. Drop silver and we have only $2.40 per capita. No economic writer has ever up to this time had the hardihood to assert that there was money enough in circulation to properly supply the business demands of the world, and almost without exception it is agreed that there is not sufficient money in existence to properly supply the demand.

Every intelligent person knows that by adopting a gold standard our debts will necessarily be increased and prolonged, necessitating the payment of vast interest. Interest is what our creditors want. We want to pay them the principal. This is good sense and good financial policy; let us use every resource at our command to pay our debts, including every dollar in silver that we can get.

We are told that we fail now because we borrowed too much, and owe too much; that we ought not to have borrowed so much. Suppose this to be true. Is that any reason why this Congress, elected by the people, should add to our burdens by depriving us of more than half the means of paying our debts? Wall street banks are here asking relief for their own acts and their own mistakes, for doing business on confidence and not on capital. It is said that we want a sound money as a basis. A gold standard places this Government absolutely at the mercy of its creditors. Our European creditors could call now—on present outstanding securities—for every dollar of gold in this country.

Are we not as a nation doing a far more reckless business than the people of the West ever did? It is proposed to adopt a gold standard at a time when we owe $50 for every dollar of gold we possess—placing ourselves in the hands of our creditors and the great money centers, giving to them the power to put up the price of gold at will, and absolutely bankrupt all business and all industry.

Does not common sense and common honesty toward our own people require us to protect their interests by standing by our legal right to pay all our debts in silver? If for no other reason we should stand by silver until we have paid our debts—at least every debt which we can legally pay with it—and we should do this at the present standard.

It is claimed, Mr. Speaker, that only the mining States are interested in this question, and I notice that some of the Wall street pictorial papers, Puck, I believe, has a big dog, a very proper illustration of this gold-standard idea, with a small tail. The tail is labeled "Four silver States," and the body of the animal is labeled "All the rest of the States." The illustration would have been much more apt and truthful with a small weasel head labeled "Gold standard," and all the rest of the body, tail and all, labeled "Free silver."

Gentlemen say that they do not see how it can affect the agricultural States, and I am asked, "How can it affect Kansas?" Let me illustrate. Let us suppose that the State of Kansas is indebted to the Eastern and foreign holders, $300,000,000; the sum is greater, sir, and that the amount of interest that sum is drawing annually is at least 7 per cent. Ten years ago wheat was worth a dollar a bushel in Kansas, and had in fact been above that figure almost continuously since the war. The interest on three hundred millions at 7 per cent would be $21,000,000. Ten years ago 21,000,000 bushels of wheat would have paid that interest.

Now, sir, wheat is only worth 40 cents per bushel, but the interest remains unchanged. Therefore, it requires 52,500,000 bushels of wheat to pay that interest. Three hundred million bushels of wheat would have paid the principal ten years ago or previous to that time, but now it requires 750,000,000 bushels of wheat to pay that debt. Kansas is an agricultural State, almost pure and simple, and she can from no discovered process become anything else for generations. The figures I have given you regarding wheat holds good with almost every other product of the farm and of the State. Not only that, but the enormous drain upon our resources to pay our interest necessarily compels us to increase our debt.

Taxes throughout the State average over 3 per cent, and all this great tax upon the energies of our people to pay interest and taxes which I have mentioned, is sapping life and hope. There is in the decline of prices absolutely no prospect of the redemption of this great debt. All the earnings must go to pay interest, and that interest pays no taxes or tribute to the State of Kansas, and leaves but little to defray the constantly increasing burden of tax necessary to carry on our State and municipal governments. And what is true, sir, of Kansas is substantially true of all the agricultural States. It is useless to tell the people of the agricultural States that it makes no difference to them whether we have a gold standard and less money, or whether we have the combined standard and more money.

As I have said, our people want to pay their debts, want to relieve themselves of these enormous burdens, but in order to do this they must have more money that must be accepted by our creditors. We will be satisfied when the volume of money is so increased that wheat will again be restored, on the average, to a dollar a bushel, and we will be satisfied with nothing less.

The mining States will not suffer as much by the adoption of

a gold standard as will the agricultural people, because they are not so heavily indebted, and if their mining interest is closed out they have the consolation of knowing that they owe nothing.

From a financial standpoint the people of the agricultural States must have a larger currency, or absolute bankruptcy awaits them in the near future, and this bankruptcy will recoil upon our creditors because they will be compelled to take our lands in payment of our debts, and put tenant farmers on them. This will result in negligence of the interests of the land-owners, decay of improvements and falling off in the value of the lands, and the burden of local taxation will then begin to be felt and understood by them, and the history of Ireland will be repeated in the valley of the Mississippi.

This, sir, is not an idle vision. I have recently examined with much interest a pamphlet prepared by the Most Reverend Dr. Walsh, archbishop of Dublin, entitled "Bimetallism and Monometallism: What they are, and how they bear upon the Irish land question." Archbishop Walsh is now recognized as one of the most learned and conscientious men in the great church to which he belongs, and it is further well said of him that there is no man living who has at heart the interest of the common people of Ireland to a greater extent than he, and after a careful and thorough investigation of the question, bringing to bear upon the subject all his vast learning and splendid ability, he felt compelled to advise the Irish people not to attempt to purchase the farms upon which they live, under the land laws adopted by England in recent years, because of the constantly and necessarily falling prices of their products on account of the gold standard now sought to be forced upon the civilized world by the English Government.

From the examination of the archbishop by the English commission, I quote:

Q. The connection, your grace, between bimetallism and the Irish land question does not seem very close?

A. (By the Archbishop). Yet nothing could be closer. The adoption of bimetallism, or of some equivalent remedy, if there be an equivalent remedy, is, I am convinced, a matter of imperative necessity; that is, if the agricultural tenants of Ireland—and I do not at all limit this to Ireland—are to be saved from otherwise inevitable ruin.

It is transparently obvious to everyone who has mastered even the elementary facts and principles of the case. But it is disheartening to find that, notwithstanding all this, no interest seems to be taken in this grave question by many of the leaders of Irish opinion.

If things go on as they are, even the excellent land-purchase scheme which is associated with the name of Lord Ashbourne may become, before many years are over, a source of widespread disaster to the tenants who have purchased under it.

And a little further on the archbishop goes on to say:

The principle of the monometallists seems to be that things must become a great deal worse before they can become any better. * * * At all events, they have no practical remedy to propose.

And at page 11 the archbishop continues:

It is indisputably plain that the Irish tenants who have the misfortune to have their rents "fixed" for terms of fifteen years, under the land act of 1881—and, much more so, the Irish tenant purchasers, who have the misfortune to find themselves saddled with the obligation of making annual payments "fixed" for forty-nine years—are simply slipping down an inclined plane, with bankruptcy awaiting them at the bottom of it.

At page 30 the archbishop continues:

Monometallism, as we have it in Great Britain and Ireland, in Germany, and in so many other countries, tends to raise the value of gold, thereby favoring the interests of the capitalists, the interest of all those who have command of gold—money lenders and the like—favoring all such persons at the expense of the general community, and favoring also the interests of all creditors, the interests of all who have a claim to receive a fixed money payment from others, favoring these at the expense of their unfortunate debtors.

The archbishop then goes on to show by statistics that when England only had adopted a gold standard the commercial world was but little influenced thereby, and silver was not cast down as compared with gold until other European nations and the United States, in 1873, adopted a gold standard. At that time the disastrous effect of the gold craze began to make itself manifest, and has continued to grow in importance and increased ruin to the borrowers of money, until now the intelligent people of the world are beginning to understand the monstrous crime that has been perpetrated against them in the effort to wipe out more than half of the money of the world. But in the face of all the history of the last twenty years, monometallists still insist with a dogged resistance that gold has not gone up, but that everything else has gone down.

Suppose we admit for a moment, Mr. Speaker, that their theory is correct. Upon our side we know that it is not; the effect is precisely the same upon the business interests of this country and of the world. That is, that the holder and controller of gold is enriched, while the creditor and the business interests of the country are correspondingly burdened. The necessary result of this increased value of gold is to increase every existing obligation to pay a fixed amount of dollars.

Therefore, sir, if, in the language of Horace White, "We are not called upon to legislate for the debtor classes," let us, to say the least, not legislate against them, and increase their already too heavy burden.

I propose to add to my remarks a few tables of figures, showing that silver has not gone down in value, notwithstanding the legislation of Europe and America against it, any more rapidly in its commodity value than the average products of labor throughout the world.

A PERMANENT CURRENCY.

The President says, and the gold-standard men say, and bimetallists say, and we all say, that we want a permanent and stable currency, and we all agree that Congress has the power to establish that currency. For some years prior to 1792, when the first coinage act was passed, a general discussion had been going on among the founders of our Republic, and an earnest effort was made by the ablest men of that day—and no one will maintain that they have ever been surpassed in this country for ability to do precisely what we now claim we should do—Jefferson and Hamilton taking the leading parts. Finally it was agreed between those great men and thos e associated with them, uninfluenced by England or Wall street, but acting for the best interests of all, that both gold and silver should be coined in the United States at a ratio then fixed.

At that time there were no great security holders clamoring for a gold standard and a high price dollar, nor extensive silver mine owners demanding that silver receive special consideration. But these men, uninfluenced by any motive except the future development of the prosperity and grandeur of the young Republic, at whose christening they had stood godfather, decided on a bimetallic standard, and that bimetallic standard stood the test of eighty-one years without wronging or injuring anyone, and would be standing to-day as a monument of their wisdom and patriotism but for the fact that during the late war an immense debt was saddled upon the people of this country, and the holders of that debt, although a small yet a compact and skillful body, desired to increase the value of their holdings, not by the usual laws of trade, not in the ordinary and fair dealing methods, but through acts of the American Congress; and, among other unjust and wrongful acts, they procured the passage of the law in 1873, known as "the demonetization of silver" law, and from that day to this, sir, they have with organized, systematic, and skillful effort, through the mighty power of untold wealth, labored to maintain that law.

They knew then and they know now that by that legislative act and other acts procured by them the purchasing power of their securities was more than doubled, consequently the burdens laid upon the shoulders of the industrial people of the United States were necessarily more than doubled, and I am, sir, astonished to find the Chief Executive of this nation and a large number of distinguished gentlemen, who owe all they have and are to the industrial people, standing up before all the world to-day and insisting upon a perpetuation of the advantages gained by that act over the masses by the rich few.

Contemplating these wrongs and the position taken by quite a respectable number of distinguished citizens, I am led to exclaim, "Can this be America? Can we be the descendants of the Revolutionary fathers? Can this be the boasted land of liberty, and of equal rights to all?" And I can not refrain from the sad reflection that, notwithstanding our boasted Christian intelligence, we are following in the footsteps of the great majority of empires that have heretofore sprung into existence, flourished, and fallen, almost universally fallen through corruption in high places and injustice on the part of the rulers toward the people.

Let us, sir, to-day, at this extra session of Congress, call a halt, and do our best to restore as far as we may, under our Constitution and laws, to the masses, to the yeomanry, and to all the people the rights which have been so unjustly taken from them: and in doing that, as a first step, let us wipe from the statute books all patchwork on the silver question and restore this country to the bimetallism which existed prior to the 14th day of February, 1873. Do this, and generations to come, whose tiny feet have not yet touched the shores of time, will praise and bless the patriotism of this Congress.

It is charged, sir, upon this floor, and in newspapers and magazines throughout the country, that the representatives and people of the silver-mining States and Territories are unjustly trying to compel this Government to buy their silver at an exorbitant price for their own selfish interests and gain.

The State that I partially represent produces no silver; therefore I think I may answer these charges from an impartial standpoint. I have mingled with the people of the mining States very extensively, and I have never yet heard the demand urged by them, or any of them, that the Government buy their products. On the contrary, sir, all they have ever asked, or are asking now, is that silver be restored to its right of free coinage as

it existed at the time they settled and begun to develop those States and Territories, and this they have a right to insist upon, and only those who prefer England and Europe, and our creditors, to the people of these States and Territories, are objecting to their claims.

It is universally admitted in works of political economy that any such thing as a commodity with absolute stability of value is unattainable.

The most important characteristic of a good monetary standard is that it should preserve comparative stability of value. The principal reason why, of the multitude of commodities that have been used for the material of money at different times, gold and silver has survived as the fittest, is because their great durability renders the total stock extremely large compared with the annual supply, and thus eliminates one element of instability of value. Another special advantage of gold and silver for monetary purposes is that both the weight and purity of the coins made from them may be easily ascertained.

Only fools believe, or can be made to believe, that gold never falls in price or value as a commodity; and even when coined in money, that it does not change in value.

If the world's stock of gold should run low every man of ordinary intelligence understands that the price of gold would go up, not that other commodities or labor would go down.

As I have stated, there can be no absolute standard of value. Value is a sliding scale and changes according to the demand of each and every particular commodity, even though that commodity may be money itself.

The immense production of gold in California was of great benefit to the human race, not because the gold was needed, but because it was generally accepted as a money standard. I use the word "money" standard distinct from "value" standard. Money was needed throughout the world, and the price of commodities and wages went up everywhere because of the discovery of gold in California and Australia. Inventions, improvements, and civilization leaped into new life, and progressed more in fifty years after the discovery of gold in those two countries than it had for a hundred and fifty years previous thereto.

Money and plenty of it is the spirit of all enterprise, of all commerce, and of all development, and no people at any time in the world's history, with a small circulation of money, have ever progressed to any considerable extent.

Adopt a universal gold standard with the small amount of gold that there is now in the world and you place gold absolutely beyond the reach of the many, clip the wings of commerce, close institutions of learning and churches, stop inventions, and reverse the hand of civilization on the world's dial plate and cause it to run backward instead of forward.

Every gentleman who has discussed this question upon this floor, without exception, I believe, admits that we need more money, that we ought to increase the volume of our currency. In fact, the gold standard men are here asking us to issue bonds with which to buy gold, and the bankers of New York are issuing illegal clearing-house certificates to take the place of money. The universal cry is going up all over the civilized world for a larger circulating medium, and the man would be reckless, indeed, who would say to the American people that we have too much money to-day, or even that we have enough.

How then are we to increase our circulating medium? The answer of the gold standard men is logically, whatever words they may desire to answer in, "by cutting off more than half of the supply." In other words, in order to increase the supply, cut off the production.

In some of the Western States crops can only be produced by irrigation, and even the gold standard men in the United States would regard the farmer who must irrigate his farm as a very foolish man, who would during the dry season of the year, and when his crops most need a supply of moisture, cut off more than half of the water which was obtainable; or having two streams flowing into his ditch turned the larger one adrift. And likewise would they deem a man foolish who had a house that was not sufficiently ventilated, who for the purpose of improving the ventilation would close half the windows and doors.

I was astonished the other day to hear the distinguished gentleman from Ohio [Mr. HARTER] say:

> I want to say right here, lest I should overlook it later, that if we had never had the Bland-Allison act, nor the act of 1890, sometimes called the Sherman act, the circulating medium of this country would to-day be over two billions of dollars, and a very large part of it would be in gold coin.

I thought, Mr. Speaker, at the time the gentleman made that declaration that he was jesting, but I afterwards, in private conversation with him, ascertained that he was in real earnest. What a remarkable proposition! What is there to support it? If we had two thousand millions of gold in the United States, all the rest of the civilized world would only have one billion six hundred millions, and think of the desperate condition of the rest of the human race, if, as he contends, gold is the only honest money.

History does not bear out Mr. HARTER'S proposition. England, conceded to be the wealthiest of all nations, has had a gold standard for seventy years, with the rest of the world most of the time using either a silver or bimetallic standard. Not only that; she is the creditor of the nations which deal with her to the extent of $10,000,000,000. So says Mr. Gladstone, and yet, with all those advantages in her favor, she only has $18 per capita in circulation, and that not all in gold.

I was curious to know, Mr. Speaker, upon what theory the distinguished gentleman arrived at his conclusions, and I learned that he based them on the trade balance in our favor for the last twenty years taken in the aggregate. But, Mr. Speaker, that proposition does not hold good, for during those twenty years we have exported silver in excess of our imports to the gross amount of $290,000,000. Even last year, when the balance of trade was largely against us, we exported in excess of our imports over $14,000,000 of silver.

Sir, a few years ago our Western people were told that what they needed was protection, that the McKinley bill was the goose that would lay golden eggs for all of us. What was the result? We got the goose, but we never got the eggs. In the year 1892, as shown by the Treasurer's report just issued, we exported $99,000,000 worth less of breadstuffs, $70,000,000 less of cotton, and $10,000,000 less of animals than for the year 1891. In round numbers, of farm products alone we exported $200,000,000 less in 1892 than we did in 1891, and we sold what we did export at less prices, instead of increased prices.

Now let us see, on the other hand, if we made that up in the increased sale of manufactured articles. I find, on examination of the same report, that we did not; that the increased sale of manufactured articles, if any, was merely nominal, not to exceed $10,000,000.

Now, sir, while I do not charge all this loss to the demonetization of silver by European nations, and partial demonetization upon the part of our own Government, yet the fact remains that ever since the demonetization of silver Europe has been paying less prices for our products, and the price of our products on the average has gone down in the European market more rapidly as a whole than silver has gone down.

I find, sir, in the July number of the Annals of the American Academy of Science, published in Philadelphia, an article by Prof. Lotz, of the University of Munich, a gold standard advocate, and in that article he admits that the demonetization of silver in Germany caused a great falling off in price of German products in Germany, and he also admits that the landowners of Germany are just as much opposed to the gold standard as are the landowners and laboring people of the United States. In fact, sir, I challenge the attention of this House and of the country to the fact that wherever silver has been demonetized by any nation or people it has resulted in an immediate falling off of the price of labor and of the products of the soil, and that it is not the farmers or laboring class of any civilized country that has demanded a single standard, but everywhere, and at all times, it has been the bankers and money-lenders, and the wealthy.

In the face of all these facts how can gentlemen stand upon this floor or go before the country and defend their attempt to force a gold standard upon America?

Germany could afford a gold standard better than the United States can, for the reason that she produces only a nominal amount of silver, and in order to get silver for money she must buy it.

England could afford a gold standard better than any other nation, for two reasons—the principal one, because she is the largest creditor nation in the world, and is not indebted, except to her own people; and for the further reason that her colonies produce four times as much gold as they do silver; and for the further reason that all her trade with India, her largest colony, is carried on on a silver basis. Therefore, it is to her interest to force silver down, so that she can buy it cheap and coin it at a ratio of 15 to 1 for India, thereby making enormous profits on the silver she purchases, and thus enabling her, as shown by Uncle Jerry Rusk, to pay for India wheat in rupees which cost her less than half their money value—two years ago she coined $65,000,000 of silver, as shown by the report of the Director of the Mint—thus enabling her to force down American wheat, which she has successfully done.

England, sir, seems to be legislating for England, and we find none of her statesmen proclaiming against the injustice done her American debtors. In fact, it is her policy to buy our products at as low figures as she possibly can. England, sir, has never at any time said that she wanted a dollar good in the United States, but has attended to her own business and her own interests, and quite successfully, too.

Germany could better afford a single standard than the United

States, for the reason not only that she is not a silver-producing country, but because what she owes as an empire is due her own people. Consequently, whatever interest she pays goes to the Germans, and not to a foreign people.

A sound currency, therefore, must be an honest currency, must be a currency equally fair to creditor and debtor, that will maintain a general uniformity of prices for a long series of years, so that the contracts made this year to be paid in fifty years would require the same amount of labor, and no more, to pay them then than they would if paid now. This definition can not apply to gold. Gold never has been fair. It is a tyrant, taking advantage of necessity. All understand that both gold and silver would make a more flexible currency than gold alone. Therefore the two combined do not answer the true definition of a "sound currency," but they approximate to it more nearly than gold alone, because the two are broader and enable the Government to enlarge and contract as the demands of the people may require.

A "sound currency" means a currency that will give employment to all labor, supply the demands of every industry, and enable every man that strives for a dollar, honestly and industriously, to obtain it. If this is not the definition of a "sound currency," then, sir, I am not in favor of a sound currency.

THE WEST AND SOUTH DEMAND EQUITY.

On the 22d day of April, 1866, JOHN SHERMAN said in the Senate of the United States:

> Before we return to specie payments the debt ought to be funded. It can not be funded on as favorable terms after we return to specie payments. The very abundance of the currency obviously enables us to fund the debt at a low rate of interest; and it is just and right, as the debt was contracted upon an inflated currency, that upon that currency the debt ought to be funded in its present form.

Nearly two years later Mr. SHERMAN pointed with pride, in a speech made February 24, 1868, to the above extract.

Continuing his speech in the Senate February 24, 1868, Mr. SHERMAN said, speaking of the power given the Secretary of the Treasury in 1866 to fund the national debt:

> Within two years he [the Treasurer] contracted the legal-tender currency $160,000,000, and the plain United States notes over $40,000,000 (making a contraction of the noninterest-bearing debt of over two hundred millions).
>
> At the time this law was passed, April 12, 1866, the total amount of 5-20 bonds was $666,000,000, and the great mass of the debt was in what are called currency obligations, the principal of which undoubtedly could have been paid in currency.
>
> Believing, as he did [the Treasurer], that the best way to resumption of specie payments was by rapid and steady contraction of the currency, he entered upon his policy.
>
> Now, what has been the result? Why, sir, in April, 1866, the price of gold was 125. It had steadily declined from the close of the war until it had reached its lowest point in April, 1866, the time of the passage of this law (funding act and resumption acts).
>
> What was the result? From that time to this gold has advanced, varying between 130 and 140, and has never from that day to this reached the price at which it stood at the passage of this act.
>
> Are we any nearer specie payments now than then? Not at all.

Now, sir, what has been the policy of this Government? First, our floating and noninterest-bearing debt has been taken up and funded into an interest-bearing debt, while the interest-bearing debt has been allowed to run and been continued.

Almost every dollar of our war debt was payable in silver, and our Government has steadily, stealthily, and in violation of the rights of our people, year after year, made it a gold debt, and to-day, sir, we are asked to put the finishing touches upon this masterpiece of villainy by stopping the coinage of silver as money.

I will quote a portion of the law under which legal-tender notes were issued:

> Such notes herein authorized shall be receivable in payment of all taxes, internal-revenue duties, excise, debts, and demands of every kind due the United States, except duties on imports; and all claims and demands against the United States, of every kind whatsoever, except for interest upon bonds and notes which shall be payable in coin, and shall also be lawful money and a legal tender in payment of all debts, public and private, within the United States, except duties on imports, and interest as aforesaid.

I know it will be argued by the opposition that the legal tender there authorized to be issued was limited to $150,000,000, but before the bonds were issued that limitation was removed. By act of Congress, dated March 3, 1863, the legal-tender act of February 25, 1862, was amended and enlarged.

We find in the report of the Secretary of the Treasury, Mr. Chase, published December, 1863, the following:

> On that day, March 3, 1863, the act to provide ways and means for the support of the Government received the approval of the President [Lincoln] and became a law. In addition to various provisions for loans, it contained clauses repealing restrictions, affecting the regulation of the five-twenties, and thus disengaging that important loan from the embarrassment which had previously rendered it almost unavailable.

Almost immediately after this enlarging act was passed the Secretary of the Treasury sold the bonds, and "they were sold under a basis of currency of $450,000,000," says JOHN SHERMAN in his speech to which I refer.

SHERMAN further says, in that speech (see Congressional Globe, part 5, Thirty-ninth and Fortieth Congresses):

> I say that equity and justice are amply satisfied, if we redeem these bonds in the same money, of the same intrinsic value, it bore at the time they were issued.
>
> Gentlemen may reason about this matter over and over again, and they can not come to any other conclusion; at least, that has been my conclusion after the most careful consideration. Senators are in the habit sometimes, in order to defeat the argument of an antagonist, of saying this is repudiation. Why, sir, every citizen of the United States has conformed his business to the legal-tender clause.

SHERMAN was speaking of greenbacks then; they have no intrinsic value.

It will be seen that the entire debt was payable in coin.

I wish, sir, to adopt Mr. SHERMAN'S views as there expressed, as my views now, and to apply them to silver, which is legal money, and when coined a legal tender for all debts.

Gentlemen roar dishonor, repudiation, dishonest dollar, etc. Will you hear our Western farmers and miners when they show that this debt must be paid with labor and products which have fallen more than silver? In other words, silver as a commodity will buy more of the products of the country and more of labor than gold would buy in 1873.

When I hear men talk of national disgrace, dishonor, and repudiation, I feel that I would be more than justified in replying "Shylock!" No, this would be unjust to Shylock, who only wanted his pound of flesh; but extortioner, oppressor, tyrant, robber.

No, gentlemen, stop your rhetoric, stop your lofty periods, stop giving us sentiment, and give us argument; give us justice, allow us the right to pay our debts in both silver and gold.

There is something remarkable, Mr. Speaker, about the radical change of opinion upon the part of our distinguished statesmen and party leaders. And what is most singular is that such changes are always favorable to the money powers.

Such men as SHERMAN and Carlisle, and a number of other distinguished gentlemen not necessary to mention, I trust will be able to explain to their constituents the wherefore of their changes, and I hope I may be pardoned for suggesting to their constituents that they demand a solid reason for their conversion.

There is one other strong point to which I wish to refer before I close, and that is, that our security holders all say that they are laboring for our interests, for the interests of the laborer, yet they seem to lose their temper when the laborer views their action in a different light.

If they really love us, if they are in good faith when they talk of our interests, why do they not give us some real solid evidence of that regard? Why do they not say, "We see that your products and your labor are bringing less and less each year, and in order to place you on a par with us we will reduce the face of our bonds, our mortgages, and the interest on our bonds and mortgages in exact proportion to the reduction of your products?"

Why not bring forward a bill and push it through this Congress, for the purpose of relieving the debtors in this country, that all debts shall be based on the price of leading products at the time of the creation of the debt; and if products and wages go up, more dollars would be required to pay, while if prices went down, less would be required in exact proportion.

Horace White, in his fine literary paper read before the Chicago monetary convention held last June, discloses the dragon's claws when he says "that nobody would be especially benefited by free silver but the debtor class." Mark you, he confesses that it would benefit the debtor class, but he goes on to say blandly, "that Congress is not called upon to legislate for the debtor class."

Now, as the debtor class make up fully 90 per cent of our population, it necessarily follows that we are called upon to legislate for the 10 per cent, or the creditor class.

It was claimed on this floor by the distinguished gentleman from Maryland [Mr. RAYNER], and concurred in by a number of gentlemen on that side of the House, that the way to compel England to adopt a bimetallic standard was to adopt a gold standard for the United States. I mean no offense, Mr. Speaker, when I say that this fallacy is too apparent to require serious consideration.

What! Compel England to do what we want her to do by doing as she wants us to do? What would you say of a general commanding an army who would take his army into the camp of the enemy and surrender for the purpose of defeating his enemy? Or what would you think of a Christian church which, for the purpose of converting the Chinese to the Christian religion, would adopt as their creed and articles of faith the Chinese religion? Or what would you think of a navigator who, starting to discover the North Pole, would direct his ships toward the equator?

There is only one theory upon which the argument of the gentleman can be based, and that is the starvation theory. That might in long years win, but in winning in that way we should sacrifice nine-tenths of the American people and send millions

of people throughout the world through starvation to paupers' graves. The way to bring England to our view is to be broader and fairer; gain from her, as we can, the trade of Mexico and the South American states, India, China, Japan, and all the rest of the East.

Let us have more money, all the silver that Europe has, and we will take from England the mastery of the ocean, and the Stars and Stripes will be hailed with delight by the people of all nations, and "Yankee Doodle" and "The Girl I Left Behind Me" will be sung by American sailors in every seaport in the world.

This proposition is not a mere idle suggestion, brewed by me for the occasion of this discussion, but it is concurred in by very able authorities.

I submit a few tables and extracts.

The following table, sets forth, by means of Mr. Sauerbeck's index-numbers, the striking contrast between the relative value of gold and silver in the years preceding and in the years following 1873:

Years from 1873 back to 1854.	Yearly index-numbers of silver.	Year on from 1873 on to 1892.	Yearly index-numbers of silver.
1873	97.4	1873	97.4
1872	99.2	1874	95.8
1871	99.7	1875	93.3
1870	99.6	1876	86.7
1869	99.6	1877	90.2
1868	99.6	1878	86.4
1867	99.7	1879	84.2
1866	100.5	1880	85.9
1865	100.3	1881	85.0
1864	100.9	1882	84.9
1863	101.1	1883	83.1
1862	100.9	1884	83.3
1861	99.9	1885	79.9
1860	101.4	1886	74.6
1859	102.0	1887	73.3
1858	101.0	1888	70.4
1857	101.5	1889	70.2
1856	101.0	1890	78.4
1855	100.7	1891	74.1
1854	101.1	1892	65.4

This table gives, in parallel columns, for the years 1874-'92, the index numbers for the 45 commodities comprised in Mr. Sauerbeck's computation, and the index numbers of silver for the same years:

Years.	Mr. Sauerbeck's index numbers.		Years.	Mr. Sauerbeck's index numbers.	
	Index number of 45 principal commodities.	Index number of silver.		Index number of 45 principal commodities.	Index number of silver.
1874	102	95.8	1884	76	83.3
1875	96	93.3	1885	73	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	83	84.2	1889	72	70.2
1880	88	85.9	1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	68	65.4
1883	82	83.1			

It is sufficient to note that in one case the index numbers show a fall from 102 to 68, and in the other a fall from 95 to 65. What more striking evidence could be looked for that the fall, all round, is the result of the rise of gold?

Let us make friendly treaties with the silver nations of the earth. I quote from a very significant editorial from the London Standard of a few days since, which is the leading organ of English finances. It says:

What if the United States should now join Mexico in declaring for the free coinage of silver, and throwing over gold as too dear? What if the two American continents held out the hand to Asia and said: "Let us have the white metal for our standard?" Chile, now hard-hit, would eagerly respond and all the states of South America and Mexico, with Japan and China and Java—in fact the whole mighty East (which cares little for Simla). It is a great danger to which the present outburst of alarm and fear must not render England oblivious.

And again, the Mexican Financier, the leading paper to-day in all financial and governmental affairs of Mexico, says in its issue of July 22:

If Europe demonetizes silver, if it refuses to exhaust every effort to adjust the two money metals, she will find her export trade with the younger nations of the New World and with the older countries of Asia steadily diminishing, and her factories will close down in proportion to her loss of trade, while in China and India, and in all Latin America, manufacturing will become the favored investment for European capital. The nations which can feed themselves will surely begin to manufacture for themselves; while Europe, which can not feed its starving populations, will certainly lose its best customers.

And again a leading daily paper of the city of Mexico says in its issue of this week:

A project is on foot here to unite all Latin-American nations in a monetary league to resist the depreciation in silver. The depreciation, it is asserted, is out of all proportion to what it should be and debtor nations should unite to defend their interests against conspiracy. Public opinion would support a monetary league with the United States, transferring the trade of Latin-America to Americans in return for a freer entrance of raw material.

Let us adopt on the other hand a gold standard and we will become the tail to England's kite for a long period of years, and no gold-standard man can give us any idea when we shall get out from under her dominion.

I fully concur in the proposition that values ought to be measured by more than one standard, but if they are to be measured by one standard, and one standard only, that standard, sir, ought to be labor. All debts, if paid by a fixed standard, should be estimated by the amount of day's labor it required to pay them. It would be fairer to the world to ascertain about how much labor should bring in every department and calling of life, and when obligations are to be met, let the calculation be made of how many days' labor, or the equivalent thereto in money or other commodities, it would require to meet them.

On this basis there could be no cornering or monopolizing of prices. I am well aware, sir, that the money-lenders of the world would fight such a plan to the death. But after all the higher and nobler idea of government is the benefit of the many, and the few must yield some of the advantages that they possess over the many for the common good of all.

We are told that the United States can not maintain bimetallism alone. France and the United States did maintain it for seventy years, and the United States is stronger now than the two together were from 1803 to 1873. In fact, we maintained it independently from 1792 to 1803, if the assertions of the gold-standard men are true. During the late war and for a number of years thereafter we maintained a paper standard, being without both gold and silver, and we suffered no loss but gained by the adoption of a paper standard. We have the power to stop coining money when we have a satisfactory amount of money in circulation for our people, say fifty or sixty dollars per capita, if we should ever reach that amount.

Why, sir, if we coined all the silver, without loss, that comes out of our mines annually, and nobody believes that we would be seriously troubled with foreign silver, and there was no loss of money now in circulation, we would only add about a dollar per capita per annum more money to our circulation, and it would take this continued for twenty-five or thirty years to bring us up to $50 per capita. Besides, much of our silver would go abroad, if we wished to pay our debts with it, and we have a right to do so, at its coined value without any change in the amount the law now places in the silver dollar, and we ought to do that in order to use our own commodities and protect ourselves against the unjust demands of foreign creditors.

Herewith I give a table of the silver and gold products of the world in 1892. [For table see next page.]

This clearly shows that we ought to stand by silver in the interest of American products and industry. I challenge any gentleman to produce in history an instance where any country has been injured by having too much silver, or whose decay has been traced or charged to an overburden of silver. Aye, more, I call upon the gold standard advocates to point out what country has been injured by bimetallism, and in what way it has injured it.

I am radically opposed, sir, to a change in the present ratio, for the reason that all debts and contracts now outstanding have been made with reference to that ratio. Our bonds are payable in coin at the present ratio. The ratio throughout the world is substantially the ratio now existing in the United States, and why should we with our debts payable in silver, and the leading silver-producing country of the world, take the lead in debasing our own products? The mere mention of the fact ought to be sufficient to answer the objections to the present standard.

Senator Plumb, himself a banker, but a patriotic and honest Senator, said in the Senate of the United States, a little more than two years ago, that if the United States adopted free coinage there could be no question but what in a very short time the parity between gold and silver at its present ratio of coinage would be established all over the world.

Judge Perkins, on this floor, in the best speech ever delivered by him, said with emphasis, "that every man, woman, and child knew that if we had free coinage of silver that in less than six months it would be on a parity with gold." And Mr. Carlisle, the present Secretary of the Treasury, made substantially the same statements, at different times, once in this House and once in the Senate.

There is no valid reason given, nor can there be, why the United States should favor her debts being paid in gold where

World's production of gold and silver, calendar years 1890, 1891, and 1892.

[Kilogram of gold, $664.60. Kilogram of silver, $41.56. Coining rate in United States silver dollars.]

they are payable in silver, and saying to the ever-exacting creditor, "We will, as a mere matter of grace, give you more silver than we contracted to give you."

If you increase, sir, the number of grains which shall constitute a dollar in silver, at the same time and to the same proportion as I have shown by tables you will increase the burdens of the debtors throughout this country and throughout the world, because if the United States increases the ratio between gold and silver there can be no question but what Europe will immediately follow.

Europe is awaiting now, sir, to see what the United States will do with silver, and the great mass of the European people, from the best information that I can gain, are hoping that the United States will stand by the silver dollar as it now stands. Aye, sir, more than that. The single-standard men of England and of Germany and of almost all of Europe are becoming more liberal in sentiment; in other words, they are being cured by experience of their gold "fetichism."

There seems to be a studied effort to deceive the people as to the amount of silver coined in the United States prior to 1873. There was coined in round numbers by the mints of the United States prior to 1873 $146,218,000. It is true that of all this amount only a little over eight millions was in silver dollars. But the Government of the United States had coined all the silver that had come to its mints, but it needed the major portion for fractional currency.

Gentlemen of golden opinions who talk about paying cheap money to the widows and orphans who hold mortgages and bonds, even if their claim possessed the merit of truthfulness, are wholly forgetful for the widows and orphans that seek employment and food and clothing, while the latter class outnumber the former in the ratio of a thousand to one in the United States alone. I may be wrong, sir, but I can not help feeling that the rights of the thousand ought first to be considered. The fact that the former class possesses mortgages and bonds is sufficient evidence that they do not require immediate relief.

The true difficulty here and throughout all this broad land is unjust usury, the collection of stupendous revenues on paper, with no real money behind it or honest capital to support it.

If the money on which we are paying interest was all in circulation, there would be, and could be, no panic or financial trouble. Prices would be three to five times what they now are, labor would be employed at remunerative prices, and business would be in holiday attire.

I gather, sir, from the last November's report of the Comptroller of the Currency that there is about $1,000,000,000 of money in actual circulation; $500,000,000 is held by the banks as a reserve, and the banks manage to do $4,500,000,000 of business on that reserve, and charge and collect interest thereon, thereby actually doing business on $4,000,000,000 of confidence.

A few months ago the representatives of these confidence plans had a little meeting in New York, the purpose of which was to bring about a gold standard, and they started the wolf-cry against the Sherman law, and proclaimed a want of confidence and pretended to be scared. The people thought that these representatives of the confidence plan were scared, that they were in earnest, and the people really did get scared and began to demand their money. The $500,000,000 being exhausted, the banks had nothing left but confidence to meet their demands, and the necessary result was failure.

We wonder, sir, that they are asking the Government to restore that $4,000,000,000 of confidence. Yes, sir; they want the Government to go into partnership with them in this confidence game, but the people are opposed to the Government becoming a copartner in any such a fraudulent practice, and are asking for money, asking this Government to do its duty and give them money, currency with which to do business. Now, sir, shall we consult the wishes of the people or of the banks? This is the whole question.

In this crisis, let us first provide for the free coinage of silver. Second, let us direct the Secretary of the Treasury to issue $100,000,000 of greenbacks, which under existing laws we have the power to do. This, sir, will save a large amount of interest, and restore confidence on a sound basis.

I wish to remark, Mr. Speaker, right here, that no party can survive the useless issuing of interest-bearing bonds at this time. The American people are aroused, weary of paying interest, and will not tamely submit to the compounding of interest-bearing obligations, and they ought not to do so.

Let us set our great, big, loyal, national foot down on all foreign and aristocratic influences, and, like men imbued with the spirit of Washington, Jefferson, Jackson, and Lincoln, legislate for the common people, America and Americans.

Mr. RICHARDS. Mr. Speaker, while this discussion has dragged along it has seemed to me that, amid the diversities of opinion, there are some things upon which we all agree. In the first place, it seems to be agreed upon all sides that a financial stringency has come upon our land; that the wheels of machinery have been stopped; that men have been thrown out of employment; that there is distress to the merchant and the farmer; and that, all over this broad land, the people are calling aloud for aid at the hands of this Congress.

Is there a single member of this House who does not feel at this moment the awful responsibility that rests upon him? Only two days ago the newspapers chronicled that a procession of laboring men gathered spontaneously, and marched through one of our cities crying aloud, "We ask not for charity; we ask for work." And when in this country the able-bodied, willing man, anxious to toil, can not find employment, it is time for us to look around and ascertain, if we can, the cause.

In the papers this morning we read that away off in the West the laboring men had consulted together about sending an army of unemployed men to Washington to plead with the representatives of the people to relieve the distress that has come upon them.

When I left my quiet home in Ohio only a few weeks ago to come and take my place in this Congress the people there were generally employed. The machinery in our mills was moving as usual, and everything indicated activity, thrift, prosperity, and happiness. The financial distress, of which we had heard so much, had not reached that happy Ohio community where I have lived so long. But only yesterday I received a letter from an old friend, from which I shall read a few lines to the House:

There is not a plant running from Strasburg to Uhrichsville. The brick and tile works below Strasburg; the furnace and rolling mills at Dover; the rolling mills, pipe works, nail works, and roofing-tile works here, and clay and tile works at Midvale are all shut down. No orders, no sales, no collections. I tell you it looks blue.

That is but a picture of the desolation that is now extending throughout the land. We have the anomalous spectacle presented of the farmer in the West being unable to find a profitable market for his wheat, while the laborers in the East are starving for bread. The President of the United States, considering the condition into which the people of the country have been thrown, has called this body together in extraordinary session, to the end that, if possible, relief may be afforded to our people.

And while arguments have been made on the one side and on the other of the questions here under discussion, I have not yet heard the wisdom of our President in convening this extra session once called in question. Gentlemen have criticised the reason assigned by him for the distress that has fallen upon us, but I have not yet heard from the lips of a single member of this House any criticism upon his action in thus convening this body.

I take it, then, to be conceded by the members of this House that distress is abroad in our land, and of such a character that it has become necessary, for the first time in many years, for the President of the United States to convene this body in extraordinary session. Is it not, then, the duty, the sacred duty, of every one of us to examine carefully the situation, and ascertain, if possible, the cause that has produced it? Why and how has this calamity been brought about? And what, if any, remedy will correct the evil?

If we can ascertain the cause, it seems to me, then, that it is the duty, the sworn duty, of every member of this House to endeavor as best he can to provide a remedy. I know that members of the opposite sides, from force of habit, I suppose, seem to act as flint and steel upon each other. And even in a nonpartisan question like this, it seems impossible to overcome this habit unless the question could be made to assume some tangible form and be labeled, "nonpartisan," "nonexplosive," or with some such peaceful device.

It was said long ago that "A rose by any other name would smell as sweet." And I say that no matter whether a man be named Populist or Republican or Democrat, when calamity has come upon his country he can, and he should, forget past party passions and party prejudices in his patriotic efforts.

Mr. Speaker, I believe as firmly as that I stand here that this distress is produced by no other means than by the operation of the purchasing clause of the so-called Sherman law. I have listened attentively to the learned and ingenious arguments that have been made by gentlemen on this floor during their discussion of the pending bill, and yet I believe that the briefest as well as best argument on the subject is the message of the President of the United States to this body. How forcible the concluding clause:

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

We have all studied, more or less, the subject of finance, of which the silver question is a branch, and are willing to do what we believe is best for the country. I do not believe—I can not believe—that any man possessing the confidence of his people requisite to obtain a seat in Congress would commit the crime of plunging the country into a financial panic, with all its concomitant evils.

But we do not all see alike, and some believe that the free coinage of silver would go a great way in relieving the present financial depression. I am for the unconditional repeal of the purchasing clause of this law, because I believe it to be the immediate cause of our present distress; and I believe if left unrepealed it will be productive, in the near future, of still further distress and suffering to all classes of our people.

Let us go back to the time of the passage of this bill and see if we can not adduce evidence sufficient to prove this point. You are all familiar with the history of this bill, or if anyone is not he can refresh his memory by turning to volume 110 of the RECORD. It was not considered then to be a good thing for the country, but was passed after a struggle and much discussion on both sides. It really was not what either side wanted. The silver advocates wanted free coinage, and the other side were willing to vote for the so-called Sherman act only to save the passage of a free-silver bill.

The clause referred to, as you all know, and have heard so often, provides for the purchase, by the Secretary of the Treasury, of 4,500,000 ounces of silver bullion every month, to be paid for in Treasury notes redeemable in gold or silver coin, at the discretion of the Secretary of the Treasury. But this discretion thus vested in the Secretary of the Treasury is annulled by another clause which declares, that it is the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be established by law.

Therefore he is forced, in order to keep those Treasury notes from depreciating, and thereby injuring the credit of our Government, to pay for them in gold when gold is demanded. We find from the reports that, up to the 15th of last month, there had been issued in round numbers $147,000,000 of these notes in payment of silver bullion, and that many of these notes had been paid for in gold. The amount of gold paid on these notes from May 1, 1892, to the 15th of last month, a little more than a year, was $49,000,000, and to-day nearly all this vast amount of silver is lying idle as bullion in the Treasury. Upon this point it has been aptly said:

Thousands of people are employed in taking silver out of the mines where it was doing no harm and piling it up in the vaults of the United States Treasury where its enormous bulk menaces the industries and general prosperity of the country.

This paying out gold for Treasury notes not only exhausted the surplus gold in the Treasury, but actually encroached upon the $100,000,000 reserve fund set aside for the redemption of other notes, and which had ever been kept sacred for the purpose for which it had been created.

Our own business men as well as the financiers of other nations had been watching the outcome of this policy, and we are told that from the first passage of this bill our public credit was by other governments considered—well, if not a little "shaky," at least in a condition to bear watching. So they kept their eyes upon us, were not so liberal in investing in our securities, and when our gold surplus had been encroached upon to about the tune of $75,000,000, they began to return our securities and "would none of us."

While gold was thus being withdrawn from our Treasury and finding its way to those of other countries and we were still increasing our silver, it became plain to our people also that we were nearing that point at which we could not maintain a gold standard. Our capitalists, as well as intelligent people of small means who perhaps had never heard of Gresham's law, fearing that we would be forced to the use of a depreciated currency, lost confidence. The former refused to invest their capital, and the latter withdrew their money from the banks.

Although the withdrawing of these multitudinous small sums has caused the suspension of many banks and the refusal of capitalists to invest in public enterprises has thrown a great many men out of work, yet the loss of confidence in the stability of the financial situation does more harm to all kinds of business than is possible to be done by the withdrawal of money from banks and hoarding it. Some one has truthfully said, "Confidence is better than gold," and I think I have plainly demonstrated that this loss of confidence is directly traceable to this purchasing clause of the Sherman law.

Only by the prompt repeal of this law can we gain the confidence of other nations, put into circulation the money that has been withdrawn from the banks, restore public credit, start the wheels of the manufactories, and, which is most important of all, give employment to the thousands that have been thrown out of work, before the rigors of winter set in. There is other and very important work for us to do; but this is preëminently the first thing, and "what our hand findeth to do let us do it with all our might."

Why should we experiment further? This act is acknowledged to have been unwise from the beginning. And the Sena-

tor from Ohio, whose name is wrongfully, he says, attached to this bill, stated a few days ago in the Senate that this act was adopted to defeat a bill for the free coinage of silver. The history of this bill being well known, as I said before, we need not revert to it further, unless to emphasize the fact that at its passage it was considered the lesser of two evils. And now, after finding what an immense amount of evil it contained, and that the people are crying out against it, we are asked to try in its stead what was at that time considered the greater evil. And yet we, as intelligent men, are asked to do this thing!

What great patience—and alas! what short memories we possess. We need precept upon precept. We need to cultivate and refresh our memories by going back into the the history of finance and the evolution of money. Among uncivilized nations we find many articles used as money that were very inconvenient of transportation, such as oxen, hides, salt, tobacco, etc. Some of the Indians, at the time of the discovery of this country, were far in advance of other rude nations, in that they had a real money made from shells, called "wampum."

From these rude forms have been evolved our present gold, silver, and nickle coins. Owing to the fluctuating and declining values of silver in the last twenty years and the greater stability of gold, and the belief that gold will never be produced in quantities sufficient to materially affect its value, have made the latter the standard of value for great commercial nations, while silver became the standard of value of weaker nations. Commerce, independent of any nation, has selected gold as its standard of value and discredited silver.

This irresistible law of evolution alone is responsible for this, and we are powerless to change it. It only remains for us to decide whether we shall stand with the strong, powerful nations of the earth, and adopt gold as our standard, or by adopting silver be classed with such nations as China, Mexico, Argentine Republic, and so forth. For my part I prefer to join hands with the great nations of the earth. Until 1870 the annual production of silver was less than half that of gold (coinage value), and the price, consequently, $1.30 per ounce, the ratio being about 15½ to 1.

Now, although the production of gold has not materially increased, the production of silver is so great that the parity of the two metals is about 27 to 1. The United States coinage ratio being 16 to 1, is about 40 per cent above the world's market price. What does this teach us? Plainly that supply and demand have to do with the regulation of the price of silver, as well as with the price of wheat, cotton, and so forth. As the production of silver far exceeds the demand for it, notwithstanding the four and one-half million ounces per month that the United States Treasury is forced, by this obnoxious law, to buy, the price has necessarily fallen.

Time has shown that this law has entirely failed to restore the position of silver; and yet, after this costly experiment has so utterly failed to accomplish what the silverites desired, and in the face of the great loss the Government has sustained, they ask it, the Government, to do more. They ask it to try the experiment of free coinage. What right has our Government to tax the whole country for the benefit of one industry, or to imperil the business interests of the people? Is not this class legislation? And if the silver advocates can not see it in this light, if they still maintain that free coinage will accrue to the benefit of the whole people, is it not our duty to call a halt to this experimenting?

We have heretofore acted too much on the defensive, but the time has come when we must change our tactics, and, acting up to the courage of our convictions, vigorously attack this law and drive it from our statutes. If we do this, unconditionally, we shall have won a lasting victory over free coinage, and no unlimited purchase act will again trouble us, at least while the history of the Sherman law remains fresh in the memory of the people. But if we compromise with the silver advocates—if we adopt a ratio of 16, or 18, or 20 to one, we only allow this experimenting to be begun over again. For if we give the ratios of the intrinsic values of silver to gold to-day, we are not sure that it will be the correct ratio for next month, next week, or even for to-morrow. We can not do what no other nation has been able to do, make gold and silver circulate together unless we limit the amount of the latter.

According to Gresham's economic law, an inferior money tends to drive out a superior money from the country; and a country persisting in a free or unlimited coinage of silver would soon drive out gold and would be forced to adopt a silver basis. It is claimed by some, who are able to judge impartially, that we have been terribly near this calamity ourselves. "Forewarned is forearmed." Let us see to it that our legislation is such that we will steer clear of this danger in the future. And as it was said in this House last Friday, by an eminent advocate of free silver, that France had been able for a period of seventy years (from 1803 to 1873) to maintain the parity of the two metals at the ratio of 15½ to 1, let us quote what Chevalier, the distinguished French economist, the great champion of silver in his day, says on this subject:

> In the year XI (1803), when the law of seventh Germinal was enacted, which established for a temporary standard the ratio of 1 to 15½ between the two metals, this ratio actually existed in the commercial world; but little by little it changed, and soon gold came to be worth ordinarily a little more than fifteen and one half times as much as silver—it has sometimes been worth a little above sixteen times as much. This discrepancy, which has usually been about 1½ per cent (that is, one-half of that which manifested itself from 1726 to 1785), would have had no effect if the provision of Gaudin had been correct. On the contrary, it had a very considerable effect: it sufficed to retire gold from circulation.
>
> A few years after the passage of the law of the year XI gold became so scarce that people had to buy it of the money-changers when they wanted to carry that kind of cash on their journeys. In fact, the circulation of the two metals side by side, which Gaudin flattered himself that he should establish by means of the coinage of pieces denominated twenty francs and forty francs, had ceased to exist shortly after the year XI, and twenty-five years after that date the circulation consisted of silver only.—*La Monnais.*

And free coinage at any of the proposed ratios would drive out gold and bring us to silver monometallism, creating distrust, danger, and bankruptcy.

Mr. Speaker, I say that this so-called Sherman act is wrong. The silver-producing miners of the West were seeking a market for their bullion; and by this compromise a market was given to them. This Government has no more right to buy up the bullion of those silver producers in the West than to open a market for the fire clay and iron ores of the miners in my region of Ohio, or for the wool and the wheat of the farmers of that State.

If this Government is going to buy up silver bullion, in order to give the miners of the West a market for it, I want it to come into my section of Ohio and give us a market for the iron ore and the fire clay and the wool and the wheat of our people.

Now, it seems strange to me in view of these facts that gentlemen can have any hesitancy in regard to their duty in the premises. In this condition of things—this piling up of silver in our vaults, this draining of our Treasury of its gold, this lack of confidence which has been created by this unwise legislation—how can this country hesitate for a moment to undo that fearful wrong? Our duty to ourselves, our duty to our people, our duty to this nation, it seems to me, demands that this unwise act be speedily repealed.

But, Mr. Speaker, there is another thing that I have noticed in the course of this debate, and it is this: While so many able gentlemen have attacked the wisdom of this act which is now sought to be repealed, while so much has been said against it, while so many logical reasons have been given why it should be removed from the statute book as speedily as possible and without condition, the furthest that gentlemen on the other side have gone has been to attempt to attribute our distresses to other causes.

Who, on this floor has raised his voice in defense of this unwise act which we now seek to repeal? Who is there on this floor that has said it is a wise piece of legislation? Who upon this floor has said that he believed that this act should still remain on our statute books?

Is it possible that we have come to this? That an act of legislation, condemned by so many and defended by none, is still to be retained upon the statute books of this great nation as a law of these United States? It seems to me, sir, that when this act is so universally condemned, and where no voice can be found that will raise itself to tell us of the good that it has done, that that of itself should settle the case in this emergency.

But here is a piece of legislation which no one seeks to defend, which has been productive of at least no good (for if it has been productive of any good gentlemen have failed to point out to us wherein it consists); an act of legislation indefensible, acknowledged to be a makeshift, acknowledged to be wrong, without the spirit if not without the letter of your Constitution, and yet with no apology for it whatever, gentlemen say "unless we can get what we want" this shall remain still the law of the land.

There is a time coming, and that before long, when gentlemen who seek to retain upon the statute books of this country a law productive of so much mischief as that will hear from the people in thunder tones. It will not be the thunder tones so well depicted by a gentleman on yesterday, that came from Mount Sinai amid the thunders and lightnings of the Almighty Himself, but it will be the thunder tones of an outraged people whose rights have been invaded, on whose shoulders wrongful burdens have been imposed, who are groaning beneath the load of calamity and of distress hurled upon them, and these people will speak in thunder tones to the representatives of the people who shall refuse to give them relief in this hour of their sorest trial.

Can it be possible that the Representatives of this great nation shall determine that although they honestly believe this legislation to be unwise, although they honestly believe it is productive of injury to the country, although they honestly believe that this legislation ought to be repealed by this House, yet that

they will take advantage of the distress of the people of this land and refuse to lift this burden from their shoulders unless they can have something else in its place?

I came into this Hall last night to listen to the arguments that should be made upon the other side of this question, and was surprised to hear the argument made by an eloquent gentleman from the State of Kansas [Mr. SIMPSON]. He said that there was a conspiracy to bring about the repeal of this law.

I say, sir, that in my humble opinion if there were a conspiracy abroad in this land against the rights of the people, a conspiracy to put upon the shoulders of the people burdens too heavy to be borne, a conspiracy to make the coming winter one of the worst that the American people have ever seen, and to make its days and nights resound with the wailings of the poor laborer, the skilled mechanic, and the toiling farmer, that conspiracy could be no more effectual to bring about these things than the retention on our statute books of this so-called Sherman act.

I heard it said the other day that the battle cry of silver would be "Home, Sweet Home." But I say that that will not be the cry that will go forth from the lips of the laborers next winter if this act shall remain in force. It will not be the old, sweet hymn that our mothers used to sing and that we loved so well, "Home, Sweet Home," that has for every man an undying attraction, no matter how humble that home may have been; but the cry that will go forth from the lips of the laborer next winter, as he tramps in search of work, if this act shall continue to be the law, will be, "I have no home."

To-day all over this land there are people who but a few weeks ago were in happy homes—everywhere husbands and fathers, willing to work, surrounded by wives and children whom they loved, men with brawny arms that were willing to work to maintain themselves and their loved ones—and to-day, with the mills and the machinery of the country idle, the farmer without proper market for his crops, amid the idleness and desolation that has been brought on throughout all sections of the country, they are at this time standing surrounded by their families wondering to Heaven what they shall do next.

This is the condition, while we are here to-day with so many of these chairs unfilled, so many of us giving but little attention to arguments, and weighing but little the burdens and miseries that are brought down upon our honest, peaceful people. The farmers, the mechanics, the laborers, are wondering this afternoon what this House of Representatives is doing for their relief.

Many are crying for bread, and if we do not give them back a stone, shall we say to them, "We have heard your cry; we know your wants; we know wherein lies the root of all this trouble; we have still our convictions: we have determined that in this grandest nation on God's earth, whose granaries are teeming with grain, whose hills are filled with mineral wealth, whose people are free, and intelligent, and strong, idleness shall continue, misery and want increase, and the credit of our country shall be sunk down to perdition itself.

Mr. TRACEY. Mr. Speaker, it is now nearly 5 o'clock, and I ask unanimous consent that the session be extended until the gentleman shall have finished his remarks.

The SPEAKER. Without any objection that order will be made.

There was no objection.

Mr. RICHARDS. I thank the House for the courtesy extended. When I rose to talk, considering the many arguments that have been made, and knowing from my own experience the patience required to listen to all of these arguments, I had not intended to detain the House at length. From the beginning of this debate I have been promptly in my seat at the opening of the daily session. I have not left the House until each day's session has closed. I have endeavored to hear all that was said, and I know from my own experience the patience it takes to sit here throughout the day and listen to the arguments that are made.

But, Mr. Speaker, this House should have patience. This is an hour when the American people are entitled to patience on the part of their Representatives in this House. The time is now here when members of this House should not seek their own personal comfort. This is a time when members of this House should forsake self for the good of the people of this land.

Therefore, Mr. Speaker, believing that the industries of the people of this country, the welfare of all our people, rich and poor—believing that the welfare of the farmer upon his farm, of the merchant behind his counter, of the mechanic and laborer, that the interests of all our people, both high and low, demand the unconditional repeal of the Sherman act—believing this, and that it is for the interest of the people of my district and my State, and the people of this nation, I shall vote against free coinage at any ratio, and for the unconditional repeal of the Sherman act. [Applause.]

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted—

To Mr. HENDERSON of North Carolina, for five days, on account of important business.

The SPEAKER. The gentleman from Tennessee [Mr. RICHARDSON] will discharge the duties of the Chair at the evening session.

And then, pursuant to the special order (at 5 o'clock and 7 minutes p. m.,) the House stood in recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House was called to order at 8 o'clock p. m. by Mr. RICHARDSON of Tennessee.

Mr. CURTIS of Kansas. Mr. Speaker, there can be no excuse for a financial panic in this country, except unwise, or the fear of unwise, legislation.

There can be no other excuse given in this, the richest nation in the world.

The trouble now is the want of confidence in this Administration and the majority of this Congress.

This distrust is not limited to the financial question alone, but to others equally as great; but the silver question being now before the House for settlement, remarks should be limited to it.

Are you surprised at this want of confidence when the President of the United States disregards the platform upon which he was elected; when it is doubtful whether or not members of this House will vote in accordance with the promise made to the people by their party; when members belonging to a party that has pretended to be a friend to silver say, as did the gentleman from Maryland [Mr. RAYNER], "that he is not in favor of coining another silver dollar?" Duplicity is a deadly assassin of confidence.

I am at a loss to understand how these gentlemen claim to be in favor of maintaining the parity between gold and silver when they support a measure which prevents the further coinage of a silver dollar.

I believe the only way to maintain the parity between gold and silver is to put a dollar's worth of gold in a gold dollar and a dollar's worth of silver in a silver dollar, open the mints to their free coinage and make them a full legal tender; but silver should be measured by its true value, and not by a fictitious value.

There can be no doubt but that both the old parties promised the free coinage of silver at its true ratio with gold.

Should the citizens of Colorado, Montana, Nevada and other silver-producing States be forced to beg for the privilege of coining their silver bullion when it is a right clearly given them by the Constitution of this country?

When it was a promise made them by both the old political parties?

When a large majority of the citizens of this country, outside the silver-producing States, are in favor, yes, demand, the use of silver coins, and the free coinage of silver at its true ratio to gold?

That silver has depreciated in value no one will deny, but there are several reasons for it, namely, the increase in production, improved machinery, and others, but no little of it was due to unfriendly legislation.

The world produced silver of the coinage value of $81,800,000 in 1873, and of $196,605,200 in 1892. It produced gold of the value of $96,200,000 in 1873, and of $130,816,600 in 1892.

The United States produced silver of the coinage value of $39,200,000 in 1880, and of $74,898,900 in 1892. It produced gold of the value of $36,000,000 in 1880, and of $33,000,000 in 1892.

When the gentleman from Colorado [Mr. PENCE] says that "the transaction of 1873 was done covertly and secretly by fraud," and in that way passed the Senate and House, and that the members did not know what they were doing, he does every man who was then a member an injustice, and casts a serious reflection upon the members of that body.

I have nothing to say in defense of the act of 1873; in fact, I believe it was one of the greatest mistakes ever made; but, after examining the records, I am convinced that the Members and Senators knew what they were voting for, but they did not know the effect it would have upon this country.

Then, again, they did not know that there would be such a large increase in the product of silver, they did not know that the silver men would be asking for the privilege of free coinage, for they had refused to take advantage of the law that gave them the right to have their silver bullion coined prior to 1873, because it was worth more in bullion than it was in coins. And the silver men by their conduct, were, to a limited extent responsible for the act of 1873.

But they should be forgiven if they will promise not to be guilty of the same conduct again.

It must be remembered that there had been but about 8,000,000 silver dollars coined prior to 1873, that there was coined,

each year prior thereto, but a small amount of silver half dollars, quarters, and dimes, and that after 1873 there was a large number of trade dollars coined, and a large increase in the coinage of halves, quarters, and dimes, as is shown by the report of the Director of the Mint for 1892. The table on page 245 of said report I ask to be made a part of my remarks.

Silver coinage of the mints of the United States from 1844 to 1892.

[From the report of the Director of the Mint for 1892.]

Year.	Trade dollars.	Dollars.	Half dollars.	Quarter dollars.	Twenty cents.	Dimes.	Half dimes.	Three cents.
1844		$20,000	$1,885,500.00	$290,300.00		$7,250.00	$32,500.00	
1845		24,500	1,341,500.00	230,500.00		198,500.00	78,200.00	
1846		169,600	2,257,000.00	127,500.00		3,130.00	1,350.00	
1847		140,750	1,870,000.00	275,500.00		24,500.00	63,700.00	
1848		15,000	1,880,000.00	36,500.00		45,150.00	63,400.00	
1849		62,600	1,781,000.00	85,000.00		113,500.00	72,450.00	
1850		47,500	1,341,500.00	150,700.00		244,150.00	82,250.00	
1851		1,300	391,375.00	62,000.00		142,650.00	82,050.00	$185,022.00
1852		1,100	110,585.00	68,265.00		196,550.00	63,625.00	559,995.00
1853		46,110	2,439,354.00	4,146,555.00		1,327,301.00	785,251.00	342,000.00

*Includes $475,000 in Columbian Exposition coins.

Notwithstanding all this, silver has declined in value, and for that reason it would not be fair to open the mints to free coinage at the old ratio.

Let Congress pass a bill, giving the relief promised, upon the silver question in either of the platforms of the two great parties of this country, and confidence will be restored upon this one great, interesting, and vital question. No other measure will satisfy the people. Let this Congress fail to pass a free-coinage measure at what it believes to be the true ratio, and let it fail to take steps to maintain the parity of the value of the two metals, and the people will lose confidence in party promises.

It is surprising that so many good people were "taken in" by the promise of the Democratic party, to be carried out by Cleveland, for he never intended to keep it. Cleveland was never for free coinage at any ratio.

The people will never be satisfied with free coinage at 16 to 1, for that would drive gold from this country. They would not be satisfied with the single gold standard, for that will destroy one of the greatest industries of this country.

Should not this Congress, then, provide for the free coinage of a legal-tender dollar at a ratio that will remove fiat value?

For thirteen years prior to 1892 the average ratio between the two metals was a little over 19 to 1; in 1892 it was about 24½ to 1; but silver has been laboring under too great a disadvantage for the last two years to justify taking into consideration its value for that period.

I request, published as a part of my remarks, the following table showing the ratio of silver to gold each year from 1874 to 1893—table issued by the Bureau of the Mint:

Highest, lowest, and average price of silver bullion, and value of a fine ounce, bullion value of a United States silver dollar, and commercial ratio of silver to gold by fiscal years, 1874 to 1893.

Fiscal years.	Highest.	Lowest.	Average London price per ounce standard .925.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Equivalent value of a fine ounce based on average price.	Bullion value of United States silver dollar, at average price of silver, exchange at par.	Commercial ratio of silver to gold.
	Pence.	*Pence.*	*Pence.*				
1873–'74	59⅜	57½	58.312	$1.27826	$1.28247	$0.98865	16.17

TREASURY DEPARTMENT,
Bureau of the Mint, August 1, 1893.

With free coinage, silver will increase in value, and under all the circumstances would it not be fair to let the ratio be fixed at 20 to 1 and create a commission, with authority to change the ratio if it shall at any time be found to be too great or too small.

Protect the holders of the silver dollars now in circulation by making them a full legal tender at their face value until redeemed.

To prevent any great loss in recoining the silver dollars now in circulation and those in the Treasury, provide that a sufficient number of them be coined into subsidiary silver coins, at their present weight and fineness, to give this country $150,000,000 of this class of coins.

If the ratio should be found to be too great, then let the silver dollars be redeemed at their face value, but prohibit any individual, company, or corporation from having dollars recoined at a lower ratio.

Let the mints be opened for free coinage, issue coin certificates to be used in the redemption of the silver dollars now in circulation and also, when agreeable to the parties concerned, issue them for the bullion as it is received at the mint.

Direct the Secretary of the Treasury to have coined into silver dollars the silver bullion now owned by the Government as fast as he may deem it expedient (a serious objection to the measures offered is that no provision is made for the coinage of the bullion now owned by the Government);

Provide for the use of silver upon an equal footing with gold, in the redemption of all coin certificates.

Permit the banks to hold 75 per cent of their reserve in silver dollars, and repeal the act of July 14, 1890.

I have prepared a bill upon this line, but as the gentlemen on the other side of the House have arranged that all bills upon this question shall be introduced by them, members on this side can get theirs before the public only by asking leave to print.

Our people are asking for more money, but they want "every dollar, gold, silver, or paper issued, to be as good as any other." They believe gold and silver coins, and paper redeemable in gold and silver, to be the only desirable money of this country.

What objection can there be to free coinage at the true ratio between the two metals? The extreme gold and the extreme silver men can give no valid reason.

Why should we consult the wishes of other countries so long as they will not be fair?

America is perfectly able to take care of herself; she produces more silver than any other nation in the world, and yet we are asking, What India is going to do? What Great Britain is going to do? What Germany and France are going to do?

Their action may affect the price of silver a little, but not much; not enough to justify this country in refusing to use it longer as a money metal.

I was pleased with a greater part of the speech made by the gentleman from Colorado [Mr. PENCE], but think he did an injustice to the producing States when he sent up a doleful wail about their small increase in wealth, and spoke of the great increase in wealth of the Eastern States, and I am glad he left out the State of Kansas, and I am sorry the gentleman from South Carolina [Mr. TALBERT] referred to Kansas.

While it is true that the manufacturing States have greatly increased in wealth in the ten years from 1880 to 1890, yet Kansas, with all the falsehoods that have been published against her, made a greater per cent increase in assessed valuation in the ten years above mentioned than any manufacturing State in this Union. [Loud applause.]

The great State of Massachusetts, the State used in the comparison made by the gentleman from Colorado, only gained 35.93 per cent, while Kansas gained 116.58 per cent.

Mr. PENCE. I would like to ask the gentleman if it is not a fact that Kansas has to-day the largest per capita mortgage debt of any State of the Union, or about the top of the list.

Mr. CURTIS of Kansas. It was very large, but within a year or two it has been reduced, so that to-day we have not as much mortgage debt as many other States; and I am thankful it is being rapidly paid off.

Mr. PENCE. I thank you for the information.

Mr. WAUGH. I would like to ask the gentleman a question in that line.

Mr. CURTIS of Kansas. Certainly.

Mr. WAUGH. Is it not a fact that a very large amount of the indebtedness of Kansas is based on the purchase of real estate and personal property?

Mr. CURTIS of Kansas. A large amount of the indebtedness is for the purchase-money of real estate, and also town lots for purposes of speculation, where they tried to spread towns over whole townships.

Mr. WAUGH. I would ask the gentleman if it is not true that the bulk of the mortgages is not on the farms?

Mr. CURTIS of Kansas. Yes, sir; it is true. The farms are all right, improving in value every day.

Mr. PENCE. As I understand, the mortgage indebtedness is $1.73 per capita, taking every man, woman, and child in the State.

Mr. CURTIS of Kansas. It does not matter if it is. Kansas is amply able to take care of herself. A great part of that mortgage indebtedness can be shown to have been incurred, if gentlemen will take the trouble to advise themselves, on farms in the extreme western part of Kansas, where farms were taken, then mortgaged, and then abandoned.

I am not a representative of the gold bugs, nor am I a representative of silver bugs.

Mr. TALBERT of South Carolina. What kind of a bug are you, then?

Mr. CURTIS of Kansas. I am for the common people; something that you are not.

The members from the silver States should be satisfied with free coinage at a new but true ratio, without silver being measured at an untrue value.

The members of this House should not pass a measure that will paralyze the silver industry of this country, but one that will stimulate it.

Let us get together and pass a measure that will restore confidence; that will remove the load from the shoulders of the business men; that will relieve the strain on the banks; that will cause the farmer and laborer to rejoice.

That will convince the people that there is no fight between labor and capital; that there is no attempt on the part of the rich, represented in this body, to crush the poor; but that labor and capital and the rich and the poor are friends and should always be.

That will convince the people that the South and West are not pitted against the East, but that this is one great country, and that the measure passed is as much in the interest of the one as the other.

The citizens of the Fourth Kansas district have no fight to make against the East, but are thankful to Eastern friends for the confidence they have shown in that part of Kansas, and they hope that confidence will never be shaken.

I am ready to support any measure that will give the desired relief, and do not care who introduces it.

This is a business and patriotic question; let us act as business men and patriotic citizens. [Applause.]

Mr. BRODERICK. Mr. Speaker, I assume in the beginning, that which is perfectly apparent, that this is a contest against bimetallism; but the discussion has taken a wide range, and should I depart from the real question it will not be without precedent.

The State I represent, in part, on this floor has no mines of either gold or silver. She has no direct interest in appreciating the bullion value of either metal, but, in common with the great majority in the West, she is deeply concerned in having money enough for the development of the resources of that country and to supply the wants of a new and growing community.

Throughout the Western States, with the people who trade and with those who toil and think, this money problem is the supreme question of the hour. And these people are looking to this extraordinary session of Congress and hoping, not for contraction of the currency, but for expansion. They are not prepared for contraction, for in seeking their suffrages during the late campaign they were not promised contraction. Nor have they had any notice that this was to be the policy of the Government until the recent extraordinary message of the President was delivered in these halls and published to the country.

PARTY PLATFORMS.

The two great national political parties at their last conventions had declared in favor of the continued use of both gold and silver as money metals without any expressions as to how much of either was required. It was further declared that, along with gold, silver should be treated as standard money. But coupled with its declarations indorsing the double standard the Democratic platform contained a clause demanding a repeal of the Sherman law, alleging that it was only a makeshift.

It was not understood, however, during the campaign that the purpose was to repeal this statute without substituting for it some other and better provision. In truth, the very terms of the declaration invited the belief that there was to be a more liberal use of silver as money. The voters generally had no thought, or suspicion, on election day that either of the national parties intended, if successful, to take a backward step on the silver question. There had been no denunciation, or dissent, in either platform from the contention which had been going on for years, having for its object the enlarged use of silver as

money, and the electors had no reason to believe that there was a latent ambiguity anywhere from which the successful party would undertake to justify itself in a movement which would result in contraction or would further restrict the use of the white metal.

When the national parties met in solemn convention to make up the issues for the campaign, there seemed to be no disposition from any source to pronounce in favor of a single gold standard or for a diminution of the currency, because the atmosphere was portentous and every one knew at the time that such a declaration would be followed by inevitable and overwhelming defeat to the party making it.

But when the contest was over, and before the new Administration commenced, the gravest apprehensions were aroused by reason of the demand from high places for the demonetization of silver.

THE EAST AND WEST.

I desire, at the outset, to call attention to certain conditions in this country, which are doubtless understood by gentlemen here, but do not, in my judgment, receive the consideration to which they are entitled. The people of the Eastern States are in the possession and enjoyment of the property accumulations of many generations. They are loaning money, and gathering interest from every other portion of the land. They have resources developed, and have long since established the machine shop, mill, and factory. They are producing and manufacturing everything they consume; hence, the money exchanged for these commodities remains at home.

With these environments the men of large fortunes in the East have not until recently seen the necessity for more money. They desire to secure the largest premium possible, and understand perfectly that the smaller the amount of circulating medium the greater the demand for loans, and the larger will be the income.

In the new West the conditions are essentially different. Her resources are undeveloped. The people, as a rule, began in adversity and have acquired nothing by inheritance. They have builded homes and institutions, but the factory is not yet established. Like the settlers in other new communities they are borrowers. It follows that they must borrow from those who have to loan and give such security as is demanded. The farm, already burdened with taxation, is now encumbered by mortgage. This farm is the source of all income to the proprietor and must produce sufficiently to meet all his demands.

The products of the field are marketed and the proceeds immediately find the way to money centers in the East to cancel coupons and to purchase and supply Western homes with manufactured commodities. There is no just ground of complaint because of this more fortunate situation in the older States. The people everywhere have the right to enjoy the fruits of their rightfully acquired possessions. But in view of these different situations it is not difficult to comprehend why the West wants increased circulation. She wants interest reduced, enterprise stimulated, and new avenues opened to business and employment.

The ratio of increase of money, under existing coinage provisions, compared with the increase of our population is slight, so restricted that prices have not been maintained. But suddenly there is grave apprehension of disastrous inflation by reason of the use of the two metals, and the demand comes to strike one down, and this is not the mutual demand of the two classes, but it comes alone from the creditor class and after the contracts have been entered into on the basis of gold and silver payments. This would change the terms of the contract, be grossly inequitable, unconscionable, and oppressive. And this threat coming from the older States, and supported by the national Administration, is supplanting security and contentment with suspicion and alarm.

But the real question lies beyond this. The capitalists want a system of finance which can be absolutely controlled through the banks, while the masses are contending for bimetallism—for the money of the Constitution. This is the paramount issue before the American people and will take precedence over all others until finally settled.

We have been admonished all through this discussion that our system of bimetallic money is not satisfactory to Europe. There have been many things done here not entirely in harmony with the views of the aristocracy of the Old World. I would not, however, underestimate the history and precedents of these great nations, but the truth remains that the great masses of the people there have had no voice in shaping their institutions or fixing their policy. Their policy was fixed solely with reference to conditions and interests of the ruling classes.

Fortunately for us, the Constitution invests Congress with the authority to coin money of gold and silver and fix the value thereof, and give to it when so coined legal-tender functions. No other power on earth or "among men" can regulate the value of our coins, unless we abdicate the power given by the Constitution. But while Congress has the sole power to regulate the value of silver coins, to destroy its money functions against the judgment of the people would do violence to the spirit of the Constitution and weaken confidence in democratic government. The power is to regulate, not to destroy.

VALUE AND COST OF THE SILVER DOLLAR.

Much has been said and written by the advocates of the gold standard about the "dishonest dollar," and yet it is true the silver dollar is worth its face value from Maine to the Golden Gate. The merchant when offering and selling his goods asks no question as to the kind of money he is to receive. Silver is exchangeable for any other money without discount all over the country, and notwithstanding the efforts to depreciate and degrade, the fact is worthy of consideration that many more people handle silver than gold. Silver is the money of the masses, while gold is the money of the few. But we hear that it is the debtor class who demand the continued use of silver. Debtors have a right to be heard, but they are not alone in this demand. It comes from the producers, from the laborers, from the mines and the mill, but it is not a demand for repudiation.

The people have not the slightest disposition to repudiate their debts. They can and will pay, with interest, that which they owe. What they do most earnestly protest against is the constant appreciation of gold by the disparagement of silver, which results in increasing their monetary obligations. If one-half the basis for our circulation is to be discarded, it follows as a necessary result that the other half will be dearer and easier manipulated and controlled. The threat to do this has brought us face to face with panic. This is the condition with which we are confronted, and this condition is to-day retarding development, stifling enterprise, and oppressing debtors. So generally has this threatened disaster affected all conditions and classes that the cry of alarm has gone out from nearly every household.

For centuries the currency of the civilized world has been based on gold and silver, but the "financiers," always fruitful in suggestions and expedients, demanded a change, first in the Old World, and it was speedily made. That we so readily indorsed this foreign policy and adopted it by legislative enactment has always been a matter of surprise, and has given rise to much criticism.

The law of 1873, omitting the standard silver dollar from the coinage act, was a mistake, but there was little silver in circulation at the time, and judging from the record no one in Congress, or out of it, foresaw the effect it would have on the finances of the country. Since that every effort to restore silver and return to the former system has been met with the argument that gold would be driven out. When partial restoration was made in 1878 dire consequences were predicted. Again in 1890, when the much abused Sherman law was enacted, it was urged that the white metal would soon be supreme. Notwithstanding these prophesies the two metals are here, each performing the functions of money and each still the object of earnest desire.

We hear it said and repeated that silver is so heavy and cumbersome that large quantities can not be put in general circulation. This will most certainly be so if the dollar is materially enlarged. But those who make this objection against silver find no fault because gold does not everywhere freely circulate. Gold does not and has not circulated among the masses to any considerable extent since the beginning of the late war. It is hidden in the vaults and few people think of it when engaged in ordinary business transactions. Paper is growing in use in the commercial world where large payments are required.

But the fact that coin does not everywhere circulate is immaterial in the consideration of this question. It is *the right to the use* of both metals as money which is insisted upon. I believe if this right had been firmly established here that the recent international monetary conference would have reached a satisfactory conclusion and silver would have been placed in business channels side by side with gold. It was the division of sentiment in this country which gave the gold monometallists of Europe hope of permanent disagreement at Brussels and which resulted in the rejection of all overtures from our delegates.

The work of this conference and the position taken by some of our delegates since are serving only to weaken our position abroad. We must adopt a comprehensive and liberal policy for the United States, stand by it, and other nations will soon come to us. The talk of gentlemen in favor of breaking down our policy in order to hasten international bimetallism will not deceive any one. It is not bimetallism they want, but an excuse for destroying it.

Mr. Speaker, it is said that we should no longer try to maintain the double standard because the silver dollar does not represent a dollar's worth of labor. It is admitted here that no one knows the actual cost of the silver product. Until recently there were no statistics which undertook to give the cost of production,

and none now give, or attempt to give, the cost of prospecting and development. The effect has been to show the cost only of taking ore from the productive mines. So far as the aggregate cost of production goes, this is clearly misleading.

Everyone who has been through our great Western mining region knows that every mountain side, where evidence of precious metal has been discovered, is literally honeycombed with prospect holes and driven full of tunnels. These ventures do not by any means cover the entire cost of prospecting. It is the judgment of those who have had best opportunities for observation that the gold and silver ores produced have cost more than 100 cents to the dollar. If the facts could be ascertained and the actual cost determined, the truth of this proposition would be demonstrated.

Superintendent Porter in his Report on Mines and Mining, under the head of "Cost of Producing Gold and Silver," says:

> The actual cost of production of the precious metals varies so greatly at different mines and works that it would be impossible to arrive at any absolutely accurate average. That one of the great gold or silver mines, when in bonanza, earns enormous profits merely means that the cost of production is but a small part of the market value of the metal produced. But the mirage of the widely known if not long lists of millions accumulated by fortunate owners of gold and silver bonanzas induces the investment of millions in the opening and working of prospective bonanzas that never materialize, and encourages and supports the lonely prospector in his wearisome waiting for the fortune that never comes. The spirit of the gambler controls in great measure investments in precious-metal mines, and so far as this class of investment goes there can be no doubt that it is, on the whole, unprofitable; or, in other words, that the gold and silver obtained by it cost much more than they are worth in the market.

This report further shows that when the losses are taken into consideration "that the average cost of all the gold produced is more than $20.67 per ounce troy, and that silver is more than, say, $1 per troy ounce."

Mr. Porter has not attempted to take into account the cost of exploration and of "dead work," and yet he has reached the conclusion that has been reached by every other impartial investigation, that the cost of producing precious metals is greater than the value as expressed by the coins themselves. There is not the slightest doubt but that the silver dollar at its present ratio represents more than 100 cents in labor and necessary expenditures.

THE ASSAULT ON SILVER.

The times of 1873 to 1877, when there was only about $15 per capita in circulation, are not forgotten. Prices went down, business was depressed, and the country was nearing the verge of bankruptcy. Congress was appealed to, and after a struggle, legislation was had which resulted in a partial restoration of silver and a gradual increase of the currency. For the last few years we have had from $20 to $24 per capita, and the country was more prosperous until this last onslaught was commenced on silver.

From this time panics and business failures came one after another, and I can not avoid the conclusion that the men who have forced this issue are wholly responsible for the distrust, suffering, and ruin which is sweeping over the land. The miners in the far West, the producers in the agricultural States, and the laboring people in the factories are alike victims to this unjustifiable assault on half the money of the Republic.

A few weeks ago, when the balance of trade was against us and our people were settling such balances with gold, we were told that the Sherman law was responsible, and that it must be speedily and unconditionally repealed. But the extra session came a month too late. The gold is rapidly returning. The silver law is still in force and the silver dollar worth a hundred cents. Had this Congress been convened forty days earlier the repeal would have been urged here and by the press on the sole ground that the law was depleting the country of its gold coin, and that we were nearing silver monometallism.

As soon as it was known that Mr. Cleveland was elected President the metropolitan press commenced paving the way for an additional issue of bonds and for this crusade against bimetallism and prosperity. Editorials and interviews showing the trend of Eastern sentiment and plainly indicative of this contest appeared from time to time, after the November election, in all the great dailies.

The following paragraph, taken from the New York World of December 21, 1892, was significant:

> The outflow of gold, which Secretary Foster so jauntily dismisses as a thing of no consequence, is very differently viewed by men of greater soberness and more sense. It is a symptom, and there are men of serious minds in Congress who regard it as one needing treatment. Senator WASHBURN sees in it the natural consequence of the fact that a number of European governments are strengthening their gold reserves. That is another way of saying that they are buying and hoarding gold. As there are several of them doing this simultaneously, and as all our financial administrative methods are such as to make the United States Treasury the easiest and most convenient source from which to get it, it is being drawn from us.
>
> There are men in Congress who, in view of the facts and of Europe's refusal to lend us any aid whatever in the solution of the silver problem, think the time has come when we should assert and protect ourselves by dropping all efforts to maintain silver and proceeding at once to strengthen our own gold reserve. It is suggested by a Senator who has not been counted as hostile to silver that we should repeal the Sherman act—for which he voted—and substitute for it a measure requiring the Treasury to accumulate a gold reserve of $200,000,000, and to maintain it intact by the sale of bonds if necessary. Such a suggestion from such a source is, so far as it goes, evidence of a tendency toward conservative reaction. The trouble is that it does not go far enough. It is shared by far too few of our statesmen to give hope that any earnest effort will be presently made to protect the country from that lapse to a silver standard which the conditions of the time seem to threaten.

These two measures were at that early date mutually understood, and should they be consummated another will be deemed necessary and will be speedily devised to dispose of all the silver, including silver dollars, now in the Treasury, or one which will in some way destroy the character of this metal as money.

Before leaving this division of the subject, I desire to refer to the question of ratio, which has been discussed so ably that I need only mention it. The silver dollar is large enough. To essentially increase its weight would be but another form of demonetization. Outside of a few money centers, where they have all along disparaged the use of silver, the silver coin at its present ratio, in limited sums, is preferred to other currency. The masses care little for the ratio. It is a convenient coin for everyday transactions which is wanted. It would partially relieve the situation to retire the one-dollar notes, coin all our silver bullion at 16 to 1, pay it out for the erection of Government buildings and in prosecuting other Government works, and thereby give new impetus to the wheels of industry.

EXPORTATION OF GOLD.

There is no reason why gold should flow out of the country in any considerable sums, except when there is a balance of trade against us and the settlement is required in gold, or when foreign governments holding our bonds desire to convert them into gold. As long as we have bonds outstanding it is possible for either of these contingencies to happen so as to cause slight contraction, whether we have silver or not; but the common mind can not understand how, when some part of the gold flows out, from any cause, conditions are to be improved by striking down any part of the money which remains.

If all these disasters should come upon us, that is, if silver should be destroyed by legislation and gold disappear, there would be but one alternative left—an irredeemable paper currency. For it is well understood that the entire stocks of gold and silver are not now sufficient to serve the purpose of the world's money and have to be supplemented by enormous issues of paper.

The argument that the use of silver will drive gold out of the country is not new. It has been made through the press and stated and reiterated on this floor at every session for years, and yet gold and silver have gone on increasing.

I hold copies from the official records of the Secretary of the Treasury showing the coin in the Treasury and in circulation July 1, 1879, and August 1, 1893, which clearly refute all these prophecies concerning the exportation of gold by reason of coining and using silver. I desire these statements placed in the RECORD with my remarks.

Statement showing the amounts of money in the United States in the Treasury and in circulation on July 1, 1879.

[Population, 48,836,000; circulation per capita, $16.75.]

	General stock coined or issued.	In Treasury.	Amount in circulation.
Gold coin	$245,741,837	$135,236,475	$110,505,362
Standard silver dollars	41,276,356	33,239,917	8,036,439
Subsidiary silver	70,249,985	8,903,401	61,346,584
Gold certificates	15,413,700	133,880	15,279,820
Silver certificates	2,466,950	2,052,470	414,480
United States notes	346,681,016	45,036,904	301,644,112
National-bank notes	329,691,697	8,286,701	321,404,996
Total	1,051,521,541	232,889,748	818,631,793

Statement showing the amounts of gold and silver coins and certificates, United States notes, and national-bank notes in circulation August 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation Aug. 1, 1893.	Amount in circulation Aug. 1, 1892.
Gold coin	$520,273,567	$103,363,626	$416,909,941	$410,447,360
Standard silver dollars	419,332,450	363,108,461	56,223,989	57,031,862
Subsidiary silver	76,563,878	12,556,749	64,007,129	63,346,937
Gold certificates	87,704,739	93,710	87,611,029	136,861,829
Silver certificates	333,031,504	2,843,114	330,188,390	327,336,823
Treasury notes, act July 14, 1890	148,286,348	4,512,210	143,774,138	101,756,301
United States notes	346,681,016	22,286,612	324,394,404	311,852,278
Currency certificates, act June 8, 1872	8,340,000	485,000	7,855,000	26,720,000
National-bank notes	183,755,147	3,620,150	180,134,997	166,595,935
Total	2,123,968,649	512,869,632	1,611,099,017	1,601,949,325

Population of the United States August 1, 1893, estimated at 67,066,000; circulation per capita, $24.02.

From this data it appears that on July 1, 1879, there were in the Treasury $245,741,837 in gold coin, and on August 1, 1893, there were $520,273,567. To this last sum must be added the gold bullion in the Treasury August 1, 1893, amounting to $78,345,510.

However prophetic the Gresham theory may have been under former conditions, recent history does not support the position our statesmen assumed on this question twenty years ago. In the light of the Treasury record showing the accumulation of gold since 1873, is there any well-grounded cause for apprehension to be drawn from the continued use of both money metals? The increase in population and business demands, and will continue to demand, a constantly increasing circulation. Every ounce of silver produced in the United States could be used without the slightest danger to business or commercial interests: and even should this Congress not so declare, the time is approaching and not far distant when the people will decree that it shall be so used.

PRODUCTION OF GOLD DIMINISHING.

There is a further and more cogent reason why the use of silver should be continued and enlarged rather than diminished. The entire gold-producing regions have been systematically prospected, and it is believed that the earth's great deposits of the yellow metal are almost exhausted.

I have here a paper, somewhat theoretical, but containing so many valuable truths bearing directly upon this question, that I ask to have it read from the Clerk's desk as a part of my remarks.

The Clerk read as follows:

Gold getting scarce—the supply running out all over the world—probable that enormous masses of the precious metal are gathered about the center of the earth—why it is rare. "How is the world going to get along when all the gold has been exhausted?" said a metallurgist to a Washington Star writer, interrogatively. "There is no joke about it. The gold production of the world is steadily decreasing from year to year, and it will not be very long before the supply is practically used up. Not more than $100,000,000 worth of the precious metal is now mined annually, and this is not nearly enough to meet the requirements of expanding commerce. Of course, new deposits will be discovered from time to time, but they will soon be exhausted.

Why is gold so rare? Simply because it is heavy. There are only two metals that are heavier, namely, platinum and iridium. Remember that at the beginning the earth was a body of gas. By gradual condensation it became liquid, while now the whole of its mass, save only an outer crust, much thinner in proportion to the whole bulk than is the shell of an egg, would be a fluid but for the fact that it is held together by tremendous pressure. Naturally, in the course of its formation about a center of attraction, the weightier particles composing the globe gathered about that center. Accordingly we find that the earth, as a whole, weighs five times as much as water, while the rocks forming the crust are only about two and one-half times as heavy as water.

From this it is evident that the materials composing the globe near its center are very heavy, and it is to be presumed that they are chiefly, if not wholly, weighty metals. Gold and platinum being, with only one known exception, the heaviest metals existing, it seems highly probable that enormous masses of these precious substances are gathered about the center of the earth. What a pity it is that such colossal treasures should remain forever inaccessible to greedy mankind! At all events it is unfortunate that more gold is not to be discovered on the surface of the planet, because no other metal is equally available for use as money.

One naturally asks how it has happened that any gold and platinum are found on the surface of the globe. The answer is very easy. Both of these metals are always discovered among rocks which have been upheaved by volcanic or other causes out of the interior of the earth. Platinum, which has only been found in abundance near the Ural Mountains, comes from serpentine, a rock thrown up from the depths. Gold occurs chiefly in quartz veins. When the earth was contracting, great cracks were formed, and these were filled from below by the action of hot springs or otherwise with gold-bearing quartz. Occasionally this quartz contains so large an amount of the metal that the vein is called a "bonanza."

But such deposits are soon worked out and fresh regions must be resorted to for supplies of gold. Thus the available mines of the world are being rapidly exhausted. They are usually discovered at the extreme limits of civilization. In ancient times gold was obtained abundantly from the rivers of Asia. The sands of Pactolus, the golden fleece secured by the Argonauts, the yellow metal of Ophir, the fable of King Midas, all illustrate the eastern origin of gold. Alexander the Great brought nearly $500,000,000 of gold from Persia. Gold also came from Arabia and from the middle of Africa by way of the Nile. But all of these famous sources of supply were long ago exhausted.

Likewise Brazil, which only a century ago was the richest of gold-producing countries, has now ceased to be largely productive. The total output of the metal from that part of the world from the end of the sixteenth century until now is estimated at $700,000,000. All the famous gold coast of Africa does not at present yield as much as $400,000 a year. Yet the dark continent was formerly noted as the country of gold. Mummies have been numerously found in Egypt with massive necklaces and other ornaments of the metal. Herodotus tells us of a king who loaded his prisoners with golden chains, that substance being more common than bronze. Copper was even worn for ornament in preference to gold. The treasures brought by the Queen of Sheba to Solomon's Temple must have been of enormous value. Since the year 1500 Africa has produced about $800,000,000 worth of gold; but the supply is nearly used up now.

The supplies of gold drawn from the United States are steadily diminishing. It is the same way with Australia, which has yielded for the world's use about $1,360,000,000 worth of the metal. Not less than $7,000,000,000 of gold has been dug in all countries since Columbus discovered America, four hundred years ago. The amount is vast, but to produce it seems to have pretty nearly used up the available deposits. The time is nearly approaching when the yellow metal will be hoarded much more than it is at present, and we may reasonably expect that it will attain before many centuries are past a value several times greater than that which it now possesses.

Mr. BRODERICK. Owing to the manifold and wonderfully improved machinery for mining and smelting there has been a slight increase of production of gold for the last few years, but all the authorities concede that there has been a substantial decrease in the world's production since 1860, while its consumption in the arts has been enormously increasing. Indeed, most, if not all, of the annual product is now consumed in the arts.

Some are frank enough to admit that with the constantly expanding commerce there is not sufficient gold to transact business and settle balances. Yet in the face of these facts and concessions the income classes are everywhere exerting themselves to diminish the currency and to increase the value and purchasing power of their money. Should the silver law be unconditionally repealed gold will appreciate and the price of all other properties and commodities will depreciate.

It is impossible to say just how much money should be in circulation because it depends on many conditions. We do know that the volume of money is now insufficient. But it is said that after the repeal of the Sherman law the demands for an increasing circulation will be met by allowing the State or National banks to issue currency. If this is the plan, then you propose to destroy the great mining interests of the country, upon which millions of people are in some way dependent, to help a class that is amply able to help itself. You foster and perpetuate a system which has served its purpose: a system once useful, but for which better methods for supplying the country with paper money have been devised—the issuing of legal-tender notes by the General Government based upon gold and silver.

The gentleman from Ohio [Mr. HARTER] said the other day on this floor, with much earnestness, that the Sherman law was passed by a Republican Congress and approved by a Republican President. I am glad the law was so passed, but hardly think the statement of the gentleman will be accepted by the country as a good reason for its repeal. It was the best measure which could then be enacted, and is infinitely better than anything this Congress will do toward bimetallism. The vice is not so much in the law as in the execution. When, a few months ago, the New York bankers organized to deplete the Treasury of gold through the presentation of Treasury notes, had the Secretary of the Treasury redeemed each obligation by paying one-half in gold and one-half in silver, as the law clearly authorized, the run would have been discontinued in twelve hours.

Mr. Speaker, this contest will not be settled here at this time. The question of whether we shall continue the use of the two precious metals as money is one of the most momentous issues now before the country. It is a question in which all classes, especially the industrial and debtor classes, are intensely interested. It was obscured during the last political campaign, except in a few States, but it can not again be thrust aside and hidden from view.

No man could have been elected President in 1892 on a public declaration of the doctrine announced in the late message. The people are in earnest and will not again be deceived. They are now beginning to read and understand the signs of the times, and when they witness, as they may in this land of ours, the setting up of the "golden calf" and hear the edict from the supreme authority to worship at its shrine, discussion will be renewed at every fireside, organization will follow, the golden image will be hurled from its pedestal, and political leaders who have deceived the people will be driven from their places as the money-changers were driven from the Temple. [Applause.]

Mr. CLARK of Missouri. Mr. Speaker, to demonetize or not to demonetize silver is the question that now confronts us. We might as well recognize the truth and look it squarely in the face. There is no good to come of beating about the bush. There is no sense in whipping the devil around the stump.

No subterfuge, no sophistry can delude the people on this momentous subject. The issue is squarely joined. There is, there can be, no misunderstanding about it. From utterances, public and private, here, from articles in current magazines and periodicals, we know that it is the remorseless purpose of a minority of this House to utterly destroy silver as a money metal, while a majority of us are determined to restore it to its place of ancient honor, usefulness, and beneficence in the coinage of the country. [Applause.]

There can be no straddling, no dodging, no foraging between the lines, and no fence riding in this fierce contest.

He who is not with us is against us. [Applause.]

The newspapers say that the monometallists have hoisted the black flag and will give no quarter. Be it so. We double-standard Democrats, knowing that we are standing on the Democratic platform, and all of it—not on one sentence wrenched from its context—and realizing that our cause is righteous, propose to faithfully and steadfastly represent the people who sent us hither.

The Western Democracy says to the legions of the single gold standard:

Come one! come all! This rock shall fly
From its firm base as soon as I.

To demonetize silver is practically to confiscate one-half of all

the property in the United States; to double the difficulty of every debtor in the land to meet his obligations; to cause stagnation in every branch of business except clipping nontaxable gold coupons off of nontaxable gold bonds; to carry ruin, pauperism and misery into one-half the homes between the two oceans. Then shall be fulfilled that scripture which says:

Whosoever hath not, from him shall be taken away even that he hath.

CARLISLE'S EVIDENCE.

I will quote to you words stronger than any my tongue can fashion—words from a man whom from my youth up I had regarded as an ideal statesman—a man whose genius and eloquence to a large extent educated the people of this country into a thorough detestation of the high protective tariff system—a man whose speeches have been used as a text-book to win voters to correct political opinions—a man whom millions of his fellow-citizens had fondly hoped to see President of the Republic—Hon. John Griffin Carlisle, now Secretary of the Treasury. In 1878, when a Representative in Congress, on this floor, on the question of demonetizing silver, he used this remarkably vigorous language:

According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the same moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

Those were words fitly spoken, and are like apples of gold in pictures of silver. When a monument is erected to his memory there should be inscribed upon it that prophetic utterance as his noblest epitaph.

Shakespeare says:

To gild refined gold, to paint the lily,
To throw a perfume on the violet,
To smooth the ice, or add another hue
Unto the rainbow, or with taper-light
To seek the beauteous eye of heaven to garnish,
Is wasteful and ridiculous excess.

And really to undertake to add anything to the forceful and truthful words of the great Kentuckian is a work of supererogation. They sank deep into the minds of the Western and Southwestern people, and have contributed largely to give hearts of oak to those who under all vicissitudes have loyally fought under the double standard bequeathed to us by the Fathers of the Republic as a portion of our priceless heritage. The people—oh, the people! have wonderful memories, and they still fondly cherish those words as containing a truth of portentous import.

THE PLATFORM.

I am a Democrat. I stand by the platform—by all of it—by every jot and tittle of it; because I believed in it with my whole heart when it was made and I believe in it with my whole heart now. It contains the Democratic gospel pure and undefiled. Over no political utterance did I ever rejoice more than over that, because it was not a Janus-faced, double-dealing, good Lord, good devil, all things to all men sort of document, but was a clear, bold, honest, manly, masterful, comprehensive declaration of Democratic faith. From a hundred rostrums, in the presence of high Heaven and thousands of intelligent, law-abiding, industrious, God-fearing, patriotic people, I pledged myself to stand by it here, and, come what may, I am going to keep my word.

The main planks in that platform are tariff for revenue only and bimetallism, in all which those terms imply. It means that, or the English language has no significance whatsoever. It promised the people unlimited coinage of both silver and gold.

Mr. TRACEY. Not in the platform.

Mr. CLARK of Missouri. Yes, sir.

Mr. TRACEY. No, sir.

Mr. CLARK of Missouri. And that they shall have, if my vote will give it to them. [Loud applause.]

Mr. LANE. We will join you.

Mr. CLARK of Missouri. Mr. Speaker, it is an old saying that all things are fair in love or war, and some people appear to believe that anything is fair in politics. I dissent *in toto* from any such immoral doctrine. The people have a right to honest treatment at the hands of those who aspire to be their agents in public affairs, and to the man who betrays them they will send the silken bowstring for his own destruction. [Loud applause.] It is my solemn conviction that the man who will deceive the people to obtain an office will desert them when in office.

I reiterate the proposition—and it can not be repeated too often—that the Chicago platform proclaimed to all the world that we are in favor of cutting the tariff to a strictly revenue basis, and in favor of bimetallism; and let me tell the single gold standard Democrats that if the people west of the Alleghenies had not believed that both of those things would come about there would now be no Democratic Congress to pass a money bill and no Democratic President to sign one. [Loud applause.] The people knew what they wanted, and they thought they knew what they were getting. [Laughter and applause.] Shall they have it, or shall they not?

Will we redeem the solemn pledges made by tongue and pen to the people and be considered their benefactors for ever, or will we violate our vows and have pronounced upon our heads their anathema maranatha? Will we restore happiness and prosperity to the land and read our history in the nation's eyes, or will we be the instruments in creating universal bankruptcy among the people who have committed to our hands a sacred trust?

These questions I press home upon the mind, heart, and conscience of every Democrat upon this floor.

An illustrious statesman once said, and I commend the wisdom of his words to all men of all parties: "You can fool part of the people all the time; you can fool all the people part of the time; but you can't fool all the people all the time."

The seventh section of the Chicago platform verbatim runs in these words:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

That is the last authoritative Democratic utterance on the subject of finance, and it appears to me to mark out a path so plain that even the wayfaring man, though a fool, can not err therein.

That is the platform; and what is a platform any way? Is it an honest declaration of principles which the framers honestly intend to enact into laws if they attain to power, or is it a dishonest device whereby to entrap the unwary voter? Is it a candid statement of the faith that is in us, or is it a bait to catch gudgeons?

Is it the plighted word of men of honor to accomplish certain things, or is it only "A good-enough Morgan" till after election, which palters with the people in a double sense—which "keeps the word of promise to the ear and breaks it to the hope"?

If the former, then Democrats are thoroughly committed to the same treatment for both silver and gold; if the latter, may God have mercy on us, for a duped and outraged people will not. [Applause.]

When going into the battle of Trafalgar, which was to establish his country's supremacy upon the seas, which was destined to write his name high up on the roll of English-speaking heroes, and which was to witness his own tragic but glorious death, Horatio Nelson, the most puissant spirit that ever rode the watery main, signaled his fleet, "This day England expects every man to do his duty." The world knows the result. As we go into this great financial Trafalgar, the producing sections of this land, bleeding at every pore from stabs of poisoned, protected stilettos, signal Congress, "This day America expects every Representative to do his duty." [Applause.]

If we do we will win such a victory for the prosperity and the happiness of the human race as has not been won since John Sobieski defeated the Turks under the walls of Vienna, and thereby saved this world from the baleful and heartless domination of the Mohammedans. [Applause.]

All this talk about the Democratic party going to pieces on the financial rock makes a lover of his country sick at heart.

With the whole force of my being I believe that it will live up to its promises and redeem its pledges. "Our friends, the enemy," need not lay the flattering unction to their souls that it is about to commit suicide by splitting into two warring factions. It can not, it must not, it will not. [Applause.] It is the great bulwark of civil liberty, and the only hope of constitutional government on the whole face of the earth. In its early days it drank at the fountain of perpetual youth; it will be living in pristine vigor when the youngest of us shall have moldered into dust, and it is destined, under God, to yet give the people centuries of honest, benignant, intelligent, and patriotic administration. [Applause.]

MISSOURI WANTS SILVER.

The gentleman from Maryland [Mr. RAYNER], who led the advance guard of the single gold-standard cohorts, seems to be har-

boring the delusion that nobody is interested in silver coinage except the silver-producers of the Rocky Mountain States and Territories. He might as well disabuse his mind of that hallucination at once and forever.

Missouri is an imperial Commonwealth. She is one of the greatest agricultural States ever formed by the hand of God. So far as is now known, she has not a paying gold or silver mine within her borders.

These are about the only good things with which she is not bountifully provided. [Laughter.] But she has what is far better than gold and silver mines. She has 68,500 square miles of land, the richest under heaven—on the surface rich in soil and beneath the surface rich in coal, marble, onyx, building stone, and all the baser useful metals. She produces in profusion wheat, oats, corn, cotton, pork, beef, mutton, fruit, and other commodities, which she exchanges for gold and silver, and her people want silver coinage for the following reasons: With all her accumulated wealth and her incalculable natural resources, she is still a debtor State. Her people believe that silver is one of the money metals of the Constitution; they believe that the experience of four thousand years has demonstrated it to be good money [applause]; they believe that it was corruptly and wickedly demonetized in 1873.

Having contracted debts under the double standard, they claim that they have the indefeasible right to pay them under the same standard; they deem it nothing short of robbery committed under the forms of law to have them doubled by act of Congress; they say that when they have mortgaged a farm for $5,000 to some Eastern company, their chosen servants have no right by hostile legislation to practically raise the mortgage to $10,000 [applause]; they believe that the financial paralysis and terror from which the country is now suffering have been produced by the twin evils of the high protective tariff and the constant contraction of the currency; and they declare that the clock has struck the hour when Congress should cease to legislate exclusively for what Mr. Blaine, for some unaccountable reason, denominates the nine industrial States. [Applause.]

AS TO IGNORANCE.

The gentleman from Maryland [Mr. RAYNER], in his impassioned address the other day, declared that our contention that gold and silver are the money of the Constitution is an argument constantly addressed to the ignorance of the country. That is certainly a refreshing sort of statement. It appears to me that somewhere I have heard before of persons who exploited their superiority over the remainder of mankind, and who stood on the street corners rolling their eyes to heaven and thanking God they were not as other people. [Laughter.] There are unquestionably a great many wise men in the East. [Laughter.]

That proposition can not be gainsaid; for Solomon lived there; Socrates lived there; Cato lived there; Lord Bacon lived there; and the gentleman from Maryland lives there. [Laughter.] But I beg leave to observe that living in the East and being in favor of a single gold standard do not necessarily make a man wise any more than living in the South or West and being in favor of the double standard prove his ignorance. The gentleman's assumption is a gratuitous insult to a majority of his fellow citizens.

I apprehend that if the gentleman from Maryland will pay a visit to the Mississippi Valley and extend his journey to the home of my friend from Colorado he will change his opinion somewhat touching the question of intelligence while he is wearing off his character of a tenderfoot. [Laughter.]

There is no imminent danger that wisdom will die with the men from the East. [Laughter.]

In his Commentaries, Cæsar divided all Gaul into three parts. If the imperial historian were alive and could witness the scenes enacted here, especially the airs of superior wisdom and honesty assumed by some of the gentlemen on the other side, he would change his text so as to read: "All gall is in one concentrated lump, huge, as high Olympus, and is found among the single gold standard Representatives in Congress." [Laughter.]

But I undertake to say that until the chief industry of the East came to be lending money the wisdom of the East was on our side, and that until the senior Senator from Ohio took a trip to Europe in 1867 every great statesman of this country, even in the East, had been a bimetallist. [Applause.]

It was one of the very few propositions ever agreed upon by Alexander Hamilton, the grandfather of the Republican party, and Thomas Jefferson, the chief priest, prophet, and apostle of constitutional liberty.

Let gentlemen think of that. It must furnish the gold-standard men ample food for reflection and give them pause. Whatever else may be said of Alexander Hamilton, he had more brains and more courage than any other man who ever fought democracy on this continent, and Thomas Jefferson possessed one of the most exquisite brains ever housed in a human skull. [Applause.] Anything political advocated by the great Virginian I am willing to swear by now. [Applause.] Hamilton recommended, in his celebrated report to Congress, that the unit of value should rest on both silver and gold, and gave his reason in these words:

> To annul the use of either of the metals as money is to abridge the quantity of the circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

He submitted the report to Jefferson, and that immortal statesman indorsed it in these words: "I return you the report on the mint. I concur with you that the unit must stand on both metals."

Hamilton, who was the original aristocrat in America—who advocated a vote based on property because the rich had, according to his view, the largest stake in the Government—he who furnished Republicans with their theories, their political chart and compass, and Thomas Jefferson, the father of Democracy, who looms up against the sky of history as the typical American President, who was the profoundest original thinker that ever devoted his life to statesmanship, who plowed his name deeper into the hearts and his political ideas deeper into the minds of men than any other man of whom history has preserved an authentic record—these men, antagonists, competitors, and enemies in their lives: antagonists, competitors, and enemies in history and even in their graves—they agreed that gold and silver both should constitute the unit of our coinage. It must have been plain indeed to induce those two bitter rivals and good haters to agree. An ignorant man—or even the distinguished scholar from Maryland—is in pretty good intellectual company when with Thomas Jefferson, to say nothing of Alexander Hamilton. [Applause.]

Aye, more. I state here and now, without the fear of successful contradiction, that until unhallowed greed combined with prostituted ingenuity to discover new ways of despoiling the many for the benefit of the few, no great financier of any age or clime can be named who seriously advocated a single standard, while on our side the roll call includes all the eminent political economists who ever lived. [Applause.]

Even Ernest Seyd repented of his sins and lived to become a bimetallist; but his disciples on this side the water, like Ephraim, are joined to their idol, and still stand by his discarded theory—which is only another illustration of the truth that—

> The evil that men do lives after them; the good is oft interred with their bones.

[Laughter.]

THE DISEASE.

The gentleman from Ohio [Mr. HARTER] likens our Uncle Samuel to a patient suffering from alcoholism, and prescribes the Gold Cure. That he is very sick is true, but Dr. Harter makes an incorrect diagnosis. He is suffering not from delirium tremens, but from anæmia—from poverty of the blood—from inanition—from a lack of the circulating medium. The gentleman's remedy for our uncle, who has been bled almost to death by the Shylocks for their pound of flesh, is to still further deplete the tottering and enfeebled old man by more bleeding. Like the horse leech's daughter, he still cries in the dull ears of the illustrious sufferer "Give!" "Give!" [Laughter.] He turns to the attending physicians and commands: "Whet your lance and plunge it into the old man's jugular vein!"

What this country needs is not Dr. Harter's Iron Tonic, but Dr. Bland's Silver Cordial. [Applause.]

THE PANIC AND ITS CAUSES.

The gentleman from New York [Mr. HENDRIX], who acknowledges that he is a Missourian by nativity, who is fortunate enough to be the president of a national bank, and who came to Congress by way of the East, draws a soul-harrowing and tear-compelling picture of the long-suffering and patriotic New York bankers standing in the breach after the manner of Leonidas at Thermopylæ and "holding up the financial system of the country by the neck." [Laughter.]

That is certainly a spectacle for men and angels.

The trouble is that they have had the business of the country by the neck until they have choked the breath of life out of its body [applause and laughter] and until the consuming desire of the great mass of the people is to break that same neck hold of Wall street. [Applause].

Speaking as one having authority, he curtly informs those who have the temerity to differ with him that they are advocating "infernal rot," "gibbering idiocy," "rank, staring, stark insanity," and "the height of midsummer madness."

These are rather harsh charges to prefer against the representatives of great constituencies sent to this Hall to legislate for a free people because they have the courage and fidelity to stand here and contend for their rights, Lombard street, Wall

street and "the old lady of Threadneedle street" to the contrary notwithstanding. [Applause.]

He repeatedly told us that the monetary evolutionary processes which God set in motion had evoluted every civilized nation except ours into the single gold standard, and would in a few days evolute us into the same condition of ineffable felicity. [Laughter.]

Now, I never was much of an evolutionist, and have always preferred Moses to Darwin; but after listening to the gentleman's speech, I believe more firmly in the Pentateuch than ever—for if the summum bonum—the chef-d'œuvre—the ultimate result—the highest product of all the evolutionary process is a Wall street gold bug, then the evolutionary process has been of little benefit to the human race. [Great laughter.]

According to his rather curious theory God Almighty—and not the Sherman law—is responsible for the condition that involves the globe to-day and is therefore presumably in favor of the gold standard.

I have in my time witnessed divers attempts to unload many of the errors, sins, and follies of men upon the Creator; but to ask rational beings to believe that He is the author of the direful calamities now oppressing mankind, and that he is sponsor for the single gold standard is certainly taxing human credulity to its utmost limit. [Applause.] In the absence of a revelation on the subject, and considering all the circumstantial evidence in the case, it looks as though He were on our side; because He is always on the right side. [Applause.] And because in the beginning, in His infinite wisdom, He so distributed the precious metals throughout the world that after six thousand years of ceaseless human endeavor the quantities of gold and silver in circulation are almost precisely the same. [Applause.] Is that a mere accident? or was not the omnipotent finger of Almighty God visible in it from the first? There is, there can be, but one answer. He created man and woman to go in pairs, and bade them "Go forth, be fruitful, multiply and replenish the earth." With alacrity has that command been obeyed. [Laughter.] He also created silver and gold to go in pairs, and sent them forth on the mission of propagating, multiplying, and replenishing the business of the world. Nobly have they discharged that duty, and of them, as of the bride and bridegroom at the marriage altar, may it be appropriately said: "Whom God hath joined together, let no man put asunder." [Applause.]

But we are dogmatically told that these metals which have been the faithful servants of humanity from a time whereof the memory of man runneth not to the contrary must now, after being lawfully wedded for sixty centuries, be divorced at the behest of England, the bully and freebooter among the nations of the earth.

I beg gentlemen to remember that just so certainly as our mania for divorce between husband and wife is sapping the foundations of our social and moral fabric, just so surely will the divorce of gold and silver sap the foundations of our business fabric and cause the temple of our prosperity to topple to the dust. The gentleman assumes the role of prophet, and exhibits to us the happiness and glory in store for us if we vote with him, and the infamy and execration to which we are heirs if we vote as our constituents desire us to vote. Indeed, all the gentlemen on that side of the question indulge liberally in prophecies. They call to mind what Charles Dickens says of David Copperfield's sitting night after night under the gallery of the House of Commons, "recording predictions that never came to pass, prophecies that were never fulfilled, and explanations that were only meant to mystify." [Laughter.]

He tells us that the panic was brought about, not by reason of the Sherman law, but because the Anglo-Saxon race has overdone the business of production. But he offered no remedy for the evil. The Anglo-Saxons are an industrious, ambitious, thrifty stock; but what would he have them do—stop the plow in the furrow, the sickle in the swath, and the mill in its grinding? That is decidedly rough on people who want to work, who know how to work, and who find their chief delight in work in the sweet hope of making pleasant the lives of their children.

But if the panic in the United States is chargeable to the overproduction of Anglo-Saxons, how does it happen that it came on first in the South American republics, where few Anglo-Saxons find an abiding place, and where Spanish-Americans constitute the bulk of the population?

He draws a graphic picture of how the money kings of Lombard street in London will jeer and hoot at us when they read of the four proposed ratios and what he is pleased to term the omnibus in which all can ride. Let them jeer and hoot till the crack of doom. I thank God my allegiance is not to the money changers of Lombard street, but to one hundred and seventy-eight thousand toiling freemen in the great State of Missouri. [Applause.]

He professes himself an international bimetallist, and wants silver coinage postponed to a more convenient season, ignoring the fact that hope deferred maketh the heart sick. He desires us to wait and follow England, France, Germany, Russia, Austria-Hungary, Italy, Spain, Holland, Portugal, Switzerland, and all other countries; that is to say, that America, the richest nation under the sun, producing 28 per cent of all the gold and 41 per cent of all the silver of the world, shall patiently and meekly wait, cap in hand, till every eight by ten kingdom and principality in Europe shall give her permission to lift up her lusty voice in the business affairs on which the happiness and prosperity of all her people depend. The masses of the United States—the men who produce the wealth and not the men who grow rich by levying tolls from wealth passing through their hands—do not love the practices or the practitioners of Lombard street.

The day has surely come at last when this Republic should lead and not follow in the procession of the nations, and if that day has not already dawned may God speed it in its coming. More than one hundred and seventeen years ago this country, then a feeble infant, declared its political independence of all the world, and some people have the audacity to believe that she, having grown to colossal proportions, should declare her financial independence and be free indeed. [Applause.]

And suppose that we completely remonetize and rehabilitate silver and England cuts our commercial acquaintance—what then? It would inevitably give us control of the commerce of every silver-using country on the globe—France, India, China, Mexico, the Central American States, and the Republics of South America—which would more than compensate us for the English trade. [Applause.]

Gentlemen talk as though Europe bought our wheat, corn, pork, cotton, and beef because they love us. That is not true. They are hungry and they must eat. They are naked and must be clothed. That is the reason they buy our stuff. [Applause.]

The gentleman lauds Thomas H. Benton for facing his own party on a question of ratios in 1834, and prays for some other man to rise up in the Mississippi Valley and make himself great by imitating the heroic example of "Old Bullion." Thomas H. Benton was a great man and formed one of the quadrilateral of the greatest statesmen who have at any one time appeared together in the Senate of the United States. His splendid fame constitutes one of the most valued treasures of Missouri and of the Republic. I hope some day to see his effigy in Statuary Hall, but it is not advisable for Representatives here to follow blindly his example in all things, unless they would enter the pathway which leads to political death.

Virgil says, *Facilis descensus averno*—easy the road to destruction—and so the haughty, belligerent, imperious Benton found it to his everlasting undoing. The awful catastrophe of his career should be a warning to all who hear me this moment. In an hour fatal to his success he peremptorily refused to obey the instructions of the Missouri Legislature as to his vote on a certain vital measure pending in Congress, and he fell, like Lucifer, never to hope again. I have no sort of doubt that if the departed dead take cognizance of the affairs of this lower world, and Benton could speak to us this day, his advice to Representatives would be, "Stand by your constituents—*vox populi, vox Dei*—the voice of the people is the voice of God." [Applause.]

This panic is a monstrous crime against the prosperity and happiness of the American people. [Applause.] It is purely fictitious—absolutely without foundation, except for the insatiable greed of the men who have planned and manipulated it to fill their coffers with ill-gotten gains. They have overdone the thing. They wanted a scare and squeeze to accomplish their nefarious purposes; but they did not want it to assume its present proportions. They started it, but they could not guide it. They sowed the wind, and they are reaping the whirlwind. They have realized the truth of the old dictum that wicked inventions sometimes return to plague the inventors. They are in the condition of the philosopher who took a few pieces of wood, leather, and iron and made him a devil, and after he had made him discovered that the devil controlled him, instead of his controlling the devil. [Laughter.]

WHY THE WEST WANTS SILVER.

The people of the West want silver money at the old ratio of 16 to 1 [applause], because they want more money; and they want more money because they need it in their business and in the development of their illimitable resources.

There is not enough gold in the world to furnish money enough for its necessities. Everybody admits that. You must use silver or some substitute. You can not get around it.

All the political economists are agreed that the prosperous condition of a country is where the volume of currency is gradually increasing, and that where the volume of money is either stationary or decreasing, business stagnates and the wheels of progress cease to revolve.

David Hume puts it this way:

It is certain that since the discovery of the mines in America industry has increased in all the nations of Europe. * * * We find that in every kingdom into which money begins to flow in greater abundance than formerly, everything takes a new face; labor and industry gain life, he merchant becomes more enterprising, the manufacturer more diligent and skillful, and even the farmer follows his plow with more alacrity and attention. * * * It is of no manner of consequence with regard to the domestic happiness of a state whether money be in greater or less quantity. The good policy of the magistrate consists only in keeping it, if possible, still increasing; because by that means he keeps alive a spirit of industry in the nation and increases the stock of labor, in which consists all real power and riches. A nation whose money decreases is actually at that time weaker and more miserable than another nation which possesses no more money, but is on the increasing hand.

William H. Crawford, Secretary of the Treasury, in a report to Congress, dated February 12, 1820, says:

All intelligent writers on currency agree that when it is decreasing in amount, poverty and misery must prevail.

Mr. R. M. T. Hunter, in a report to the United States Senate in 1852, says:

Of all the great effects produced upon human society by the discovery of America, there were probably none so marked as those brought about by the great influx of the precious metals from the New World to the Old. European industry had been declining under the decreasing stock of the precious metals and an appreciating standard of values; human ingenuity grew dull under the paralyzing influences of declining profits, and capital absorbed nearly all that should have been divided between it and labor.

But an increase of the precious metals, in such quantity as to check this tendency, operated as a new motive power to the machinery of commerce. Production was stimulated by finding the advantages of a change in the standard on its side. Instead of being repressed by having to pay more than it stipulated for the use of capital, it was stimulated by paying less. Capital, too, was benefited, for new demands were created for it by the new uses which a general movement in industrial pursuits had developed; so if it lost a little by the change in the standard, it gained much more in the greater demand for its use, which added to its capacity for reproduction and to its real value.

The mischief would be great, indeed, if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than one-half; and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race.

I could pile up authorities for a week; but they are all to the same effect and these must suffice.

Why will we not accept the conclusions of men who have probed financial problems to the bottom? It is said that experience is a dear school, but that fools will learn in no other.

Gentlemen on the other side admit that there is not enough money in the country, for they rejoice with us that gold is now returning to this country; they try to make us believe that the annual output of gold available for coinage is constantly increasing, and they ask us to join them in passing a law authorizing the national banks to issue bills up to the full limit of the par value of the bonds on deposit.

The first source of increase which they suggest—the return of gold from abroad—may or may not be permanent: the second source of increase, the growing annual output of gold available for coinage, is without basis of fact, as conclusively demonstrated by the gentleman from Utah last Saturday; and as to the third source of increase—the leave to the national banks to issue more bills—we are not particularly enamored of the idea of placing ourselves absolutely at the mercy of the national banks and give them power to expand and contract the volume of the currency at will. [Applause.]

And at best this proffered increase of the national bank circulation is a delusion and a snare, because it is a historic fact known of all men that they will not issue notes up to the 90 per cent limit as they can now do under the present law.

These gentlemen stand here day after day and assert that nobody wants silver money, and that nobody will have it. Nothing could be further from the truth. The people take it; the people use it; the people love it. All that ever was the matter with silver is that people could not get enough of it. [Applause.] A silver dollar will buy as much of the necessaries or luxuries of life as a gold or paper dollar, and if it had been fairly treated by the Secretaries of the Treasury it would be this day at par, and even above par, as it was in 1873. Give us unlimited coinage of silver even at the old ratio of 16 to 1 and it will at once jump to its old position, side by side with gold. If France, with a much smaller population, territory, and business than we have, can sustain and uphold seven hundred millions in silver at the ratio of 15½ to 1, certainly, with our growing population, with our expanding business, with our undeveloped territory, we can maintain at the ratio of 16 to 1 all the silver we are likely to have.

THE CRIME OF 1873.

The history of silver can be briefly told. From the days when Abraham fed his flocks and herds on the plains of Palestine gold and silver both had been the money of commerce and of civilization until 1873, when the silver dollar was surreptitiously struck from the coinage of the country by legislative legerdemain, by a Machiavelian trick, by a confidence game that would put to blush the boldest three-card monte man upon the plains, by a species of juggling that would cause the most expert Japanese artist to turn green with envy. [Laughter.]

From that day to this there has been nothing but trouble, turmoil, vexation of spirit, crimination and recrimination on the money question. There never will be until the people get their dues.

That was the most astounding piece of legislation ever enacted in any civilized country since the morning stars first sang together. So far as can now be ascertained, nobody demanded it, and only a small and select coterie knew that the silver dollar was demonetized until some months after the fell deed had been accomplished. Such men as Allen G. Thurman, James G. Blaine, WILLIAM M. STEWART, James A. Garfield, DANIEL W. VOORHEES, William D. Kelley, Ulysses S. Grant, and others of high character must be believed when they solemnly asseverate that they did not know that that infamous bill, with the innocent title of "Regulating the Mint," struck down one-half the money of the world.

To this day no man has ever given a cogent or satisfactory reason for that unparalleled act of confiscation—for that is precisely what it was—bald, heartless, wicked confiscation; for, let it never be forgotten that at the identical moment when that bill was passed the silver bullion in a silver dollar was worth 103 cents in gold. [Applause.]

It was not a "dishonest dollar" then, it was not a "fiat dollar" then, it was not a "60-cent dollar" then, as the gentlemen claim it is now. Pass a law to put it back where the conspirators of 1873 found it, and it will rise to par again, and constitute the mainstay of the Government and the people in every crisis of their fate.

True, silver has apparently gone down since then, but everything else that our farmers have to sell has gone down with it. In 1872 wheat sold at $1.47 per bushel, and now it sells at about 50 cents per bushel. And the following table tells the remainder of the sad, sad story:

Year.	Wheat.	Cotton.	Silver.	Year.	Wheat.	Cotton.	Silver.
		Cents.				*Cents.*

All other farm products have gone down in about the same proportion. Whatever the farmer has sold he had to sell in the open markets of the world in competition with the pauper labor of Europe, Asia, Africa, and the islands of the sea, and whatever he bought he was compelled to buy at prices fixed at abnormally high figures by our stake-and-rider tariff. No wonder he is discontented, disconsolate, and determined to find a remedy.

But, as a matter of truth, has silver actually fallen, or has gold been forced up to a premium by skillful manipulation? Unquestionably it is the latter, for every product of farm, mine, shop, or factory that has been unaided by friendly class legislation has kept pace with silver, and the bullion in a silver dollar will purchase as much of almost anything as it would when it was dishonored in 1873.

The gentleman from Ohio [Mr. HARTER] asked the other day, "What about pork?" I think I can answer that. A year or two ago, as gentlemen from Kansas, Iowa, Nebraska, and Missouri will bear me witness, the corn crop was such a failure throughout all the corn States that the farmers had little or nothing on which to winter their swine, and they shipped nearly all their hogs, including even their breeding stock, whether fat or not, to market, and ever since the country has been decidedly short on hogs. That is all there is of the exception to the rule of downward prices, so far as hogs are concerned, and which the gentleman paraded here as an argument to prove that silver had lost its purchasing power. But let him make a note of the fact that a silver dollar will buy as much pork as a gold dollar any day in the week.

The demonetization of silver helped nobody except those owning Government funds, and it injured everybody else.

The act of 1873 produced incalculable bankruptcy, suffering, and sorrow throughout the land—particularly in agricultural States. The people were aghast at the sudden and awful ruin which so unexpectedly came upon them.

For example, a man who owned $25,000 worth of property and owed $10,000 on it and was therefore worth $15,000, went to bed at night happy in the belief that he was comfortably fixed financially and awoke next morning to find himself a pauper—for so

great had been the fall in prices that his $25,000 worth of property when sold under the hammer would not bring enough to pay the ten thousand of his debt.

Hundreds of thousands of as honest and industrious men as ever lived found themselves beggared and their wives and children homeless and shelterless by the most diabolical act ever placed upon a statute book. And though twenty long, wearisome years have rolled over their heads since then, tens of thousands of them suffer from it yet, and will continue to suffer from it until they are placed under the sod.

The wasting by fire and sword of the Palatinate, the black ruin wrought by the Duke of Alva in the Netherlands, the devastation of the Napoleonic campaigns, the Thirty Years' War in Germany, the seven years' war which the mighty Frederick waged against all Europe in arms for the possession of Silesia, the Crusades for the redemption of the Holy Sepulchre, the wars in which Marlborough broke the power of Louis XIV—none of these singly, nor all of these combined, caused as much loss of property and entailed as much suffering on the children of Adam as the crime of 1873. It laid its paralyzing hand on every human being throughout the whole civilized world who was not possessed of a fixed income or who was not loaded down with gold-bearing government securities.

There has been no era of genuine prosperity in this country since. The Bland act helped a little, and the energy of the American people, being unconquerable, has sometimes forced a seeming prosperity; but the trend of prices has been constantly downward, which, according to all political economists, is an infallible sign of the sinking fortunes of a nation; and there will never be any substantial, permanent prosperity in this country until the people are furnished a volume of money adequate to their commercial wants, growing with our growth, increasing with our population.

An old legend ran:

> While stands the Coliseum, Rome shall stand;
> When falls the Coliseum, Rome shall fall;
> And when Rome falls—the world.

To this poetic prophesy, long since fulfilled, I will add in sober prose: "When the American farmer is impoverished and the American laborer can not find remunerative employment, the very lifeblood of the Republic is being sucked from its veins." [Applause.]

[Here the hammer fell.]

On motion of Mr. BRYAN, Mr. CLARK'S time was indefinitely extended.

Mr. CLARK. I thank the gentleman and the House.

WHO ARE THE REPUDIATORS?

The gentlemen of the single gold standard melt and dissolve in tears when they consider the bare possibility of bondholders being paid in what they flippantly denounce as the 50-cent dollar; but they have no bowels of compassion for those who, if the single standard prevails, will be compelled virtually to pay two dollars for every one which they promised to pay.

The truth is that we are advocating honesty and justice, and they are advocating rank injustice and extortion committed under the guise of law. [Applause.]

They declaim grandiloquently about upholding national honor and about the sanctity of contracts. They charge us with being repudiationists. Now, who repudiated the contract, the bondholders or the people? What was the contract? How was it nominated in the bond? It was expressly provided that they should be paid in "lawful money"—which meant gold, silver, or paper; and this was just, for their owners paid for them in paper money worth 40 cents on the dollar. Then, after the war was over, and they had the bonds securely locked up, under the pretext of "strengthening the public credit"—that is the way they put it—not of "strengthening the bank account of the bondholders" [laughter], which is the way it ought to have been put—they induced a supple Congress to repudiate the contract with the people and to make the bonds payable in coin. That was step number one to rob the people. That was bad enough in all conscience sake. But worse was to follow. They by fraud induced Congress to pass the act of 1873 demonetizing silver, thereby making payment in coin mean payment in gold.

Again, I ask who broke faith? Who repudiated the contract? The people or the bondholders?

What was the result of these changes? It meant that it took from the people in way of taxes two horses, two cows, two sheep, two hogs, two bushels of wheat, corn, oats, barley, or flax, where one was taken before; it meant two blows of the axe, maul, sledge hammer, or pick where one sufficed before; it meant two drops of sweat wrung from the brow of labor where there was one before; it meant less food, fewer clothes, less time for study, poorer shelter, less leisure, and less enjoyment to every man, woman, and child in this broad land who works for a living. [Applause.]

It means that after the people have been taxed nearly to death for thirty years to pay the public debt, and after paying two-thirds of it, they practically owe more of it than they did when they began to pay it. It is only a repetition of the story of the Sybilline books.

Solomon says:

> There are three things that are never satisfied, yea, four things say not, It is enough: the grave; and the barren womb; the earth that is not filled with water; and the fire that saith not, It is enough.

If he were writing his Proverbs now he could add a fifth thing that is never satisfied—the holder of American bonds.

If we obey their behests and enact the additional legislation, in a hundred years the people will be reduced to the wretched condition of Russian serfs or Mexican peons, and the bondholders will have all the money in the country; for, as old Jim Craig, of St. Joe, was wont to say: "When a dollar goes down into their capacious pockets the eagle on it sings, 'Farewell, vain world, I'm going home!'" [Laughter and applause.]

The national banks are heard here and get what they want. The tariff barons are heard here and get what they want. The self-constituted and multiform boards of trade are heard here and get what they want. The bondholders are heard here and get what they want. The great corporations are heard here and get what they want. The Army and Navy are heard here and get what they want. The subsidized steamship mail companies are heard here and get what they want. These can always offer a reason which carries instant conviction with it. But when the farmers of the country, through their representatives, prefer a request that they be not totally ruined, they are told to work more and talk less. When millions of honest laborers ask Congress to so order things as to give them the poor privilege of having a chance to toil, they are denounced as tramps and vagabonds. [Applause.]

For thirty-two years the legislation of this country appears to have had one end in view—that of building up a moneyed aristocracy, the very danger which the fathers of the Republic foresaw, against which they warned us, and from which Jefferson thought he had saved the country, when he abolished the law of primogeniture. This course bodes no good to the Republic. Truly did Goldsmith say:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates, and men decay.
> Princes and lords may flourish or may fade—
> A breath can make them, as a breath has made;
> But a bold peasantry, their country's pride,
> When once destroy'd, can never be supplied.

AS TO POPULAR DELUSIONS.

We have during this debate heard many sneers at "popular delusions." The single standard advocates roll that phrase as a delicious morsel under their tongues. They may learn to feel the power of popular fury.

At the beginning of the French revolution the people sent up a cry for bread that has sounded down the ages. An upstart aristocrat responded: "Let the people eat grass!" Then came the *dies iræ*—the day of wrath—at whose awful scenes the world still shudders. May a merciful God lead us into more pacific and prosperous paths! [Applause.]

"Popular delusions!" Those are sonorous words. We are gravely told by the single-standard gold men that the people do not know what is the matter with them, can not understand what is destroying them, do not know what they want, and must rely for information entirely upon the leaders of the other side. That would certainly be repeating the ancient and futile performance of going to a goat's house for wool.

Now, the average American citizen may not be much of a political economist or logician. He may not know a syllogism when he sees it, and can not, in technical terms, distinguish a major premise from a minor; but nevertheless, in his own homely way, he reasons a great deal more than he gets credit for. He knows when he is hurt and when his business is crippled. [Applause.] He understands that when, after toiling sixteen hours a day through summer's heat and winter's cold, and after practising the severest economy, he can not at the end of the year make buckle and tongue meet, there is something radically wrong and that "something is rotten in the state of Denmark."

He may be afflicted with "popular delusions," but when he can not, in 1893, sell for $50 per acre a farm which in 1872 cost him $100 per acre, he will search for the authors of that unpleasant phenomenon, and punish them when found. His weapon is the ballot, which, in the hands of resolute men, is more effective than shot and shell and Krupp's big guns. [Applause.]

And it is the toilers of the country—the farmers, the mechanics, the merchants, the shopkeepers, the wage earners—rather than the boards of trade that finally make up the sum total of that public opinion against whose "pitiless peltings" the gentleman from New York warned us last Saturday. The bulk of the people are not much in the habit of memorializing

Congress, but they are much in the habit of thinking and of voting. [Applause.]

The leaders in the cities express their opinions through the metropolitan press by resolutions of all sorts of boards and by pamphlets galore. The great body of the people, the wealth creators, are not heard from in any such way; but as certain as God reigns in heaven, they will discover a way to make their voice penetrate even to this Hall.

"Let the people eat grass!" quoth the pampered lackey of Louis XVI, who lost his head upon the block.

"The people be damned!" shouts William H. Vanderbilt, whose father laid the foundations of a more than princely fortune by selling root beer at 3 cents per glass.

"Popular delusions!" exclaims the gentleman from Tennessee, whose sudden conversion eclipses that of Saul of Tarsus, as he journeyed down from Jerusalem to Damascus. [Laughter and applause.]

Over against these ejaculations I would place for our instruction the words of the foremost man of all this world. On a celebrated occasion Queen Victoria thought to overawe William E. Gladstone by saying: "Do you know who I am? I am the Queen of England!" To which the great commoner answered: "Madam, do you know who I am? I am the people of England!" [Applause.]

No wonder he is universally known as the Grand Old Man.

If gentlemen do not believe that the people have opinions and know how to make them effective, let them recall the consequences of the act of 1873 and the financial crash which it precipitated.

The first political fruit was the election of William Allen to the governorship of Ohio in 1873—the first Democratic governor that Ohio had had since 1853. The resurrection of one from the dead would not have astonished the country more. So unexpected was it—so utterly impossible did it seem of performance—that the morning after the election all the Cincinnati papers announced in a perfunctory sort of way that Governor Noyes and the entire Republican ticket were elected by the usual majorities; but when the rural districts were heard from, "Old Bill," as his followers loved to call him, was found to have won the great handicap by a length.

Then followed the tidal wave of 1874, which sent a Democratic majority to this House, which landed Michael Kerr, of Indiana, in the chair where you now sit, Mr. Speaker, and which for the first time in a generation gave Massachusetts a Democratic chief magistrate.

Then, in 1876, came the election of Samuel J. Tilden to the Presidency; twice since then Mr. Cleveland has been sent to the White House; and finally, after the lapse of thirty-four years, we have an Administration Democratic in all its branches. [Applause.]

All these things found their mainspring in the protest of the people against the unpardonable sin of 1873.

In addition to these, the country has witnessed the rise and fall of the Greenback party, which was nothing more than an extreme protest against the foul performance of 1873.

We behold to-day another extreme protest in the Populist party, which at the last election polled a million votes, which returned eleven Representatives to this House, which sent four United States Senators to the other end of the Capitol, and which stands here, vigilant, alert, courageous, and aggressive, ready to take advantage of any blunder we may make.

The "pitiless pelting" of public opinion has been doing its perfect work, and will continue to do it until the wrong of 1873 is completely righted.

We have been repeatedly told by the single-standard men that this Congress has a golden opportunity. Verily, verily, it has. I thank them for that word. I profess myself an opportunist. One of the best beloved of my teachers was forever repeating to his pupils: "*Carpe diem*—seize the day!" This Congress has the opportunity to redeem the pledges solemnly made to the people, thereby placing the country upon the broad highway to lasting prosperity and of preserving Democratic honor bright as the spear of Achilles or the plowshare of Cincinnatus.

The great Irish orator, Charles Stewart Parnell, once said:

Opportunity is a horse, saddled and bridled, which stops at each man's threshold once in a lifetime. Be ready, mount, and he carries you on to success and honor. Pause but a moment, he is gone, and the clatter of his iron hoofs, echoing down the corridors of time, will forever remind you of what you have lost.

My Democratic brethren, the magnificent silver-white steed stands pawing impatiently at our gates. Let us vault into the saddle and ride him into the realm of unfailing prosperity amid the benedictions of a grateful people. [Prolonged applause.]

Mr. McLAURIN. The hour is now so late that I do not think it would be proper to have another speech to-night. I move, therefore, that the House adjourn.

The motion was agreed to; and accordingly (at 10 o'clock and 25 minutes p. m.) the House adjourned.

SENATE.

MONDAY, *August 21, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The VICE-PRESIDENT resumed the chair.

The Journal of the proceedings of Friday last was read and approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had agreed to the resolution of the Senate to print 6,000 copies of Herschell's Report on the Coinage of Silver in India.

The message also communicated to the Senate the intelligence of the death of Hon. William Mutchler, late a Representative from the State of Pennsylvania, and transmitted resolutions of the House thereon.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the Chamber of Commerce, of Cincinnati, Ohio, praying for the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented the petition of R. A. Vance, of Cross Timbers, Mo., praying for the submission to the States of an amendment to the Constitution providing that gold and silver dollars shall be made of equal value as legal tender; which was referred to the Committee on the Judiciary.

Mr. PLATT presented the petition of W. L. Folsom, of New Haven, Conn., praying for the passage of legislation providing fenders on wheels of railway cars; which was referred to the Committee on Interstate Commerce.

Mr. PLATT. I present a petition of citizens of Meriden, Conn., praying for the construction of a public building in that city. A bill for that purpose has already been introduced and referred to the Committee on Public Buildings and Grounds. I move that the petition be referred to that committee to accompany the bill.

The motion was agreed to.

Mr. LODGE presented a petition of the Boston (Mass.) Hardware Association and the petition of T. H. Buck & Co. and 14 other citizens of Chelsea, Mass., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were referred to the Committee on Finance.

Mr. CAMERON. I present a large number of petitions of business men of Philadelphia, Pa., indorsing the resolutions of the Trades League of Philadelphia, praying for the immediate repeal of the silver-purchasing clause of the so-called Sherman law. I move that the petitions be referred to the Committee on Finance.

Mr. CAMERON presented a petition of the Grocers and Importers' Exchange of Philadelphia, Pa., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

He also presented a memorial of Corry (Pa.) Grange, Patrons of Husbandry, remonstrating against the repeal of the so-called Sherman silver law unless provision is made for the free and unlimited coinage of American silver; which was referred to the Committee on Finance.

Mr. PEFFER. I present a petition, somewhat out of the usual order but yet perfectly respectful, coming from a body of men in the State of Illinois. The ages of the petitioners are here given. There are 85 persons whose names are on the petition and their ages range from 19 to 76; I should think the average is about 40 years. If the Senate will permit me, as the petition is quite brief, I will read it:

To the Honorable the Senate and House of Representatives of the United States in Congress assembled:

Your petitioners, citizens of Pleasant Ridge, Douglas County, Ill., and vicinity, are opposed to our present financial laws, and petition your honorable body to revise them. Please hear us: We are opposed to the issue of any more interest-paying bonds; we demand gold, silver, and paper money issued by the Government, and a sufficient amount for the best interests of the Government; gold to be a legal tender to amount of $300, after that 1 per cent discount; silver to be a legal tender to amount of $50, after that 1 per cent discount; paper money to be a legal tender for all debts in the United States. (If gold-worshippers want gold, let them buy it.) We demand a revenue and tax on all wealth to share the burden of expenses of the Government; we indorse our honorable ex-Presidents—Thomas Jefferson, Andrew Jackson, and Abraham Lincoln—as honest advisors; we advise a mark to be put on all traitors that are opposed to honest and just laws, and have them to take warning before it is too late.

Then follow the subscribers' names, their occupations, and their ages. I move that the petition be referred to the Committee on Finance.

The motion was agreed to.

Mr. PEFFER. I present a memorial of the Farmers' Alliance, of Cherokee County, Kansas, and a memorial of citizens of Marshall County, Minnesota, remonstrating against the repeal of the so-called Sherman silver law, unless a bill is passed providing

for the free coinage of silver. I move that the memorials be referred to the Committee on Finance.

The motion was agreed to.

Mr. PEFFER. I present a petition from a number of farmers who are engaged in the business of growing beets to be used in the manufacture of sugar. The petitioners reside at Anaheim, in Orange County, in the State of California. As the petition relates to so important a subject in connection with this new industry, and there are just two pages of it, I ask that the Secretary may be permitted to read it, and then that the petition be referred to the Committee on Agriculture and Forestry.

Mr. MORRILL. The rule about petitions is that a brief statement shall be made, and I think that nothing more is expected in any case. I therefore object to the reading of the petition because it would go into the RECORD and occupy a large space.

Mr. PEFFER. I did not understand the remark of the Senator from Vermont.

The VICE-PRESIDENT. There is objection on the part of the Senator from Vermont to the reading of the petition.

Mr. PEFFER. My request is that it be read, not that it shall go into the RECORD.

Mr. HARRIS. Everything goes into the RECORD that is read from the Clerk's desk.

The VICE-PRESIDENT. The Chair so understands.

Mr. HARRIS. The objection is fatal to the Senator's request.

Mr. PEFFER. Then let the petition be printed as a document, without reading. I want it in print for the information of Senators.

Mr. MORRILL. I do not object to its being printed as a document.

Mr. PEFFER. It contains some very valuable information.

The VICE-PRESIDENT. In the absence of objection, the petition will be printed as a document, and referred to the Committee on Agriculture and Forestry.

Mr. CULLOM presented a petition of the Lumbermen's Association of Chicago, Ill., praying for the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. PASCO presented a petition of the Fernandina (Fla.) Chamber of Commerce, praying for the speedy repeal of the purchasing clause of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented a petition of the Jacksonville (Fla.) Board of Trade, praying for the immediate repeal of the so-called Sherman silver law, and providing for the use of both gold and silver as the standard money of the country, and also praying for such legislation as will insure the parity of the two metals at all times; which was referred to the Committee on Finance.

Mr. SQUIRE presented petitions of citizens of Seattle and of the Chambers of Commerce of Tacoma and Everett, in the State of Washington, praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were referred to the Committee on Finance.

Mr. DUBOIS presented a memorial of the Shoshone Assembly, No. 3810, Knights of Labor, remonstrating against the enactment of a law providing for the coinage of silver at a ratio to gold of less than 16 to 1; which was referred to the Committee on Finance.

Mr. ALLEN presented petitions of the State committee of the People's party of Wyoming, and of the People's party county central committee of Hall County, Neb., praying for the free coinage of silver at the ratio of 16 to 1 of gold; which were referred to the Committee on Finance.

Mr. HANSBROUGH presented a petition of 44 citizens of Fargo, N. Dak., praying for the immediate repeal of the purchasing clause of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. POWER presented a petition of citizens of Cold Springs, Mont., and vicinity, praying that the Sherman law be not repealed unless a free-coinage bill be passed; which was referred to the Committee on Finance.

Mr. KYLE presented two memorials of citizens of Grant County, S. Dak., remonstrating against the repeal of the so-called Sherman silver law; which were referred to the Committee on Finance.

Mr. CALL. I present a communication from the Jacksonville Board of Trade, of Florida, reciting that the board has passed a resolution requesting Senators and Representatives in Congress to vote for the immediate repeal of the purchasing clause of the so-called Sherman silver law, and to support such measures as will enable the people of this country to use both gold and silver as the standard money of the country, and the coinage of both gold and silver without discrimination against either metal. I move that the paper be referred to the Committee on Finance.

The motion was agreed to.

Mr. MITCHELL of Oregon presented a memorial of Pomona Grange, of Mulino, Oregon, remonstrating against the repeal of the so-called Sherman silver law unless a law providing for the free coinage of silver be enacted in lieu thereof; which was referred to the Committee on Finance.

Mr. TURPIE presented a petition of citizens of Richmond, Ind., praying for the extended use of silver as money; which was referred to the Committee on Finance.

Mr. MILLS presented a memorial of sundry citizens of Texas, remonstrating against the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented a petition of sundry citizens of Texas, praying for the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. STEWART presented memorials of citizens of Scranton City, Iowa; of citizens of Missouri; of citizens of Cass County, Iowa; of citizens of Scio, N. Y.; of the Transmississippi Commercial Congress of Ogden, Utah; of citizens of Austin, Nev.; of the Silver Club of Tuscarora, Nev.; of the Silver League of Mason Valley, Nev.; and of citizens of Osceola, Nev., remonstrating against the unconditional repeal of the so-called Sherman silver law, and praying for the free and unlimited coinage of silver; which were referred to the Committee on Finance.

Mr. VILAS presented a petition of the common council of Eau Claire, Wis., praying for the unconditional repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. ALLISON. I notice that all these petitions are referred to the Committee on Finance. I suggest that that committee has already reported upon the subject of the petitions, and it seems to me, as the matter is now pending in the Senate, the petitions ought to lie on the table. I have no wish about it, but simply make the suggestion.

Mr. SHERMAN. The petitions ought to lie on the table.

Mr. ALLISON. They ought to lie on the table, so that the Senate may have access to them, if it so desires, in the debate.

The VICE-PRESIDENT. It will be so ordered.

BILLS INTRODUCED.

Mr. PERKINS introduced a bill (S. 594) to provide for the purchase of a site for, and the erection of, a public building at Oakland, in the State of California; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. PEFFER. I introduce a bill as a substitute for the bill (S. 453) reported by the Committee on Finance, to provide for the issue of circulating notes to national banks. I ask that it may be read and lie on the table for action when the bill reported by the committee is taken up.

The bill (S. 595) to provide for the immediate issue and circulation of Treasury notes was read the first time by its title and the second time at length, and ordered to lie on the table; as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to cause to be prepared immediately Treasury notes to the amount of $250,000,000, said notes to be in form, dimensions, and general appearance similar to those which have been prepared under the provisions of the act of July 14, 1890; they shall be of the denominations $1, $2, $5, $10, and $20, one-fifth part in value of the total issue to be in each of said denominations; they shall be made payable in lawful money; they shall be received by the Government of the United States and the officers thereof for taxes and all public dues, and they shall be lawful money and legal tender, at their face value, in payment of debts to any amount whatever.

SEC. 2. Said notes shall be printed on paper of the same character, quality, and grade as that now used for United States notes; they shall be prepared in accordance with laws, rules, and regulations now in favor applicable to such work, and as fast as they are ready for delivery they shall be deposited in the Treasury and treated as so much available cash, and they shall be paid out the same as other public moneys.

SEC. 3. When any of said notes are received in the Treasury in the course of business, they shall be reissued, and thus kept in circulation.

SEC. 4. This act shall take effect immediately after its passage.

Mr. LODGE introduced a bill (S. 596) for the establishment of a light and fog signal station near Butler Flats, New Bedford, Mass.; which was read twice by its title, and referred to the Committee on Commerce.

Mr. CAMERON introduced a bill (S. 597) for the relief of the legal representatives and devisees of James W. Schaumburg; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. KYLE introduced a bill (S. 598) to authorize the erection of post-office buildings, and for other purposes; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. HUNTON introduced a bill (S. 599) for the relief of the residuary legatees of Mark Davis, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. SQUIRE introduced a bill (S. 600) providing for the erection of a public building at the city of Tacoma, in the State of Washington; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 601) providing for the erection of a public building at the city of Wallawalla, in the State of Washington; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 602) to extend to Alaska the benefit of the laws encouraging in the several States and Territories instruction in agriculture and the mechanic arts; which was read twice by its title, and referred to the Committee on Agriculture and Forestry.

He also introduced a bill (S. 603) providing for the manufacture of steel high-power rifled guns, under the designs of R. J. Gatling, for coast defenses; which was read twice by its title, and referred to the Committee on Coast Defenses.

He also introduced a bill (S. 604) for the purpose of increasing the efficiency of the coast defenses; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 605) for the relief of J. M. Lyon; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Commerce:

A bill (S. 606) establishing a ship channel in the Columbia River near Vancouver, Wash.;

A bill (S. 607) to increase the number of light-house districts, and for other purposes; and

A bill (S. 608) to amend section 4414 of the Revised Statutes relating to inspectors of hulls and boilers.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Public Lands:

A bill (S. 609) to provide for the survey of public lands in the State of Washington;

A bill (S. 610) granting to the State of Washington certain lands therein situated for the purpose of fish hatchery;

A bill (S. 611) authorizing the Secretary of the Interior to reserve from public sale or entry certain lands within the States admitted under act of Congress of February 22, 1889;

A bill (S. 612) authorizing citizens of that part of the State of Washington eastward of the Columbia River to fell and remove timber on the public domain for mining and domestic purposes;

A bill (S. 613) granting to the county of Clallam, State of Washington, certain public lands in trust, and for other purposes;

A bill (S. 614) for the relief of John C. Smith, Milton Evans, and others;

A bill (S. 615) to confirm title to eighty acres of land in the State of Washington to Jesse W. Finch and his grantees;

A bill (S. 616) for the relief of David Dealy and Moses Younkin;

A bill (S. 617) for the relief of the purchasers from the United States of land in even-numbered sections within the forfeited portions of railroad grants;

A bill (S. 618) to confirm title to certain lands in the State of Washington; and

A bill (S. 619) granting to the State of Washington 5 per cent of the net proceeds of the sales of public lands in that State.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (S. 620) granting an increase of pension to Eddie Powers;

A bill (S. 621) to increase the pension of Cyrus J. Van Laningham;

A bill (S. 622) for the relief of James J. Wheeler;

A bill (S. 623) to increase the pension of Benjamin Brink;

A bill (S. 624) granting a pension to Lizzie Wright Owen;

A bill (S. 625) granting a pension to Ida Button and May Button;

A bill (S. 626) granting a pension to Jasper N. Warren;

A bill (S. 627) for the relief of William R. Munroe;

A bill (S. 628) granting an increase of pension to James R. Lewis;

A bill (S. 629) for the increase of pension of Farnham J. Eastman;

A bill (S. 630) granting arrears of pension to P. Q. Healy;

A bill (S. 631) granting an increase of pension to John C. Brown; and

A bill (S. 632) granting an increase of pension to Augustus T. Pintler.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Military Affairs:

A bill (S. 633) for the relief of Emile B. Weishaar;

A bill (S. 634) granting a right of way across the Scarboro Hill military reservation to the Ilwaco Railway and Navigation Company;

A bill (S. 635) for the relief of Louis B. Kopp;

A bill (S. 636) granting the use of certain lands in Wallawalla County, State of Washington, to the city of Wallawalla, for the purposes of a public park;

A bill (S. 637) making appropriation for the improvement of the military reservation known as Fort Wallawalla, in the State of Washington; and

A bill (S. 638) to provide for the construction of a wagon road through the military reservation of Fort Canby, in the State of Washington, and for other purposes.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 639) for the relief of Thomas J. Miller, of the State of Washington;

A bill (S. 640) for the relief of Henry L. Tilton and Isaac S. Kaufman;

A bill (S. 641) for the relief of Thomas Wright; and

A bill (S. 642) for the relief of George A. Barnes.

Mr. SQUIRE also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Indian Affairs:

A bill (S. 643) to grant to the Seattle, Tacoma and Courtland Railway Company a right of way through the Puyallup Indian Reservation, in the State of Washington;

A bill (S. 644) to ratify and confirm agreement between the Puyallup Indians and the Northern Pacific Railroad Company for a right of way through the Puyallup Indian Reservation;

A bill (S. 645) to give the consent of Congress to the removal by the Legislature of the State of Washington of the restrictions upon the power of alienation of their lands by the Puyallup Indians;

A bill (S. 646) for the relief of John O'Keane, of the State of Washington; and

A bill (S. 647) for the relief of Robert Williams, sergeant of ordnance, United States Army.

Mr. GALLINGER (by request) introduced a bill (S. 648) for the relief of Maj. William M. Maynadier, a paymaster in the United States Army; which was read twice by its title, and referred to the Committee on Military Affairs.

He also (by request) introduced a bill (S. 649) for the relief of Mrs. Sarah Elizabeth Holroyd, widow and administratrix of the estate of John Holroyd, deceased; which was read twice by its title, and referred to the Committee on Patents.

He also (by request) introduced a bill (S. 650) for the relief of Frank Della Torre and Susan F. Della Torre, heirs of Peter Della Torre, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. POWER introduced a bill (S. 651) for the relief of George A. Norton; which was read twice by its title, and referred to the Committee on Claims.

Mr. PASCO (by request) introduced a bill (S. 652) to authorize the purchase of a site for the Government Printing Office; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 653) to open certain parts of the Fort Jupiter military reservation, in the State of Florida, to entry under the homestead laws; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. MITCHELL of Oregon. On the 8th of the present month I introduced a bill (S. 116) explanatory of an act entitled "An act to settle certain accounts between the United States and the State of Mississippi and other States," and for other purposes. The purpose of the bill is to extend the provisions of that act to the State of California and all the States admitted into the Union since March 3, 1857. I find upon examination, however, that through some mistake the States of California, Wyoming, and Idaho were omitted from the bill. I now introduce a bill which I intend to take the place of Senate bill 116.

The bill (S. 654) explanatory of an act entitled "An act to settle certain accounts between the United States and the State of Mississippi and other States," and for other purposes, was read twice by its title, and referred to the Committee on Public Lands.

Mr. MITCHELL of Oregon introduced a bill (S. 655) to extend the jurisdiction of justices of the peace in the District of Columbia, and to regulate the proceedings before them; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. SQUIRE introduced a joint resolution (S. R. 19) authorizing the Secretary of War to correct the military record of Capt. Edward Wheeler, Fifty-sixth New York Volunteers; which was read twice by its title, and referred to the Committee on Military Affairs.

WITHDRAWAL OF PAPERS.

On motion of Mr. HUNTON it was

Ordered, That all papers relating to the allowance by the Commissioners of the District of Columbia of $1,000 per month for the daily collection of

garbage during the months of May, June, July, August, and September of the year 1893, be withdrawn from the files of the Senate, or Committee on the District of Columbia, and referred to the said Commissioners.

INTERIOR WATER COMMUNICATION.

Mr. CHANDLER submitted the following resolution; which was referred to the Committee on Commerce:

Resolved, That the Committee on Commerce be instructed to inquire into the expediency of the construction in the immediate future, by the aid of the Government, of an interior coast line of water ways across the head of the peninsula of Florida, along the coast from Florida to Hampton Roads, between the Chesapeake Bay and the Delaware, and through Cape Cod; for the purpose of securing the combined commercial and military advantages which these avenues for merchant and naval vessels would afford.

SENATOR FROM KANSAS.

Mr. CHANDLER submitted the following resolution; which was referred to the Committee on Privileges and Elections:

Resolved, That there was no lawful election of a United States Senator from Kansas by the Joint Assembly which met on January 25, 1893; and that JOHN MARTIN is not entitled to a seat as Senator from the State of Kansas.

PURCHASES OF SILVER BULLION.

Mr. STEWART submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Secretary of the Treasury be, and he hereby is, directed to furnish the Senate with a statement giving the aggregate amount of silver bullion purchased under the act of July 14, 1890, during the month of July, 1893, together with the cost thereof; the amount, date, and price of each purchase, and the name of the vendor. Also the aggregate amount of silver bullion offered for sale during the said month of July, the amount, date, and price of each offer, and the name of the person making such offer.

STATISTICS OF MORTGAGE INDEBTEDNESS, ETC.

Mr. TELLER. I have received a communication from a statistician of this city, Frederick C. Waite, that I think is of sufficient importance to ask that it may be published as a document. I do not care to ask that it go into the RECORD, which is cumbered with so many things, but I desire that it may be published as a document. It is a statement of the increase of indebtedness in the United States between 1880 and 1890. It occurs to me that it has a very great bearing on the question which has come before the Senate on the bank bill and the bill reported from the Committee on Finance a few days since.

I should state that I of course have not had an opportunity to go over all these statistics to ascertain whether they are entirely accurate or not. This gentleman was employed in the Census Office for sometime. He came to me with his facts and figures, and as far as I could I went over them, and I believe they are in the main accurate; and if they are thought not to be accurate, he is a gentleman of sufficient character and standing that any Senator who objects to the statement or who contests in any way its correctness will find a foeman worthy of his steel, I think, when Mr. Waite comes to defend his figures. He shows that the mortgage indebtedness of the United States increased from $2,500,000,000 in 1880 to at least $6,300,000,000 in 1890. He shows that the total private indebtedness of the people of the United States has increased from $6,750,000,000 in 1880 to $19,700,000,000 in 1890. He shows that the railroad indebtedness increased from $2,792,000,000 in 1880 to $5,463,000,000 in 1892; and he gives various other statements bearing upon the questions under consideration.

Mr. CHANDLER. I should like to ask the Senator from Colorado a question about the paper. He wishes it printed as a document?

Mr. TELLER. I wish it printed as a document, for the information of the Senate and the country.

Mr. CHANDLER. May I ask whether it is a paper prepared by a private citizen containing statistics as to the amount of indebtedness of the country?

Mr. TELLER. It was prepared by a private citizen.

Mr. CHANDLER. Now, can the Senator tell us from what sources this private citizen gets the information, whether he gets it from the permanent records of the Census Office or whether he has made private inquiries?

Mr. TELLER. It is taken, with the exception of the use, perhaps, of Poor's Railroad Manual, from the Census Office reports. While I suppose all those reports are to be had by Senators, I know from my experience that only a very small percentage of Senators will ever look to see what such a report contains.

Mr. CHANDLER. I understand the Senator to say that it is a statement prepared by a statistician of the United States or the United States statistician. Did the Senator state that?

Mr. TELLER. I did not say he is an official of the United States. He has been, but he is not now.

Mr. CHANDLER. He has been in Government employ?

Mr. TELLER. Yes, before the recent change of administration.

Mr. CHANDLER. The Senator wishes the Senate to print this private compilation by this private citizen?

Mr. TELLER. I ask the Senate to do what we have been in the habit of doing when anything was thought of sufficient merit to preserve it, but not to print it in the RECORD, which I could readily do by reading it, were I so inclined. I thought it would encumber the RECORD, and I asked that it might be printed as a document.

Mr. CHANDLER. Certainly; I do not object. I merely wanted to understand exactly what the Senator is asking to have printed as a document, and I learn that it is the statement of a private citizen and not of a United States official.

Mr. TELLER. It is the statement of a private citizen, and if the Senator from New Hampshire thinks it is not correct I will guarantee that he will have full opportunity to raise objection to it.

Mr. CHANDLER. I take the word of the Senator from Colorado that it is correct; but that does not make it a document prepared by a statistician of the United States Government.

Mr. TELLER. I have never stated that it was prepared by a statistician of the United States Government. That is the statement of the Senator from New Hampshire.

Mr. MCPHERSON. If it will throw any light on the question under consideration it certainly ought to be printed.

The VICE-PRESIDENT. Is there objection to printing the paper as a document?

Mr. ALLISON. I do not object to its being printed; I rather think it ought to be printed; but I should like to ask the Senator from Colorado if he is in possession of information as to the condition of the report made by the Superintendent of the Census on this subject. I remember that we appropriated a million and a half or two million dollars for the purpose of securing accurate statistics as respects the mortgage indebtedness in the United States. It seems to me that would be a valuable contribution to the debate we are about to have, and if it is not already printed I hope some means will be taken to possess the Senate of that important information. The Senator from Missouri [Mr. COCKRELL] is, I see, on his feet. He is familiar with these details, and I hope he will inform the Senate, if he knows, the status of that report.

Mr. COCKRELL. If it has been published I have not been able to get it.

Mr. TELLER. It has not been.

Mr. COCKRELL. I telephoned only a day or two ago to the Superintendent of the Census to send me all the publications in regard to indebtedness, and I got one relating to foreign nations and one of the others, but it is not complete, I understand.

Mr. ALLISON. The amount of the indebtedness of the people of the United States is a very important question, and we have expended a large sum of money to secure an accurate return of that indebtedness. I hope that we shall have a full statement at an early day, so as to compare it with the suggestions made by this gentleman, who is vouched for by the Senator from Colorado.

Mr. TELLER. I will state that the census reports on this subject are not yet ready. They are not printed.

Mr. COCKRELL. That is correct.

Mr. TELLER. I am rather inclined to think that they will not be printed for some little time.

Mr. CULLOM. May I inquire of the Senator if it is not true that a number of bulletins on the subject have been published relating to the indebtedness of different States and giving the condition in those States?

Mr. TELLER. Yes.

Mr. ALLISON. The reason why I make the suggestion to the Senator from Colorado is, that I have no doubt Mr. Waite, late an employé of the Census Office, must have gathered his information from official sources, if it is at all accurate, because in the nature of things it would be impossible for any one citizen of the United States to ascertain, with any degree of accuracy, the amount of indebtedness of the people of the United States. So, if Mr. Waite has not had access to those papers in order to furnish us an abstract, I trust that in some way we shall have an official abstract covering the same information and giving it more in detail if practicable.

Mr. MORRILL. Does the Senator from Colorado present this as different from what will be presented by the Census Office?

Mr. TELLER. Not at all, but simply as showing what will come out. I will simply add that Mr. Waite does not touch certain States, but he makes an estimate. Having been an employé in that very portion of the Census Office, and having dealt with this subject as an official, he states that as to certain States they are estimates, which may not be accurate, of course, as to the States concerning which he could not get full information.

The VICE-PRESIDENT. Is there objection to printing the paper presented by the Senator from Colorado? Without objection it will be so ordered.

Mr. PLATT. I do not make any objection to the printing of this specific matter, but I think it is rather a dangerous precedent for us to establish, that whenever any private citizen of

the United States thinks he has some statistical information that is valuable all he has to do, to get a general circulation for it, is to bring it here and have a Senator ask to have it printed. I think it is a practice which has perhaps sprung up of late and is growing, and it is one which in the end is very likely to be abused. That is all I want to say about this matter.

The VICE-PRESIDENT. The paper presented by the Senator from Colorado will be printed as a document.

LEAVE OF ABSENCE.

Mr. MORRILL. Mr. President, I ask an indefinite leave of absence after to-day. I am here now against the advice of my physician.

The VICE-PRESIDENT. The Senator from Vermont asks an indefinite leave of absence. Is there objection to his request? The Chair hears none, and the request is granted.

SILVER COINAGE.

Mr. MORRILL. Mr. President, I should be glad to have the bill which was reported by the chairman of the Committee on Finance laid before the Senate, for the purpose of allowing me to address the Senate this morning upon it.

The VICE-PRESIDENT. The title of the bill will be reported, in accordance with the request of the Senator from Vermont.

The SECRETARY. A bill (S. 570) discontinuing the purchase of silver bullion.

Mr. MORRILL. Mr. President, the effervescence of speeches on silver, as we all know, by those, like myself, who always have one on tap, is not unlike that of champagne yesterday uncorked—gone and very flat. I can only vouch that this one of mine has never before been uncorked.

Let me frankly avow that I do not yet abandon all hope of bimetallism, and, accordingly, I shall gladly vote for the repeal of so much of the act of 1890 as requires the purchase of silver, which originally did not receive any favor from me, and the wide distrust it has excited should be speedily removed.

But, after its repeal, we shall not be dependent upon gold alone for currency, as there will be in the Treasury much more of silver than of gold, more of paper currency than ever before, and the silver dollar will not be demonetized. Whenever more silver can be coined and utilized without crowding gold to a premium, it will be done by universal consent; but the Treasury of the United States should be relieved from its embarrassment of furnishing gold to pay for silver bullion. We may not ever be able to keep as much silver afloat as has been done by France, because our people prefer something lighter, of equal nominal value, and more portable to handle; but we can easily carry enough of both silver and gold for all the business of the country, if the mastery is not wholly surrendered to silver.

I shall have more to say on this branch of the subject after some preliminary remarks upon the general subject, as well as some commentary upon the pitiful failure of our costly Populistic attempts to raise the value of silver by the action of the United States single-handed.

To maintain silver, with our present standard, on a parity with gold, while increasing our public debt by the daily purchase of over five tons of silver bullion, for which Treasury notes must be issued, practically redeemable in gold, imposed a task upon the Treasury Department, in the face of an almost total disappearance of gold in the receipts of revenue, too great for even an unclouded Administration to bear; and it was wise for the present Administration to seek relief, if so to be found, by an appeal to Congress. It is a time when the leaders of States where silver most abounds should do something more than in figures of speech to take up the pickax and spade to dig rifle pits from which to assail others, or build up earthworks behind which to merely protect themselves. The declaration that "the silver question was of equal and greater importance than the question whether the country should remain united or divided," was an utterance that will go unclaimed and unrewarded by any State.

The Democratic party, once distinguished for its intrepid hostility to all cheap substitutes for legal-tender money, having successfully pushed gold to the front during the Jacksonian era, with Missouri then in the lead for gold and now in the lead for silver, more recently, though not fully, accepting the fantastic fiat theories of those who claim for the Government omnipotent power to keep an unlimited circulation of either silver or paper on a parity of 16 to 1 of gold, it has in various latitudes, with a knowing wink, played off tolerance to any delusive financial absurdities that fished for and promised to catch votes.

Unfortunately, the bait, being pungently perfumed with debt repudiation, proved attractive, and more votes were caught than may be conducive to its political health. Now, the old leaders clearly see that if these fresh and undisciplined recruits are permitted to lead, and that is likely to be their demand for any further party allegiance, the country may be ruined. It is to be hoped, however, that these new local recruits, before they are allowed to lead the majority of the people in the various States, will be permitted to tarry at Jericho a little longer.

Very recently an excellent Democratic friend related to me a conversation he had with a witty Southern member of Congress, known to be a full-blooded silverite at home, but at heart, like many other Democrats, wholly destitute of faith in the silver panacea for all financial maladies, when remonstrated with for occupying such a parlous position, replied, "What would it matter to me were I to save the whole country and lose my own *deestrict?*"

I am glad to believe that even such embarrassed statesmen as this will finally conclude, if the whole country can be saved, no part of it will be lost.

The Silver League here in Washington of the revolutionary propagandists recently began to be desperate. Losing confidence in their logic, as they well might, they appear to have thought it easier to win by threats of violence, and called a convention of the faithful to meet at Chicago, where the lately pardoned anarchists no doubt were ready to participate and to be assigned to any forlorn duty. Colorado was to contribute largely to a national campaign fund. One of the members of the league from Colorado predicted that "the convention at Chicago would be a call to arms." Another diligent student of reigns of terror was reported to have said, "The people are ready to shoulder the musket in real earnest," adding, "They will accept no quarter." The peace-loving governor of Colorado, knowing that he was great, and overestimating his hideosity, believed that by showing himself as governor he could scare all the very devils of Wall street to death, but instead the martyrs proved to be nearer to him in Denver.

The silver-mine owners declare that they will not consent to the repeal of the act of 1890 without a satisfactory substitute, notwithstanding that in every month's delay the value of silver plunges downward with increasing velocity. The only satisfactory substitute indicated by them is free coinage—the very measure that has been most feared by the country—which, when established, would at once bring with it the single silver standard, and on this standard the producers of silver, in less time than one year, would get no better money than that made of silver. Such money, when no longer supported by the privilege of exchange for gold, or its equivalent, would be current at its commercial value only, no matter what the ratio. The coin would be legal tender and receivable for demands due the Government—by no means a measure of value—and that would be the only redemption ever to be offered. The coins of no monometallist nation were ever current, and never will be, at a single fraction above their intrinsic value. No man outside of an insane asylum would receive the silver coins of Mexico, India, or Peru for more than their weight value in bullion.

The coining value of silver produced from mines in the United States in 1892 was $74,989,900, or more than double what it was in 1873, and the product of the world was ten millions more than ever before, with a coining value of $196,608,200, or $115,000,000 more than in 1873. For twenty years Germany, France, and all the Latin nations have ceased from the coinage of silver, and every year the annual surplus, beyond consumption for the arts, has glutted and cloyed all markets. Other metals are meeting the same fate, and from no other reason than that of an excessive production. The vast and abnormal overproduction of silver can no more escape from depreciation in price than iron or copper, or than cotton, corn, or wheat, with a redundant production. Even ostriches and ostrich feathers at the Cape of Good Hope have not been relieved by any precious miracle from the same law. As soon as this royal bird began to be domesticated there was a mania there to win the fabulous profits of ostrich farming, as there has been for silver-mining in Colorado. The doctor and the lawyer, the baker and the barber, all went into it, and a pair of ostriches could be sold for a thousand dollars or more. To restrain their export to California and Australia, an export duty of $500 was imposed on each ostrich and $25 on each egg; but the supply of ostrich feathers has now so largely increased that, like silver, they have sunk in value about one-half. But the government there has not been asked to buy and hoard ostrich feathers at the old standard price.

The extreme partisans of silver claim that all the facts support their ill-begotten theories, and muster them like conscript soldiers to combat on their side; but when they will not stay there, so much the worse for the facts, and they are then straightway consigned by these partisans to the Wall street of the bottomless pit. It is well known that for several years there has been a downward tendency in the prices of food products and of many other materials, and the silver extremists claim this to have arisen solely from demonetizing silver. But here it is not demonetized. It is manifest that so far the silver dollar here, though now distrusted, has rarely had a larger purchasing power, but is as barren of influence as to the depreciation of the price of cotton or wheat as copper or tin, or as the winding sheet

of an Egyptian mummy. Wherever depreciation of the price of any article has occurred all the world knows, save the unfortunate dupes of silver extremists, that it has arisen from redundance or from a cheaper cost of production.

In such cases the supply is greater than the demand. For many years there has been a prodigious annual increase of silver bullion, and the downward tendency of its price has followed step by step. So tempting were mining profits that over one thousand mines, according to the Census reports of 1890, were being worked, though producing neither silver nor gold, and apparently exhausted; but all the same they still kept on barking, like Mr. Bucher's dog, at the old hole, long after the disappearance of the squirrel. But the labor lost in such mines creates no claim to be included in the average cost of labor in successful silver mines.

Even if our good intentions to bull the market for silver had been in the slightest degree successful, as they have not been, there is another law, as universal as the law of gravitation, which inexorably determines the value of silver, as it does of other products, and that is the cost of its production.

The average wages of all persons, foremen, miners, and laborers, employed in our gold and silver mines, according to the Census report of 1890, were $729 a year, and the average output per man amounted to $1,732 a year. In any other business these facts would indicate no stinted half-rations as the measure of profits. Certainly it far exceeds the profits of wool-raising in Oregon, of cotton-raising in Texas, and even of corn-raising in Kansas.

This statement includes 1,610 mines for each of which the bullion product was less than $1,000, and 1,408 mines where the product of each was over $1,000 and not over $10,000. The great bulk of silver bullion comes from a very limited number of mines, and their rich ores have afforded some silver kings large profits, surely higher returns than capital invested and labor employed in any other industrial occupation.

It is not to be assumed that all silver mines now, like the Consolidated Virginia years ago, with an assessment on stockholders of only $411,209, are paying dividends of over $1,000,000 per month; nor that any other mines now equal the Mollie Gibson mine of Colorado, which was claimed to have produced up to December 31, 1891, 2,000,000 ounces of silver at a cost of 4.8 cents per ounce; but it should be claimed that the average cost of the production of silver within a few years has been greatly and radically diminished by improved machinery, by new processes of treatment, and by much cheaper transportation.

Mr. William H. Beck, as quoted by Cowperthwait, says:

> When I went to Montana, in 1886, it cost us to transport ores from Dillon to Omaha $24 per ton. That transportation now costs $10 a ton. It cost us then to treat ores $17 a ton. Now it costs $8 and $10. Mining powder cost 50 and 60 cents a pound. We can buy it now for 20 and 22 cents a pound. It cost then to board a man $1 a day and more. We can do it now for a less sum. Machinery is better and improvements in mining machinery are being constantly made.

He also states that when he went to Colorado, in 1878, he was told that they "could not treat ores that assayed less than $20 to the ton. Ores can now be profitably handled that yield as low as $5 a ton."

It can not be doubted that the cheaper cost of mining silver has had the natural effect of reducing its value. If by any means the product were now to be considerably increased, an equal or greater reduction in value would be likely to follow. With no greater consumption of silver than now exists, the interest of no part of our country can be promoted by stimulating work in the poorest mines or in the tailings of the richest.

The generosity and large concessions to producers of silver by the Government of the United States have been unparalleled in the history of the world, although it had a low seat at the table during the Administration of Gen. Jackson. Silver was originally put into our coinage at nine hundred and twenty-five thousandths fine, then changed to nine hundred thousandths fine, and our dollar had 2 to 3 per cent less of silver than the Spanish milled dollar, or than the Mexican dollar. In 1834 the dollar was practically demonetized by a reduction of over 6 per cent of the gold in our gold coins, which served to exclude the silver dollars from coinage or circulation. This was the condition of the dollar, as recognized in 1873, and clearly and fully explained in the report of the Secretary of the Treasury (Governor Boutwell). Those who claim to be ignorant of the act passed must also seek absolution for ignorance or indolence in not reading the report of the Secretary of the Treasury.

In 1853 our half-dollar and other minor silver coins were made with a less amount of silver, mainly to prevent their exportation. In 1873, to make an Asiatic market for silver and to promote its exportation, the trade dollar, of 420 grains of standard silver, was coined, but becoming unmarketable it was at length redeemed by the Government, which bore the loss. In 1878 we tried to make an American market for silver by making the Government a purchaser and coiner of not less than two million nor more than four million dollars per month, for which our silver certificates are now outstanding, and only kept on a parity with gold by redemption in gold whenever demanded. The silver so purchased has depreciated in value to the extent of $89,730,248. This Bland speculation was bad for the Government and worse for the people, who ultimately can not escape the loss which has accrueor may accrued.

At last the law of 1890 was passed, by which we have since purchased silver bullion to the amount of over 154 tons per month, for which Treasury notes are outstanding, greatly embarrassing the Secretary of the Treasury by threatening to absorb with an open-mouthed appetite his slender stock of gold. This latest speculation in silver, it was loudly claimed, would raise the price to $1.29 per ounce or to the parity of gold; but this midsummer night's dream ends with silver flat at 75 cents per ounce, leaving the silver dollar at the value of 58 cents. The value of the silver bullion purchased under the act of 1890, at the present market price, is $29,543,335 less than was paid for it.

From 1878 to 1893 there were 419,332,450 silver dollars coined, with a difference between their face value and present market value of $176,086,829, a depreciation of over 40 per cent. The stock of bullion and silver dollars now on hand, if placed in the hands of a receiver, would exhibit a melancholy loss, but a loss that would be more cheerfully endured if we "could trammel up the consequence," and it were to be all and the end-all of portending future suffering of our people in all the business relations of life. The desperate remedies administered for the congestion of silver everywhere prevailing have not only aggravated ugly symptoms but have started a wide suspicion that the plethoric condition of silver was more dangerous perhaps to the United States Treasury than the facts would warrant, so long as the present Administration appeared pledged and willing to preserve the parity between gold and silver.

These delusive efforts, made by all the power and prestige of the National Government to enhance the value of silver, show that the universal law of supply and demand is still invincible, and can not be set aside even by the dynamics of legal-tender laws. Every milestone along the dreary track of these unsuccessful experiments marks a step downward in the depreciation of silver.

It has been too obvious that our nominal consumption of silver did not consume. Its swollen bulk of over 15,000 tons, ever visibly increasing, perpetually suggests that it may be too great to be forever held above and away from all contact with the world's markets, and that, like an Alpine avalanche when jostled by some thunderbolt, it may ere long be let loose, and by its fall finally and forever crush out its own life as a precious metal.

The futile attempt also for fifteen years to force silver dollars into circulation by the unending woe, grief, and trouble of all the Secretaries of the Treasury, in repeating the stubborn task of Sisyphus of rolling a stone daily uphill that daily rolls down again, has resulted in the unstable distribution of no more than $57,000,000, though delivered to any place near or remote, however great the cost to the Treasury of its transportation. Yet even this slender allotment so frets the pockets of the people that they swiftly unload it through the custom-house at the earliest opportunity. Constantly diminishing in value and somewhat in weight, silver dollars, though strutting with the outstretched wings of an eagle, are known to be pushed through the world for more than they are worth, and are beginning to be regarded as base intruders in all markets. Their deepest degradation, however, would seem to be that they are passed by on the other side by Levites, or shunned even by the owners of silver bullion.

Foreign nations will not be persuaded to adopt any measure in favor of silver by the fact that it might afford some relief to the United States, but they will do much for their own relief. Too ready to believe whatever may be derogatory of the American people, they have confidently believed that, with Boeotian stolidity, we should be contented with silver only, and that the stock of gold now in America and all future productions would easily be transferred to their possession. Four of the great powers of Europe are training soldiers possibly to make famous other fields than Waterloo and Sedan. Their success, as they believe, requires not merely the heaviest artillery, but the heaviest stock of gold; and this they are financially maneuvering to acquire. Nations, as well as men, often get gold and yet fail to keep it. We, very well, have learned how recklessly destructive martial glory is to treasures of gold, whether that of the victors or the vanquished. These ambitious powers have regarded America, not as a formidable competitor for gold, but as one of their unfailing sources of its supply, as well as an unfaltering and hungry market for silver.

America, however, can be a competitor for gold, and by far one of the strongest, for the reason that it is a home producer of gold as well as of silver, and will use both only for all the be-

atitudes of peace and prosperous commerce. By the great cost of large armies, and greater loss of labor in domestic industries, European nations are really crippling their financial resources, while our small army and our peace-loving habits relieve our people from such excessive burdens, and will surely in the end give us the primacy in financial power. A repeal of the silver-purchasing clause in the act of 1890 will give us a practical force, so long manifestly disregarded, in the final determination of the silver problem, and Europe, after all, to provide for its own financial necessities, is most likely to reach the conclusion that silver should not remain obsolete and useless only as a commodity.

The magnificent colonial possessions of Great Britain have been no doubt immensely profitable, but the query is now often suggested, even by the Queen's subjects, whether they will much longer largely contribute to her wealth and power. If Great Britain could fetter them to the free-trade conditions of a Cobden Club revenue tariff and be relieved from the risk and cost of their defense, no serious objections would be offered to their prompt independence; but unstaggering unbelief in free trade reigns supreme among their colonies, big and little.

India, unquestionably, with 250,000,000 of population controlled by British revenue laws, still affords splendid advantages to British trade. India, however, has suddenly declined to bear the whole burden of silver depreciation, and refuses to receive silver on the old standard for its domestic products and then pay gold in return for British merchandise. India is also heavily in debt for its railroads and other internal improvements, upon which annual interest in gold must be paid in London, and this has to be met by the sale of silver rupees at a ruinous reduction from the nominal value. The exports of India exceed imports to the extent of $100,000,000, for which gold instead of silver is now wanted. No remedy will now be satisfactory unless the currency of gold and silver shall be more equitably employed by Great Britain in all of her financial relations with her Indian Empire.

The interest of colonial people in monetary questions can not be forever ignored, even by an imperial government. Great Britain might be happier and stronger if there were less bankruptcies in Australia, less United States annexationists in Canada, and less Irishmen in Ireland. She may have no apprehensions elsewhere, so long as her neighbors have all the quarrels they like among themselves, but it would be opportune and perhaps sound policy for her to begin the cultivation of better political and financial relations with her kin across the Atlantic, and fairly consider whether or not international bimetallism is destitute of all merits.

I can not, however, favor bimetallism without an increase of silver in silver coinage, as without an increase it would be impossible to maintain any parity between gold and silver, even with the coöperation of many nations. Nor can I favor the free coinage of silver by the United States alone were the ratio between the two metals to be advanced from 16 to 25 to 1, or even to 28 to 1, for the reason that the present colossal output of silver can not be annually absorbed by any single nation, and a preposterous attempt to absorb it on our part might win a smile from the governor of Colorado, but would provoke the ridicule of the commercial world, and inexorably cause its further depreciation. No remedy will have a prosperous ending which does not squarely and fully recognize the existing extraordinary magnitude of the amount of silver which must be furnished with a new market.

Mr. Cernuschi, by far the ablest bimetallist that has yet appeared, has always insisted that it was only necessary for the United States for the time to cease from coining or from purchasing silver to bring European nations to a proper and just international arrangement by which the general use of silver as an integral part of the money in use among leading nations would be speedily consummated. Delay may have made this more difficult. The Bank of France now most unwillingly hoards 250,000,000 of 5-franc silver coins, which are there appreciated much as the $363,000,000 hibernating in the United States Treasury are appreciated here. If we tamely assume the burden of a monopoly of silver here, a burden quite large enough for the whole world, it may induce France and other nations also to join the gold monometallists of Europe.

I well understand that it will be necessary to enlist in any international agreement a considerable number of nations that will each take their just proportion of the present enormous annual production of silver, or it must necessarily be a failure. Nevertheless, an international agreement is the best hope of a permanent resuscitation of silver, and after proper national action here on our part, the chances of resuscitation will be greatly multiplied. Other nations will have an equal if not greater responsibility. It may be called a bitter remedy to stop purchasing silver, but without it the case is hopeless. If in all the world we are now the only purchaser of silver, to cease from it might temporarily cheapen its price, but to open our mints to its free coinage would permanently cheapen its value, as its solitary accumulation in our hands has already sufficiently demonstrated. In the language of Burke, "a wise and salutary neglect" is the highest service we can now render to silver.

After the repeal of the silver-purchase law of 1890 the United States will not wrestle alone with the overproduction of silver, as the question will equally confront foreign nations and can not be shirked. There is no statesman among such nations that does not know the United States can fix and carry a currency on the gold standard, if necessary (though I do not now believe that it will ever be necessary), with greater ease than any other nation on the earth. We produce enough of the metal ourselves to supply any needful annual increase of currency in gold coins, much more than equal to our annual increase of population.

There is little now of the necessaries of life for which our people are dependent upon any foreign country in peace or war, and much of what we produce to sell, like cotton, petroleum, and provisions, can not so readily be obtained elsewhere in equal abundance or on terms equally satisfactory. There is no possible combination of circumstances that can deprive the United States of its large and natural share of the world's gold, unless by free coinage we go directly to the silver standard, or unless our revenue laws shall be so framed as to permanently fasten upon the country an excess of imports over exports, and of this no party in our country can ever afford to take the risk.

With a sound currency foreign gold capital will flow into our country by millions for investment, but with any cheap or uncertain standard of money panics will be an everyday occurrence, and foreign capital would stand aloof and foreign creditors would demand a prompt return of all investments.

It is well understood that the great hindrance to bimetallism in our international conventions has been the fixed opposition of Great Britain. The leaders, however, of one of the great British parties have recently declared themselves ready to respond favorably to the popular opinion and to the business petitions in behalf of bimetallism. The demand for silver in India has annually been from forty to seventy million dollars. To all this the mints of India have suddenly been closed. The British trade with India is very large, and Great Britain, with that trade confused if not paralyzed, can not there safely abandon a large use of silver, and it must be used in such manner as will not subject the Hindoos and the Mahometans to the whole loss on bills of exchange. Nothing short of bimetallism would therefore seem possible.

There are some persons who wish to figure as one-string bimetallists by our country only. I have been told by a distinguished astronomer that the coal of the entire coal fields of Pennsylvania, which he had laboriously computed, would produce a heat equal to that of the sun for the 900-millionth part of a second. These one-string fiddlers, it may be computed, would maintain bimetallism for an equal length of time.

It has been absurdly charged that to repeal the law of 1890, which requires the Secretary of the Treasury to purchase 154 tons of silver bullion every month, would at once establish here the gold standard and nothing else; but that is untrue and comes here as a scarecrow that will scare nobody who does not want to be scared. Not a Senator who will vote to repeal that law will do it as a gold monometallist. The purpose and effect of the repeal will be to keep in circulation as much silver as ever, and to have enough gold keeping company with it to maintain the parity of the two metals. The repeal is the only lever by which bimetallism internationally can be secured. Americans should have the courage to use this lever and take a stand that will at once relieve our financial condition from foreign dictation, and secure the stock of gold which must naturally find a home in the United States, and which should not be deprived of that home without our consent.

I would not be personally offensive to anybody, but I think it could with more propriety be said that this charge of gold monometallism is a subterfuge to conceal an organized purpose of precipitating silver monometallism upon the American people. I think they will not fail to so understand it. Among all those who will refuse to discontinue the purchase of silver not one will consent to any purchase of gold.

The repeal of the silver-purchasing part of the act of 1890 will at once unlock millions of gold now hoarded, as well as millions of the old United States notes, to redeem which gold has long been held in the Treasury, as it would satisfy the public that Congress, as well as the President, propose to maintain every dollar of our currency as good as every other dollar, of no greater and no lower value than we have had, and so just and sound as to give assurance of being just and righteous for both the debtor and creditor to-day as well as years hence.

We cannot afford to take the risk of a silver dollar that may curtail the usual reward of wage-earners nearly one-half and cause an epidemic of strikes. Merchants might possibly shirk

or transfer to others a large share of their losses from a depreciated dollar; but farmers, for what they have to sell, would be compelled to accept whatever legal tender might be offered. Indirectly the duties on all imported dutiable merchandise, if paid in depreciated silver, would suffer a reduction that would more than satisfy even the exterminators of protection.

With the present rate of annual accumulation there would be piled up in the Treasury within ten years over a billion in pig silver bullion, and its depraved value fluctuating with the daily market when sold for use in the arts and manufactures. Certainly no prudent Senators can be expected seriously to propose that this expensive accumulation of silver and of public debt shall go on forever, bringing, as our experience has already shown, no benefit to producers of silver, but untold disasters upon our common country. Alone, and without international coöperation, if the United States would take its annual purchase of silver and give it a fatal plunge over the Falls of Niagara, so that it would be irrecoverable while wood grows or water runs, we might somewhat advance the market price of silver; and by no other less heroic measure, nor by any cunningly contrived compromise, while the supply is great and the demand down to zero, can the United States by itself lift silver out of the mire of overproduction.

Thirty-three years ago the yearly production of silver in the United States amounted to only $150,000; but in 1892 it amounted to five thousand times that sum. The silver extremists now demand that the United States shall not only take and pay for the whole of this vast increase, but at the valuation of thirty-three years ago, and will not even aid in opening the way for largely increasing the demand for silver by making it the interest of many nations to coöperate in a bimetallic standard for its use.

Probably, with one-half of all our iron furnaces closed, and one-half or more of all woolen and cotton mills idle, we have rarely required so small an amount of currency for actual business purposes. The difficulty is that currency, to an extraordinary amount, is being hoarded by millions of depositors in savings banks, who have feared they would have to wait sixty days if they were not drawn out at once Only one country in the world has a larger per capita circulation of money than the United States. We shall have plenty of money whenever distrust goes out of circulation.

According to the great Roman orator, "a commonwealth should be immortal," and I can not suppose that any Senator would willingly limit the life of our Government to any briefer period. In all the advantages of power and wealth, of natural and industrial productions, of coal, iron, and copper, of food products, and of territory and climate, no other people will dispute the superiority of the American Republic. Nor will they dispute our primacy as the producer of gold and silver. They dispute only our capacity for self-government, and deny the wisdom of universal suffrage. They believe we are to stumble on silver.

The crucial test is whether we are or not to drop from the bimetallic standard of gold and silver, maintained on a parity, to the dangerously crippled standard of silver only, and thereby limit to an inferior currency the foremost business nation of the world. The grave responsibility rests upon a Democratic Administration now in full control of both branches of Congress, as well as of the Executive department. No government can be sustained which does not fulfill its pledges in good faith. The public debt, national and State, and all other contracts, by our recorded pledges, are payable in legal tender on a parity with gold. The honor of the country may be in peril. Whatever policy will relieve the public distress will be my policy. Whatever party favors the public credit will have my favor. Whatever measures support public honor will have my support.

COST OF CHANGE OF RATIO.

Mr. VOORHEES. Mr. President, though I am aware that the Senator from North Carolina [Mr. VANCE] is entitled to the floor at this time, I ask his indulgence to present a letter from the Secretary of the Treasury on the subject just now being discussed, which I conceive to be of great importance. I shall ask that it be read, and printed for the use of the Senate. It is not long, and I conceive it to be my duty to lay it before the Senate and the country in that way.

The VICE-PRESIDENT. The hour of 2 o'clock having arrived, it becomes the duty of the Chair to lay before the Senate the resolution reported by the Senator from Massachusetts [Mr. HOAR], from the Committee on Privileges and Elections, which will be read.

The Secretary read as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

The VICE-PRESIDENT. The Senator from North Carolina [Mr. VANCE] is entitled to the floor. Does he yield to the Senator from Indiana [Mr. VOORHEES]?

Mr. VANCE. Yes, sir.

The VICE-PRESIDENT. The letter referred to by the Senator from Indiana will now be read.

The Secretary read as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1893.

SIR: Referring to our conversation relative to the probable cost incident to the change from the present coining ratio between gold and silver (1 to 16 for the standard silver dollars, and 1 to 14.95 for subsidiary silver) to a ratio of 1 to 20, you are respectfully informed that the number of silver dollars coined since 1878 aggregates 419,332,450.

Without any allowance for abrasion and loss incident to melting the same, the coinage value of these dollars at a ratio of 1 to 20 would be $333,222,162, or $84,110,228 less than their present face value.

To recoin these dollars at a ratio of 1 to 20 would require the addition of 81,376,700 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890 ($0.93¼), would cost $75,883,700.

In addition to this I estimate that there would be a loss from abrasion and in the melting of these dollars of at least $3,000,000, which amount, together with the difference in the face value of the coins ($84,110,288), would have to be reimbursed to the Treasury by an appropriation for that purpose.

From the fact that the silver dollars are distributed throughout the country it would be necessary, as they are redeemed at the several subtreasuries, to transport them to the mints, and the expense of transportation for $300,000,000, the amount outside of the stock on hand at the subtreasuries and mints at Philadelphia, San Francisco, and New Orleans, would average at least 1½ per cent, or $4,500,000.

I therefore estimate the cost of recoining the silver dollars already coined, as follows:

New bullion to be added	$75,883,700
Loss by abrasion and melting	3,000,000
Cost of the coinage (labor, materials, etc	6,230,000
Copper for alloy	68,200
Transportation of dollars to mints	4,500,000
Total	89,741,900

The stock of subsidiary silver coin in the country is estimated at $77,000,000, which at full weight would contain 55,699,875 ounces of fine silver. This amount at a ratio of 1 to 20 would coin $55,843,892, or $21,156,197 less than the present face value.

To recoin $77,000,000 of subsidiary silver into an equal amount of fractional coin at a ratio of 1 to 20 would require the addition of 18,797,625 fine ounces, which, at 93¼ cents per fine ounce, the average price paid for silver under the act of July 14, 1890, would cost $17,528,785.

There would be a loss of about 2½ per cent by abrasion from the face value, or about $1,925,000.

I would, therefore, estimate the cost of recoining the subsidiary silver in the country, at a ratio of 1 to 20, as follows:

New bullion	$17,528,785
Loss by abrasion	1,925,000
Cost of coinage (labor, material, etc.)	2,500,000
Copper for alloy	15,636
Cost of transportation	1,155,000
Total	23,124,421

RECAPITULATION.

Estimated cost of recoining silver dollars	89,741,900
Estimated cost of recoining subsidiary silver	23,124,421
Total	112,866,321

Very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. DANIEL W. VOORHEES,
United States Senate.

The VICE-PRESIDENT. Without objection, the letter will be ordered to be printed as a document.

CALIFORNIA MIDWINTER INTERNATIONAL EXPOSITION.

Mr. VOORHEES. I desire to call attention to Senate bill No. 50, in aid of the California Midwinter International Exposition. I wish to state that I reported it by authority of the Committee on Finance, and that the matter of time is of importance. I trust the Senate, upon the request of the Senator from California [Mr. WHITE], who will explain it in a moment, will take up the bill and pass it.

Mr. STEWART. Is that the California Exposition bill?

Mr. VOORHEES. Yes; I reported the bill. It was carefully considered and examined by the committee, and there can be no objection to it.

Mr. STEWART. I hope the bill will pass.

Mr. VANCE. Does the bill carry an appropriation?

Mr. VOORHEES. There is no appropriation whatever with it. I promised the Senator from California that I would ask the Senate to consider the bill.

Mr. WHITE of California. I ask unanimous consent for the present consideration of Senate bill No. 50. It is entitled "A bill in aid of the California Midwinter International Exposition."

The circumstances of the matter are briefly these: We have made extensive preparations in California for a midwinter fair. We have prepared to expend a large amount of money, and have made partial arrangements with three or four thousand of the exhibitors at Chicago, who will transfer their exhibits to California; but before they are willing to definitely enter into contract they desire an act of Congress permitting them to remove their goods to California under the same arrangements made in the law in reference to the World's Exposition: that is to say, they desire that goods may be taken in bond to California under

the restrictions of that act of Congress, with which Senators are all familiar, and also desire that the laborers imported who are used at the Chicago Exposition for the purpose of putting things before the public in proper condition may go to California and be there with the goods.

No appropriation of money is asked, and there are a great number of unemployed persons in our State who expect to receive employment when this work is begun.

I have in my possession two telegrams, one from the mayor of San Francisco and the other from Mr. De Young, who is the director-general of the exposition, stating that the work will commence immediately upon the passage of this bill, and that a number of people, reaching into the thousands, will be given employment. As there is no imposition to be placed upon the Government or any of the people, and as the exposition is solely designed to benefit that portion of the United States so far as employment goes, and the whole country in a general way, I conceive that there can be no opposition to the passage of the measure.

The VICE-PRESIDENT. The Senator from California asks for the immediate consideration of a bill, the title of which will be read.

The SECRETARY. A bill (S. 50) in aid of the California International Midwinter Exposition.

Mr. WHITE of California. I ask that a communication personally addressed to me by the Assistant Secretary of the Treasury in relation to the terms of the bill, and approving of the same, may be read for the information of the Senate.

The VICE-PRESIDENT. Is there objection to the present consideration of the bill?

Mr. FRYE. Let the bill be read at length.

The VICE-PRESIDENT. The bill will be read at length, subject to objection.

The Secretary read the bill; and by unanimous consent the Senate, as in Committee of the Whole, proceeded to its consideration.

The VICE-PRESIDENT. The accompanying paper will be read, in pursuance of the request of the Senator from California.

The Secretary read as follows:

TREASURY DEPARTMENT, *Washington, D. C., August 16, 1893.*

MY DEAR SENATOR: I have had the accompanying draft in aid of the California Midwinter International Exposition carefully examined, and am of the opinion that there is no objection to its becoming a law in its present form, so far as the interests of the revenue are concerned.

It appears to be identical with the act providing for the admission of goods for the World's Columbian Exposition, except that it allows the transfer of the articles on exhibition at Chicago to San Francisco, and this transfer could be safely made under regulations to be prescribed by the Department.

Very respectfully yours,

CHARLES S. HAMLIN.

Hon. S. M. WHITE,
United States Senate, Washington, D. C.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

The VICE-PRESIDENT. The question is on agreeing to the preamble.

The preamble was agreed to.

SENATOR FROM MONTANA.

The Senate resumed the consideration of the resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, March 27, 1893; which was read, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. VANCE. I have a request to make as representing Senators of the Committee on Privileges and Elections. I find such a number of Senators wish to be heard on the proposition as to contested seats, that I have been requested to ask that the vote which was to have been taken to-day at 5 o'clock should go over until the same hour to-morrow.

The VICE-PRESIDENT. Is there objection to the request of the Senator from North Carolina?

Mr. VOORHEES. Of course I do not object; but I wish to say that it would be convenient for me to deliver some remarks to-morrow, of which I gave notice, and it would be very inconvenient for me to postpone them. I should like to take the floor after the morning business to-morrow, if that will not interfere with the purpose of the Senator from North Carolina. I shall, of course, make no objection to the change he proposes.

Mr. VANCE. Of course we can not resist an appeal of that kind. It is in consequence of having granted such an appeal to-day, the time expected to be consumed in debate on this question having been otherwise disposed of, which causes me to ask for an extension; so that, if it will not be inconvenient to the Senator from Indiana in the slightest degree, I ask that the vote be postponed until Wednesday.

Mr. VOORHEES. I should very much prefer that the Senate would indulge me to say what I have to say upon the financial situation to-morrow.

Mr. VANCE. It is not possible to refuse a request of brother Senators who have special business and who trespass upon the time which has been given for the discussion and consideration of the question of the admission of Senators. Therefore, as I do not like to refuse a request of that kind, I think it necessary that we should be given a little more time for this discussion.

Mr. MITCHELL of Oregon. I hope, then, that the chairman of the committee will ask that the question in relation to the contested seats of Senators go over until Wednesday at 4 or 5 o'clock, or some other hour on Wednesday.

Mr. VANCE. That is what I intimated.

Mr. MITCHELL of Oregon. That will give the chairman of the Committee on Finance an opportunity to occupy whatever time he wishes to-morrow.

The VICE-PRESIDENT. The Chair will state the request of the Senator from North Carolina, which is that the vote on the pending resolution be taken on Wednesday at 5 o'clock. Is there objection?

Mr. HOAR. I wish to say that, having made the report in this case, having expressed my views in its favor, and pressed it at this session, I consider that my duty has been performed, and the question of a special hour, whether the vote is to be taken on one day or another, is a question which must be determined by the convenience of the Senate; so that I have no personal duty about that.

Mr. STEWART. Is the time for a vote fixed for Wednesday?

The VICE-PRESIDENT. The Chair hears no objection to the request of the Senator from North Carolina that the vote on the pending resolution be taken at 5 o'clock Wednesday next.

Mr. VANCE. Mr. President, the question involved in this case, briefly as I can state it, is this: The term of Mr. Sanders, the late Senator from Montana, ended March 3, 1893. The Legislature of that State, whose duty it was made to elect his successor, by the act of 1866, adjourned on the same day without an election. On the next day, March 4, 1893, Mr. Mantle was appointed to succeed Mr. Sanders. Is he entitled to a seat in this body? In other words, the regular term of a Senator expiring by law on a certain day, the Legislature being in session, which by law should have elected his successor, and failed to do so, shall the governor appoint? The minority of the Committee on Privileges and Elections say he shall not. The majority say he may. That depends upon Article I, section 3, of the Constitution of the United States, which is as follows:

SEC. 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

Immediately after they shall be assembled in consequence of the first election they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

I want to say, *imprimis*, that I deny there is any specially imposed constitutional obligation upon us to keep the Senate full, greater or more binding than there is in regard to any other department or offices of the Government. It is made our duty, in common with other officials, to keep them all full, so that the people may be served. To this end the manner of the filling is prescribed by law, and we and all other officers are sworn to observe that law. In regard to the filling of some, two methods are provided—the one to be adopted only after the other has failed; as in the election of a President and Vice-President.

In executive and ministerial offices which are elective, the common-law principle of holding over until after the election and qualification of a successor helps to keep the offices full. It is not so with legislative officers. If a member of the House dies or resigns or is expelled, or if there be no election at the appointed time, there must be another election. In offices appointive by the President, when the concurrence of the Senate is required, the President shall appoint in the recess of the Senate, which appointment shall hold good until Congress has convened and adjourned. But there are no means of forcing the President to appoint, other than the same official oath which binds us to the performance of our duty.

If there be any duty specially imposed as to keeping the Senate full, it is imposed upon those who are charged with the creation of Senators by the Constitution and not upon us. We sit here only to judge of the election and qualification of those who come to us claiming to be Senators; it is in no sense our duty to supply the defects and cure the failures of constitutional Senator-makers to perform their sworn functions.

Now, how are the Senators to be chosen? That is set forth in Article I, section 3, of the Constitution, as quoted above. Before applying the technical rules of construction to the words there-

in contained, let us look at them in a plain, common-sense light, as they would appear to any unprejudiced citizen of ordinary intelligence; and to aid us in that view, let us consider the circumstances under which this article of the Constitution was adopted.

We may suppose that the members of that Convention had assembled and organized and digested a skeleton outline of the form of government which they wished to establish. We will suppose that they had determined upon dividing its powers into three branches—the executive, legislative, and judicial—that the Legislature should consist of two Houses or bodies, a Senate and House of Representatives; that the Senate should consist of two Senators from each State with one vote each. That was brief and simple. The question next arose, how should they be chosen? It was decided that they should be chosen—that is, elected—by the Legislature of each State for a term of six years.

When and how? This was also prescribed. When first assembled they should be divided into three classes, the term of the first to expire in two years, that of the second in four years, and that of the third in six years; so that one-third of the members should be elected every two years. Thus far they had provided for a Senate as a part of the lawmaking power, prescribed of how many members it should be composed, how they should be elected, how long they should serve, how they should be divided so that their terms should not all expire at the same time, and how their successors in regular course should be elected.

This was the programme for establishing a complete continuous body called the Senate of the United States, with a single exception—no provision had been made so far for the casual interruption of a term, such as by death or resignation or expulsion, or any other change in the condition of a Senator which rendered his service impossible. Naturally these accidental and unlooked-for circumstances were considered. The question was asked, should any of these things happen to a Senator when the Legislature of his State was not in session, what then? Should that State have no representation in that body for no fault of its own?

Surely not; and so they provided that in such a case the governor of such a State may appoint temporarily, until the Legislature meets, which shall then fill the vacancy. In all these contingencies it will be observed that the Legislature was treated as the primary source of power in reference to the selection of Senators; the appointing power conferred upon the governor was only in case of accident or some mischance happening to the occupant of a term once filled which would deprive the State of a representative in the Senate.

It seems impossible to reasonably conceive that at this point there was anything else to provide for except these contingencies attending human life and the conduct of human affairs. They had already provided for the election of the first Senators, fixed their terms, and how and when their successors in regular course should be chosen; and it is a reflection upon their intelligence to say that they in the same breath added a clause giving the governor power to fill these identical vacancies without even the averment that the Legislature had failed or refused to do its duty. To make sure, they give a sample of the kind of vacancy which might "happen."

There was death—no member doubted that was something which might happen to a Senator, and need not therefore be named. There was expulsion, which might also happen to a Senator—there was no doubt about that; but there was a doubt whether a Senator could resign his office on account of the doctrine which governed the British Parliament. To establish the contrary doctrine they mentioned "resignation" as one of the vacancies which might "happen," and added the words "or otherwise" to include other contingencies, as death, expulsion, and the like, not needed to be named.

Surely in the face of their express provisions for filling regular terms by the Legislature, if they had intended to include the filling of such terms in the powers granted to the governors, they would have said so in plainer terms than the words "or otherwise," and would not have left so important a grant of power to depend upon a construction—and a doubtful construction at that, and one in the face of the ordinary meaning of the words used and of well-established law. Nor can the plea of ignorance of the meaning of these words, or the usage of the law in the construction of them, be for a moment considered.

The Senator from Virginia [Mr. HUNTON] says technical rules ought not to be applied in construing the language of those who framed the Constitution, because many of them were not lawyers. If this be true, it is also true that most of them were lawyers, and as eminent as any in America. Mr. Madison himself was a member of the Committee on Style or Revision, and, we may assume, carefully scrutinized and corrected the language of the clauses as they were adopted. As they put it, it seems to me language could not be plainer.

If they had intended that the words "or otherwise" should include every possible vacancy, they would not have used the words, "which happened by resignation or otherwise," at all, but would have simply said "if vacancies occur," the governor shall appoint, etc. Nor would they have used the word "happen" as applied to a vacancy created by law on a given day, which had no element of chance about it; nor would they have used the word "if" vacancies happen, because a regular term was sure to expire on a day certain, and create a vacancy. There was no contingency about it as is implied by "if." They would have simply said "when" vacancies occur. As, one would not say "if the sun rises to-morrow I will do so," but "when the sun rises I will do so."

I do not admit that in construing a constitution the rules which govern contracts between parties do not apply. On the contrary, it seems to me that in a government of limited powers, the instrument in which the powers are specified and limited should be strictly construed according to known rules of the law. I can not agree to the statement that there is here any such manifest and overruling purpose as the language of the committee would imply, as to justify a construction opposed to the clear meaning of the particular words and phrases; nor can I agree to the statement inferentially made by the committee, that its manifest purpose would justify the elimination and absolute ignoring of a whole sentence in the Constitution; as is contended by the committee when they say "that the language of the Constitution is quite as well suited to confer the power upon the governor of appointing to a vacancy occurring at the beginning of a term, or to a vacancy which began to exist when a Legislature was actually in session, and continued after the adjournment of the Legislature, as any language likely to be used."

In order to seat this applicant, Mr. Mantle, they, therefore, would override the plain and obvious meaning of words according to the legal rules of construction. They would eliminate a word in one case and a large part of a sentence in another; and make the latter clause of section 3 read as follows: "And if vacancies occur, the executive of the State may make temporary appointment until the next meeting of the Legislature, which shall then fill such vacancy." They would strike out the words "happen by resignation or otherwise during the recess of the Legislature of any State."

It can not be sustained in reason or in law. To sustain the committee it is necessary also to adopt the secondary and not the primary meaning attached to the word "happen" by all the lexicographers of authority to-day. For instance, the primary definition of the word "happen," according the Century Dictionary, is, "to occur by chance" or "occur unexpectedly or unaccountably;" secondary, "in general to occur," "to take place." This term the committee adopts, whereas common usage would invariably take the first and ordinary meaning of the word. But even there, the illustration used explanatory of the second meaning are words implying pure chance, as "I happened to be there"—"this happens often."

The definition of the Imperial Dictionary, primarily, is to "chance," "to be brought about unexpectedly, or by chance." So of all of them.

The truth is, there is no paramount purpose impressed or implied in relation to keeping the Senate full in the Constitution. It is the dictum of those who wanted to seat a Senator. The main purpose of the Constitution, if we are to infer that any such exists from the language used, is that the Senators shall be elected by the Legislature. The secondary purpose is, that if the Legislature be not in session when the vacancy happens, the governor may appoint until such time as the Legislature can act.

The Constitution provides that each State shall have the right to be fully represented in the Senate, and it is the business of this body as a part of the lawmaking power to see that that right is jealously preserved to each State. Whether that State shall in fact have its full representation here or not depends upon the State itself. If it sees proper to withhold a Senator by failing to select him in the constitutional way, it is the sole business and lookout of that State; and to speak of depriving the State of her representative in the Senate because she does not see proper to comply with the Constitution in choosing him, is an abuse of terms.

In answer to the argument made by the minority report and so ably sustained by the speech of the Senator from Oregon, that the rule of law is "that a general word which follows particular and specific words of the same nature as itself takes its meaning from them, and is presumed to be restricted to the same genus as those words; or, in other words, as comprehending only things of the same kind as those designated by them, unless there is something to show that a wider sense was intended," the Senator from Virginia [Mr. HUNTON] contends that there is something in this case which shows that a wider sense was intended. He says: "This contrary intention does appear here.

The unquestionable object of this clause was "to keep the Senate full—always full;" and that "the history of the Convention's proceedings shows that by a vote of the Convention it was decided unanimously on Madison's amendment that this was the intention of the Convention, that the governor should fill the vacancy when it happened from refusal to accept, resignation, or otherwise."

Again the assumption is made that the object of that clause was to keep the "Senate full—always full." Yet, he admits that Mr. Madison's amendment was not incorporated in the Constitution itself, and denies that Mr. Madison's amendment was ever reversed by a vote of the convention. It seems to me, Mr. President, that the report of the committee on style, changing the language which necessarily and under the rules of construction changed the meaning, and which report was adopted by the convention, was a reversal or abandonment of Mr. Madison's amendment. And it is new to me that the use of words in an amendment which was not adopted by the convention should be held up as the guiding light to the meaning of words which were adopted.

In other words, it is a new species of logic to undertake to prove what a set of men did do by setting forth what they did not do.

Mr. Madison's amendment was as follows, as cited by the Senator from Virginia [Mr. HUNTON]:

To strike out the words in section 3, after "vacancies," and insert the words "upon the refusal to accept resignation or otherwise, may be supplied by the Legislature of the State in the representations of which such vacancies shall happen, or by the executive thereof, until the next meeting of the Legislature."

This would make the clause in the third section read as follows:

And if vacancies happening by refusal to accept, resignations, or otherwise, may be supplied by the Legislature of the State in the representation of which such vacancies shall happen, or by the executive thereof, until the next meeting of the Legislature.

Here was another opportunity for inserting the words "or by expiration of a regular term," but it was not embraced. In fact, it is noticeable that nowhere, either in the debates which preceded the forming of the Constitution, or in the Constitution itself is there any authoritative mention of filling a seat which had become vacant by the mere efflux of the constitutional time, except in connection with the Legislature.

To base an argument that it was the intention of the Constitution-makers to confer such power upon executives of the States, in the face of the absence of any attempt to do so in any enumeration of possible vacancies, seems to me absurd. The lawyers of that convention must have known all the principles of law which qualified their general word, "otherwise," after their particular enumerations, and as men of common sense, to say nothing of legal knowledge, they could not have left their intention so obscure as to be groped after by strained construction and overruling of the principles of law.

But, granting that the meaning of the convention was expressed by Mr. Madison's amendment, and that it had been incorporated entire, the case would not have been altered one particle. A refusal to accept is an unexpected thing, an unlooked-for event, as is a resignation; and those specific words "refusal to accept" would still further qualify the general word "otherwise," and exclude with still stronger force the possibility of its applying to all vacancies whatsoever. It was only the addition of one more specific word, and, beyond doubt, the more specific words which are mentioned of the same genus, the stronger becomes the qualification of the general word which follows, limiting it to things of like genus.

One thing must be conceded by all, that the power delegated to the Legislature to elect Senators is a primary power, while the power conferred upon the governors to appoint in certain contingencies is supplementary. It is by no means coextensive with the power conferred upon the Legislature.

I will not weary the Senate or myself by referring again to the cases where the courts have decided the principle of construction on which the minority depend. They have all been cited in the views of the minority and are upon the desks of Senators; nor will I again go over the precedents of this body, with which by this time almost every Senator must be familiar.

In the opinion of the minority, sustained by the leading precedents in the case, as well as by the opinions of most of the great lawyers who have ever sat in this body, Mr. Mantle is not entitled to hold a seat here for the reason that the Legislature upon whom was devolved the duty of electing Mr. Sanders' successor, both by the Constitution and the act of 1866 passed in pursuance thereof, and equally binding upon us, failed to discharge its duty.

For a still stronger reason is Mr. Allen, appointed from the State of Washington, not entitled to a seat, without a clear violation of the expressed words of the Constitution; for the vacancy neither happened within the meaning of that word, nor did it occur during the recess of the Legislature of that State.

I can not better close my remarks on this head than by quoting from the speech of Geo. E. Badger, of North Carolina, delivered in the Phelps case in 1854. He was perhaps the greatest lawyer my State has ever produced, and was possessed of an intellect profound as that of Bacon, analytic as that of Fearne, and acute as that of Pascal:

The vacancies which the executive of a State is authorized to fill are never vacancies that happen by the efflux of time. They are not foreseen vacancies; they are vacancies that happen by resignation or otherwise. Mr. President, from an exceeding desire to give this clause of the Constitution such a construction as would keep the Senate always full, I labored hard a year or two ago, when we had questions of this kind before us, to find out some method of supporting in my own mind a construction that a vacancy happening by efflux of time, and not filled beforehand by the Legislature, might be brought within this limited power conferred on the executive.

But, sir, I have been obliged to abandon it. "By resignation or otherwise," is the language. We must expound the word "otherwise" to apply to vacancies happening by similar events: that is, unforeseen events—death, resignation, appointment to an office which disqualifies; but it can not be applied to the expiration of a term of a Senator which leaves a seat vacant on this floor. My opinion, therefore, is that the governor of a State has no power to fill a vacancy in this body which is brought about by the expiration or efflux of the time for which the Senator was elected—in other words, at the termination of his term in the Senate. It must be a vacancy in the term happening during the recess of the Legislature; it must be a vacancy in the term happening by resignation or other casualty. That I understand to have been the express and solemn decision of the Senate in Lanman's case in 1825, overruling one or two earlier decisions which had passed, perhaps, without full consideration.

The danger or the inconvenience supposed to arise from the Senate not being "always full," is not to be compared for a moment with the danger which would ensue if the practice were followed of filling the Senate with members who are not entitled by the prescriptions of the Constitution to sit here. Into this temple of our liberties no man should be permitted to enter except by the door of the Constitution.

Doubtless, when providing the way by which it may be entered, our fathers had in mind the Divine wisdom, which saith:

Verily, verily, I say unto you, he that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber. But he that entereth in by the door is the shepherd of the sheep.

There should be no politics in the decision of this question. No other consideration should enter into it but that of a sincere desire to maintain the letter and spirit of the Constitution. Doubtless many of the complicated decisions which this body has made have arisen from the pressure of temporary circumstances of one kind or another. It is a great question which should be decided with proper solemnity. The ambition of men which leads them often to the obstruction of the proper and legal election of Senators to this body in the hope of securing favor from a single man—the executive—should be rebuked, and they should be taught to know that this great tribunal will not make itself an accomplice in their schemes and combinations, if we wish to avoid scandals and to preserve the character and dignity of the United States Senate.

Mr. GEORGE. Mr. President, as I listened to the very able argument just made by the Senator from North Carolina [Mr. VANCE], although I promised him to take part in this debate, I felt that I could not meet the promise, except so far as an argument upon the words of the Constitution is concerned, as there is nothing left to add to what has been said by that Senator. I shall, therefore, confine my remarks to a brief statement of the argument as based on the words of the Constitution itself. There are precedents both ways. They have been brought to the attention of the Senate, and we are at last left to decide this very solemn and important question upon the meaning of the Constitution as expressed in that instrument.

The case before the Senate is the expiration of the regular term of a Senator, the meeting of the Legislature required by law to elect his successor, the failure of that Legislature to elect, and then on that failure an appointment by the governor of the State. The question is, has there been a constitutional appointment of the successor now applying for his seat? The question seems very plain on the very words of the Constitution itself. The provision as to filling vacancies by executive appointment is in these words:

If—

As was well remarked by the Senator from North Carolina. Not "when," but "if;" the very word of all others to express a contingency.

If vacancies happen—

Not "if vacancies occur;" not "if vacancies exist;" but "if vacancies happen." How?

by resignation or otherwise—

When?

during the recess of the Legislature of any State the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

It would seem too plain for controversy, at least, that the vacancy must happen during the recess of the Legislature. If it does not happen during the session of the Legislature the *casus* does not exist in which the power to appoint is conferred. But it is argued that the Constitution means as if it read, "If vacancies happen to exist during any recess of the Legislature of any State, the executive may appoint." And thus it is insisted that the Constitution means that all vacancies, occurring in whatever mode and at whatever time, may be filled by executive appointment.

There are conclusive reasons against this view. It requires us to read the language of the Constitution by striking out what is in it and inserting other language of different import.

That is the true *casus*. To give this clause of the Constitution the meaning claimed for it by the majority of the committee, you must take your pen and strike out four words in the Constitution. The phrase "if vacancies happen by resignation or otherwise" must mean less than all vacancies whatever, or the four words "by resignation or otherwise" are utterly without meaning, and the Constitution must be read as if they were stricken out.

When you read the Constitution and interpret it by leaving out the meaning of four words, you do the same thing exactly as if you were to physically erase those words from the Constitution itself. We can not construe the Constitution in that way. We must construe the language as used and according to a rule of law recognized by every respectable court in the world; we must give force and effect to every word in it.

This is true of all instruments, however trivial and unimportant they may be. In private contracts parties are not presumed to have used words without attaching to them any meaning or force. But the rule which applies to all instruments, whether of a private or public nature, is the more binding when we come to construe constitutions. Such instruments are necessarily brief, and therefore they do not contain unmeaning words. The fewest possible words are used to convey the meaning of the framers. Constitutions are framed with the utmost care, and words are selected to express the exact meaning and intent of the framers, and for no other purpose.

How strange it would be if men called together to form the framework of a great government should indulge in idle, loose, and unmeaning language. Hence instruments are carefully prepared, and the words undergo careful revision before final adoption, in order that they may be perspicuous—plainly giving the meaning of the framers. The style of these instruments is fixed to attain clearness only; there is no effort at anything else but to express the plain meaning of the framers.

Such instruments are not intended to be eloquent, to excite the emotions of those who read them; they are framed solely as guides, and as guides they must be construed. Hence there are no pleonasms, no amplifications, no unnecessary adjectives, and none in the superlative degree, except "greatest," "highest" in connection with numbers—as "highest" in greatest number of votes. It is true we have "supreme law of the land," but this is essential to express the necessary supremacy of the Constitution. There is not a word in the Constitution that is superfluous, much less a phrase.

When "all vacancies" are meant the words "all vacancies" are used, as in clause 3, section 2, Article II, or the word "vacancies" alone, but in a connection which manifestly means all, as in clause 4, section 2, Article I.

In the clause first cited it is said "the President shall have power to fill up all vacancies that may happen during the recess of the Senate." Not a part of them, nor is it left to argument or conjecture whether all is meant. The word "all" is used.

In the clause secondly above cited it is said, "When vacancies happen in the representation from a State, the executive authority thereof shall issue writs of election to fill such vacancies." There the context shows that "vacancies," unaccompanied by any word of qualification, means all vacancies, and necessarily so.

When, then, we have two instances of provisions for filling vacancies, and both using the appropriate language to designate—"all vacancies"—without question, we are bound to conclude that in the other instance, the language, if intended to embrace "all vacancies," would have been equally explicit.

When the framers of the Constitution had been so particular in one instance as to say "all vacancies," and in the other instance to say "vacancies," which manifestly by the context means all vacancies, can any one suggest a reason why, having thus adopted the language necessary and appropriate to express the idea of all vacancies, they would, when they came to this particular place, employ other language when they meant the same thing.

If the proposition propounded by the majority of the committee be true, the language of this clause of the Constitution must mean all vacancies, for that construction embraces all. So, then, the framers of the Constitution having thus in two instances in providing for filling vacancies used words which rendered it impossible to mistake their meaning, that they intended to include all vacancies, it seems to be manifest if they meant all vacancies in this clause they would not have forgotten the proper phrase to express the idea, and they would have been equally explicit.

But in this case vacancies of a particular kind are mentioned, namely, "by resignation or otherwise." If by "otherwise," and the whole strength of the argument is based on that word "otherwise," it was meant to embrace all vacancies, however occurring, then the framers of the Constitution were guilty of a gross departure from the right use of language in using the words "by resignation or otherwise" to designate what in other parts of the Constitution they had expressed by "all" or by "vacancies" generally in a connection which necessarily meant "all." When they meant "all" they had expressed the idea by "all" or by "vacancies" generally without qualification.

We must conclude, therefore, that the introduction of these four words were for a purpose—to give a meaning to the phrase which it would not otherwise have had if vacancies alone had been used—this purpose being to make the "vacancies" less than all vacancies.

The framers of the Constitution, as shown, would not have used those four words if they had meant "all vacancies."

These were appropriate words if they meant to restrict the appointing power to vacancies—less than all—occurring unexpectedly or from an unanticipated cause. So they specified "resignation," which means vacating in that mode a term already commenced and already completely filled by election by the Legislature, whereby, through an unlooked-for event a place once filled in accordance with the Constitution had become vacant.

If the language had stopped there at the words "by resignation," the most reckless disputant would have admitted that it was not an original vacancy that could be filled, but only one occurring outside of the usual order, by the act of the incumbent. But "resignation" would not cover all the vacancies happening unexpectedly—there might be death, expulsion, abandonment of the office, the failure of the Senate to admit to a seat on account of a constitutional disability, want of age or inhabitancy, alienage, or willful failure to qualify by taking the oath. It was necessary to provide for all these and possibly others of a like character.

This provision was rightfully made and properly expressed by the word "otherwise," which, according to a well-settled rule of law—when associated with resignation—means other vacancies *ejusdem generis*, that is, occurring unexpectedly in a place once filled. Hence the provision was designed to cover that class of vacancies. Vacancies occuring in the regular order, normally, by expiration of a term, had already been provided for in the first clause of the same section, wherein it was provided that they should be filled by being chosen by the Legislatures for six years.

There can be no controversy that this provision covers the case of an original vacancy for a full term. And this view is, if possible, made still more clear by the provision in the second clause, providing for a classification of the Senators; that is the word used when the Legislature elect; the word "appoint" is used when the governor fills the term, so that one-third thereof should "be chosen" by the Legislature, not appointed, "every second year."

These make complete provision for filling vacancies occurring by expiration of the term. They must be filled by being chosen by the Legislature for six years, and under the classification by one-third of the Senators being chosen every second year. This seems to place, in my judgment, the matter beyond controversy as to how the Constitution required vacancies for the full term to be filled. This mode of selection so required by the Constitution is:

First. By election for six years by the Legislature.

Second. By a classification which would require the elections to take place every second year.

With these provisions immediately preceding the clause in controversy—provisions full, complete, plain, and certain—it is impossible to conclude that the language "by resignation or otherwise" meant by resignation expiration of term, or otherwise. It is absurd to suppose that the Constitution, having provided for filling full-term vacancies by election every second year for terms of six years, immediately afterwards provided that the same full-term vacancies might be filled by executive appointment for an indefinite and undefined part of the six years by a mere "temporary appointment," to use the language of the Constitution.

The Constitution can not mean that original vacancies in the Senate shall be filled by election, one-third every second year for a full period of six years, and at the same time mean that

the same original vacancies may be filled temporarily by executive appointment. To justify such a conclusion, to infer such a plain contradiction or exception, if that term be preferred, very explicit language should be employed, language admitting of no other meaning. This reasoning seems to be conclusive on the language of the Constitution.

This construction is, moreover, demanded by the scheme of the Constitution itself as plainly developed in reference to the legislative department. Two Houses are provided for, one with a short term—two years—to be elected directly by the people. By this part of the scheme, representative responsibility and accountability is fixed at short intervals, so that the public will should be fairly represented and that will should be expressed frequently.

This was an essential idea in a free government, founded on the popular will; yet it was apprehended that if both branches were elected biennially the policy of the Government would be subject to frequent changes, to sudden vacillations, coming sometimes from passion and excitement without due reflection and sometimes from want of time for the influence of the sober second thought. To obviate this other provisions were made in reference to the Senate, all securing exemption from sudden popular changes.

The Senators were to be elected by the Legislature, not only that they might represent the State as a distinct political organism—itself a very important idea—but that, as was supposed, greater care might be exercised in their selection. It was supposed then (whatever may be the real facts as shown in the outcome) that the Legislature would be more solicitous to secure the services of the best men. The Legislature, too, was the real representative, more than any other functionary, of the sovereignty of the State, and also of the people of the State, in their organized political capacity.

But more than this, it was deemed that whilst the Senators should be representatives of the will and of the matured judgment of the people of their several States, and should be accountable to the people, yet, with the longer terms provided, the Senate would be more conservative and would represent the popular will when it was matured and made up upon full consideration and deliberation; that they would make with these long terms the policies of the Government more stable.

And to secure this stability and at the same time give a proper influence to the people's will the provision about classification was inserted. In this way the influence of the popular will throughout the United States would be made manifest in the Senate as in the House, at least to the extent of one-third of its members, who were required to be elected every second year. No better scheme could have been devised for uniting conservatism with progress—for giving effect to the people's will without violent fluctuations and changes.

The scheme is utterly overthrown by the construction contended for by the majority of the committee.

The constitutional scheme is not only abandoned, but reversed. For, by substituting for the Legislature the executive, Senators are not chosen for six years, as the Constitution requires, but selected for an indefinite and undefined part of six years—mere temporary appointments, as the Constitution calls them. A Senator thus chosen is not that representative of the State which the Constitution provides for. He has not the tenure given to secure his independence and to secure the country from violent and immature popular changes. On the contrary, he is what no member of either branch of this Legislature should be, a mere creature of the executive of the State, subject to his will as to his tenure, because the executive may call the Legislature together at any time and terminate his office. He is not chosen under the constitutional rule of classification as to election of one-third every second year, since the executive, being under no constitutional obligation to appoint at all, having only permission to do so, may make the appointment at any time during the recess of the Legislature, however long that recess may be—and in some States the recess is four years.

The foregoing seems to be fatal to the pretensions of the applicant. But there is another view equally conclusive. As to the Oregon case, the vacancy did not occur during a recess of the Legislature, but when it was in session. It will be kept in mind that the provision relating to filling vacancies in the Senate substitutes a different agency for filling the office than the one primarily fixed in the Constitution, and, as has been shown, essential to the scheme fixed by the plain language of the Constitution. This is not so in the two other instances before mentioned providing for filling vacancies.

In the case of vacancies in the House the same constituency—the people—fills them that fills the office for the full term. In the case of appointments to office, the same agency—the President—is the appointing power in both instances. The only difference is that in sessions of the Senate he must have their advice as to some offices. There is no revolutionary change in the constitutional method of filling the office; for even as to the advice of the Senate it is within the competency of Congress to dispense with it in such offices as the Congress shall deem to be inferior.

When we come, then, to consider the language used in the clause under consideration, we would err fatally if we neglected to consider this change in the fixed and determinate scheme of the Constitution—as to the agency to select a Senator—a change from the Legislature to the executive. And the more so, since the very language of the clause in question marks with emphasis the change.

The language is, if vacancies happen, etc., "during the recess of the Legislature"—the plain meaning being that the vacancy shall then happen in order to be filled by the executive. Can we discard this language and adjudge that the governor may appoint, though the vacancy happen whilst the Legislature is in session? It seems impossible to do this without in effect annulling that part of the Constitution and framing a new one. I do not know how to make the meaning plainer than it is on its face.

But the plain meaning of the Constitution as expressed in the words of the instrument itself is asserted to be subordinate to and subject to control by what is called the policy of the Constitution.

This policy is said to be:

That the States are equal in the Senate, and to preserve this equality each State must always be represented by two Senators; not that each State shall have the right to be represented by two Senators. The argument goes to the point that to preserve this equality the State must actually have the two Senators.

It is asserted that this policy is manifested by that provision in the Constitution which forbids, even by an amendment of that instrument, that any State shall be deprived of its equal suffrage in the Senate without its own consent. The answer to this is:

First, no such policy is expressed in the Constitution. We can impute no policy to the Constitution in construing it than its plain meaning as shown by the language used. If we are authorized to go outside of the language and frame a policy for the Constitution, such as we may fancy is right and proper, and then use the fancied policy to change the meaning of the Constitution itself, then we in effect alter the Constitution as framed and make a new one. We substitute for the Constitution what we think the Constitution ought to be. We amend it by construction instead of in the mode provided for by that instrument itself.

The policy of the Constitution is, and can be, rightfully nothing else than the meaning of the Constitution as expressed in its words.

That meaning is that each State is entitled to two Senators chosen by the Legislature thereof for six years, and that the Senators shall be so classified that one-third of the number shall be chosen by the Legislature every second year. I say entitled, that is, may have two Senators if the State will select them in the mode provided for in the Constitution. It is a privilege and a right, nothing more. This is conclusively shown by the provision above referred to, that the State may be deprived of its equal suffrage by its consent.

In no other sense can it be said truly that it is the policy of the Constitution that each State shall have an equal suffrage in the Senate. To give it any other meaning we must go further, as the committee do, in effect, and say that the Constitution means that the Senate is not legally organized to transact business on any particular day unless there be present in the Senate two Senators from each State. For if it be the policy, that is, the meaning of the Constitution, that each State shall at all times and under all circumstances exercise its equal suffrage in the Senate, it is unconstitutional to enact a law without this equal suffrage. That shows how absurd the position is.

On the contrary, if the policy of the Constitution and its meaning be that each State is only entitled to have two Senators, then the State's failure to select the two Senators in the mode prescribed in the Constitution is but a failure on the part of the State to claim a right, and of course concerns only the State itself.

Then, if, as has been conclusively shown, the plain meaning of the Constitution is that the executive shall appoint only in case of a vacancy happening during a recess of the Senate, that can not be affected by the failure of the State to fill the office in the manner provided for in the Constitution.

A State has no right of representation in either House of Congress except by Senators and Representatives selected in accordance with the mode prescribed by the Constitution. The mode prescribed is as essential as the right to representation itself. They are both parts of the Constitution—the supreme law of the land.

But this idea of a policy which is so overpowering as to change the Constitution in its plain language in order to have representation in the Senate at all events, is disproved by the very language of the clause in question; for, if that policy had been such as it is claimed to be, it would have been mandatory on the governor to appoint. Certainly it would be the strangest thing in the world that the framers of the Constitution deemed the actual representation of each State by two Senators so absolutely important as to authorize a departure from the scheme of the Constitution, as therein plainly expressed, whereby the Senators are required to be chosen for six years—one-third every two years, by the Legislature of the State—certainly, I say, if they deemed such continuous representation in the Senate so important, they would have so provided in express words by imposing a duty upon the executive of the State to make the appointment.

But they did not do this. They provided only that the governor shall have permission to make a "temporary appointment," leaving it absolutely to his own judgment or caprice whether he should make the appointment or not. The language is, "may make a temporary appointment," not "shall make."

Mr. COKE. I ask the Senator whether the word "may" might not mean "shall" in that connection.

Mr. GEORGE. Well, Mr. President, that is a suggestion which I can only answer by saying, No, sir. There is not one place in the Constitution where "may" imposes obligation, and, especially, it can not mean that in this clause. No duty is imposed, only a power to be exercised or not, as the executive may determine. It is impossible to conceive that the overruling policy of the Constitution to have the Senate always full could be said to exist if it only provided that it shall be full or not at the discretion of the executives of the States.

Note how different—I call my friend's attention to that—is the the language in reference to filling vacancies in the House of Representatives, where the provision is that the vacancy shall be filled by the constituency authorized in the first instance to elect. There it is said, "The executive authority shall issue writs to fill such vacancies." And also, note the language in the same clause where it is said after the Legislature meets they "shall then fill such vacancies."

I may say here, if the framers of the Constitution in the very same clause and sentence use "may" to impose a duty and "shall" also to impose a duty, they were playing at odd and even with the English language; they were using it at random, and giving us no guide by which to form a conclusion as to the meaning, except conjecture.

Another answer to the question of the Senator from Texas is, that in construing statutes and constitutions and other instruments, we are bound to give to every word in them, not its possible signification, but its primary and proper signification, and you are only authorized to depart from it when the context shows that the framers of the instrument intended to use it in another sense. No such meaning is here shown by the context.

But it is admitted that it is the duty of the Legislature to fill original vacancies and all others when in session, however they may happen. The language of the Constitution is plain, that such is the duty of the Legislature, a duty which it can not evade or avoid without declining to comply with the Constitution. It is the failure, therefore, of the Legislature to do its duty which, in the view I am answering, gives rise to the power of the executive to fill a full term.

This view requires a total reconstruction of the clause in question. It should read, then, "if vacancies happen to exist in the recess of the Legislature in any State, and the Legislature shall have failed to discharge its duty in filling them, then the executive may appoint." Of course we can play no such tricks with the Constitution. Besides, there is no single instance in the Constitution where a power is conferred on any officer to do a thing required by the Constitution to be done, and on failure of the officer to do that thing another officer or tribunal is substituted to made good the default.

The Constitution requires all officials charged with any duty, or clothed with any power under it, to take an oath to support it, and does not contemplate, in any event, that any such officer will not discharge the duty, and hence has made no provision for a devolution of that duty on another. The provision in the Constitution for dealing with derelict officers is impeachment, not substitution. The new construction now contended for overthrows the whole scheme of the Constitution by substituting an idea not contained in it anywhere, that the Constitution itself presumes neglect on the part of its agencies, and provides for other agencies to supply the neglect.

It was said in debate in answer to that view during the last session that there was an instance of that kind in the case of a devolution on the House of Representatives of the right to elect a President. Let us see how that stands. The case of a devolution on the House of Representatives of the duty to elect a President, and on the Senate of the duty to elect a Vice-President, constitute no exception to the rule as I have stated it. For, in the first place, the persons charged with the duty of electing these officers in the first instance are not officers of the United States, but the people at large. In the second place, the failure to elect does not arise from a failure to hold the election at the only time and place in which it can be held, but from the fact that the Constitution prescribes a rule necessary to make the election effective, which, without fault of any elector, may not be complied with.

Each elector has a right to vote for his choice for President, and it is his duty to vote for his choice for President without reference to the possible contingency that the person for whom he votes may not receive a majority of all the votes cast, and in that case the Constitution, whilst refusing to the electors another opportunity to elect, makes the election already had good *pro tanto*, that is to the extent that one of the three highest candidates shall be selected by the House of Representatives as President.

In that case, there is no substitution of power, but a provision that the election shall be good if made in either one of two ways, one by a majority of the electors, and the other by a concurrence of the House of Representatives with the electors in selecting one of the three having the highest number of votes. The House can not select whom it will. The scheme of the Constitution is simply that, first, the election shall be held by the people, and, if a majority agree, it shall be good, but if a majority do not agree, then the concurrence of the House of Representatives with the electors on one of the three highest candidates shall make the election good.

It is but a provision to unite the House of Representatives with the electors in selecting one of three persons, if none of the three has a majority of the electors. The same is true in principle as to the action of the Senate in selecting a Vice-President from the two having the highest number of votes for that office.

But, sir, it was also contended that there was another instance in which power and duty were devolved from one officer of the Government upon another on account of the failure of the first to perform the duty. The case mentioned at the last session of an adjournment of Congress by the President is not an exception to this statement, but a confirmation of it; for, as to the necessary adjournments from day to day, each House acts for itself, and no power in reference to it is given to the President or to the other House.

In the case of an adjournment of both Houses of Congress as a body, there is no duty imposed by the Constitution upon that body to adjourn. So it is not a case of a duty imposed by the Constitution on an officer, and on his failure to perform it devolving it upon another.

Congress performs its constitutional duty by being in perpetual session, if that be their wish, as much as it does by adjournment when an adjournment is deemed proper. There being, then, no duty on the part of Congress to adjourn their session, a failure of the two Houses to agree is not a failure to perform a duty. The interposition of the President in case of such failure to agree is not, therefore, in consequence of the failure of Congress to perform a duty prescribed by the Constitution, but is a new and independent power conferred on the President in the contingency named—disagreement of the two Houses.

EXECUTIVE SESSION.

Mr. HARRIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After fifteen minutes spent in executive session the doors were reopened, and (at 4 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, August 22, 1893, at 12 o'clock m.

CONFIRMATIONS.

Executive nomination confirmed by the Senate August 18, 1893.

SECRETARY OF OKLAHOMA TERRITORY.

Thomas J. Lowe, of Guthrie, Okla., to be secretary of Oklahoma Territory.

Executive nominations confirmed by the Senate August 21, 1893.

ASSISTANT SECRETARY OF THE TREASURY.

Scott Wike, of Illinois, to be Assistant Secretary of the Treasury.

REGISTER OF THE TREASURY.

James F. Tillman, of Tennessee, to be Register of the Treasury.

FIRST COMPTROLLER OF THE TREASURY.

Robert B. Bowler, of Ohio, to be First Comptroller of the Treasury.

SECOND COMPTROLLER OF THE TREASURY.

Charles H. Mansur, of Missouri, to be Second Comptroller of the Treasury.

DEPUTY AUDITOR OF THE TREASURY.

William G. Crawford, of Louisiana, to be deputy auditor of the Treasury for the Post-Office Department.

DEPUTY FIRST AUDITOR OF THE TREASURY.

Robert M. Cousar, of Tennessee, to be deputy first auditor of the Treasury.

DEPUTY SECOND AUDITOR OF THE TREASURY.

John C. Edwards, of Illinois, to be deputy second auditor of the Treasury.

THIRD AUDITOR OF THE TREASURY.

Samuel Blackwell, of Alabama, to be third auditor of the Treasury.

DEPUTY THIRD AUDITOR OF THE TREASURY.

George W. Sanderlin, of North Carolina, to be deputy third auditor of the Treasury.

FOURTH AUDITOR OF THE TREASURY.

Charles B. Morton, of Maine, to be fourth auditor of the Treasury.

DEPUTY FOURTH AUDITOR OF THE TREASURY.

Elliott N. Bowman, of Indiana, to be deputy fourth auditor of the Treasury.

HOUSE OF REPRESENTATIVES.

MONDAY, *August 21, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of Saturday's proceedings was read and approved.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

The SPEAKER. There is a desire on the part of members of the House for a session to-night for debate on the pending bill; so that, without objection, an order will be made that at 5 o'clock the House take recess until 8 o'clock, the evening session to be devoted to debate on the bill now under consideration. The gentleman from Vermont [Mr. POWERS] is now recognized.

Mr. POWERS. Mr. Speaker, I am not vain enough to suppose that anything I may say, nor credulous enough to believe that anything that anybody else has said, touching the pending proposition, will change any single member's vote or shade his belief. But animated by that common impulse of mankind which prompts us to talk of those blessings we do not enjoy, I propose to talk a few moments about money. The President of the United States has convened Congress in special session for the avowed purpose of repealing the purchasing clause of the Sherman act. At the very outset of this very laudable undertaking we are confronted with a condition. The friends of the administration on this floor find themselves torn with dissension and divided into factions. Each faction, claiming itself to be orthodox, accuses the other of disloyalty to the party platform of 1892. Both factions ignore the inherent sin and quarrel over the doubtful syntax of that composite document. And conformably to a well-settled rule in law that where the terms of a written instrument are ambiguous, and especially if they are made so intentionally, the construction of the parties interested in the document is always resorted to to understand its meaning, several gentlemen have taken the confessional and advised us of the manner in which they explained this instrument to their constituents during the late campaign. Gentlemen from the North and the East say that the dear people were informed that it was an honest-money document, while gentlemen from the South and West say that it sanctioned and favored free coinage of silver. So that from this Babel of tongues it is perfectly evident that the Chicago platform, like nature, speaks a various language.

There is one notable exception, however, and that is the case of the accomplished Representative from the Seventh Massachusetts district [Mr. EVERETT]. He confesses that he could not understand the intricacies of that instrument. He wanted something more vicarious; so, unlike the gentleman from Pennsylvania [Mr. SIBLEY], he does not select the Saviour of the world, but takes what many people think is a greater personality, Grover Cleveland, as his platform. And so, as he tells us, he went up and down his district during the campaign, singing at the top of his voice, "Oh, isn't he a dandy!" [Laughter.]

But the true construction of this platform, Mr. Speaker, depends altogether upon how you read it, where you put the accent—whether upon the penult or the antepenult. Why, many years ago up in my State it was the custom in the churches, when any member undertook any great and important business, for his friends to request the prayers of the congregation; and on one occasion when Mr. Jones was about to go to sea, his wife penned a request which she handed to the clergyman and asked him to read on the following Sabbath. It ran like this: "Mr. Jones being about to go to sea, his wife desires the prayers of the congregation." But the minister—like many gentlemen on the floor of this House when reading the Chicago platform—having no clear conception of the meaning of that request, delivered it in this way: "Mr. Jones, being about to go to see his wife, desires the prayers of the congregation." [Laughter.]

But, sir, is there no good thing to come out of this Nazareth? Yes, sir. Each of these factions assures us in unqualified terms, and with the greatest sincerity, and with the most probable truthfulness, that if the views of the other are adopted the Democratic party will "go where the woodbine twineth." Mr. Speaker, the country at large is less concerned with party platforms and more anxious for party patriotism. This is not the time, nor here the place, to play politics. The question demands a play of statesmanship.

The purchasing clause of the Sherman act, in my judgment, ought to be repealed not only, first, because it is vicious in principle, but, second, because it is dangerous in application. It compels the Secretary of the Treasury peremptorily to buy four and a half million ounces of silver each month, and to pay therefor in Treasury notes an equivalent amount in dollars. These notes, although in form payable in silver dollars, yet under another provision of the act requiring gold and silver to be kept at a parity, have always been redeemed in gold. The effect of such redemption has been to strengthen the credit of the Government and to assure the people that the silver certificates in their hands are as good as any other kind of money. But what can justify this compulsory purchase of silver? Why should the Government be compelled to buy silver or any other commodity that it has no use for? Silver and gold are commodities sold in the market by weight as butter is. The mine owner takes his silver out of the earth as the marble owner takes his marble out of the earth, and both have a commodity for sale in the markets of the world.

Now, if the Government has occasion to buy either silver or marble, it ought to stand as a voluntary bidder in the markets of the world for such commodity. But this law does not permit it to stand as a voluntary bidder. It must buy *nolens volens;* no matter whether the currency is unduly expanded it must buy; no matter whether silver is depreciated in price and unfitted for the currency of the country, it must buy.

The viciousness of this law is the compulsory requirement to buy. It is not a proper function of the Government to be a dealer in commodities. The Constitution nowhere requires it to own any kind of money. It never ought to own any, save such as it collects by some form of taxation for its own administrative needs. It can coin money and regulate its value, but this constitutional power implies that it is to exercise supervision only over other people's property. Congress may regulate interstate and foreign commerce, but it can not properly buy ships to carry on commerce. It may say to the mine owner, the people need fifty-four million ounces of silver for their use as money. Now you may have that much of your silver, which otherwise you would sell to the silversmith to make into tea sets, coined, free of expense, into silver dollars with our certificate stamped upon them attesting their purity and weight, and then do what you please with them. This is all the function that the Government can properly exercise in the transaction. But the Sherman act goes further and says in the supposed case, the Government shall not only coin this fifty-four million ounces into dollars, but shall certify that these dollars are honest dollars—each worth one hundred honest cents, and, top of all that, shall be obliged to take them at their face value and pay for them, dollar for dollar, in gold. This is the net result, for the Government issues a certificate to the mine owner on which he can demand the gold to its face value. Take a concrete case. The mine owner takes to the Government enough silver bullion to make ten silver dollars. The Government coins the bullion for him, free of expense, into ten silver dollars, which are piled up in the Treasury vaults and a Treasury note for ten dollars which is paid in gold is handed over to the mine owner. The silver dollars, however, are to-day worth less than six dollars in gold, and thus the people are robbed the difference.

The proposition for free coinage is merely an enlargement of the robbery of the people which is now accomplished by the Sherman act. It proposes that the mine owner may compel the Government to coin into money, at the same relative loss to the people, not the insignificant fifty-four million ounces assured him under the Sherman act, but the hundreds of millions of silver that he may offer. Not only what he secures from his own mine, but all he can buy from the Old World, all he can secure by melting down his tea pots and silver spoons—all, in short, that he can buy, beg, or steal. No wonder that the mine owners are in favor of the Bland amendment. It means to them untold millions of profit. But how about the peo-

ple? Every dollar of net profit that goes into the pocket of the mine owner under this scheme is taken out of the pockets of the people.

If these gentlemen proposed to put into their dollars one hundred cents' worth of silver, no objection to the scheme could be made, except that it would unduly expand the currency, and thereby lead to reckless speculation. But the money would be good.

The Bland amendment to the pending bill provides that anybody having silver bullion may have it coined into dollars having 412½ grains of standard silver, and may have these dollars deposited in the Treasury and receive silver certificates therefor "in the manner now provided by the law for the standard silver dollar." The "manner now provided by the law," as it now is and has been heretofore construed, enables the holder of silver certificates to have them redeemed in gold. The privilege to do all this is accorded to "all holders of silver bullion." It will be noticed, and herein is the great danger in the proposition, that the American holder of bullion is no better off than the foreign holder. The output of American mines is from 60 to 64 million ounces per year. The Sherman act takes up 54 million ounces, so if the scheme were limited to the product of American mines the country would be but little worse off than we are under the Sherman act. The proposal, however, is not so limited. On the contrary, it opens the door to the whole world. France, with her six or seven hundred millions of silver, England, Germany—all Europe—India, Mexico, South America, everybody from everywhere is invited to dump his silver dollars into our vaults and load himself down with gold-bearing currency at the rate of ten to every six dollars of intrinsic value in the silver dollars.

The scheme makes this Government the highest bidder for silver in the known world. There is in round numbers four billion dollars' worth of silver in the world within reach of our bid, and we are compelled to buy all that is offered. How long does any sane man suppose that our Government would remain solvent? The silver certificates that are to be issued on deposit of this silver are in form and fact a debt against the United States. The silver collateral we hold to pay this debt amounts, at present prices, to six-tenths of the debt. The remaining four-tenths of the debt is for the people to pay. It is but fair to say that these certificates can only be issued upon the deposit of silver dollars coined at our mints, and it may be argued that their capacity will not permit a sudden swell of the output of silver dollars and by consequence the volume of certificates, but that the increase would be gradual year by year, and the increase in population, industries, and wealth would fairly demand this increase in the currency of the country. The answer to this pleasing assurance is that our mints can turn out dollars practically as fast as the holders of bullion can supply it—if not, new mints will be established—and the increase of paper currency in the form of silver certificates is not regulated by the Government under the Bland amendment, but is wholly at the mercy of the bullion holder, and so long as he is making over 60 per cent on his investment it is probable he will crowd the business for all it is worth.

Suppose, however, that only a moderate quantity of silver dollars are coined each year, say one hundred millions, how will the Treasury stand at the end of ten years?

We have, in round numbers, about eight hundred millions of paper money in circulation, not counting the bills of national banks, nor gold certificates.

To redeem this eight hundred millions of paper in gold, as has been our policy, and, as to some of it, is our duty, we have say, one hundred millions of gold in the Treasury, and some two hundred and fifty millions in silver at its gold valuation. Three hundred and fifty millions of collateral to eight hundred millions of debt, when we start into the paper business under the Bland amendment, to say nothing about our large liabilities for other obligations. Now, it is proposed to increase our silver paper currency one hundred millions per year, or in ten years one billion dollars, with nothing added to our collateral but unsalable silver dollars. How long will the credit of the Government be kept good.

But gentlemen say that the United States is the richest nation on the face of the globe; that it stands behind its currency, and that makes it good everywhere. I am perfectly willing to hear these gentlemen boast of our country and its resources in all the fervor and with all the latitude of a Fourth of July oration, but these things come far short of proving that our credit will be good when pay day comes, or even before it comes. A little more than thirty years ago we were the greatest nation on the face of the globe and the fervor of Fourth of July talk was then as glowing as now. Still we had to pay 12 per cent interest on our paper when the ratio of assets to liabilities was even greater than to-day. This talk about the potency of a Government fiat is a delusion and a snare. The creditor wants to see collateral instead of promise. This was demonstrated in France a hundred years ago when she issued her assignats. It was demonstrated here during the late war when we were throwing off paper issues very much as the boy blows off soap bubbles with a clay pipe, that went to a discount of 60 per cent. We are a great nation, but after all we are only a small part of the world. We are compelled to recognize this fact, unpalatable though it may be.

As long as we remain in the world we are forced to adopt a standard of money that our neighbors count as good. That standard, to-day, the world over, is gold. Silver would be just as good if the rest of the world would only think so. But we can not make them think so. We have tried five times within the last twenty-six years, through the instrumentality of an International Monetary Conference, at which from twelve to twenty of the leading nations of the world were represented by their ablest thinkers, to persuade the world that silver was just as good as gold, but our efforts have been fruitless. It follows then that paper issues based on silver collateral are less marketable than paper issues based on gold. This brings me to the very root of the trouble with the Sherman act. It has seriously threatened the credit of our Government. A very large fraction of the investors in American securities—our railroad and other corporate bonds—are foreigners. They watch our fiscal legislation as sharply as the individual creditor watches the business methods of his individual debtor. They discover that our legislation tends toward a silver standard. They think they are confronted with a probable payment of their debts in silver. They don't want silver. They lose confidence in our Government as a debtor and in our people as debtors. Our home investors imbibe the same distrust, and the result is the money-lending class, at home and abroad, withholds its offerings. The vaults of every bank in the land are locked, simply because the Government is indulging in a little dalliance with silver.

It does not help the matter to say that this condition of things has been brought about by the gold bugs of Wall street. If free coinage be adopted those bugs could corner the market as easy as they now have. It does not mend the matter to say that the Republican party is responsible for the passage of the Sherman act. The practical question is, what are you going to do about it? Both of the political parties have said that they are in favor of bimetallism. We are all in favor of it to-day. We are all blessed with it to-day. We have in the Treasury 540 millions of silver and less than 200 millions of gold. Is there any discrimination against silver shown in this fact? We have in the hands of the people, in active circulation, twenty-five times as much silver as gold. Where is it, or how is it that the people have not done their full duty to the white metal?

The trouble is not with the people, it is with the metal. Gold and silver are commodities, salable in all the markets of the world, either for money or in the arts. Their market value is necessarily established by the prices paid in the markets of the world. In those markets gold is worth par and silver is below par; and our nation alone can not change this fact. If we were the only silver-producing nation in the world, we could set our own price on silver; but, unfortunately for this purpose, we are not. Consequently silver, for the time being, is cheapened in price, and dollars made of silver have gone down 40 per cent.

Now, if we open our mints to the free coinage of silver and issue upon the coined metal an illimitable quantity of paper currency redeemable in gold, we are carrying our Treasury to the verge of insolvency and bankrupting our national credit. No nation can afford to tolerate an impaired credit. No nation can safely indorse an impaired currency. Every dollar, whether of gold, of silver, or of paper, must be intrinsically worth 100 honest cents, yesterday, to-day, and forever. Every scheme that threatens to impair the value of any one of our dollars is a scheme that impairs our national credit, and with that, and in consequence of that, the credit of our people.

Our national credit is now second to that of no nation on the globe. We can float our gold-bearing securities at 2 per cent. Our greenbacks, because they are payable in gold, as freely circulate in the Old World as they do at home; our national-bank bills, because redeemable in gold-bearing bonds, are current the world over. Nothing can change this confidence in our currency but the persistent clamor, that has prevailed for the last twenty years, for legislation in the interest of silver-mine owners and the unfortunate surrender to that clamor which has been made.

No currency of any kind can circulate at par unless the holders have faith in the government that issues it; not the blind trust that friend places in friend, but that more discriminating trust that the intelligent creditor places in his debtor.

If our circulating medium is distrusted all our securities, individual and national, will be distrusted. If we persist in coining silver dollars worth 60 cents, stamping on their face our certificate that they are worth 100 cents, we are guilty both of fraud and falsehood. If the Government should begin to-day to redeem the silver certificates already issued, in silver dollars, as it has a right to do, those certificates would drop 40 per cent in value in the pockets of the people. The silver dollars might, from their legal-tender quality, be used to pay existing debts; but no new engagements could be made upon their credit. If the Government should refuse gold redemption to one kind of its paper money, every other kind would at once be under the ban of public distrust. The only solution of the problem is to at once suspend the purchase of that metal which the world has discarded, until such time as we can bring the world to its senses, even though to do this the governor of Colorado will be obliged to stain the head-gear of his frothing Bucephalus with the blood of heretics.

It will not help the matter to increase the ratio which silver now

bears to gold. We are bimetallists; we desire to bring the metals to a parity. The world must have both in circulation. Nearly all the nations with whom we have dealings of any considerable amount have said they do not want silver. Now, if we at once reply that we do not want it, we will, in the near future, be asked to join them in the effort to restore it to its old position in the monetary system of the world. But to do this you must keep the ratio where it is. Put it at 20 to 1 and you at the start dishonor the metal you are anxious to elevate to an equality with gold.

If, as our friends contend, the demonetization of silver is the work of the gold bugs of Europe, the quickest way to counteract this villainous scheme is for our nation to put itself on a gold basis. Our resources are ample enough to enable us to get our share of the world's gold, and what we get they must lose.

With the permission of the House I will append to my remarks a table showing the aggregate gold and silver in the world, with their per capita and relative distribution.

The stock of gold in the world, as shown by this table, is a little over $3,500,000,000, and it is now divided not very unequally between the nations of the world. But all nations are bidders for it and each will get what it can. Now, it is a well-known fact that American securities—our vast corporate bonded indebtedness, our public securities of every name and kind—bear a higher rate of interest than like foreign securities, and all things else being equal the foreign investor prefers them and will buy them and pay in gold. If, therefore, we keep this temptation alive by so shaping our legislation as to dispel the fear that we are coming to a silver basis, is it not as clear as sunlight that we shall outbid other nations for gold and equally clear that they will be short of that metal?

When they discover this fact and see that it is a vantage ground that we shall always have in the future they will discover that their supply of gold is inadequate and will then see that silver must be recognized as a basic metallic standard.

Thus bimetallism will come about by natural causes, and when once established on such basis it will come to stay. How much better, wiser, and surer this plan than the bold, defiant, reckless, and illogical scheme of free coinage of silver by our nation alone.

But it is said that we must continue the purchase of silver, in order to expand our currency to the needs of our growing population. Suppose that this is true: can we not do it and still keep the expanded currency good in every market on the globe?

Strike off the 90 per cent limit affixed to the circulation of our national banks, and you will at once expand the currency about twenty million dollars. Not only this, you will tempt capital to invest more freely in such bank stocks, and the number of national banks will be largely increased and the currency still further expanded. Coin the surplus silver, now in the Treasury vaults and you put into circulation forty millions of silver. If the currency then needs further expansion, authorize the Secretary of the Treasury from time to time to issue 3 per cent gold-bearing bonds, to a limited extent, to be used as a basis for the circulation of new or old national banks that may desire them.

But whatever be the character of supplemental legislation, the pressing command of the people to-day is, "Stop buying silver."

But, Mr. Speaker, silver is not alone the cause of our business depression. The money investor, at home and abroad, is out of business because we are rapidly approaching to a silver basis for our currency. This brings untold disaster to all business enterprises. It touches the wheat farmer of the West and the cotton farmer of the South, who must have money, or their crops will rot on their hands. It touches every tradesman in the land, who can neither buy nor sell, for there is no money. It has depressed the value of our securities in every market in the world.

But alongside this business paralysis lies another that has overtaken every manufacturer or tradesman who deals in articles affected by a change in tariff legislation.

It is not my province to advise the dominant party in the House what its action should be in respect to tariff legislation; if it were, my advice would hardly be followed. For present purposes, the country cares less what the policy is ultimately to be, and more for an immediate announcement of what it is to be. Don't ask us to study the Chicago platform to learn your purpose. You will probably be as much at loggerheads youselves over the tariff plank as you are over the silver plank. Don't give us that conundrum. But in the name of the hundred thousands of workingmen and working women of this land, who are already thrown out of employment and who in their hunger for bread, before the rigors of winter shall set in, will storm the Walhalla Hall of every important city and town in the land unless something be done to give them work, I implore you to tell us, and tell us now what the "reform" you have promised is to be. The manufacturer will shape himself to the emergency whatever it may be.

But action! action! action! should be the eloquence and the watchword of to-day. [Applause.]

APPENDIX.

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Mr. HOOKER of Mississippi. I desire to say, Mr. Speaker, before proceeding to say anything on the financial question now before us, that this Congress of the United States has been called into existence by virtue of the power which the Constitution lodges in the hands of the President of the United States on extraordinary occasions to convene Congress at the capital. The participation of the President in the legislation of the country, which pertains under the Constitution to him, is limited to a very few and well-defined occasions. Under the Constitution the President of the United States possesses certain powers, and certain powers only. He is clothed with the power to convene the Congress in extraordinary session, but he possesses no power to indicate what the subject-matters of legislation shall be.

This Congress has been convened, it is said, because of the calamity which has fallen upon the country by reason of the passage of what is known generally as the Sherman law of 1890, authorizing the purchase of 4,500,000 ounces of silver per month. Who passed that law? What party is responsible for it? I see in the metropolitan paper of this city this morning that the Democratic party is to be held responsible unless they yield relief to the people. Relief from what? Relief how?

The President has convoked us together, and in his message

recommends the repeal of the purchasing clause of the Sherman law, and stops without recommending what other or further legislation shall be had. That law was passed by a vote in the Senate, which is recorded in the volume before me here, showing that not a single Democrat in the Senate voted for it.

The vote in detail in the Senate was as follows:

YEAS—39.

Aldrich,	Edmunds,	McMillan,	Sanders,
Allen,	Evarts,	Manderson,	Sawyer,
Allison,	Farwell,	Mitchell,	Sherman,
Blair,	Frye,	Moody,	Spooner,
Casey,	Hawley,	Pettigrew,	Squire,
Cullom,	Higgins,	Pierce,	Stewart,
Davis,	Hiscock,	Platt,	Stockbridge,
Dawes,	Hoar,	Plumb,	Washburn,
Dixon,	Ingalls,	Power,	Wolcott.
Dolph,	Jones of Nevada,	Quay,	

NAYS—26.

Barbour,	Colquitt,	Jones of Ark.	Turpie,
Bate,	Daniel,	Kenna,	Vance,
Blackburn,	Faulkner,	McPherson,	Vest,
Call,	Gibson,	Pasco,	Voorhees,
Carlisle,	Gorman,	Pugh,	Walthall.
Cockrell,	Hampton,	Ransom,	
Coke,	Harris,	Reagan,	

ABSENT—19.

Berry,	Chandler,	Hearst,	Stanford,
Blodgett,	Eustis,	Morgan,	Teller,
Brown,	George,	Morrill,	Wilson of Iowa,
Butler,	Gray,	Paddock,	Wilson of Md.
Cameron,	Hale,	Payne,	

It was purely and absolutely and unqualifiedly a Republican measure. Every Republican in the Senate who voted at all voted for it, every Democrat voted against it. And in this same volume I have the page marked which indicates the vote in this House when the bill came here. It was as follows:

YEAS—122.

Lodge,	Phelan,	Tarsney,	Wilson, Mo.

It was voted for by every Republican upon the floor of the House, when the Republican party was in control of this House and in control of the Senate. Not a Democratic vote was registered in favor of it, and every Democratic vote was registered against it. How, then, can it be said that the Democratic party is responsible for the condition in which the country is to-day? If the country is in financial disaster and disorder, if trade and commerce are impeded and stagnant, if the wheels of the manufactory are stopped and the toiling laborers have no vocation, and if it is to be attributed alone to the passage of the Sherman law, the Republican party in the House and Senate are responsible for it.

It is said by the President in his message that you are convened here for the purpose of considering this question, and that the only method of consideration is an absolute, unconditional, unqualified repeal, without a substitute in its stead. Is that so, Mr. Speaker? Will relief come to the country if to-day you repeal the purchasing clause of the Sherman act? How? In what way? Why, they talk about restoring confidence. Who is it that lacks confidence? Where is confidence lacking?

Sir, it is not lacking with the great masses of the people. It reminds me of a reply that I heard my witty and logical and humorous friend from North Carolina [Senator VANCE] make in a speech at a banquet given by a commercial organization in Baltimore some time ago. One of the officers of the Treasury had spoken of the wonderful banking institutions of this country, and of the confidence the people had in it; and when Senator VANCE came to respond to the sentiment he said, "I have no doubt the people have confidence in your banks and in your currency. The trouble with me has always been to find a bank that had confidence in me." [Laughter.] And so it is with the great masses of the working people to-day.

The difficulty is to be found in the fact that the great moneyed institutions of the country have locked up, not only the coin, but the currency also; and if trade and commerce are paralyzed and checked, if labor is bearing additional burdens, it is attributable to the action of the Republican party and not of the Democratic party.

It is said that this measure was passed as a truce between the two parties who were quarreling upon the question of silver. That is the language of the President. A truce usually means a benefit to both sides, at least during the suspension of hostilities. Where has the benefit come to the silver men in this measure? I do not mean by that the producers of silver, for they occupy an insignificant position in reference to this question. I mean the users of silver, the great masses of the people who use it as a standard money value. Where is the advantage to them unless the Government intended, in deed and in truth and in fact, to carry out the Sherman law, as it is termed, in the spirit in which it was expressed and adopted?

I have the law before me, and will read some paragraphs of it to show what its purpose and object was. It provided in its second section—

That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand in coin at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued; but no greater or less amounts of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom, then held in the Treasury, purchased by such notes; and such Treasury notes shall be a legal tender in payment of all debts, public and private, except where otherwise provided, etc.

I will quote other sections.

I will read the third section, in order that my idea may be taken by the House. Section 3 provides:

That the Secretary of the Treasury shall each month coin 2,000,000 ounces of silver bullion purchased under the provisions of this act into standard silver dollars, until the 1st day of July, 1891, and after that time shall coin, etc.

Now, sir, the object and purpose of the act evidently was that these silver certificates should be redeemed in silver. No child can read the bill and not see that that was its purpose and its object. You are imposing upon the Secretary of the Treasury the duty to coin enough of that silver into standard silver dollars to

pay for the whole monthly purchases of the bullion. Is not that the act?

Has it been executed? Where was the benefit to the men who believed in the standard silver dollar in this truce between the parties effected by the Sherman bill? It was not there, and the great advocate of the free coinage of the standard silver dollar, the gentleman from Missouri [Mr. BLAND], knew very well that it was not there; for when he came to speak of it in a speech which he made in this House, he characterized the truce in the language which it deserved to be characterized. I quote now the language of the gentleman from Missouri when the bill was reported and before the House on the report of the committee of conference:

> Now, Mr. Speaker, the gentleman from Iowa says this bill is the result of a free and fair conference. I deny it. We had but one meeting of the conference committee in which all the conferees were represented. That was the meeting appointed for last Thursday. We were to have another meeting of these conferees, but before the date of that meeting arrived I was notified that my presence was no longer needed, and that when my services were required I would be notified. In the meantime secret meetings or caucuses were held by the Republican members of that conference, and this bill was concocted and prepared by them; and I never received a notice to attend another meeting of this conference until this bill was agreed to and the report ready to be signed, and I was simply asked whether I agreed to it or not. That is all I had to do with the conference. Is that a free, a full, and a fair conference?
>
> * * * * * * *
>
> I say the financial history of this country is that we never have coined the two metals at an absolute par, and now this bill undertakes to incorporate into a statute the false doctrines of the Secretary of the Treasury and the gold men that we should not use silver or pay it out unless at par with gold, a thing which the bimetallists of this country have contended against from the beginning, a proposition that I have never assented to and that no bimetallist, so far as I know, has ever assented to. Rulings and constructions of the Secretary of the Treasury are ingrafted into this bill to fix us on the gold basis and the gold standard.

And that such was the case you now see by the disasters which have been brought about.

Now, what are the powers of the Government in reference to coinage, and in reference to silver?

The Constitution of the United States, Article I, section 8, page 5, provides the Congress shall have the power—

> To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

Section 10, page 1, Article I, of the Constitution provides:

> No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts, or grant any title of nobility.

Article II, section 3, of the Constitution clothes the President with the power to which I have adverted:

> He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both Houses, or either of them.

Paragraph 2, section 7, of Article I, clothes the President with the power to veto any legislation passed by both Houses of Congress, and provides that if he should veto such bill he shall return it to the House in which it originated, with his objections, and that it may be passed by both Houses by a two-thirds vote of both Houses on a call of the roll by a yea-and-nay vote; and then it shall become law.

In the language of that great interpreter of the Constitution, Mr. Calhoun of South Carolina, this power was vested in the President of the United States only by its exercise to strike another keynote in the popular voice, and bring it out in more full and perfect harmony. It was not in order to oppose the wishes of the people that he was vested with that power, but expressly in order that the sentiments of the people might be expressed in a larger, broader, and a wider sense. Under the provisions of the Constitution it was intended to effect this object.

These powers, therefore, are the only powers that the President has with reference to participation in legislation. He has a right to suggest to the Congress of the United States what he believes will relieve the present condition; but it is our office, our function, representing as we do the people by direct election, to come here and cast what we believe to be a proper vote, expressing their views in accordance with the wishes expressed by them in the canvass.

The President of the United States may recommend, but he can not ask that the Congress of the United States be bound by his recommendation, but must leave to the conference between the Senators and Representatives the determination of the proper remedy.

Now, sir, I hold that the repeal of the purchasing clause of the Sherman act would not restore confidence to the people, would not restore trade and commerce to their wonted activity, would not give relief to the wage-earners of our country. If you repeal that law you must put something in its stead. What shall it be? The President of the United States does not intimate what it should be.

Are you convoked here simply for the purpose of repealing the purchasing clause of the Sherman act, and are you limited to doing that and nothing more? Will you have performed the functions for which the people sent you here if you simply repeal the purchasing clause of that law and go home? Is that all that the people have sent you here for? Sir, we think that there was involved in the contest brought to an issue last November a grave question as to whether or not we should have the coinage of the silver dollar in this country.

But even that was not the question of prime importance in that canvass. If you have occasion to call in a physician you do not want an empiric who will simply cauterize the wound in the body politic and give temporary relief, while he leaves the poison to prey upon the vitals. It is not the purchasing clause of the Sherman act that has produced the condition in which the country finds itself to-day. The cause of that condition lies deeper. The disease is a more serious one than any that could be produced by that provision of the Sherman law, improper, idle, foolish as that provision was. There is another cause for the condition in this country.

I think, sir, that cause is to be found in the fact that for a great many years we have been laboring under a tax law which in its operation has been onerous, unequal, unjust, and oppressive. In the canvass last year we had an important issue upon that subject. In fact upon that issue the President of the United States was elected to fill the high office which he now occupies, and you gentlemen were elected at the same election to represent here the sentiments and wishes of the people.

The Democratic party assembled in convention in one of the great cities of the West and made a solemn declaration of its principles. In one of the sections of that declaration, in relation to the question of taxation—that question which is always more important to the people than any other—is to be found set forth the cause of the present disastrous condition of public affairs. The second section of the platform adopted by the Democratic party at Chicago on the 22d of June, 1892, contains the following language:

> We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties, except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.
>
> We denounce the McKinley tariff law enacted by the Fifty-first Congress as the culminating atrocity of class legislation; we indorse the efforts made by the Democrats of the present Congress to modify its most oppressive feature in the direction of free raw materials and cheaper manufactured goods that enter into general consumption, and we promise its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party.
>
> Since the McKinley tariff went into operation there have been ten reductions of the wages of the laboring man to one increase. We deny that there has been any increase of prosperity to the country since that tariff went into operation, and we point to the dullness and distress, the wage reductions and strikes in the iron trade as the best possible evidence that no such prosperity has resulted from the McKinley act.
>
> We call the attention of thoughtful Americans to the fact that after thirty years of restrictive taxes against the importation of foreign wealth, in exchange for our agricultural surplus, the homes and farms of the country have become burdened with a real-estate mortgage of over $2,500,000,000, exclusive of all other forms of indebtedness.

It was relief from the burdens there described that the people asked relief, and those burdens are the cause of the present disastrous condition of our public affairs. The power of taxation was conceded to the Federal Government, coupled with the condition that it should be used only for the purpose of paying the debts and providing for the general welfare of the country. The power of taxation as used by the Federal Government has been a very different power from that exercised by the States.

In every State in this Union taxation is levied according to the value of the real and personal property of the citizen: but under the laws of the United States taxation is laid not upon the value of what you have, but upon the value and amount and cost of what you consume. It is a tax on consumption; and, being a tax on consumption, the poor man with a family of ten pays for all the absolute necessaries of life which he requires for himself and his family to eat and to wear, as large a tax as a man who is worth a million, with an equal number in his family. It is a tax upon consumption alone, and such a tax ought not to be imposed except where the needs of the Government absolutely demand it.

Mr. Speaker, what was the effect of the McKinley bill? There were a great many agencies that carried the knowledge of that bill all over this land almost immediately after its enactment, but I know of no one which operated with more celerity, with more efficiency, with more accuracy, in conveying to the great masses of the people an idea of the character of the tax laid by the McKinley bill than that great body of intelligent men known as commercial travelers, who traverse this country from end to

end, going into every valley, upon every hillside, through every city, through every town, through every village.

In less than thirty days after that bill became a law its practical effect upon the great necessities of life was demonstrated, especially in those of its schedule which related to the hardware and culinary ware used by the masses of the people. In that way a knowledge of the character of the McKinley bill was carried abroad throughout the country. And what was the effect of that law? In the two schedules to which I have referred prices instantly went up 50 per cent all over the country.

And, Mr. Speaker, it is because of that taxation, and like taxation under that and similar laws preceding it, that the present state of things has come about. That taxation prevents you in the West, who produce oats, wheat, corn, pork, beef, and it prevents us of the South, who make the great product of cotton, which clothes the world, from having access for our surplus products to the markets of the whole world. In that way it has operated to shut off your revenue, so that, when the Republican Administration went out of power and the Democratic Administration came into power, the result was, under your McKinley law, that you had bankrupted the Treasury, and you had no power under that law to replenish it.

These are the causes of trouble in this country. When you undertake to say you are going to remedy this trouble by repealing the law authorizing the purchase of silver, you undertake to say that you will apply a remedy in this matter which does not touch the disease at all.

Now, while it is true that the full coinage of silver, in my opinion (and I want to be frank about this), would not give us absolute relief, it would give relief to a very great extent; it would restore the double standard of value that we had in this country for over eighty years. And I do not know of any political convention that has assembled for many years that has not said that this ought to be done. My friend from Pennsylvania [Mr. SIBLEY], who made an exhaustive speech on this subject the other day, stated that, upon examination, he found that every State convention, except possibly Massachusetts, and every national convention had adopted resolutions in support of this proposition.

Sir, from early history silver has constituted one of the money metals of the world. From the day when Abraham paid his five hundred shekels of silver, "current money with the merchant," for the field in which he buried his wife Sarah, down to 1873, silver had constituted one of the money metals of the world. And it remained so, unchallenged even by monometallic Great Britain—unchallenged by any country in the world—until that strange scene occurred in these Halls in 1873, when simultaneously with the demonetization of silver by Germany an act of similar effect was passed in this House and in the Senate, and became a law.

You passed it without notification to the people, and your then President of the United States, six months after its passage, said he did not know of such legislation. You passed it, and one of the most prominent men of this House, with whom I served in former years, said he did not know it. You passed it in the Senate, and as that grand old representative of Ohio, Allen G. Thurman, very truly said, you passed it without cutting the tape strings that bound the volume of the Revised Statutes that made it the permanent law of the land in 1874.

Simultaneously with the action of Germany this act was accomplished in the United States, and one-half the money metal of the world was stricken down. And that was made a permanent law by the passage of your Revised Statutes in 1874. Mr. Spofford, in speaking of this subject in the American Almanac, gives the reason for this. I read from the American Almanac of 1878:

> In addition to these general considerations urged by the advocates of both sides on the silver question, there is another branch of the argument, based upon considerations peculiar to the United States. It is alleged by the advocates of the double standard that this country had the silver dollar as a full-valued currency and legal tender to any amount until the year 1873; that for nearly eighty years the silver dollar of 371¼ grains of pure silver (412½ grains standard silver) went side by side with the Mexican dollar of equal value and weight, as the real monetary unit; that though this dollar was never coined to any great amount——

There being only, as has been stated by Mr. Carlisle, our present Secretary of the Treasury, about 8,000,000 standard silver dollars coined, while there were $109,000,000 of silver in halves and quarters—

> that though this dollar was never coined to any great amount it was none the less the standard measure, while half dollars of equal proportional value were coined to the amount of $109,000,000 and were everywhere in circulation; that the legislation of 1873, under the guise of amending the Mint statutes, prohibited the coinage of the silver dollar and limited the legal-tender power of other silver coins to $5 in any one payment; that this act, while it did not take away the value of the existing dollar coinage, practically effected demonetization by prohibiting the further coinage of the silver dollar; that the demonetization was actually completed by the revision of the whole statute law enacted in bulk June 22, 1874, in which it was provided, in section 3586, that the silver coins of the United States should be a legal tender to the amount of $5 only in any one payment—these silver coins, by section 3513, having been specified so as expressly to exclude the silver dollar; that this legislation was effected without any public discussion in the country, with very brief debate either in House or Senate; that it was during a suspension of specie payments, and before the resumption act of 1875 was passed, when there was no silver coin in circulation, and public attention was not drawn to questions of coinage or of currency; that the act thus passed, revolutionizing the entire metallic money system of the country, was in effect without the consent of the people, and ought to be rescinded; that its effect was, coupled with the subsequent legislation for resumption of specie payments, to change the measure of all obligations, public and private, to make debts before payable in gold or silver at option, payable in gold alone; that thus an enormous enhancement of indebtedness was effected, alike unjust to the debtor class while unduly favoring that of the creditor, and prejudicial to public policy and to private welfare; that the United States is, of all nations, the one most interested in maintaining the value of silver as money, being the largest producer of silver metal; that upon the market for this one of the precious metals depends a very large share of our national prosperity; that the present as well as the prospective value of our silver mines closely approaches, if it does not exceed, that of our gold mines; that the discrediting of silver, and its banishment from use as a legal tender currency, implies nothing less than the almost entire destruction of the market for American silver; that for us to enter into the designs of those who would make the gold standard universal would be to enhance, not only all public and private obligations, but to throw away one of our most efficient sources of national wealth; and that Congress is bound, by considerations of public equity, as well as by those of national interest, to restore the money measure to what it was before the legislation of 1873, as perfected by the enactment of the Revised Statutes.

So much, therefore, for what was accomplished by the demonetization of silver. And when you passed the Sherman act clothing the Secretary of the Treasury with power to issue Treasury notes, and empowering and compelling him to coin enough money to redeem those silver notes, did you expect them to be paid in silver or did you expect them to be paid in gold? Is there any man who voted for that measure in the House or in the Senate who will say that he expected those notes to be paid in gold. If you had any such expectations you used most unfortunate language in the passage of this law.

The history of the country, from the passage of the first coinage act, in the Administration of President Washington, down to the demonetization of silver, in 1873, shows the uniform expression of the leading minds of each generation that there must be a coinage of silver as a money metal; and that the double standard ought and should prevail in our country.

The report of R. B. Taney, Secretary of the Treasury, to the Committee on Ways and Means of the Twenty-third Congress expressed the then opinion of the country in these words:

> We need a circulating medium composed of paper, and gold, and silver, in just proportions, which would not be liable to be constantly disordered by the accidental embarrassment or imprudencies of trade, nor by a combination of the moneyed interests, for political purposes.
>
> The value of the metals in circulation would then remain the same, whether there was a panic or not.
>
> If a broad and sure foundation of gold and silver is provided for our system of paper credits we need not hereafter apprehend these alternate seasons of abundance and scarcity of money, suddenly succeeding each other, which has marked much of our history, and irreparably injured so many of our citizens.

Mr. Windom, Secretary of the Treasury, in his annual report for the year 1889, said:

> He is a dull observer of the condition and trend of public sentiment in this country who does not realize that the continued use of silver as money, in some form, is certain.

Now, I say every political convention, national and State, that has assembled in this country, that has spoken on this subject, has declared in favor of the double standard coinage of silver and gold. Allow me to refer briefly to the language of the Democratic national convention at Chicago. In the seventh section of that platform, on which President Cleveland was elected, on which you, my fellow Democrats, were elected, I find the following language:

> SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payments of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.
>
> SEC. 8. We recommend that the prohibitory 10 per cent tax on State bank issues be repealed.

Upon that declaration our present President of the United States stood when he accepted the nomination of the Democratic convention in 1892; you Democrats of this House who were nominated by Democratic conventions and voted for at the polls by Democratic constituencies stood (did you not?) upon that declaration.

Is there anything ambiguous in that? Is there anything doubtful in that language? Can a child read and misconstrue it as being in favor of gold alone as the standard metal of value in this country? I say that the declaration is explicit and emphatic, and that there can be no mistaking it.

Mr. Speaker, every single convention in every State in this country that has declared on this question at all has expressed itself in favor of it. The national convention has done so, and ever member on this floor elected on that platform stands pledged to the double standard. If you do not so understand your constituents certainly think that you do, for they voted for you with that understanding. I know that I said it myself in my canvass, and I think every man who was elected on that platform made the same pledges. I know that it was the sentiment of the people of Mississippi, and they have spoken very lately their convictions upon this question.

That State had a convention in 1891 in which it made a very clear and explicit declaration upon the questions of government generally and particularly upon this one. On the 15th day of July, 1891, the State of Mississippi, in her convention, made this declaration. And if my colleague, Gen. CATCHINGS, is on the floor, I ask his particular attention to this declaration, which he then favored:

JACKSON, MISS., *July 15, 1891.*

The State Democratic convention met pursuant to call in the hall of the house of representatives, and was called to order at 12 o'clock, by Hon. J. S. McNeily, chairman State Democratic executive committee.

Hon. T. C. CATCHINGS, from the committee on resolutions, made the following report:

PLATFORM.

1. We are Democrats, and as such, without equivocation, evasion, or mental reservation, we proclaim our steadfast devotion to the principles of the Democratic party, and pledge ourselves to labor in season and out to secure its efficiency.

2. We believe that no permanent prosperity can be assured to the American people until this Government is administered, in accordance with the doctrines of this great party, which demands equal rights for all and denounces all class legislation as hurtful and wicked.

3. We believe that the depression now bearing so cruelly upon the agricultural interests of this country is largely caused by unjust discriminations against them in behalf of favored industries, whereby the few have been enriched at the expense of the many. Monopolies have been created and robbery made lawful, and we believe that this depression will continue until all legislation has been made equal and a tariff laid with no other purpose than to raise the revenue needed to defray the expenses of the Government economically and honestly administered. We believe that individual prosperity can only come from individual industry, intelligence, and frugality, and that all schemes for the enrichment of the people by legislation are chimerical.

4. We take pride in the fact that the Democratic party has always been the opponent of class legislation, the greatest evil of the times in which we live, and of all the paternal and centralizing tendencies of the Republican party. We are opposed to the subtreasury scheme as violative of the time-honored principles of the Democratic party, and as violative of the Democratic idea of the proper construction of the Constitution, and regret that the discussion of the same has been thrust into the politics of our State. We regard it as not only not being Democratic, but impracticable and not calculated to furnish the relief claimed for it.

The policy of the United States Government for the last thirty years has been and is now especially destructive to the agricultural interests of the country. The farmers have been unduly taxed. They have been made the bearers of the burdens imposed for the benefit of the manufacturers, while the prices of their chief products are fixed by the prices in Europe.

The protective system has been so arranegd as to restrict the markets and thus reduce the price of such products, and at the same time enhance the price of what the farmer has to buy. We declare it to be the highest duty of the Government to render due justice to the agriculturists and laboring classes, the real producers of wealth. To this end we favor a repeal of the heavy tariff taxation on the necessaries of life, and the extension of our foreign commerce.

In this connection it will not be forgotten that, although the Democratic party has not for thirty years had entire control of the Government, and therefore has not been able to give relief to the people by repealing class legislation and enacting just and honest laws, yet it has manifested its purpose to give relief when it shall have the power to do so, and it is the part of wisdom to hold up its hands and not coudemn it until it has had opportunity and failed to take advantage of it.

We believe that gold and silver should be coined upon the same conditions, and that when the Government shall cease to discriminate between them they will freely circulate side by side and be equally useful and acceptable to the people.

We also believe that there should be an additional issue of Treasury notes, interchangeable with coin, sufficient to transact the business of the country and to relieve the present financial depression.

I call your attention, Mr. Speaker, to this declaration made by the great State of Mississippi, in this report submitted by my honorable colleague, Mr. CATCHINGS, to the convention, which, I believe, was adopted without a dissenting voice, and which I still believe represents the sentiments of that people:

We believe that gold and silver should be coined upon the same conditions, and that when the Government shall cease to discriminate between them they will virtually circulate side by side and be equally useful and acceptable to the people. We also believe that there should be an additional issue of Treasury notes, interchangeable with coin, sufficient to transact the business of the country and to relieve the present financial depression.

These, I repeat, were the sentiments adopted, and unanimously adopted, by the State convention of Mississippi, its last expression of opinion upon the subject; and I venture the assertion that that opinion still holds with the same people; that they are in favor of the free coinage of both metals; that they do not ask the exclusive coinage of silver, or the exclusive coinage of gold, but the coinage of both metals.

They believe that the prosperity which existed among our forefathers for over eighty years, when we had a double standard of coinage in this country, would come again if the double standard were reënacted now. They believe that the act of 1873, which demonetized silver, had the effect to strike down one-half of the purchasing power of money metal throughout the world. It was attempted to be restored by my friend the gentleman from Missouri [Mr. BLAND], when he introduced what is known as the Bland coinage act of 1878, to the extent of coining two and a half millions of dollars a month.

Mr. BLAND. If the gentleman will permit an interruption, the bill I introduced, and secured the passage of in the House, was a free-coinage measure.

Mr. HOOKER of Mississippi. I know; but it was finally changed to the Bland bill, as it is now known and generally called, which provided for the coining of two and a half millions of silver a month. But that was supplemented by the Sherman act.

The conspiracy against silver enacted in 1873 finds its legitimate sequence in the Sherman bill, for that strikes down the Bland bill, which provided for this coinage of two and a half millions a month, and allows no coinage whatever to take its place. And yet the Sherman bill, you all say, and rightly say, ought to be repealed.

Now, if it ought to be repealed, should there not be something provided in its stead? Is the voice of the people of the United States, as expressed at the ballot box in November last by such an overwhelming majority, and as exhibited by the membership of this House at the present time—is that voice to be hushed because any set of men, no matter how lofty their office, no matter how powerful in the councils of the nation, believe that it should be stifled?

I tell you, Mr. Speaker, that the sentiment of the American people on this subject can not be hushed or quieted by any such action. They have demanded action, and prompt action, at the ballot box on the part of this Government to establish a double standard of money in this country, a standard of silver as well as a standard of gold; this is the voice of the people themselves. The verdict of the jury is unquestionable, and no man is so high that he can escape it. There are no class of men so exalted in official positions that they can escape the responsibility to the people who demand the enactment of the double standard in this country.

Now, Mr. Speaker, I want to say upon this subject that we have some very strange bimetallists in the United States, and the strangest of whom I have read is my distinguished friend from New York [Mr. COCKRAN], who, in an article published in the North American Review for the month of June, 1893, on this law, has treated on the financial question, and particularly of the relation silver bears to our finances in this country; and before he concludes his address to the people in favor of monometallism in this country he uses these expressions, which I beg leave, with great respect for him and respect for his opinion, to quote, as showing what his conclusions are. He says:

The full tender metallic money of the world consists in round numbers of about $7,000,000,000, of which very nearly one-half is silver. If silver be universally demonetized the metallic money of the world will be reduced one-half, and the problem which would then confront all commercial countries would be the possibility of maintaining the business of the world with one-half the existing stock of metallic money.

If actual experiment proved that 3,632,605,000 gold dollars formed a sufficient money basis on which to transact the whole business of international exchange, the demonetization of silver would undoubtedly be a salutary measure. If, on the other hand, experience proved that this tremendous reduction in the stock of metallic money tended to unsettle credit and paralyze enterprise, silver would be recalled into coinage by the concurrent demand of the people of the whole world.

Any country which enjoys the benefit of a single monetary standard will be very unlikely to experiment with a double standard, merely to simplify the domestic politics of some other country. England will maintain the gold standard so long as the total volume of metallic money throughout the world is helped out by the silver circulation of countries that maintain the double standard or the single silver standard. What she may do when confronted with such a reduction in the volume of metallic money in the world as would be caused by a general demonetization of silver no man can say.

But it is certain that if the United States join this general movement towards a gold standard, she will occupy the strongest position of any nation in the world. She is not an exporter of luxuries, but of necessaries. The things which she has to sell are the things which are essential to the support of life. Whatever may be the prevailing currency of the world, a large proportion of it must necessarily flow to her shores.

In a previous portion of this article the gentleman from New York [Mr. COCKRAN] says:

It must not be inferred from what has been written that those who believe that this Government should go immediately to a gold basis are opposed to bimetallism. The writer of this article believes that the business of the world will never be on a stable basis until the free coinage of silver shall have been restored throughout the world.

It will be very hard to get our people to comprehend an argument in favor of monometallism and the gold standard as it is now presented by my friend from New York [Mr. COCKRAN], who proposes that they shall be driven to desperation, and that all trade and commerce shall find itself with only one-half of the money metal of the world to do business, and then there will be a clamor for silver. And in order that free coinage may return throughout the world, the gentleman from New York [Mr. COCKRAN] proposes to strike it down in his own country, the

second greatest money power in the world. He believes that prosperity can not return until silver is coined, until bimetallism comes again, and he proposes to point the way to it by putting his own country on the side of monometallism.

To plain people, like those who live in my country, this sort of argument would not stand for a minute. It would not do. Why should this, the next to the greatest financial country in the world, take side with England in favor of monometallism? The gentleman from New York [Mr. COCKRAN] says that is the road to bimetallism. I beg to say I can not travel in that direction: I can not vote in favor of putting this country on the side of monometallism, as was done surreptitiously by the destruction of silver coinage in this country in 1873, which surreptitious demonetization was sought to be consummated by the Sherman act, and now by the repeal of the Sherman act, which itself repealed the Bland bill, and by means of which process you leave the country with a single gold standard.

You can not fool the people about it. "You can fool a part of them all of the time, and all of them a part of the time, but you can not fool the whole of them all of the time." They understand that you mean to depart from the declaration made in your national platform. They understand that you mean to be in favor of monometallism, and to say that gold should be the only thing to be coined.

Now, I have seen expressed in a paper to which I am going very briefly to call your attention, if I have the time, views upon this question which strike me as presenting more perfectly than I have seen anywhere the condition of affairs in this country; and I will say just in this connection that I intend to embody in my speech a portion of the platform which refers to the striking down of the 10 per cent tax on State banks. That tax ought to be struck down. That tax never should have been put on. It was a monopolistic measure, intended to give the national banks power over everything. It should be struck down as soon as possible.

A singular fact was mentioned to me by one of the most intelligent and astute bankers of Mississippi, Mr. Millsaps, president Capital State Bank, the day before I left home. You will be astonished when I tell you that he says the State bonds of the State of Mississippi, the county bonds of the State of Mississippi, and the municipal bonds of our cities and towns are to-day more eagerly sought for than the bonds of the United States, and are regarded as an equally safe investment.

And why not? They are predicated upon the taxable property, real and personal, of the State. Every dollar of real and personal property is pledged for their redemption. They constitute, therefore, as a basis for banking, a foundation as solid and as stable as that which you find in the national banks when they deposit the bonds of the Government of the United States in the Treasury as a basis of their circulation.

But in 1907 every bonded debt of this country will be paid, and there will be no bonds remaining. You must resort, therefore, to some other financial system than the system of national banks, because there will be no bonded debt upon which to predicate their issues, unless the intimation of the metropolitan papers is to be taken that it is your duty not only to repeal the Sherman act, which repealed the Bland act, and leaves silver no longer a money metal in this country, but that in order that you may restore confidence and bring about universal prosperity, you must issue $300,000,000 of bonds of the United States payable in gold to perpetuate the national banks and create the necessity for the continuance of the present onerous taxation.

I for one, as an humble Representative, raise my voice against that proposition, and I would rather resign my seat and go back to my home than to stand here as a Representative, if I am at the behests of anybody to be required to vote another dollar of bonded indebtedness upon the people of the United States. [Loud applause.]

If I have time, Mr. Speaker, I would like to read very briefly from an article from a journal of the metropolitan city of New York, which I think presents the facts of the case in a shape easy to comprehend, very exhaustive, and absolutely unanswerable. I read now from an article that appeared a few days ago in the Recorder, of the city of New York, treating of the very things for which we are assembled by the President to consider:

GIVE US FREE SILVER.

The Recorder believes that the time has come when the will of the people must be enforced alike upon Congress and the President, and the mints of the United States be thrown open to the free coinage of silver.

The financial and business situation is admittedly bad. There is no need to exaggerate it. It might be worse. It will become worse, much worse, unless Congress and President Cleveland can get together and relieve the existing commercial congestion by prompt and adequate legislation.

The President admits in his recent message that the repeal of the silver-purchase law of 1890 will not fully meet the exigencies of our situation. It is confessed on all hands that to simply repeal the Sherman act and stop there will not leave our currency upon a satisfactory basis, or provide for a safe and sufficient circulating medium.

The business of this country can not be done upon a purely gold basis. There is too much business to be done, and too little gold to do it with, to justify the experiment of a currency based wholly on one metal, and that one the scarcer and dearer of the two. The total disfranchisement of silver as a money metal, which seems to be the aim of the gold extremists at Washington, means a violent and ruinous contraction of values. The mere threat of it has already given the first sharp twist to the screws of contraction.

To persist in the total elimination of silver from our currency is madness. The lead of the gold monometallists has been followed far enough. It is time to call a halt and demand that silver shall be put back in the place it held for eighty years, from the formation of the Government down to 1873, and be made again one of the two main pillars of the American system of currency and coinage.

It is evident that his party in Congress is not fully with the President, and will not act upon his initiative unless he will assent to a provision by which silver shall be retained as a partner with gold on a just and fair ratio in the metallic basis of a nation's money. Congress is not ready and willing to repeal the act of 1890 until the President on his side is prepared to give his assent to a new law based on bimetallic principles, restoring silver as a money metal and reëstablishing the double standard.

This is the perilous feature of the situation at Washington. If the President and Congress can not harmonize their views and act together without long debate and delay, the crisis through which the trade and industry of the country are passing must and will grow more acute. Is there any way of bringing them together? Only, as the Recorder thinks, by putting such a pressure of public opinion upon them both as will compel them to meet on middle ground and take decisive action.

The President is not justified in asking for the unconditional repeal of the present silver law. To postpone the definite readjustment of our currency laws, leaving silver demonetized and its use as a standard money metal wholly prohibited, would, in the Recorder's opinion, precipitate a financial and business catastrophe compared with which all past panics would seem to have been mere bugaboos.

Absolute gold monometallism spells ruin, universal and unsparing ruin, for the people of this country.

Congress is right in demanding securities for the silver already coined and represented in our paper circulation, and a guarantee for the permanent retention of both metals and the historic double standard, at a ratio to be fixed with a due regard to the existing conditions of the currencies and coinages of the world. Congress stands for the American people in this matter. It is their dearest interests which it is defending in defending their constitutional currency—gold and silver.

The single gold standard has never been sanctioned or desired by the people of this country. Their will has been over and over again expressed to the contrary at every election and in every Congress for sixteen years past. Their determination that silver shall not be outlawed at the mints has been clearly and forcibly shown by overwhelming majorities in both branches of Congress. It never was stronger than it is to-day.

The clamor of the money-changers, the usurers, and the stock gamblers, inspired by the English influences that radiate from Lombard street, and which represent the organized rapacity of the world, has not shaken the faith of the American masses one iota in the honesty, the justice, and fairness, and, above all, the vital necessity of maintaining silver side by side with gold in their national money system.

There may have been a change in the relative measuring values of the two metals. That has often occurred in the course of history. But that change, whatever it may be, can be corrected by a change in the ratio of coinage from the present 16 to 1 to, say, 19 or even 20 to 1. It does not justify the total abolition of silver as a standard money metal. England is reported to be at this moment exchanging her gold for Indian silver on the basis of 22 to 1, showing that even the leading gold-standard country recognizes that silver possesses an exchangeable value with gold at some ratio that can be fixed. And we may be sure that the Bank of England, in fixing it at 22 to 1, has been as unfair to silver and as partial to gold as it has dared to be.

The Recorder earnestly calls for a general expression of the popular will, loud and clear, and general enough to make the President and Congress understand that the people demand immediate relief from the stifling and stagnating currency conditions from which they are now suffering; and that, while they want the act of 1890 repealed, they also want the free coinage of silver restored at such new ratio as the wisdom of Congress may see fit to fix.

The money power has spoken for gold monometallism, and Mr. Cleveland seems to be its executive echo. Now, let the people be heard, and Mr. Cleveland be clearly informed that Congress, and not he, represents the national will on this matter of admitting silver as well as gold to the mints.

Gen. Grant once said, speaking from the same chair now filled by Mr. Cleveland: "I have no policy to enforce against the will of the people." The Recorder recommends Mr. Cleveland to adopt the same attitude on this money question, for it is the only one that is worthy of an American President. Congress is the repository of the people's lawmaking power, and it correctly represents them in resisting the single gold standard crusade, at whose head Mr. Cleveland has apparently placed himself. He can do the nation no better service at this grave crisis in its financial and business history than to yield gracefully and say with Grant: "I have no policy to enforce against the will of the people."

It is of the very first importance that the present state of affairs should not be long continued. Business is benumbed in every branch; currency and coin are alike in hiding; exchange is difficult to effect for want of money to do it with; perfectly sound banks are embarrassed themselves and can not give ordinary accommodations to their depositors; trade is clogged and hampered at every turn; mills and workshops are closing in large numbers, and even the most solvent and flourishing firms find it hard to draw on their deposited moneys in such form as to meet their weekly pay rolls in the usual way.

How much time have I remaining, Mr. Speaker?

The SPEAKER *pro tempore* (Mr. DOCKERY in the chair). The gentleman has two minutes of his time remaining.

Mr. HOOKER of Mississippi. Then I have not time to conclude the reading, but it proceeds in the same vein.

Mr. VAN VOORHIS of New York. Mr. Speaker, I move that the gentleman have such time as he needs to conclude his remarks.

There was no objection.

Mr. HOOKER of Mississippi. I will not abuse the confidence of the House, Mr. Speaker, though I will finish the reading of this paper, as there is something in it to which I desire to call attention:

This is the situation, and it is not improving but growing worse with every day's delay at Washington.

Bad as it is, it would become infinitely worse if Congress were to yield to the single gold standard movement and surrender the cause of silver. Such

a surrender would mean disaster to all classes except the vultures that always flesh their beaks deepest and gorge themselves fullest on a field that is strewn with the victims of a vast commercial and industrial calamity. The merchant and the manufacturer, the big business man and the small tradesman, the great mass alike of employers and employed, the professional man, the brain-worker and the brawn-worker, and, more than all, the laborer and the wage-earner in every occupation, will all be drawn down together in the vortex of contraction if silver is outlawed.

To make gold the sole standard and the only currency, is to diminish the volume of our money by one-half. That is contraction; and contraction means the complete paralysis of all enterprises, the utter collapse of credit, the complete prostration of trade from New York to California, and the consignment of myriads of working people in every city and State in the Union to idleness and starvation.

The Recorder pleads with all its power that this whirlpool of contraction may not be opened. President Cleveland and Congress must get together and prevent it. The people must raise their voices now and demand their own salvation. If silver be not restored quickly to free coinage, the most optimistic man can not look forward six months without fear. Millions of unemployed, wageless men, with their wives and children crying for bread that can not be earned for them, will be hard to reason with. But they will have to be reasoned with if silver is outlawed from the mints. And it will be idle to tell them that it was thought best to starve them in order to place the country on the same gold-standard footing as England.

Repeal the act of 1890, readmit silver to free coinage at a new and reasonable ratio, and do it quickly. That, and nothing less than that, will put the business of the country firmly on its feet again, give new heart to capital, new hope to labor, and restore good times throughout the land.

If this be not done and the antisilver madness prevail, the prosperity of the country can not be recalled, and its peace will soon be in serious peril.

This, I think, is a clear, full, forcible expression of the situation, and of what is necessary to relieve it, so far as Congress has power.

I have, Mr. Speaker, occupied a longer time than was my purpose.

I have long been convinced that there could be no settlement of the money question in this country until we have the recoinage of silver, with its capacity to pay as good as the capacity of gold, and its recoinage in the same way, at the same mints, for the same charge.

Give silver a fair chance. It has never had it since 1873. It has never had it by law. We have the right now to give it to it by law, and do it in terms so clear and explicit that there can be no double construction. It has had an unfair construction by the different Secretaries of the Treasury from the time of demonetization in 1873 down to the present time. Pay out the silver coin as the gold coin is paid out, and coin it up and pay it out as gold coin is. Give it the same power as gold has to pay debts all over this land.

It is a very remarkable fact that gentlemen say that they do not want a 50-cent silver dollar; but it is a still more remarkable fact that there is not a silver dollar coined and has the impress and stamp of the Government upon it to-day that can not, from Maine to California, buy as much provisions and pay as much of debt as any gold dollar will. It is a remarkable fact; and yet you say that silver has no intrinsic value and that the silver dollar can not be a coin of the United States unless you have a gold dollar behind it to redeem it.

I have no objection to the gold coinage. I want both; I believe in both. It is the standard metal of the Constitution; the money of the Constitution; and it is a money to which the people are devoted, because it is the money of the Constitution and because for eighty years of long experience we have had them at a parity with each other. How does France preserve the parity between the two metals? She preserves it because she has $700,000,000 of gold and $600,000,000 of silver, and directs her financial officer to pay in gold or silver as he shall please.

You may enact a law for the purpose of preserving the parity if you please; and that is the argument that is made—that you must preserve the parity. Give us the coinage of both metals first, and we will take care of the parity. Coin the silver dollar and the half and quarter, and we will take care of their maintenance. Do not frighten us with the idea that silver may be depreciated. When they demonetized silver in 1873 it was worth more than gold. That was one of the arguments for its demonetization—because it was worth more than gold; and now one of the arguments is that its bullion value is worth less than gold.

When you coin silver—and you have refused since 1873 to coin silver, when it was worth more than gold; and now you refuse when it has declined, and you say that silver is not equal to gold—I say that every single ounce of silver that is coined by the mints and has on it the stamp of the Government to-day possesses the power that the gold dollar possesses in its capacity to purchase and its capacity to pay debts.

Therefore give us free coinage and we will fix the ratio, we will preserve the parity. They preserved themselves for eighty-odd years; and what was good enough for our fathers and our forefathers is quite good enough, I take it, for us. As I said before, I have no hostility to the coinage of gold. Let our friends who are worshipers of the yellow metal drink of the golden sands of Pactolus if they will, but do not deny to we poorer mortals the right to slake our thirst in the shining silver rills that come bounding down from our own mountain side, carrying peace and plenty, hope and happiness to many an humble household. [Applause.]

STANDING COMMITTEES.

The SPEAKER announced the appointment of the standing committees of the House, as follows:

Committee on Elections—Messrs. O'Ferrall, Brown, Paynter, Lockwood, Lawson, Hayes, Patterson, Denson, Woodard, Taylor of Tennessee, Waugh, Daniels, McCall, Thomas, and Wheeler of Illinois.

Committee on Ways and Means—Messrs. Wilson of West Virginia, McMillin, Turner, Montgomery, Whiting, Cockran, Stevens, Bryan, Breckinridge of Arkansas, Bynum, Tarsney, Reed, Burrows, Payne, Dalzell, Hopkins of Illinois, and Gear.

Committee on Appropriations—Messrs. Sayers, Breckinridge of Kentucky, Dockery, Compton, O'Neil of Massachusetts, Livingston, Washington, Robertson of Louisiana, Brookshire, Williams of Illinois, Coombs, Henderson of Iowa, Cogswell, Bingham, Dingley, Grout, and Cannon of Illinois.

Committee on the Judiciary—Messrs. Culberson, Oates, Stockdale, Goodnight, Boatner, Layton, Wolverton, Fellows, Lane, Bailey, Terry, Ray, Powers, Broderick, William A. Stone, Updegraff, and Childs.

Committee on Banking and Currency—Messrs. Springer, Sperry, Cox, Cobb of Missouri, Culberson, Ellis of Kentucky, Cobb of Alabama, Warner, Johnson of Ohio, Black of Georgia, Hall of Missouri, Walker, Brosius, Henderson of Illinois, Russell of Connecticut, Haugen, and Johnson of Indiana.

Committee on Coinage, Weights, and Measures—Messrs. Bland, Tracey, Kilgore, Epes, Stone of Kentucky, Allen, Bankhead, Rayner, Harter, Coffeen, McKeighan, Charles W. Stone, Johnson of North Dakota, Dingley, Sweet, Hager, Aldrich, and Rawlins.

Committee on Interstate and Foreign Commerce—Messrs. Wise, Price, Brickner, Geary, Houk of Ohio, Mallory, Patterson, Caruth, Durburow, Brawley, Bartlett, O'Neill of Pennsylvania, Randall, Stoner, Belden, Hepburn, and Fletcher.

Committee on Rivers and Harbors.—Messrs. Blanchard, Catchings, Lester, Clarke of Alabama, Jones, Page, Alderson, Causey, Caminetti, McCulloch, Barnes, Henderson of Illinois, Hermann, Stephenson, Hooker of New York, Grosvenor, and Reyburn.

Committee on Merchant Marine and Fisheries.—Messrs. Fithian, Magner, Berry, Robbins, Pigott, Cooper of Florida, Cornish, Bratton, Perkins, Boutelle, Gillett of Massachusetts, White, and Phillips.

Committee on Agriculture—Messrs. Hatch, Alexander, Shell, Forman, Moses, Capehart, Sibley, Marshall, Schermerhorn, Williams of Mississippi, Simpson, Funston, Waugh, Funk, Apsley, Hainer, Baker of New Hampshire, and Flynn.

Committee on Foreign Affairs—Messrs. McCreary of Kentucky, Hooker of Missouri, Fitch, Rayner, Geary, Price, Tucker, Dinsmore, Everett, Hitt, Harmer, Stoner, Blair, Draper, and Van Voorhis of New York.

Committee on Military Affairs.—Messrs. Outhwaite, Wheeler of Alabama, Lapham, Gorman, Pendleton of West Virginia, Bretz, Sickles, Black of Illinois, Morgan, Bowers of California, Hull, Curtis of New York, Marsh, Gillett of Massachusetts, Woomer, and Joseph.

Committee on Naval Affairs.—Messrs. Cummings, Geissenhainer, Meyer, McAleer, Clancy, De Armond, Money, Talbott of Maryland, Tyler, Boutelle, Dolliver, Wadsworth, Randall, Robinson of Pennsylvania, and Hulick.

Committee on the Post-Office and Post-Roads—Messrs. Henderson of North Carolina, Dunphy, Kyle, Hayes, Turpin, Sipe, Cabaniss, Burnes, Swanson, Caldwell, Wilson of Washington, Loud, Smith of Illinois, Houk of Tennessee, Gardner, and Flynn.

Committee on the Public Lands—Messrs. McRae, Hare, Magner, Kribbs, Hall of Minnesota, Crawford, Gresham, Somers, Latimer, Davis, Lacey, Wanger, Moon, Meiklejohn, Ellis of Oregon, and Smith of Arizona.

Committee on Indian Affairs—Messrs. Holman, Allen, Turpin, Lynch, Hall of Minnesota, Maddox, Hunter, Pendleton of Texas, Bower of North Carolina, Kem, Wilson of Washington, Hopkins of Pennsylvania, Pickler, Sherman, Curtis of Kansas, and Smith of Arizona.

Committee on the Territories—Messrs. Wheeler of Alabama, Kilgore, Branch, Donovan, Kribbs, Arnold, Hunter, Simpson, Boen, Perkins, Scranton, Le Fever, Avery, Smith of Arizona, and Joseph.

Committee on Railways and Canals—Messrs. Catchings, Beltzhoover, Cobb of Missouri, Gresham, Ryan, Bower of North Carolina, Hudson, Cannon of California, Hull, Chickering, McCleary of Minnesota, Wanger, and Aiken.

Committee on Manufactures—Messrs. Page, Warner, Harter, Crawford, McLaurin, Gorman, Cornish, Conn, Chickering, Scranton, and Linton.

Committee on Mines and Mining—Messrs. Weadock, Sipe, Tate, Ikirt, Richardson of Michigan, McDannold, Cockrell, Baker of Kansas, Stephenson, Shaw, Newlands, Cousins, Lilly, and Rawlins.

Committee on Public Buildings and Grounds—Messrs. Bankhead, Abbott, McKaig, Campbell, Bretz, Cadmus, Grady, Berry, Davey, Milliken, Sweet, Morse, Wright of Pennsylvania, Wever, and Mercer.

Committee on the Pacific Railroads—Messrs. Reilly, Snodgrass, Boatner, Caruth, Kyle, Lockwood, Weadock, Bell of Texas, Hendrix, Harris, Blair, Smith of Illinois, Powers, Hepburn, and Cooper of Wisconsin.

Committee on Levees and Improvements of the Mississippi River—Messrs. Allen, Tracey, Stockdale, McDearmon, Johnson of Ohio, Sperry, Talbott of Maryland, Woodard, Ray, Haugen, Marsh, Joy, and Hicks.

Committee on Education—Messrs. Enloe, Grady, Pearson, McLaurin, Arnold, Williams of Mississippi, Stallings, Haines, Wever, Thomas, Van Voorhis of Ohio, Murray, and McCall.

Committee on Labor—Messrs. McGann, Capehart, Dunn, Erdman, Wells, Ryan, Talbert of South Carolina, Pence, Apsley, McCleary of Minnesota, Phillips, Gardner, and Kiefer.

Committee on the Militia—Messrs. Forman, Meyer, Haines, Baldwin, Bratton, Burnes, Cannon of California, Bell of Colorado, Wright of Massachusetts, Adams, Aitkin, Baker of New Hampshire, and Wright of Pennsylvania.

Committee on Patents—Messrs. Covert, Lapham, De Forest, Tate, Hutcheson, Strait, Robbins, Neill, Bowers of California, Draper, Hicks, Joy, and Hulick.

Committee on Invalid Pensions—Messrs. Martin of Indiana, Fyan, Hare, McEttrick, Baldwin, Graham, McDannold, Erdman, Fielder, Taylor of Tennessee, Pickler, Lacey, Apsley, Meiklejohn, and Strong.

Committee on Pensions—Messrs. Moses, Henderson of North Carolina, Jones, Houk of Ohio, Snodgrass, Taylor of Indiana, Lisle, Clark of Missouri, Baker of Kansas, Loudenslager, Lucas, White, and Tawney.

Committee on Claims—Messrs. Bunn, Cox, Campbell, Russell of Georgia, Hutcheson, Richards, Mutchler, Clark of Missouri, Hammond, Loud, Cooper of Wisconsin, Settle, Heiner, Kiefer, and Cousins.

Committee on War Claims—Messrs. Beltzhoover, Stone of Kentucky, Enloe, McLaurin, Cooper of Texas, Goldzier, McNagny, Ritchie, Houk of Tennessee, Hermann, Mahon, Avery, and Wilson of Ohio.

Committee on Private Land Claims—Messrs. Pendleton of West Virginia, Crawford, Edmunds, Fithian, Cockrell, Conn, English, Hudson, Bell of Colorado, Funston, Marvin, Lucas, Shaw, and Rawlins.

Committee on the District of Columbia—Messrs. Heard, Richardson of Tennessee, Rusk, Cobb of Alabama, Meredith, Cadmus, Abbott, Cooper of Indiana, Cooper of Florida, Harmer, Post, Cogswell, Belden, Hilborn, and Babcock.

Committee on the Revision of the Laws—Messrs. Ellis of Kentucky, Magner, Branch, Mallory, Neill, Pigott, Maguire, Maddox, Goldzier, Johnson of Indiana, Wheeler of Illinois, Hager, and Settle.

Committee on Reform in the Civil Service—Messrs. De Forest, Brawley, Meredith, Hooker of Mississippi, Branch, Everett, Hines, Taylor of Indiana, Hopkins of Illinois, Russell of Connecticut, Brosius, Sherman, and Van Voorhis of Ohio.

Committee on Election of President and Vice-President and Representatives in Congress—Messrs. Fitch, Tucker, Crain, Compton, De Armond, Donovan, Lawson, Stallings, Johnson of North Dakota, Curtis of New York, McDowell, Northway, and Hainer.

Committee on Alcoholic Liquor Traffic—Messrs. English, Barwig, Reilly, Layton, Livingston, Cooper of Texas, McEttrick, Morse, Daniels, Hainer, and Kiefer.

Committee on Irrigation of Arid Lands—Messrs. Cooper of Indiana, Lisle, Paschal, Maguire, Richardson of Michigan, Pence, Newlands, Sweet, Doolittle, Hartman, and Tawney.

Committee on Immigration and Naturalization—Messrs. Geissenhainer, Epes, Fyan, Brickner, Davey, Paschal, Maguire, Gillet of New York, Bartholdt, Wilson of Ohio, and McDowell.

Committee on Ventilation and Acoustics—Messrs. Shell, Durborow, Hammond, Graham, Walker, Heiner, and Linton.

Committee on Expenditures in the State Department—Messrs. Lester, Breckinridge of Kentucky, Covert, Alexander, Charles W. Stone, Caldwell, and Dolliver.

Committee on Expenditures in the Treasury Department—Messrs. Barwig, Hendrix, McNagny, Sibley, William A. Stone, Wadsworth, and Grosvenor.

Committee on Expenditures in the War Department—Messrs. Montgomery, Bunn, Sickles, Black of Illinois, Hitt, Hooker of New York, and Loudenslager.

Committee on Expenditures in the Navy Department—Messrs. McMillin, Dockery, Abbott, Clancy, Milliken, Robinson of of Pennsylvania, and Northway.

Committee on Expenditures in the Post-Office Department—Messrs. Oates, Paynter, Richards, Haines, Wright of Massachusetts, Ellis of Oregon, and Doolittle.

Committee on Expenditures in the Interior Department—Messrs. Turner, Somers, Swanson, Talbert of South Carolina, Grout, Hopkins of Pennsylvania, and Bowers of California.

Committee on Expenditures in the Department of Justice—Messrs. Dunphy, Clarke of Alabama, Brown, O'Neil of Massachusetts, Ritchie, Payne, and Reyburn.

Committee on Expenditures in the Department of Agriculture—Messrs. Edmunds, Hall of Missouri, Cockrell, McDearmon, Kem, Hartman, and Funk.

Committee on Expenditures on Public Buildings—Messrs. Crain, Cummings, Dunn, Boen, Moon, Gillet of New York, and Lilly.

Committee on Rules—The Speaker, Messrs. Catchings, Outhwaite, Reed, and Burrows.

Committee on Accounts—Messrs. Rusk, Paynter, Tate, Mutchler, Ikirt, Wells, Post, Wright of Massachusetts, and Marvin of New York.

Committee on Mileage—Messrs. Lynch, Strait, Pendleton of Texas, and Mahon.

JOINT COMMITTEES.

Committee on the Library—Messrs. Fellows, O'Ferrall, and O'Neill of Pennsylvania.

Committee on Printing—Messrs. Richardson of Tennessee, McKaig, and Broderick.

Committee on Enrolled Bills—Messrs. Pearson, Russell of Georgia, Latimer, Hines, Hager, Adams, and Gillett of Massachusetts.

ORDER OF DEBATE ON SATURDAY.

Mr. BLAND. Mr. Speaker, I ask unanimous consent that the special order heretofore made for the conduct of this debate be modified so as to provide that after two days of this week, Thursday and Friday, have been consumed in debate under the five-minute rule, giving an opportunity for 140 or 150 members to be heard, probably a larger number than will desire to speak, Saturday be assigned for general debate; the time on that day to be divided equally between the two sides without regard to what shall have gone before.

Mr. STOCKDALE. I suggest an amendment, so as to make that apply also to Saturday evening.

The SPEAKER. The Chair will submit the proposition as he understands it. Under the order of the House, as it now stands, Thursday, Friday, and Saturday of this week would be devoted to debate under the five-minute rule. The gentleman from Missouri [Mr. BLAND] now asks unanimous consent that the debate on Saturday, instead of being had under the five-minute rule, may proceed under the rule for general debate, and that on that day the time be equally divided between the two sides.

Mr. BOUTELLE. Mr. Speaker, what will be the practical effect of the change proposed by the gentleman from Missouri?

The SPEAKER. Under the order as it stands, Saturday, as well as Thursday and Friday, would be devoted to debate under the five-minute rule. The proposition of the gentleman from Missouri would devote Saturday to general debate.

Mr. BOUTELLE. Then the practical effect would be that, if the gentleman's proposition were agreed to, fewer people would have an opportunity to speak on Saturday than could speak under the five-minute rule?

The SPEAKER. Undoubtedly.

Mr. BLAND. Thursday and Friday will be devoted to debate under the five-minute rule, and doubtless that will give as many members as will desire to speak an opportunity to be heard.

The SPEAKER. Is there objection to the proposition of the gentleman from Missouri?

Mr. HATCH. As I understand it, that proposition does not interfere with the general debate on to-day and to-morrow.

The SPEAKER. Not at all. It only changes the order in so far as next Saturday is concerned, and provides that debate on that day shall proceed under the hour rule instead of under the five-minute rule.

Mr. McCREARY of Kentucky. But the five-minute debate is to proceed on Thursday and Friday, as previously ordered?

The SPEAKER. It is.

Mr. TRACEY. And it is understood, Mr. Speaker, that we shall commence voting on Monday at 12 o'clock.

The SPEAKER. The Chair so understands. In the absence of objection, the change in the order proposed by the gentleman from Missouri [Mr. BLAND] will be made. The Chair hopes that gentlemen representing the respective sides will make some agreement among themselves as to who shall occupy the time on

Saturday, and the order in which the several speakers shall address the House, and thus relieve the Chair from pressure.

Mr. BLAND. We will undertake to do that, Mr. Speaker.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed a bill (S. 50) in aid of the California Midwinter International Exposition; in which the concurrence of the House of Representatives was requested.

[Mr. COOPER of Indiana withholds his remarks for revision. See Appendix.]

Mr. ALEXANDER. Mr. Speaker, being by profession a farmer and being a member of the Committee on Agriculture of this House, I desire to present that side of this question which addresses itself especially to agriculturists.

In regard to the call of this extraordinary session, the condition of the country warrants it; but I can not agree with the view announced by the President in his recent message or with that announced by my friend from West Virginia who presided over the Democratic convention at Chicago, that the Sherman silver law is the cause of all our woes. I admit that the Sherman silver law is the occasion of this panic, but it is not the cause. I will even go farther and maintain that but for this same Sherman silver law this panic would probably have come a year ago.

Now, this panic, to my mind, has been caused by vicious legislation, not vicious at the time it was adopted, because it was enacted during the war to save the country. But it has been kept upon the statute books for a course of years during which we have been passing through an industrial revolution. Let us look back a moment at the days beyond the war and see what was then our condition, when the city people and the country people seemed to be upon an equality. In that day we had in every township and county mechanics of all classes, shoemakers, wagon-makers, hatters, weavers, tailors, blacksmiths, all classes of laboring men. At that time this Government issued only gold and silver coin. At that time the paper money circulating among the people was the issue of the State banks. The railroad was then a local corporation, and whatever it made in transportation was paid to the stockholders living along the line. At that time the whole country alike seemed prosperous and happy. But the war came, and the roads have forked; the country people have been traveling one road and the city people another. Now I desire, not in a spirit of antagonism to the cities, to present this view; but it is just that gentlemen living in our cities should see how hard have been the times upon the farmer.

After the war, when cotton was high, when all commodities commanded war prices, there came upon us a system of banking extending from New England to the Rio Grande, which was totally unsuited to us. Money was scarce; it flowed freely from the North to buy our cotton, and at such large prices that we thought we would soon get rich. But here came the national bank system—a system which, if you will examine it, you will find can not run a single year without the deposits of the people. Our people believing that the Government was strong and would protect them, placed their deposits in those banks. These same national banks became competitors with the people for money. Why, sir, after the war, many of those institutions did not hesitate to pay 8 or 10 per cent per annum for money to be loaned out at 1¼, 2½, and even as high as 3 per cent per month.

Now the farmers had a hard, hard time. They had no money. They were forced to raise money by some means, and it took more money to run the farm after the war than before, because the mechanics had left the country and everything had to come from the stores, and they were forced to get money and pay an enormous interest to the bankers, or to the few who held money, for its use. And not only that, Mr. Speaker, the railroad system, and I wish to impress this on the minds of members present to show how they have minimized the price of the farmer's products in this country. Before the war they had no great connections. But after the war the great railroad system of the country was developed, extending from one side of the country to the other. If the wheat crop failed east of the Alleghenies it made no difference in the price, because the railroads would bring the wheat from the Dakotas and other sections and place it in the cities of the East; so that they got it at a minimum price, and the farmer realized no increase in price by reason of a short crop in his locality. They have carried this system to such a degree of perfection that there is not a farm product in this broad land but has to be marketed in this country at the minimum price on account of this very fact.

To illustrate the effect of the railroad system on farm products more fully, let us take beef cattle for an example. They are bought in the western country and shipped here all along the mountain ranges from here to Alabama. True it is dressed beef as a rule, but it is so cheap—that is to say, it is shipped at such a low rate—that the minimum price is preserved all along the entire line wherever it is received. Not only that, sir, but take even cotton: the mills in my part of the country can receive it, brought from any point in the State of Texas, delivered at the mills, for less than half cent a pound—and the cost of production must be 2½ cents per pound in favor of Texas.

Now with the crops being marketed at the minimum price, with a greater demand for money than was ever before known in this country, with no chance to get money at a reasonable rate of interest, we find the farmers falling, one after another, in every part of the country, until they become what is known as "time price" men. Now these time price men are unable to get money in their localities. Their land and their stock is their entire collateral to offer for it. But the banks will not take the stock, and they are prohibited by law from taking the land as collateral security. In this condition of things they have to go to the merchant, and the merchant having to run risks in carrying so many of them, not only the risk whether the man will live to carry out his contract, but the risk of the seasons, have to charge exceedingly high prices; so that you find that the "time price men" have paid from 40 to as high as 300 per cent for the use of money, for they all have to use merchandise to a great extent instead of money.

Mr. Speaker, they have a term (I believe it extends from here to the Rio Grande) known as "running a man." When a man can not borrow any money from a bank or the few who have it, he is compelled to go to the merchant and be "run" by him, as the term is. Now, whoever started that word was as fortunate in the selection as the man who started the term "carpet-bagger" in the South Because the man is actually run. It runs him all the entire year and when the year ends he finds, when he settles up, nothing to go on, and he is ready to start in on another year's "run." This condition of things, this usurious interest that they are compelled to pay, has brought the entire farming population of the country, from here to Texas, almost to the verge of ruin. It is indeed a very serious condition. Now let us see how it affected the cities.

The national banks got most of the money—that is, the money of the city people and the money of all such country people as would put it into them and the people that could be induced to lend it to them at 4, 6, or 8 per cent. Not only that, but there was a system of bank checks by which the currency of the cities was augmented to an unlimited amount. This system of bank checks aswered the city people as money. Many a time when I would go into the city I could see every man paying his debts with checks, and no money was needed even in traveling here and there. The check book was all that was wanted and no money was required. Consequently, they could more than double or treble the capacity of the volume of money, or its equivalent for use. But the man who knows the worth of money knows well that the largest volume controls those who have the least.

Now, sir, not only that, but it enabled them to double up their securities and use them as money. Take, for example, a man who had $100,000 worth of railroad bonds. Say he went and borrowed $75,000 on the bonds, he did not receive any money. He simply had $75,000 entered in his bank book, and received a check book, and when he wanted to put that money in circulation he did not pay out actual money; he gave his check, which passed instead of money. Now in this way they doubled up the amount of securities, the amount of money, or that which served as money, until the term "prosperous" for cities seemed to lose its meaning, and there came in a new term, "boom."

The great cities were on a boom, and they prospered as they never prospered before. They controlled everything, and the cities that had the greatest amount of securities to hypothecate, under this system of bank checks, controlled the greatest amount of property; and hence you see that in the great cities they own all the railroads and all the interest-bearing bonds and almost all other interest-bearing securities. Now this gives them a most wonderful advantage. This system has broken down, and that is what has caused this panic. It very nearly came before. Have gentlemen forgotten that only a few years ago they had to telegraph the Secretary of the Treasury to go to New York for consultation, and that he had to purchase bonds in order to relieve the pressure? Have they forgotten that from $40,000,000 to $60,000,000 of the people's money were kept in the national banks in order that the people might not be distressed for currency? In any one of those years if a single bank had failed another one possibly would have failed, and another, and this crisis would have come.

Now, I can not see how the Sherman law, issuing one hundred and forty-odd millions of dollars, should have anything to do with this panic. In other words, if the situation was relieved in New York by the Secretary of the Treasury buying the bonds of the Government and the deposit of money in the national banks, it was just simply the want of currency that threatened the panic, and how could the $140,000,000 of currency issued under the Sherman silver bill have produced the panic? That is one thing that I can not really understand.

As my friend from Indiana [Mr. COOPER] says, 90 per cent of the business of the country was done by checks and evidences of credit. Now, that system having broken down, it resolved itself just into this condition: Suppose you had a water mill that only had 10-horse power, and you supplemented that by an engine of 90-horse power, in order to do the work of a mill that required 100-horse power. Suppose that 90-horse-power engine broke down or

collapsed, could your water power of only 10-horse power keep all that machinery in motion? Why, certainly not. It would be bound to stop, and that is just what has clogged the wheels of this country.

Go to your own internal-revenue offices and you will find the collectors will not take a single check. They want currency. Go to every railroad or corporation of any kind and you will find they will want currency. Go to your hotels and they ask for currency. The system by which we could do business with checks has failed; and when it collapsed we were thrown back upon the little power remaining, and that has clogged the wheels of commerce.

Now, Mr. Speaker, the only way I can see to relieve this panic is by currency. It prevented it several times in previous years. One of the wisest of our Secretaries of the Treasury once called attention to the fact that the financial system, with which we are now dealing, had its severest strain in the months of August and September; and the reason he assigned was that there was no elasticity in the system, and that currency was demanded at that time to move the crops. The money had to leave the money centers, and as the crops of the country increased, the necessity for more money becoming so great, there was not elasticity enough to furnish the money by which they could move the crops and transact the business in the cities. Now, if that is true, there can be no question but what it will take currency to relieve the situation; and I would no more hesitate to vote for one hundred or two hundred or three hundred millions of legal-tender notes, and get them into circulation among the people at once, to relieve the pressure of this panic, than I would hesitate to vote for it for the defense of this country if it was invaded by a foreign foe. The amount of property that may be destroyed may even exceed that which would be destroyed by a foreign enemy.

The condition that confronts us is really sad and serious. We find the crops of this entire country ready to move and not a dollar to move them. I see in a paper that in my own State, where a man has brought into a town a bale of cotton; he could not sell it, because there was no money to buy it. Now, under the present condition of things, if this Congress does not relieve this country at once, and if the farmers of the country are robbed of their year's labor, there is going to be trouble. The mechanics in great cities are already thrown out of employment, by reason of the fact that there is nobody to buy the goods which they make. Probably some of them are now suffering for the breadstuffs of life. So that it is a serious condition that confronts us, and it is urgent, immediate relief that this country demands. It reminds me of an old Methodist minister who tried to organize a church. They met in March, and while discussing what salary they would pay, one brother rose and said: "Why, brethren; we can't tell what kind of crops we are going to have. Let us postpone this thing until next August and let us see then." The old minister rose up and said: "My brothers, that old gray horse that is hitched to that hickory tree is mine, and if we can get along without your assistance till next August we will not need it."

And it is pretty true of the condition of the farmers. If they do not get this relief by the middle of October, they will be so virtually ruined that all you will have to do will be to pass the Torrey bankruptcy bill that was offered in the last House. The necessity for immediate relief is pressing. In the bills before me I can see no immediate relief. If there is any relief at all, it is that which is offered by the gentleman from Missouri [Mr. BLAND]; but if you would run your mints and run them night and day, you could not coin enough silver dollars in time to relieve the present condition. So that I would like to have seen offered to this House a bill which would immediately relieve this country and start the wheels of commerce and trade in motion.

While I am on the floor I want to call attention to a financial system that we probably ought to adopt. I have studied over this question of how the farming classes might be relieved. I have tried to show to you that they had no means by which they could pool their assets and use them as money, as city people use checks. I have tried to show that they required more actual money in their farming operations now than they did before the war, and the only system that I can see by which they could be relieved after this pressure has passed is by State banks, a repeal of the tax upon State bank circulation. Most people urge as a reason why the tax on State bank circulation ought not to be repealed is because it is not good everywhere—that a bill from North Carolina will not pass in Ohio or in Indiana.

Mr. Speaker, that is the very reason I advocate it. If that bill was good everywhere, we could no more keep it than we can keep these national bank bills. It is the very fact that it is not good everywhere that makes it return to its place of issue; and as the people who know the banks know whether it is good or not, they are the ones for whose benefit it remains, and they are the ones to be benefited by it, and they will take it and it serves them as money. Rather than see that fail, I would urge that the 10 per cent tax on the State bank circulation be amended so that it would place a tax on the bill in a State different from that in which it was issued. That would keep these State bank bills from going into States where they were not wanted.

Many gentlemen who have not been engaged in farming do not know how important it is for the farmers to have money from May to August, which is the time in which the crop is made. If, by reason of drought or any untimely circumstance, they are out of money, $20, $30, or $50 is a big thing to them; and when they can not get that, and have to go to the store and buy goods to exchange for labor, it makes the interest too high. Now, if they can get this old banking system the farmers can pool their assets in the State banks; they can put their money in there as they have done before in this country. In North Carolina over 80 per cent of the stock of the State banks before the war was owned by the farmers of the State, and to-day there is less than 10 per cent of the national-bank stock owned by farmers. Another fact I would like to call attention to, and it is that, no matter what system the United States Government might adopt, it can not fit every section of this country alike. There would be some who would be benefited more than others. Now this local circulation that would go only among the people in the State in which it was issued would relieve that condition. I am satisfied that it would give satisfaction upon a trial.

In regard to silver, Mr. Speaker, money according to the definition where I come from, is simply a medium of exchange. We recognize that this Government can not give to money more than four powers—the power to represent value, the power to exchange value, the power to measure value, and the power to accumulate by interest. Now, the question is, what will the Government make that money out of. That may be a matter of policy, or it may be a matter of necessity. But our people have been taught that gold and silver was the best to make money out of. They know that gold and silver has seen empire after empire go down; that there is no nation that has survived its use; and then many of them recollect that during the late war, when the Confederacy first issued its notes, they were as good as gold, and exchangeable for gold, but as the war proceeded and the fortunes of the Confederacy commenced to waver, they knew that gold and silver would survive the wreck of the Confederacy and everyone would prefer money made of gold and silver.

All country people prefer it, for the reason, among others, that if a house is burned down the money is not totally destroyed, the bullion may still be recovered, and because rats can not destroy it as they can destroy bills. Recognizing that gold and silver money as being stronger than the Government itself, they feel that it is good enough for them. But the most pressing question at this time is not what kind of money there shall be, or what it shall be made of, but how much of it is to be issued and kept worth a hundred cents on the dollar? That is the great question with them. They prefer gold and silver, but they want enough of it to do the business of the country and to relieve this pressure. Mr. Speaker, I have not time to describe to this House the true condition of our farmers.

It would take too long, but if I had the time I know that the remarks that I would make about the farmers in my part of the country would apply as well to those of New Hampshire, New York, Minnesota, or other States. The same condition is extending everywhere. I have seen in agricultural papers accounts of abandoned farms in Rhode Island, abandoned farms in New Hampshire and other States, with complaints of the difficulty of making both ends meet.

Now, as this financial policy has been kept in force all these years by the Republican party, there having been no change of law permitted, the people are looking to the Democratic party for a new and more equitable system; and I say here to-day that if the Democratic party comes up fully and squarely to the requirements of the situation, there will be no question whatever as to their remaining in power for all time to come, because the true habitat of democracy is among the people of our country who labor in production.

Mr. Speaker, as I may not have another opportunity to discuss the measures that are brought forward here for the relief of the existing distress, I will call attention to some of them now: The bill of Mr. Johnson of Ohio is good, as far as it goes, as a means of getting out more money at once among the people.

The next bill that I hear of is one which proposes to authorize an increase of the issue of the national banks to 100 per cent of their bond deposits. To that our people are opposed. We do not like that system. It is the system that has accumulated the money of the country at certain centers and has come in competition with everybody by borrowing money.

Not only that, Mr. Speaker; when the Farmers' Alliance met in St. Louis in 1889 and promulgated the demand known as the subtreasury plan, I do not suppose there were a half-dozen men in that body who had any idea that that plan would ever be enacted into a law, but it was simply used to educate the people, and especially to educate them in regard to the national banks, because the farmers regarded those banks as no more than subtreasuries.

Why should five gentlemen who owned 3,000 bales of cotton, or 100,000 bushels of wheat, why should they not be allowed to warehouse it and draw 90 per cent of currency upon it as well as five gentlemen who own $100,000 in United States bonds? The subTreasury suggestion of the Farmers' Alliance was directed purely and squarely at that system, and I must confess that our farmers can not see the difference between the two cases. The bonds are

private property, the Government has nothing to do with them except to pay them as they become due. In like manner the cotton and the wheat are private property.

Not only that, Mr. Speaker, even this Sherman silver law creates a subtreasury. It brings the product of the mine and warehouses it, and pays for it dollar for dollar at the market price. In making that fight we simply desired to educate our farmers so that they will be able to protect themselves, because we believed that this very kind of situation was going to come about very soon. We did not think it would be quite so extensive as it seems to be in the cities, but we saw that the condition of the farmer would be just what it is. We can not see any reason why the United States should pay a man, simply because he calls himself a banker, 100 cents on the dollar, and interest on the bonds besides. We want money that is not tampered with by the corporations. We want money direct from the Government, and if corporations are to have anything whatever to do with the issue of currency, let them be governed in their own States so that no influences can be brought to bear by which such a state of affairs as we now have can be made to recur.

Now I do not want to believe that the bankers have had anything to do with this panic, because bankers are the last men in the world to want a panic. A capitalist engaged in legitimate business is one of the last men in the world who would want a panic. But this state of affairs does exist, and it strikes me with peculiar force that if the Sherman law is repealed and confidence is restored to the country, and money comes out from its hiding places, and business starts up again—if these things come to pass, I say, it will seem to me very much as if the forty men described by the gentleman from Alabama [Mr. WHEELER] who, he said, could stop the wheels of trade and commerce, had got together and decided to start it up again. [Laughter.]

In conclusion I simply urge this House to take into consideration the present condition of the country. The people need relief at once; and we should lose no time whatever in furnishing this relief. Afterward we can settle these other questions. I hope that the House will not delay longer the passage of that measure which will bring to the people the relief that is needed. [Applause.]

[Mr. SPERRY withholds his remarks for revision. See Appendix.]

[Mr. COX withholds his remarks for revision. See Appendix.]

Mr. SETTLE. Mr. Speaker, In common with many members on this floor I represent a constituency divided in opinion upon the questions now pending in this House; divided, I believe, not along party lines, but along the line of honest difference of opinion as to what is the best remedy that can be offered for the present unfortunate condition of our country. Something has been said on this floor in the course of this debate about financial "evolution."

I refer to that simply as a basis for the remark that I believe there is no State in this Union whose citizens have felt the effects of that "evolution" more than have the people of North Carolina. In the recent contest the Democratic party formed its line of battle on this subject with two distinct utterances in its State platform, the first of which was that—

We especially favor the free coinage of silver and an increase of the currency.

Not content with the enunciation of their position there made, further on in the platform we find the statement that—

We demand the free and unlimited coinage of silver.

Every Democratic organ in the State of North Carolina advocated that financial policy throughout the campaign. Every distinguished speaker of that party who enlightened his audiences on the subject of finance, committed himself and his party, State and national, in unequivocal terms to the advocacy of the free and unlimited coinage of silver.

The Republican party fought that campaign with the declaration that it was not in favor of the free and unlimited coinage of silver under existing conditions, and that never would it come to that point until there was an international agreement fixing the ratio upon which the two metals should be coined; that the furthest they could ever go was to the enactment of some law looking to the coinage of the American product only.

In my campaign, on every stump from which I spoke, I took the position that I was opposed to the free and unlimited coinage of silver under existing conditions, and that the furthest I could go was, as I have already stated, to favor the coinage of the American product. The Democratic party, with its line of battle formed otherwise, was successful in the nation as in North Carolina.

In less than four months after the inauguration of the Democratic President the Democratic press of North Carolina, almost without exception, certainly without important exception, had reversed their machinery, repudiated the doctrine of the free coinage of silver, said that it was unsound finance, and that they were opposed to it. Nearly every speaker that had participated in that campaign, in conversation and in public utterance said that it was unwise and that he was opposed to it.

This condition of things, Mr. Speaker, continued to exist until quite recently, when the distinguished representative from North Carolina, who occupies a seat in the other Chamber, addressed a letter to one of the Farmers' Alliance orders in North Carolina, in which he said that he was for the platform which declared for the free and unlimited coinage of silver.

The Democratic speakers to whom I have referred joined issue with him. The Democratic press of North Carolina repudiated his utterances, said that they regretted exceedingly that that distinguished gentleman could not follow his party, and denied the fact that the Democratic platform adopted at Chicago committed the party to the free and unlimited coinage of silver. That has been the utterance, Mr. Speaker, of nearly every Democratic paper in North Carolina since the publication of Senator Vance's letter.

I quote two utterances of the Charlotte Observer, the leading Democratic paper of the State:

There is to be no free coinage of silver under this platform declaration, because it has been amply demonstrated since it was adopted that under a system of free silver coinage parity demanded could not be maintained, the two metals being now, under a system of limited coinage of silver, on the verge of parting company. Neither is the country to be reduced to a monometallic basis, gold being the only recognized money, but the two metals are to be coined and made to circulate together upon terms of equality—or, as the platform has it, "of equal intrinsic and exchangeable value."

We have no words with which to express our regret on account of the attitude taken by Senator Vance in his letter published in yesterday's Observer. We had much hoped that he would see his way clear to take a position with his party in favor of the repeal of the Sherman law, and of such further financial legislation as the national Democratic platform suggests—the coinage of silver upon such basis as will insure its circulation upon a parity with gold.

We can not but think, in view of recent events, that either the free coinage of silver or the Sherman law will defeat the very object the silver men have in view. And again, while nothing could possibly be further from the purpose of this patriotic and illustrious citizen, we can clearly foresee that the general tenor of his letter will greatly embolden the Third party and add immensely to its strength. In view of the certainty of a combination next year between the Republicans and Populists, this is to be particularly deplored, for at best the contest in North Carolina is to be close and doubtful, the disappointments following the accession to power of a party which has been out, rendering the maintenance of its position, in the first election thereafter, always uncertain. It would be idle to deny that Senator Vance's public and deliberate avowal of sympathy with the financial policy of the Farmers' Alliance complicates the situation immeasurably.

What has been the fruit of that publication? To-day there is an ominous silence on the part of the majority of the press of that State. Leading and prominent politicians are silent as a grave without a tombstone when called upon for a direct utterance as to the free and unlimited coinage of silver. They have reefed their sails and put themselves in shape to catch any breeze that may come along, so that after the action of Congress is had they may be able to say, "I told you so."

I believe that in North Carolina the opinion which I express is not confined to any one class of her citizens. Regardless of party, regardless of vocation, there is an honest difference of opinion as to what Congress ought to do upon these pending questions. Numerous boards of trade and chambers of commerce have passed resolutions asking for unconditional repeal of the Sherman silver law. I believe that I voice almost the universal sentiment of the business interests of North Carolina when I say that they call for the repeal of the Sherman silver law.

What weight, Mr. Speaker, should the opinions of men engaged in business interests, whose lives have been devoted to the study of financial and economic questions, what weight, I ask, should their opinions have upon the questions pending now before Congress? I respectfully submit that the honest opinion candidly expressed of such are worth more, when we are seeking an intelligent solution of these questions, than the opinions of persons whose lives have not led them into that line of thought or research.

Something has been said upon this floor to the effect that the message of the President was inspired not by the voice of the toiling masses, the honest yeomanry of the land, as they are sometimes called in political campaigns, but that it had its inspiration from the banking institutions and the capitalists of this country. I believe, Mr. Speaker, that the voice of the toiling and laboring masses of my State call not for the free and unlimited coinage of silver; simply do they ask for an increase in the circulating medium of this country.

We are not wedded to the free coinage of silver. That is but one way suggested to increase the currency. Our demand is for an increase of the currency, and, as a Republican from the State of North Carolina, I voice the sentiment of the Republicans of that State when I say I am not willing that there shall be any increase of the currency that does not increase it with sound and good money [Applause]—money that is equal in debt paying and purchasing power in Maine and in Florida, on the shores of the Atlantic and on the shores of the Pacific. In every part of this country of ours must that money which increases the circulation be equally good and sound—not money which is shaved and discounted when it crosses a State line.

I believe, further, Mr. Speaker, that there is nothing so unwise as to advocate an increase of the currency of this country by the issue of a depreciated and ever-changing form of money. In my humble judgment we are not subserving the interest of the laboring classes when we increase the currency in that manner; for I believe firmly that the cheaper money, the fluctuating money, is always the money that finds the pockets of the poor man.

The laboring man receives pay for his work in the depreciated coin; the farmer sells his products and receives in exchange depre-

ciated coin; the fixed and stable currency of the country, constantly appreciating, is and always will be, by the inflexible laws of trade and commerce, hoarded in banks and under the control of the capitalists of a country that issues various forms of currency that can not be maintained upon a parity.

So far, Mr. Speaker, from believing it to be in the interest of the toiling masses to increase the currency of this country with free silver, I believe no greater curse can befall them than a constantly-changing, ever-fluctuating money for the poor man, a fixed, permanent, constantly-appreciating money for the rich man.

Mr. Speaker, I had not intended to ask the attention of the House in this debate, thinking I would content myself with the opportunity of recording my vote, which would explain my attitude before my constituents. But we are summoned here to a feast by the proclamation of the President; and the majority of this House have prepared a bill of fare without consultation with us or inquiry of us as to what our appetites called for. We are bidden to eat what is put before us.

No opportunity is afforded any member of the minority here to offer a single amendment to the pending propositions. The order of debate, the bill of fare, is all prepared in a committee or conference, the selection of which was without consultation with the minority. Our opinions have not been consulted. Our views are disregarded. We are brought up here and our hands are attempted to be tied; and we are to vote simply upon the propositions which they submit. In debate even, we as the minority are not allowed to control a portion of the time.

I do not agree with those gentlemen who say that a vote for the unconditional repeal of the Sherman silver law now means the establishment of a single standard in this country. I believe that under existing conditions it is wholly impracticable to coin the world's silver at any of the ratios suggested by the gentleman from Missouri without utterly revolutionizing our financial system, and instead of blessing, cursing the agricultural and laboring classes of our people.

Mr. Speaker, I have sat in this hall listening to these debates; loud, long, earnest, and appealing have been the utterances of the advocates of free silver in behalf of the "toiling masses" of this country. They speak as though they were shedding tears of sympathy which would cause the rivers to rise or wash gulleys in the mountain's side. "Great blessings," they say, "shall be laid at your door if you will only be blessed in the way we say; but if you will not, then be damned."

Nothing short of the free coinage of silver will they agree to. Even those who advocate the free coinage of silver admit that the purchase clause of the Sherman silver law should be repealed. But they say, "If you once repeal the purchasing clause of that law the advantage which would thereby be given to the advocates of the President's financial policy is such that they could not be induced or compelled to surrender at a later stage of this game."

That argument, it seems to me, proceeds upon an assumption of great virtue and wisdom on their side and an accusation of turpitude and ignorance on the side of all who differ with them. They have made, according to their argument, a "corner" on patriotism, and all who differ with them have none of that article about them. I believe, Mr. Speaker, that no lasting financial policy can be enacted at this time in one bill. It is a cherry of such dimensions that we must take more than one bite at it. And I do not agree with the idea that if the purchasing clause be repealed no further financial legislation will follow at this session.

One reason assigned for the condition existing in this country at present by the Democrats who have spoken on this subject is what they call want of confidence. I had a vague idea of the meaning of that term before I came to this hall; but thanks to the members of the majority I have an enlarged and expanded idea of its significance now; and it seems to me that they have the disease in a more violent form than any other part of our country. They undertake to restore confidence.

They are the physicians ministering to our wants; they assume the responsibility of taking the initiative, and properly so, as they are in the majority. But how can they expect to restore "confidence" to the sick patient when they fall out among themselves, and each physician accuses the other of prescribing medicine which will not build up and restore the patient, but which will kill him? Yet, the free-silver men claim that it is the object and aim of all who differ with them to establish a single gold standard and bring forth a train of disasters which I have not words to picture. The gold advocates in that party charge the same motive upon the silver advocates. It does seem to me, Mr. Speaker, that the condition in which the majority of this House finds itself to-day is one which they have brought upon themselves with their eyes open.

When the President of the United States received their votes—when they argued in his favor during the campaign—they had before them the letter which he had written just prior to his inauguration in 1884. They went to the polls with their eyes open and cast their ballots; and it does seem that the principle of law which declares that a juror shall not be permitted to impeach his verdict should estop them from the utterances they make on this floor. [Laughter and applause.]

I stand here, Mr. Speaker, certainly not endeavoring to correct any inconsistency on the part of the President, because in this matter, it seems to me, he is consistent and that his critics are inconsistent.

I listened to the gentleman from Colorado, I think it was, as he spoke advancing the ideas of his party, the Populists, when he said that, in comparison, this question of finance towered above the tariff question; that Wall street had its fingers on the throat of this country and was tightening its grasp; that Wall street's power over money and men was without limit, and they were in touch with the Executive of the country in favor of a single gold standard. I could not help thinking, when listening to him, that if all that were true we may reasonably conclude that with the immense power attributed to the street Wall street might at least control the State of New York.

How was it, then, that in the convention at Chicago New York stood solidly opposed to the President throughout all of the ballots? If its interests are so selfish as they claim, if it has no heart that sympathizes with the masses of the people, why should we find the influence of that street steadily opposing the nomination of the President? It simply carries to my mind this fact, that the argument advanced in favor of the free coinage of silver is an argument like the straws at which drowning men are said to catch.

Now, sir, in the limited time allotted to me to express my views on this pending question I can say but little else. I wish it to be distinctly understood that I am in favor of bimetallism. I am not in favor of striking down silver entirely as money in this country, but I stand now, as I stood during the last campaign before my constituents, unalterably opposed to the free coinage of the world's silver in the absence of an international agreement fixing the parity between the two metals. [Applause.]

I stand now, as I said then, unalterably opposed to the inflation of the currency of this country with a fluctuating and changeable money, believing that in that position I am on the side of the business interests of the country, and also on the side of the toiling, laboring masses of our country. Because, Mr. Speaker, the laboring masses above all others need a fixed, permanent, and stable currency.

I know not how my friends on this side of the Chamber are going to vote on this question, but for myself, favoring an increase of the currency with good money, I shall record my vote in opposition to all the scheduled variety offered to us by the gentleman from Missouri and in favor of the only digestible part of the bill of fare that has been presented—that offered by the gentleman from West Virginia [Mr. WILSON]. [Applause.]

Mr. ALLEN. If the gentleman has time I would like to know what is his scheme to increase the currency?

Mr. BOUTELLE. The gentleman from North Carolina can hardly go outside of the present schedule that has been offered here by that side.

Mr. SETTLE. I do not recognize the responsibility of suggesting the road that leads out of this wilderness as resting with the minority on this floor. [Applause.] But I say that had you not tied our hands and cut us off from offering an amendment I have no doubt that many amendments would have been presented by members on this side of the Chamber looking to an increased currency with good and sound money. [Applause.]

One remedy that might be suggested, and the proposition I would like an opportunity to vote upon, would be the free coinage of the American product, protected by a tariff on any foreign silver that might be brought in. [Applause.] Another amendment I would like to vote on would be the plan suggested by the gentleman from Ohio [Mr. JOHNSON] of private holders of Government bonds in the United States hypothecating them with the Treasury and receiving Treasury notes to the full value of the bond, said bond to draw no interest while so deposited, with power at any time subsequently to redeem the bonds. [Renewed applause.]

That far I would go, I will say in answer to the gentleman from Mississippi, not recognizing the responsibility as resting upon this side, under the circumstances, for proposing any plan in this emergency. [Applause.]

Production of gold and silver in the world, 1792–1892.

Calendar years.	Gold.	Silver (coining value).	Total.
1792–1800	$106,407,000	$328,860,000	$435,267,000
1801–1810	118,152,000	371,677,000	489,829,000
1811–1820	76,063,000	224,786,000	300,849,000
1821–1830	94,479,000	191,444,000	285,923,000
1831–1840	134,841,000	274,930,000	409,771,000
1841–1848	291,144,000	259,520,000	550,664,000
1849	27,100,000	39,000,000	66,100,000
1850	44,450,000	39,000,000	83,450,000
1851	67,600,000	40,000,000	107,600,000
1852	132,750,000	40,600,000	173,350,000
1853	155,450,000	40,600,000	196,050,000
1854	127,450,000	40,600,000	168,050,000
1855	135,075,000	40,600,000	175,675,000
1856	147,600,000	40,650,000	188,250,000
1857	133,275,000	40,650,000	173,925,000
1858	124,650,000	40,650,000	165,300,000

Production of gold and silver in the world, 1792–1892—Continued.

Calendar years.	Gold.	Silver (coining value.)	Total.
1859	$124,850,000	$40,750,000	$165,600,000
1860	119,250,000	40,800,000	160,050,000
1861	113,800,000	44,700,000	158,500,000

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. MAHON of Pennsylvania, for two days, on account of important business.

The SPEAKER. The gentleman from Tennessee [Mr. RICHARDSON] will preside at the session of the House this evening.

The hour of 5 o'clock then having arrived, the House was declared in recess until 8 o'clock.

EVENING SESSION.

The recess having expired, the House, at 8 o'clock p. m., resumed its session (Mr. RICHARDSON of Tennessee in the chair as Speaker *pro tempore*).

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. MCLAURIN. Mr. Speaker, being a new member, I had intended to leave the discussion of the silver question to more experienced heads. I can not hope to add much that is new, in figures or statistics, to a question which has been so exhaustively discussed, nor do I propose to weary the House by the attempt. The gravity of the situation demands that every section should be heard from, and I think that, in what I shall say, I voice the sentiments not only of those I have the honor to directly represent, but that I voice the sentiments of the great masses of the Southern people.

The President tells us that we are in the midst of a panic. That—

Our unfortunate financial plight is not due to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

This depicts a strange condition of affairs to produce a panic. Whose panic is it? Can it be, Mr. Speaker, that we have advanced to that high state of civilization where we not only produce artificial rain and make artificial eggs, but when a few financial wizards can precipitate an artificial panic. This is not the people's panic; they disown it; it is preeminently the rich man's panic.

MR. GOULD EXPLAINS THE PANIC.

Mr. George Gould, the other day, upon his return from a trip to Europe, gave the New York World some information upon the subject of the panic. Mr. Gould said:

To sum up briefly, I should very much dislike to be compelled to raise $10,000,000.

Well, so should I, gentlemen.

I doubt very much if I could do it by Monday or Tuesday.

I am sure I could not.

Mr. BRYAN. He has got down to a common level.

Mr. MCLAURIN. Yes; has got where the balance of us have been all the time.

The situation—

Said Mr. Gould—

is extremely bad. There will not be any improvement either until the Sherman law is repealed or so modified as to restore confidence; and the financiers of the country completely lack confidence just now, and it is natural, too, that they should. You do not want silver. I do not want silver. Gold is the only honest and equitable currency for the people, and gold we want.

It is not the people who want gold. I deny that. It is not the people who lack confidence. I know men just as patriotic as he, and who add infinitely more to our material wealth than Mr. Gould, who yet have confidence in their country and her institutions.

There have been some of the most remarkable arguments adduced upon the floor of this House in favor of a gold standard that I ever heard. But the gentleman from Florida [Mr. COOPER] capped the climax, the other day, when he said that we must destroy the gold which enabled these men from the East to go down to Florida, for in Florida they depended for their support upon a winter's crop of Yankees. [Laughter.]

In other words, Mr. Speaker, if you want to pluck the goose, you must feed him. Our staple crops in South Carolina are cotton and corn. We have no Yankee goose feathers for our winter supply; but from my experience, brief though it was, with the Florida hotels, they need not only a goose with plenty of feathers, but one that lays a golden egg, and the gentleman from Florida [Mr. COOPER] was right. [Laughter.]

Mr. Speaker, I charge that even under this so-called makeshift silver has not had a fair chance. I say that silver has been stabbed with a Brutus dagger in the house of those who, if platforms amount to anything, ought to be its friends.

A BRUTUS DAGGER FOR SILVER.

The President says that under the operations of the Sherman act between May 1, 1892, and July 15, 1893, $54,000,000 of Treasury notes were put out, and $49,000,000 of them were redeemed in gold. Is it any wonder that the gold reserve is depleted? The law provides for the purchase of 4,500,000 ounces of silver bullion each month, and for an issue of legal-tender Treasury notes against the same. These notes are redeemable in coin, and certainly coin is either gold or silver; yet silver was kept locked up in the vaults while the notes were redeemed in gold. And this in the face of the provision of law that "no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom then held in the Treasury purchased by such notes."

PANACEA OFFERED.

The gentleman from Ohio [Mr. HARTER] says:

That we ought to extend to the national banks this privilege of issuing circulating notes up to 100 per cent of their bonds deposited as security for their notes.

* * * * * * *

The next thing to be done is this: I believe that, as prudent business men, we ought to authorize the Secretary of the Treasury of the United States, with the concurrence of the President, at any time, in any amount, and at any price, to sell "3-30" year 3 per cent bonds of the United States for two purposes: First, to maintain the parity of all the paper and coined money of the United States, and, second, to meet the debts of the United States as rapidly as they mature. This measure would forever maintain the credit of the United States, and yet I doubt whether, under its provisions, there would be in the next twenty years $200 of United States bonds offered for sale by any Secretary.

It is not hard to discover why this lack of confidence on the part of these financiers. An issue of gold bonds payable in gold is the panacea offered; or else they propose to authorize the national banks to increase their circulation to the full value of their bonds. In either case the remedy is at the expense of the producer, and there will be no increase in our currency except as these national bankers see fit. No money outside of national-bank notes and gold. In other words, as one of the speakers so forcibly said, "put the gold of the world upon the auction block and sell it to the highest bidder." Throw away as worthless for money our own silver that we may build up a system of credit money based upon gold and entirely within the control of the holders of gold.

The farmers and laborers of this country have done their duty. The President says, "Crops were never more plenteous," and yet financial statesmanship of the party proposes to borrow gold from abroad to keep the governmental machinery in motion.

BONDS PAYABLE IN GOLD.

In less than fourteen years about five hundred and fifty million of our bonds became due. Our bonded debt was contracted upon a currency basis, many of them costing the original holders from 40 to 70 cents on the dollar in gold. In the Fortieth Congress Senator SHERMAN said:

Every State, without exception, has made its contracts upon a currency basis since the legal-tender clause.

And again:

If the bondholder refuse to take the same kind of money with which he bought the bond, he is an extortioner and repudiator. No bond or other Government obligation was made payable in gold. The interest upon the bond was payable in coin, the principal of the original bond in "lawful money," and of the refunding bonds in coin.

Can it be that the astute holders of these securities, looking fourteen years ahead, through the demonetization of silver, propose to become the "extortioners and repudiators" spoken of by Senator SHERMAN. There are two kinds of repudiation—one by the debtor, the other by the creditor. When gold becomes the only legal-tender coin, and its representative the only lawful money, then all public and private debts become payable in gold.

POOR WORKINGMAN.

It is refreshing to note how wonderfully tender these advocates of monometallism are of the poor "workingman" who has to buy in this "depreciated coin." As long as it buys $1 worth of meat and flour, why is it not just as good as any other dollar? If they are sincere, and think it is such an injustice to the workingman, why does one of the gentlemen propose that silver shall be legal tender for all sums under $10? In other words, this "poor workingman" they shed such tears over shall receive his Saturday night's wages in this despised silver, but the interest and principal of their bond shall be wrung from the sweat of the same workingman in gold. [Applause.]

I have been amazed to hear gentlemen attempt to justify the demonetization of silver in 1873 and eulogize those who were responsible for it. Truly, it is a pretty sight: a sight to make devils laugh. The lion and the lamb lie down together; their swords are beaten into golden pruning hooks. The senior Senator from Ohio [Mr. SHERMAN], the archetype of Republicanism, spokesman of a Democratic Administration in the other end, the gentleman from Ohio [Mr. HARTER], the high priest of tariff reform, excusing Republican infamy in this end! The story of how this was accomplished has been told too frequently upon the floor of this House for me to now rehash it. I will simply say that the masses of the people believe that it was done by fraud, and that President Grant did not know when he approved the bill that it struck down at a blow one-half of the money of the country; that at a stroke of the pen he doubled the debts of the people, with a corresponding increase in the wealth of the creditor class.

DEMONETIZATION IN 1873.

Last summer there went the rounds of the press the affidavit of one Fred. A. Luckenbach, setting forth the part Ernest Seyd played in the drama of demonetization; which I give as follows:

STATE OF COLORADO, *County of Arapahoe, ss:*

Frederick A. Luckenbach, being first duly sworn, on oath deposes and says: I am 62 years of age. I was born in Bucks County, Pa. I removed to the city of Philadelphia in the year 1846, and continued to reside there until 1865, when I removed to the city of New York. In Philadelphia I was in the furniture business. In New York I branched into machinery and inventions, and am the patentee of Luckenbach's pneumatic pulverizer, which machines are now in use generally in the Eastern part of the United States and in Europe. I now reside in Denver, having removed from New York two years ago. I am well known in New York. I have been a member of the Produce Exchange and am well acquainted with many members of that body. I am well known by Mr. Erastus Wyman.

In the year 1865 I visited London, England, for the purpose of placing there Pennsylvania oil properties in which I was interested. I took with me letters of introduction to many gentlemen in London—among them one to Mr. Ernest Seyd, from Robert M. Foust, ex-treasurer of Philadelphia. I became well acquainted with Mr. Seyd, and with his brother, Richard Seyd, who, I understand, is yet living. I visited London thereafter every year, and at each visit renewed my acquaintance with Mr. Seyd, and upon each occasion became his guest one or more times—joining his family at dinner or other meals.

In February, 1874, while on one of these visits, and while his guest for dinner, I, among other things, alluded to rumors afloat of parliamentary corruption, and expressed astonishment that such corruption should exist. In reply to this he told me he could relate facts about the corruption of the American Congress that would place it far ahead of the English Parliament in that line. So far, the conversation was at the dinner table between us. His brother, Richard, and others were there also, but this was table talk between Mr. Ernest Seyd and myself. After the dinner ended he invited me to another room, where he resumed the conversation about legislative corruption. He said: "If you will pledge me your honor as a gentleman not to divulge what I am about to tell you while I live, I will convince you that what I said about the corruption of the American Congress is true." I gave him the promise, and he then continued: "I went to America in the winter of 1872–'73, authorized to secure, if I could, the passage of a bill demonetizing silver. It was to the interest of those I represented—the governors of the Bank of England—to have it done.

"I took with me £100,000 sterling, with instructions if that was not sufficient to accomplish the objects to draw for another £100,000, or as much more as was necessary." He told me German bankers were also interested in having it accomplished. He said he was the financial adviser of the bank. He said: "I saw the committee of the House and Senate and paid the money, and staid in America until I knew the measure was safe." I asked if he would give me the names of the members to whom he paid the money, but this he declined to do. He said: "Your people will not now comprehend the far-reaching extent of that measure, but they will in after years. Whatever you may think of corruption in the English Parliament, I assure you I would not have dared to make such an attempt here as I did in your country." I expressed my shame to him for my countrymen in our legislative bodies. The conversation drifted into other subjects, and after that—though I met him many times—the matter was never again referred to.

(Signed), FREDERICK A. LUCKENBACK.

Subscribed and sworn to before me at Denver, this 9th day of May, A. D. 1892.

(Signed) JAMES A. MILLER,
Clerk Supreme Court

But this is foreign to the merits of the question, and is only alluded to in order to show what the people think.

HONEST DOLLAR.

The advocates of the gold standard are fond of the virtuous, the "honest dollar." We, too, believe in an "honest dollar." The "honest dollar" is the silver dollar, the only metal through all these twenty years which has retained relatively the same proportion to the commodities which it would buy, through the manipulations of a dishonest gold dollar, which is always rising in value while the prices of the products of this country have steadily fallen and the debts steadily increased.

The dollar is nothing but the representative of so much cotton or so much wheat, and the dollar of debt which was contracted when one bushel of wheat equaled a dollar is a dishonest dollar when it takes two bushels to pay the debt. [Loud applause.]

The House has been wearied with statistics, and I will give none, but content myself by appending to my remarks tables demonstrating the truth of these statements:

TABLE 1.—*Showing relative values in years named.*

Year.	Silver, per ounce.	Wheat, per bushel.	Cotton, per pound.
1873	$1.29	$1.17	$0.20⅛
1876	1.14	1.05	.12
1879	1.11½	.83	.10⅛
1890	1.09	.92	.11½
1891	1.01	1.01	.07½
1892	.83	.73	.07½
1893	.75	.63	.07½

January 1, 1873.—Cotton in New York was 20⅛ cents per pound; $1 in gold bought 4.93 pounds.

August 16, 1893.—Cotton was worth 7½ cents per pound; $1 in gold would buy 13⅓ pounds.

Our people remember the flush days when cotton was high and they had plenty of money. They have pondered over these figures, showing that wheat and cotton have gone down with silver, and have connected the two in their minds. They have seen that in 1873, wheat, cotton, and silver steadily fell together, while gold staid at the high-water mark. They remember that in 1873, when silver was $1.29 an ounce, wheat was $1.17 a bushel, and cotton, the king, was 20 cents a pound. They have connected these things in their minds, and have seen it take 4 pounds of their cotton to buy a dollar in 1873 under the double standard, and they see now that it takes 15 pounds of the same cotton to buy the same thing.

The statistical abstract for 1892 fails to give the figures upon cotton for the years mentioned, but the figures on corn will illustrate the point; and surely a man from South Carolina and Marlboro County may even speak of corn in the presence of the Representatives of the great corn countries of the West, when in my county Mr. J. Drake had the honor of making the largest yield of corn that was ever made in the world and was awarded the prize of $1,000 for raising 255 bushels on a single acre.

In 1873 South Carolina had in corn 973,158 acres, and raised thereon 9,245,000 bushels, the value thereof being $8,690,300.

In 1892 South Carolina had in corn 1,591,677 acres and raised thereon 16,713,000 bushels, the value thereof being $9,526,000. Thus we have as between 1873 and 1892 an increase of over 63 per cent, an increase in bushels of over 80 per cent, with an increase in value of less than 10 per cent.

Mr. Speaker, no people ever bore with greater fortitude their burden than the Southern people since the war. They recognized that as a conquered people, like the children of Israel, to "make bricks without straw" was a part of their fate. We can stand it no longer. By the eternal justice of an omnipotent God, we will stand it no longer. [Loud applause.]

IT IS ENGLAND'S SCHEME.

When silver is worth 80 cents per ounce, it takes 600 grains of it to buy 23.32 grains of pure gold, the amount in an American dollar, or 25.84 grains of silver to one of gold. Now, suppose the United States under present pressure establishes a ratio of 25 to 1, then she fixes the value of silver at 80 cents per ounce. England can buy it at that price, send it to her mints, and coin it into rupees at $1.46¼ per ounce, and use the rupee to pay for wheat, cotton, rice, and jute, thereby fixing the price of these products. I affirm, and will demonstrate mathematically, that with free coinage, and the United States keeping silverat $1.29 per ounce, our cotton would to-day be at 15 cents per pound.

A GRAND EXPOSÉ.

A pound of cotton or a bushel of wheat of the same quality is of equal value to the English whether they lay it down from India or America. Suppose a Manchester cotton spinner wants some cotton for his mill and wheat for flour on which to feed his operatives. He writes to his London broker to buy him, say, 10,000 ounces of silver and to ship it to his broker at Bombay. At 85 cents per ounce it costs him $8,500 in gold. He writes his broker in Bombay on the arrival of the silver bullion to take it to the mint and have it coined into rupees and invest the product in cotton and ship it to him.

His Bombay broker, on the arrival of the silver, obeys instructions, and, after paying 2 per cent seigniorage for having it coined, received in rupees $14,374 worth, which he invests in cotton and ships to Manchester. On its arrival, counting first cost of silver, freights, brokerage, insurance, etc., say it costs 10 cents per pound in gold to lay it down. An American offers him cotton, and, if he buys it from him, he will have to pay for it in gold; so he says:

"I am laying my cotton down from India at a cost of 10 cents per pound in gold, and, other things being equal, I would prefer to patronize our own colonies."

Therefore, if an American sells, he must offer the same quality at a lower price, or a better quality at the same price. And the price at which the Englishman can lay his cotton down from India is what enables him to fix the price on our cotton.

FREE COINAGE WOULD STOP IT.

We will assume for the present that if we had free coinage of silver that an ounce of it would be worth $1.2929, and if it was, then 10,000 ounces of it would cost $1.2929 in gold, and when sent to Bombay and coined into rupees and seigniorage was paid, would only give $14,374 worth in rupees, the same as when the first cost was $8,500, and there being no more rupees it would pay for no more pounds of cotton or bushels of wheat; the freight, insurance, seigniorage, and brokerage being the same in both cases, the difference in the cost of the same amount of cotton would be the difference in the first cost of the silver; $8,500, at 10 cents per pound, would buy 85,000 pounds of cotton, but 85,000 pounds of cotton, the cost of the silver to pay for which was $12,929 would make it cost, laid down in gold, 15⅛ cents per pound, and if wheat can be laid down from India at $1 per bushel, when silver costs 85 cents per ounce, when it would cost $1.2929 per ounce wheat laid down from India would cost $1.52 per bushel, and if it costs 15⅛ cents a pound, and $1.52 per bushel to lay cotton and wheat down from India, then American cotton and wheat would certainly be worth 15 cents per pound and $1.50 per bushel.

* * * * * * *

ASTONISHING STATEMENTS.

A pound of cotton yarn of the same quality is of equal value to the inhabitant of China or Japan, whether spun in India or England, and as the same money that would pay for 100 pounds of cotton yarn in England would buy and pay for 136 pounds of yarn of the same quality in India, the Chinese and Japanese merchants, being sensible men, bought their goods where their money would go farthest to pay for them. (Will some patriotic Democrat bar the doors of the White House to the office-seeker until President Cleveland can get this idea into his mind? The perpetuation of the party in power and the commercial supremacy of the nation depends upon it.)

The result is that India in 1892 had in operation 88 cotton mills, running 2,380,000 spindles, and built 8 more cotton mills during that year, so that there are now 96 cotton mills in operation in India, as against 18 when silver began to decline. These mills are all spinning Indian cotton with Indian labor, fed upon Indian products, and the markets they supply take the place of that much of the products of the English mills. The result is that while 8 new cotton factories are being pushed to completion in India, the English cotton mills were closed in a lockout for six months, and were it not for the cheap cotton and wheat that low silver enables them, at our expense, to supply themselves, their condition would be much worse.

What is the imperial Anglo-Saxon blood to do? Commerce, when free, does not examine the color of the skin of those who best serve her wants. Great Britain in 1890, after supplying her own 40,000,000 of home people with cotton goods, sold to the rest of the world $352,529,975 worth of cotton products. Is she going to sit still and see these yellow sons of Shem rob her of this her greatest industry, that has taken her more than three hundred years to develop? Great Britain, who, when she first began the manufacture of cotton goods, passed a law that prohibited all of her citizens from wearing any cotton goods not manufactured in their own country, and as soon as she captured India levied a tax on all cotton looms there, which taxed them out of existence and gave the trade to her own people, and never removed the tax until the discovery of the use of steam and Arkwright's invention enabled them to manufacture better and cheaper goods than any country in the world?

Oh, no; it is not to the tunes of retreat that the British banner has been placed where it is first to kiss the rising sun on every meridian of the earth's face. Something must be done to retain this supremacy. The English money lenders, while controlling the government, and successfully plotting in their own interests, are bankrupting her farming and cotton manufacturing industries, and "a house divided against itself can not stand." How can all her industries be made to strike the chord of prosperity in unison is the question. And let us see how the ingenious English mind approaches the subject:

Parliament appoints a commission, of which Lord Herschell was chairman, to investigate and report. This commission has been gathering information and studying the subject for more than eight months, and has recently reported, recommending:

First. That the mints of India be closed to the coinage of silver for individual account.

Second. That the Government buy silver bullion and coin it into rupees at the mints of India, and sell the rupees at 32 a piece in gold.

Third. That a tariff be levied on the importation of all silver into India not introduced by the Government.

A TERRIBLE RAID.

Now each of these measures has a special service to perform. First, the stoppage of the free coinage for individuals is to depress the value of silver bullion and give the Government the control of the supply of rupees. At 31 pence an ounce for bullion, the price quoted yesterday, the silver in the rupee would cost the Government 20 cents, and if sold at 32 cents would give the Government 12 cents profit on each rupee, or about 38 cents profit on each ounce she coined into rupees. Sixty per cent profit should certainly be satisfactory to the Government. Having made this sum herself, she hands the rupees over to her customers with a stamp on them authorizing said customers to pay their debts due her Indian subjects with these rupees at a valuation of a fraction more than 47 cents per rupee. The aggregate ravages upon India of the three invasions of Alexander, Pompey, and Lucullus did not cost India one-half the treasure that this measure will, if submitted to without a revolution.

A tariff on the imports of silver shipped by individuals to India will force Chinese and Japanese merchants to quit the India mills and buy their cotton goods and yarns in England. This will bankrupt every cotton factory in India, and build up the British factories. It will force India to export all of her cotton, and every bale that is so exported takes the place of an

American bale. Unless America comes to the rescue, it makes England mistress of the commercial world for the next century. She is accustomed to large transactions and unscrupulous where her financial interests are concerned, as shown by her legislation in reference to factories in the American colonies, Ireland, and India. Were we disinterested spectators, we might catch our breath at the enormity of the scheme and plod on, but when all of our giant industries are bowing their towering heads, and being stripped of their green leaves and vigorous shoots, we cannot fold our hands and idly float with the current.

These figures are studied at every humble fireside in the South and every eye is turned upon this Congress, and gentlemen who advocated free silver and so suddenly changed front will have to answer how these figures lie. They are not sending petitions like the boards of trade, but are doing some quiet watching and thinking on their own account. We understand that the difference between the price of cotton in 1873 and 1893 represents the difference in a large degree between bimetallism and monometallism. That in the last cotton crop it represented the difference between five hundred and twenty and two hundred millions of dollars. Yes, gentlemen, our people understand that destroying one-half of our money doubles the purchasing power of the other half always at the expense of the producer.

VOLUME OF CURRENCY.

Now, Mr. Speaker, as to the volume of currency, a word: The gentleman from Ohio [Mr. HARTER] said that "the volume of currency was of no consequence when you kept the standard of currency sound;" and cited the nations with a small per capita circulation as examples of greatest prosperity. The gentleman told us all about Lycurgus [laughter] and seems profoundly versed in classic history, but I will read a page to him. From the report of the monetary commission, on pages 49 and 50, it says, in regard to contraction:

CAUSE OF THE DOWNFALL OF THE ROMAN EMPIRE.

"At the Christian Era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

"History records no such disastrous transition as that from the Roman Empire in the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with a shrinkage in the volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods, unaccompanied and unfollowed by any such mighty disasters.

"It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes, through which the scanty stock of the precious metals was increased in efficiency.

"But not less than the energizing influence of Potosi and all the argosies of treasure from the New World were needed to arouse the Old World from its comatose sleep, to quicken the torpid limbs of industry, and to plume the leaden wings of commerce. It needed the heroic treatment of rising prices to enable society to reunite its shattered links, to shake off the shackles of feudalism, to relight and uplift the almost extinguished torch of civilization.

"That the disasters of the Dark Ages were caused by decreasing money and falling prices, and that the recovery therefrom and the comparative prosperity which followed the discovery of America were due to an increasing supply of the precious metals and rising prices, will not seem surprising or unreasonable when the noble functions of money are considered.

"Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish, and, unless relieved, finally perish."

Our people are centuries ahead of the gentleman in his financial theories, for they understand that a contracted volume of currency means a few very rich men and a nation of paupers. [Applause.] Well does the historian say:

The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation.

It is easy to see that after a man has made his fortune the less other people have the more highly prized and valuable are his accumulations. One can well imagine in those days preceding the Dark Ages some learned and wealthy Roman senator entertaining his colleagues with the same argument. Human nature is ever the same, and "when self the trembling" balance holds interest, conscience, and judgment run near together. [Applause.]

DANGER TO THE DEMOCRATIC PARTY

For the first time since the war, the Democratic party is in full possession of every department of the Government. The people recognize the fact that we are not responsible for thirty of Republican misgovernments, and are willing to give the Democracy a fair trial.

But, Mr. Speaker, they will stand no deception upon the silver question. The recent revolt against the Republican party, as the party in power, will be a gentle zephyr to the cyclone which will occur in 1896 if we are unfaithful to the pledges contained in the platform upon which we were elected, and you might just as well attempt to twist a Western cyclone round the wrong way as to stem the tide.

That plank of the platform was as follows:

SILVER PLANK.

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

In South Carolina we accepted in good faith this plank, pledging the party to maintain the parity of metals. Had Mr. Cleveland then announced that "silver and gold must part company," the solid South would have been a thing of the past, and he would never have been elected President of these United States, and you know it. [Applause.]

THE PRESIDENT SURRENDERS TO WALL STREET.

Mr. Speaker, some of the press are doing, I fear, the President a great injustice. I read:

[Special Dispatch to the Traveler.]

WASHINGTON, D. C., *August 14.*—President Cleveland has determined to apply his most heroic influence to bring about the speedy adoption of the silver repeal bill.

He has issued instructions to all of his cabinet officers that there shall be no more appointments made upon the recommendation of men in Congress about whose vote upon the silver problem there is any doubt.

He has gone even further, and has directed that there shall be extended no official courtesy whatever to any one in Congress until it is known how his vote is to be cast upon the silver question.

Two Senators from the far West called upon Secretary Hoke Smith the other day, and asked to have enforced certain laws adopted by the last Congress relating to Indian reservations, and they were surprised to be informed by the Secretary of the Interior that the Department would take no action upon the request of men in Congress until after the Sherman law was repealed.

The Senator attempted to explain to Secretary Smith that there was not the slightest partisanship or personal favor to them in the request made, but the Secretary of the Interior replied that he was carrying out instructions, and there would be nothing done except the routine of the Department until after the silver question was disposed of.

Mr. Speaker, if heroic treatment is to be applied, let it be met by heroes. Let us teach Mr. Cleveland that we and not he are the representatives of the people. [Loud applause.]

THE PROBABLE RESULT.

Mr. Speaker, if the great influence and power of the Executive is to be used to strike down one-half of the metal money of the country, it is too dear a price to pay for a party triumph, and can only be regarded in the light of a national calamity.

In 1878 John G. Carlisle, now Secretary of the Treasury, said:

The movement to totally demonetize silver is a stupendous conspiracy conceived by the moneyed interests of all countries to increase the value of one-half of the world's metallic money by destroying the other half. The successful consummation of that conspiracy would be more disastrous to the people of this world than war, pestilence, and famine.

That eloquent tongue is silenced by a Cabinet office.

Representatives like the gentleman from Tennessee [Mr. PATTERSON] have suddenly found out that "consistency is the hobgoblin of the fool," and gone to the other side. We are gravely told that the silver plank means nothing—"catch-words and glittering generalities."

"Platforms are a good thing to get in on," and I would remind the gentlemen that the late Republican party found platforms a good thing to get out on. Let us be brave; let us be honest. The message of the President is a bitter disappointment—a complete surrender to Wall street. The issue is plainly and sharply drawn. It is well that it is so.

Necessity will force the West and South to unite, and then the domination of the East in national affairs is gone forever. The people can not be again deceived with "catch-words and glittering generalities." The gentleman from Tennessee [Mr. PATTERSON] reminds us how much we owe to New York for help in reconstruction times. We are profoundly grateful to our brethren of the East for the help rendered in freeing us from negro domination and carpet-baggism, but we can not show our gratitude by becoming industrial serfs, to manufacture more Goulds and Vanderbilts.

For thirty years we have tackled our car to Eastern Democracy; but this straw will break the camel's back, and you will force us to the great West, whose soul is fashioned in the likeness of her boundless prairies and mighty mountains—not confined within the narrow rim of a gold dollar.

It was the great common people in 1776, with "confidence" in their country, who secured our independence from Great Britain.

The same people to-day are ashamed and humiliated at the admission of the right and power of England to force upon us a financial policy which enriches foreign security holders at the expense of our own people. The next thing in order is for some one to propose that these United States be annexed to the Dominion of Canada. We are in exactly the same condition we were in 1876, except that now we seek to eliminate the tyranny of King Gold, instead of King George. Fifteen-sixteenths of our railroad lines are owned by British capitalists, and we have even more cause for discontent than we had then. Millions are drained from us annually in interest and rents, and what England failed to do with her sword she accomplishes with her money. Are we to be forever a tributary province, a puny, sickly baby, with spasms every time mother England has hysterics? Let us rather clip the umbilical cord with a pair of silver shears, and assume the proportions of full manhood. One thing more, and I am done. I will not repeat the words of Mr. Ingalls concerning silver, so frequently quoted upon the floor of this House.

Ex-Senator Ingalls, in a speech in the Senate February 15, 1878, said:

No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty it does not break. It has no friend it does not sooner or later betray. Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of the greatest peril it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured gold reappears and claims the fruits of victory.

In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the enemy. It was the most invincible enemy of the public credit. Gold paid no soldier or sailor. It refused the national obligations. It was worth most when our fortunes were the lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction. But as usual, when danger had been averted and the victory secured, gold swaggers to the front and asserts the supremacy.

The present situation is no exception. Gold has hidden its head in time of trouble and silver is at a premium instead of gold, as they predicted. I read an extract from the New York World, which certainly can not be accused of being friendly to silver. The occurrences were so exceptional that it may be well to recall some of them by way of illustration.

It is not so long ago that apprehension was felt that the continued purchases of silver by the Government would send gold to a premium. A hoarding of the yellow metal resulted in consequence. Last week, however, gold was actually worth less than the Government promises to pay, or paper money, and even the discredited silver dollars commanded a larger premium.

There was also witnessed during the week the anomaly of unprecedentedly heavy imports of gold with the rates of sterling exchange practically on the same basis as when Europe took millions from this country. Bankers were enabled to import at the high rates simply because of the premiums commanded by currency for local purposes. In a comparatively short time between $20,000,000 and $25,000,000 gold have been contracted for, no less than $13,000,000 having arrived during the week just closed. Far and beyond everything else was the premium on silver dollars, which served to bring out clearly the seriousness of the currency famine. It was not a pleasant thing to contemplate.

Mr. Speaker, I favor the free coinage of silver at a ratio of 16 to 1. I am opposed to increasing the ratio, first, because we can maintain the parity at 16 to 1 as easily as at a larger ratio. I despise compromise. Brazen, impudent wrong and timid virtue are the parents of compromise. Second, because it would result in a shrinkage of probably $200,000,000 in the coin now in circulation, which would all have to be recoined. Third, because just to the extent that the size of the dollar was increased there would be a contraction in the money metals of the world, and a corresponding increase in the debts. In other words, every man now owing a debt would be forced to pay in a dishonest dollar, one that had appreciated in value, since the debt was contracted, in proportion to the increase in ratio.

DUMPING GROUND.

Unfortunately, we would not be the dumping ground for silver. India coins at $1.37½, France at $1.33½, and the United States at $1.29 per ounce. Therefore, it would cost from 4 to 8 cents per ounce to ship silver here, besides depleting the circulation of the countries from which it came.

But suppose that silver did come here. Would not our competitors, India and Egypt, be driven out of the wheat and cotton markets of the world? Every buyer would come here to buy with silver, and how long could these countries stand a contracted currency, with the markets of the world closed to their products? Would not the price of every American product be enhanced even in this debased coin, which is now selling at a premium in New York? Would not the clamor from their colonies force England and Germany to us, hat in hand, and we then realize that "iridescent dream" of international bimetallism, with which the gentleman from Nebraska [Mr. BRYAN] taunted the advocates of monometallism.

Mr. Speaker, I am glad the time for debate has nearly closed. The country has its eyes turned anxiously upon Congress, and it wants us to do something or else adjourn and go home. What we do we should do promptly, and let the country know what to expect. There can be but one thing worse than inaction, and that is the unconditional repeal of the Sherman act. I for one am prepared to stay here the balance of my term before I vote for unconditional repeal.

Mr. Speaker, these times are not without their compensating advantages. Discontent and agitation are the parent of progress. The very air we breathe bears upon its bosom the restless discontent of the masses.

Our beautiful capital city has its wide avenues, its grand marble palaces.

Back down the dim corridors of the past lie the ruins of other great cities, the wrecks of mighty nations, perishing upon the shores of time because of the destruction of the homes of the people. The homes of our people are now at stake. Oh, ye money kings and wise financiers, I appeal to you, heed the warning. Belshazzar—feasted and intoxicated with the subtle essence of power, the golden goblets from the temple of the Lord were polluted with the lips of the harlot. Belshazzar is a type. When the beautiful night came down over Babylon, and he delighted himself with music and feasting, there were strange lights on the horizon line, but none noted them save the gloomy seers, and these called them the watch fires of the army of the great Cyrus. There are strange lights now upon the horizon line. The deep mutterings of a mighty storm, the fierce discontent of a hungry people, come to us like a cry for help from out of the night. Oh, my friends, will you heed the warning, will you listen to the voice of the people, or will you wait until a Daniel strides into the judgment hall, and reads the doom of a great nation and a mighty people? My friends let us rise above section, above party. In this hour of a nation's supreme need let us forget self and the fleeting present. Let us build wisely, so that generations yet unborn will rise up and call us blessed. [Loud applause.]

Mr. MCDANNOLD. Mr. Speaker, there is but a single excuse needed for my intrusion into this debate. For many days I have listened in this House to speeches for and against certain governmental policies, and have yet to hear a single member of the dominant party take that stand upon the burning question which has caused this midsummer gathering which I believe is due both to the people from whom we receive our warrant and to that brave and courageous Executive from whom issued our call. It may be that we of the Western prairies have lacked something of the education which prevails in circles more dominated by foreign culture.

It may be that the eminent statesman and orator from Maryland has gained through contact with older civilizations that insight into governmental policy denied to men who draw their inspiration from cornfields and prairies of grain. But, sir, I should do injustice to my own convictions and to the earnest beliefs of my constituents did I fail to make stern condemnation of the sentiments by which one wearing the garb of my party seeks to discredit the organization, and I make this at the opening of my remarks that it may be taken as my text.

The gentleman says:

In conclusion, sir, I wish to state that as far as I am concerned at this critical era in the history of our country, I am not in the slightest degree disturbed or intimidated by the glittering catchwords of political conventions. I am guided by a purer and higher faith. No matter what construction may be placed on our platform, I believe in forever striking from the tenets of our political creed the superstitious folly that a nation grows rich in proportion to the amount of worthless money it can coin. In place of this idolatry, I would plant high upon our altars, so that all mankind could read it, the inscription that we would as soon fail and perish as dishonor any of the obligations upon which have been imprinted or emblazoned the emblem of the Republic.

Now, sir, I presume that such assertions may please the ear and tickle the fancy of liberal paymasters of older lands. It may serve to excite laughter and derision of American institutions in circles where the divine right of kings is recognized. But I say for the benefit of the gentleman who uttered these words, and for the benefit of certain editors who have echoed them, that they do not represent the opinions of that vast aggregation of triumphant Democrats who reversed political conditions in this country last November. These sentiments smack of that spirit which tempted the Democracy in national convention to worship the discredited fetish of protection.

Let my answer stand for that better wisdom which yielded to the popular demand for reform and gave no recognition to the infamous policy of robbing the masses for the benefit of the classes. And as last fall the victory of right in convention was followed by a logical success in the national contest, so to-day there should be better possibility of Democratic service to the people by calling to the attention of their Representatives certain facts which can not be gainsaid.

I am of those who believe absolutely and unreservedly in the capacity of this people for self-government. I am of those

who rejoice in the fact that cliques have twice met with signal rebuke when seeking the overthrow of a statesman who dared to be right, and to serve the people through the Democratic organization, even when timidity cast before him the possibility of defeat. Believing this, I ask Democratic Representatives on this floor to examine the credentials they bear from their constituents. I spurn the insinuation that the Democrats of the nation indulge in "glittering catchwords." [Applause.]

I know no higher and purer faith for a Democratic Representative than can be drawn from the expressions of their party platform. Nor do I believe, if it may be asked that those platforms, speaking the voice of the people, shall be construed solely by the representatives of national banks on this floor. We have had too much of that sort of construction from our friends on the other side of this House. They made a contract between the people and the bondholders, specifically promising that a bond should be paid in "coin," and then the modest national banker came forward with his construction that "coin" meant only gold. And now representatives of the same class come here and ask that we show our patriotism and Democracy by allowing national bankers to be once more our schoolmasters, and teach us the meaning of the simplest terms.

No, sir; I come from a section where national bankers are not recognized as the most learned or patriotic men of the land. I have been sent here by a constituency who would resent the imputation that they went to a national banker for the double purpose of being fleeced and then educated. We have no hostility to national bankers, as bankers. But our gorge rises when a national banker turns pedagogue and talks about evolution and human progress. Gentlemen have a tender regard for the proprieties on this floor when speaking of their associates. They carefully place a bit on their tongues when alluding to members of a coördinate legislative body. But when referring to that higher power vested in the people, all restraints are cast aside and naught recognized save the right to indulge in sarcastic reference to all the people hold dear, and in sneers at expressions which stand for the supreme deliverance of the nation's electorate.

We are in this House representing the Democratic party of the nation. I do not believe there is a single member on this side of the House who would have been victorious at the polls had he been so bold as to denounce either the candidate or the platform of the Chicago convention. Holding this position we have at our hands a simple statement of our duty. We are commanded by the Chicago platform to repeal the Sherman law. We are called together in extra session for this purpose by a statesman who has never known an inclination to denounce the solemn expressions of his party as "glittering catchwords." There is no chance for evasion of this duty save at the expense of the personal honor of each Representative thus guilty.

The people have demanded that the Sherman law be repealed, and I am ready now, as I have been since the first day of the session, to vote unconditionally in accordance with these instructions. But I ask those who signify their approbation of this sentiment to withhold their expressions until they shall have had occasion to determine whether or not they will follow to the logical end of this argument, and make that full performance of their obligations, than which less will be disobedience to the people's demands. I can not sympathize with those gentlemen who quiet their consciences by a recognition of one portion of the command of the Chicago convention and tickle hostile influences by ignoring an equally binding clause in the same platform.

I say I am willing to vote this moment for the absolute repeal of the Sherman law. But, though I will do this asking no promise of future legislation, I am forced to confess that I take this ground firm in the conviction that other legislation will be thus made more easy because of the union of men who look to the people, rather than to their personal employers, for a rule of conduct.

I believe there is a fundamental principle underlying the demand of the Chicago convention for the repeal of the Sherman iniquity. I do not believe that demand rested on the belief or thought that the present money stringency might or could be produced by this single cause. There have been scrambles for gold ever since Moses left the original monometallist at the foot of the mountain to build the golden calf for a perverse and ignorant generation. There were panics in the money market even while the wonderful financier of Republican legislation was still obscure in the wilds of Ohio.

There was no Sherman law in 1873, nor had there been in 1857. Nor was it due to the nonexistence of a Sherman law in 1866 that this people escaped the consequences of an abnormal raising of the rate of interest by the Bank of England upon the occasion of the panic resulting from the failure of the banking house of Overend, Gurney & Co. But, sir, there was a fundamental truth underlying this demand nevertheless. We of the West have not been heedless of the discussion of the fiscal question since Grover Cleveland dared lead his party aright in 1888.

We have been instant in season and out of season in following that lead and in presenting to the people the ground of the faith that was within us. We have demonstrated to the entire satisfaction of a majority of the people of my State that unnecessary taxation is unjust taxation. We have insisted that the Government had no just power to exercise its fiat for the purpose of distributing the products of human activity applied to natural opportunities. We have denied the just power of the Government to place wealth or value of any kind in the pockets of one class by the exercise of its fiat. We have gained the people's assent to the affirmation that whenever by its fiat the Government adds to the wealth of an individual or class it by that act takes unjustly from another individual or class an amount equal to the improper gift.

Standing upon this ground, the people dominated the Chicago convention. There was no terror of a financial panic. They were not actuated by fear lest their banks might break and leave them with no means of paying their board bills. They were not a flock of geese terrified by one of the Ohio financier's scarecrows. [Laughter.] They were rather an educated people demanding the return of the Government to its original principles and the assumption by the Democracy of a leadership logical as the teachings of Democracy's founder. To-day, sir, there are none so poor as to do reverence to this silver law to which our opponents pledged their continued support during the entire campaign which resulted in a Democratic victory last November.

The charge of the Democratic platform has been confessed and Republicans vie with those who have never supported the infamous measure in demanding its repeal. But there is this difference: Democrats ask that this law shall be repealed because it is fundamentally opposed to the principles of their party. They believe it as wrong and unjust for Congress to purchase the entire product of silver mines as to pile in Government warehouses the product of field and farm that their price might be enhanced thereby. Many also understand that all such senseless efforts to influence trade and production will inevitably work ruin to the people. It required little study or knowledge of economic truths three years ago to prompt the prediction that the effect of the Sherman law would be to diminish the relative value of the white metal.

The same unvarying law governs in all things. Let it be enacted that the Federal Government will purchase 90 per cent of all the wheat produced in this country and place it in Government warehouses, and the immediate effect would doubtless be an advance in the selling price of the commodity. There would have been created a new demand for which no immediate supply would be available. But the contrary would appear when one harvest had passed and the Government purchases were piled upon last year's crop. The visible supply would be constantly increasing and the selling price as constantly diminishing.

This, however, is not the fundamental principle upon which we base our opposition to the Sherman law. We understand that, under its provisions, the Government is doing for one class of producers in this country what it neither does nor can do for all others. It gives by its fiat value to one class in offering an extended market for their commodities. It is no answer to this proposition to say that the effect of the law has been contrary to this. That was the intent of those who accepted the law in place of another from which they sought the same result. And the effect upon the general prosperity is the same, since every dollar lost by the Government in the continuing decline in the relative value of silver must be borne by the people at large.

It is only an illustration of that principle, which must be iterated here perhaps for years, that the Government which gives by its fiat wealth to one class by that act robs all other classes. Nor is it an answer to this proposition to say that we are not to be influenced by whatever may be the indirect result of our action regarding the finances. I have been surprised to hear from men known all over the country as opponents of protective tariffs—and they argue that all tariffs are protective—that although it may be true that by reëstablishing the free coinage of silver we by that act bestow wealth upon the mine owners, it does not follow that we must refrain from the act because this is an incident to a necessary exercise of the legislative power.

Let me tell these gentlemen so arguing that they are on the wrong side of the House. They should join their friends in the ranks of protection. And let me remind them that the discussion of the principles of protection has gone so far as to have created a strong demand all over the country for the entire abolition of the system which forces such absurdity into our legislation. It is for those thus arguing to demonstrate the necessity for the addition of the legal-tender element to either of the so-called precious metals.

But I am asked if I am opposed both to the purchase of silver by the Government, and—if my argument is to be followed to its logical conclusion—am also opposed to its admission to the mints upon any ratio, how shall we who accept the Democratic faith and bind ourselves as the accredited agents of the people do anything to restore or maintain the parity of the two metals? The answer is revealed in a simple statement of existing conditions.

There was signal failure attending the attempt to coin a certain amount of silver per month. The added use did not compensate for the rapidly increasing supply, and silver decreased in relative price. The attempt to bull the market under the Sherman law was equally a failure. We have come to a parting of the ways. It might have been difficult to attract public attention had the relative value of the two metals been maintained within a small fraction. With but 4 or 5 per cent difference between the value of the commodity in the gold and silver dollars it might have been held by some with a show of truth that the people could well afford to be robbed of that difference in favor of the mine owners because of the advantages to arise from a steadily increasing volume of circulating medium to keep pace with increasing production. It might have been argued with much force to those who appreciate the constantly increasing command of accumulated wealth over future production that by this act the producers of the country would be in a large degree protected against the encroachments of combinations of capital.

But, sir, that argument falls to the ground in the face of the silver market of to-day. It fails to convince thoughtful men when it demands that mine owners shall receive 100 cents for less than 58 cents. It has, in my judgment, been one of the happy incidents of the operation of an unjust law that the people have received an object-lesson well worth all its cost. Therefore, sympathizing, as I do, with those who demand that the people be furnished by the Government with a larger volume of money, I am as sternly opposed to the further coinage of silver as a means of maintaining its parity with gold as I am to its further purchase under the Sherman law. I find warrant for this position in the simple fact that every principle of sociology is opposed to this scheme. Nor are we left to a continuance of old methods whose failure has led to present conditions.

I understand, sir, that value resides largely in use. I hold to the unvarying action of the law of supply and demand. That this law applied equally to money as to commodities was fully appreciated by the friends of "honest money," whose spokesman confessed from his seat in the United States Senate, "It was our policy as the war progressed to depreciate the value of United States notes," and who then proceeded to show that the dominant political party at that time understood the operation of this law by explaining that they did the most natural thing—they simply took away one of the uses of the greenbacks issued at that time. And the same gentleman afterwards showed once more that he fully appreciated the value of this law as applied to finance when he led his party in the opposite direction and "appreciated" the greenbacks after the war had closed by securing to them even more than their old functions.

I make this reference, not because there is necessity to demonstrate the existence and universality of this law, but that the gentlemen on the other side of this House need not challenge the acumen of their patron financial saint by denying that such a law can apply to money, which is not a commodity but merely a creation of law.

And in passing it may be well to offer still another proof that this law is always appealed to when the people are to be defrauded by those gentlemen who avow themselves the sole defenders of "honest money." The world has seen of late the result of depriving silver of one of its former uses. Concealed in the cunning compromise devised by the same gentleman who avowed that it was his party's purpose to depreciate the value of the money paid to the nation's defenders "as the war progressed," the complete demonetization of silver as a money metal under the Sherman law destroyed one of its uses.

The price of the white metal temporarily rose during the first months, but more rapidly declined when the true inwardness of the scheme had become patent to the people. Silver had been deprived of one of its uses and its value, and selling had declined in accordance with the law of supply and demand. There is no ground upon which these acts may be defended by attributing to the gentlemen responsible for them a lack of knowledge. Their spokesman has told the world in a single sentence that ignorance can not be made a cloak for his actions. These men will never be sent by an enlightened and conscientious jury to a lunatic asylum.

Having, then, destroyed the parity of the two metals in the very act in which it was pharisaically pretended that the parity was to be maintained, and having done this by a cunning following of an economic law once before employed for the plunder of the people and the enrichment of monopolists, why may not the same law now be put into operation for the purpose of restoring the destroyed parity in the only possible way open to intelligent legislators by taking also from the yellow metals its money function, leaving both on a parity of use as mere commodities?

I would coin for all who desire metal money both gold and silver upon any ratio that may be acceptable—and it makes no possible difference—and would then remove from all coins after a fixed date the legal tender quality. Contracts made in "lawful money and legal tender" should be discharged in the same way the nation discharged its obligations to the soldiers and sailors during the war. Contracts made in other terms should be discharged in accordance therewith. [Applause.]

From and after the date named no coin should be received by the Government in payment of any dues; none should be paid by the Government for any debts and demands. But I would ask one single exception, that the Government shall have the privilege of paying every dollar of its interest-bearing obligations in coin. No Republican friend of "honest money" shall ever raise the finger of ignorant scorn at me and say that I would violate the conditions of a contract. That crime shall, so far as my action is concerned, always remain affixed to the Republican party of the nation, and to it alone. It has well earned the distinction. Let no one compete for the infamy. [Applause.]

No, sir; I would pay every dollar of the nation's interest-bearing bonds in coin. That is the language of the existing contract. True, it was a contract made *ex post facto* for the benefit of the bondholder, as was also confessed by the Republican financial saint. And it is well to remind those gentlemen here who so glibly mouth the words "honest money" that the greatest political crimes of the century have been those which lie at the door of their class. They devised the infamous legislation which gave the soldier rags while providing refined gold for the greedy money lord. [Applause.]

It was their crime that paid a million soldiers the money of the country, and then depreciated its value by act of Congress. It was their idea of political and financial honesty under which the people saw an army, returning victorious, forced to pay three times the amount of the debt contracted in the conduct of the war. And yet, sir, I would pay this debt in coin. We will hold them to the contract, and heartily enjoy their ravings as we tender them the coin of the bond, and refuse them that for which they even now exchange the yellow metal at a discount. [Applause.]

Snap cameras will be in demand when Mr. Pluto finds himself denied the derided greenback if the country should, for once, insist upon the full performance of a contract made for his benefit. Possibly the time will come. It most surely will if we pursue the only possible method of restoring the lost parity between these two metals. And then, possibly, the country may discover that something better is expected of the members of Congress than an attempt to interfere with laws of trade or to substituteth eir enactments for the law of supply and demand in determining the exact ratio of any two or more commodities with each other.

Of course, the friend of "honest money" will now be alarmed lest we lose all chance of settling that most senseless of humbugs, the balance of trade. He will demand, "How will you settle the balance of trade"? The answer would be comprehended by an intelligent boy in a primary school. It may have to be illustrated to the frightened defender of "honest money." It will not make it any more difficult to export gold for these alleged balances if we cease to hoard it as a false basis for our circulating medium. If that pile of idle coin in the Treasury were cast out into the channels of trade it might flow to foreign countries and back again in a constantly moving tide and never disturb the relations of commodities in this country if it possessed no legal-tender quality here.

It is the most absurd of all propositions that we are enabled to export gold by a policy which locks up the entire product of more than three years in the vaults of the Treasury. It passes comprehension that sane men should propose to increase this hoard at a time when the money market is in such a state that laws are broken every day with impunity lest their execution increase the panic caused by an attempt to maintain a system of "honest money," under which the Government promises the impossible and then wonders that the people are periodically panic-stricken when they discover the fact. [Applause.]

And I shall be confronted with still another cry from the caverns of the bankers. They will declaim against the danger of being reduced to the level of silver-using countries. Sir, the people of this generation have learned lessons in finance that have not come from men with bank accounts. They recall the fact that the most gigantic war of history was carried to a successful conclusion without the use of coin. They remember that thus were established the words of Democracy's founder, "Treasury

notes bottomed on taxes will carry the country through the longest war."

I know there will be those who will bring up the ghosts of the old French assignats and ask us if we would imitate that example and court the fate of the southern republics whose credit money has so recently failed. To all such I reply that history does not furnish an instance when the paper money of a solvent government, receivable by that government for all debts and demands, has been below par in coin. Never since Venice ruled the world, under similar conditions, has this test been applied in vain.

Gentlemen have risen on this floor and demanded another attempt to perform the impossible. Yet the cry of all is that confidence sh ll be restored. They ask that the people shall have immediate relief. They know that relief shall only come as the result of restored confidence. I look upon this people as capable of self-government. That assumes their capacity to determine the right from the wrong, the attainable from the unattainable. I believe the people have learned that the Republican prophet spoke correctly when he said in the United States Senate, "No coin reserve, however large and carefully guarded, can resist the stress of adverse trade and panics." Knowing this, they look with disfavor upon the proposition to make them once more face panics and their resulting horrors in a vain attempt to perform the admittedly impossible.

I have not sought to delay this discussion by flowers of speech. I have simply pointed to the easiest possible way out of the present difficulties. Long ago a Democrat, honored in his time and revered in ours, said: "Smite the rock of public credit and there shall flow a stream that will give life to all your industries." I appeal to this House, controlled by men revering the heroes of the past, to legislate in the interest of the people, even if for a moment they hurt the feelings of some banking legislator. There is no necessity for increasing the volume of the circulating notes of the banks. Those notes are the evidence of a banker's debt. They draw interest so long as they are in the hands of the people whose indorsement makes them acceptable.

Now, sir, we ask that the people be allowed the same privilege. Let them have the same privilege that has been so freely accorded to one favored class. Read the provisions applicable to the notes of national bankers. Accord them to the people and there will be little difficulty in settling economic questions. For myself I would say, sir, that if you will pass a law that will enable me to draw interest on my debts you may pile the tariff mountains high, and I will call you blessed. [Applause.] The more you make the coat cost that my tailor will charge to me, the greater will be my debt and the larger my revenue. But does someone say that privilege can not possibly be enjoyed by everybody. Then I answer that it should not be enjoyed by anybody, nor can it be without a resulting burden on every other producer in the land.

To one other objection that will likely be urged against the plan outlined in my remarks and to be presented to this House by my friend from Ohio, I will address my closing words. It will be said that the notes thus issued will rest solely on the faith and credit of the Government. It will be said that they will be simply fiat money and with no "intrinsic" value. Standing here where thirty-one years ago greed higgled for the price of patriotism and produced one money for the bondholder and another for the soldier, I freely admit the assertion.

I want nothing in this life that shall be stronger or outlast the authority of this Government. I believe that what was good enough and strong enough to protect the flag and preserve inviolate this nation, is strong enough and good enough to transfer our commodities in times of peace as well as of war. I look for no hand to shake if its owner desires to provide against the possible disruption of this Government. For I believe that flag will float through all time and greet eternity at its coming. [Applause.] If we shall be guided in wisdom towards an advance step in the evolution of economic science it shall float over no land in which subjective slavery has taken the place of objective slavery.

We fought a long war, and at its close the shackles fell from the hands of 4,000,000 of black men. That was a war in which bullets sped and blood flowed. We are on the eve of a greater contest. It is ours to see that ballots take the place of bullets, and that the only quickening of the flow of human blood shall be that which warms the hearts of 65,000,000 of freemen relieved from the intolerable burdens of a financial system in which are imbedded the absurdities and follies of ages. [Applause.]

Mr. BARTLETT. Mr. Speaker, it had not been my intention to address this House at so early a day in the session, but the exigency of the hour, the emergency of the situation, must be my excuse, if any be needed.

The second article of the Federal Constitution, in its third section, provides that the President shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient: and in accordance with this constitutional mandate the Chief Magistrate of the nation in his message, conveyed to us at the beginning of this extraordinary session, has recommended the prompt repeal of the silver-purchasing clause of the Sherman act of July 14, 1890; and that other legislative action may put beyond all doubt the intention of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

The Executive has in clear and direct language sketched the financial and material condition of the Union, and has outlined the legislation deemed essential, and with that message I am in thorough accord. In my opinion, to follow the adjectives used in the Constitution, it is not only most expedient, but vitally necessary, to repeal at once and without compromise, without condition, without bargain or compact, the clause ordering the purchase of silver bullion; and I regard the amendments providing for the free coinage of silver at various ratios, from 16 to 1 to 20 to 1, as remedies more fatal than the disease—like deadly poison given to hasten the moribund patient to his death.

To pass any free-coinage measure would be like digging the spurs deep in the flank of the steed already rushing madly towards the brink of a precipice.

And why should the free-silver men seek to extort from us the passage of a law we believe to be iniquitous, as a condition to the repeal of an act which they admit from even their own standpoint is pernicious? The words of the gentleman from Missouri, who now leads the van of the white-metal men, are memorable, for at the time of the passage of the Sherman bill, in July, 1890, he said:

> The whole bill is in the interest of the gold standard. The whole bill is a murder of silver.

The gentleman from Missouri should not make himself an accessory to the continuing murder of silver by refusing to vote for the unconditional repeal of the law he once pronounced so destructive.

I represent an agricultural county, Richmond County, or Staten Island, and the great water front of the city of New York, extending from Peck Slip on the east side, to West Houston street on the North River, and containing within its limits all the great exchanges—stock, consolidated, produce, cotton, coffee, real estate, and maritime, and that famous street which is the object of almost daily attack upon this floor. I am proud, Mr. Speaker, to represent Wall street; for, conceding that all the primitive virtues exist in the mining gulches of the silver States, it is nevertheless true that there is no place in the world where there is a higher standard of integrity and honest dealing than in Wall street. And, sir, I assert that the animadversions and attacks made upon the financial center of this country spring from unthinking and unintelligent prejudice, and are based upon a defiance of the elemental principles of political economy and an entire misapprehension of the relations of capital and labor.

Of course, in a district such as mine, although the wealthiest in the Union by virtue of the aggregation of capital in its trust companies and banks and in the vaults of its exchanges, the great body of constituents is made up of poor men or men of moderate means; and yet they are all united on this question, and they all demand, in accents as fearless as those of the orator from Nebraska, that the purchasing clause of the silver bill be repealed, and that no free-coinage substitute be enacted.

Bankers and brokers, merchants and clerks, mechanics and farmers, sailors and the longshoremen and the laborers on the docks, all, irrespective of party, urge the repeal of this fatal statute. And, sir, I should be recreant to the trust reposed in me were I to allow my voice to be silent at this momentous time.

The gentleman from Colorado, who opened the debate on the free-silver side, said:

> When this vote comes two weeks from now you will find the Eastern Democrat and the Eastern Republican standing together.

His prophecy was only half correct, for you will find all the men, from North, South, East, and West, who believe in honest money and the honest payment of debts, and the restoration of credit, and the maintenance of this country as one of the great solvent nations of the world, united in this battle for the right.

The issue is above and beyond a partisan or party question; it is an issue of patriotism; and every man who loves his home and country, and the Constitution of his fathers should hasten by his vote to check the tide of impending ruin, and to relieve the pent-up agony of the land.

And, sir, I am glad that I shall see every member of my native State—Massachusetts—side by side and shoulder to shoulder in the fight with every Representative from the State of my adoption—New York.

The gentleman from Colorado said that the dwellers in the

mining States went West "under the protection of a law that had been upon our books since the days of Washington, Hamilton, and Jefferson." The gentleman, it would seem, supposed that the act of 1792 remained in force until 1873, and he overlooked the act of 1834.

The invocation of the names of our Revolutionary patriots is as out of place as the constant allusion to the dollar of the daddies. He had forgotten, too, that the framers of the Federal Constitution were hard-money men. The power given to Congress in the great written instrument of 1787, "to coin money," means, as I interpret it, the power to coin honest money, money which will stand the test of the melting pot, money which is worth as much after it is melted into bullion as its face value stamped upon the coin represents it to be worth. The words "to coin money" were not intended to grant the right to coin silver dollars worth 50 cents in silver, supplemented by 50 cents of fiat money.

I listened to the speech of the silver orator, the gentleman from Nebraska, with admiration and regret, for I admire his charm of utterance and the courage of his convictions while I regret that eloquence and ferver, fancy and the imagination should supply the lack of logic and the cold substratum of fact.

We have had graceful applications of the stories of the Punic hostages, and of the drummer boy of Marengo who could not beat a retreat, but nothing is said of the calmer, colder side of history which deals with the rise and fall of prices, and the increase or decrease of wages; that greater branch of history which treats of the progress of civilization rather than of the warrior and the tented field, and from which are derived many of the inductions of political economy. I do not blame the silver advocates, as the cruel logic of experience is against this visionary scheme, and they would have scanned the pages of the Past in vain.

If a bimetallist be, as defined by the president of the American Bimetallic League, one who wants the unlimited coinage of gold and silver, then I am not one.

Without an international agreement bimetallism becomes simply silver monometallism, and, believing such international agreement impossible, I am in favor of a single standard of value, and that standard gold. I believe that there can be but one universal measure of value, but one ultimate medium of exchange.

I agree with the report of the special commission of the Austrian upper house, wherein it is said:

> In every age there is some metal dominant in the history of the world, which forces its way with elemental strength in the face of any public regulation, and in our day gold is that metal.

And it was so as far back as the reign of King Solomon, for we are told in the Book of Kings—

> And all King Solomon's vessels were of gold and all the vessels of the house of the forest of Lebanon were of pure gold; none were of silver; it was nothing accounted of in the days of Solomon.

And again:

> And the King made silver to be in Jerusalem as stones * * * for abundance.

The commercial price and the coinage value of the standard metal must coincide, and gold fulfills that test.

Gold is a proper standard by reason of its intrinsic value and its light proportionate bulk. It is, as Andrew Jackson said in one of his messages, both sound and portable. But silver, on the other hand, is so cumbersome and bulky that the people do not want it and will not use it for large payments, and because of its constant fluctuation and enormous overproduction it is no longer fitted to be a measure of value at any ratio, be it as 27 to 1, 28 to 1, or even 33 to 1.

Our people, when needing actual cash, prefer gold and paper symbols, either representative of gold or backed by the credit of the Government. They have no use for heavy silver coins, as is shown by the fact that only 56,223,989 silver dollars are in circulation, while $363,108,461 lie untouched in the vaults of the Treasury. Were silver dollars coined of intrinsic value they would be about twice as heavy as our present cart wheels, and in quantity could be carried by the ordinary citizen only in handbags and handcarts. [Laughter.]

The proposition to coin silver dollars at the ratio of 20 to 1 is untenable. It is no more right to call 70 cents 100 cents than it is to call 50 cents 100 cents. The dishonesty and deception are there in both cases. There is but a slight difference in the grade of the offense.

The Chicago platform declares that—

> The dollar unit of coinage must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts.

At that time, in June, 1892, it looked as though an international bimetallic agreement were possible. The result, however, of the Brussels International Monetary Conference demonstrated the impossibility of coming to such an agreement in face of the opposition of every great European power; and since the defeat of the bimetallists at that conference their prospect of final success has been dimmed by the secession of the last great remaining silver-standard country—India.

An adjustment through international agreement is, therefore, at least for many years to come, out of the question. The dollar unit of coinage is not of equal intrinsic value, and can not be until the proper ratio be adopted—27.74 to 1 to-day—and be altered with each fluctuation of the market value of silver.

Every dollar is of equal exchangeable value with every other dollar, as is demonstrated by the continuous and rapid exchange for gold of the Treasury notes issued against the silver bullion. Of course, the plank must be read as a whole, and, interpreted in that way, it pledges the party to maintaining the equal power of every silver dollar with every gold dollar in the markets and in payment of debts. Strictly speaking, at the present rate of production, it is beyond the power of any legislation to maintain silver at parity, or, in other words, at $1.29 an ounce.

To maintain by trusts or other artificial means the price of any commodity, says Ottomar Haupt, it is an indispensable condition of success that overproduction be avoided. Excessive production is not avoided by the mine-owners, and this furnishes an additional reason why international bimetallism is impracticable. With improved machinery the annual output of silver is increased at a lesser outlay, and this, too, with a continuously falling market. Figures do not lie, and they prove that concurrent with the fall in the market price of silver there has been a large increase in production. The product of 1892 was some 157,535,000 ounces, as against an annual average of 78,766,000 ounces for the quinquennium from 1876 to 1880.

Although it is sought to discount the action of India by railing at the administration of Mr. Gladstone, and by the assertion that Mr. Balfour will some day come into power and undo all that has been done, we may, I think, learn profitably one or two object-lessons from the experience of England in the East.

The great lesson taught is the absolute necessity of a fixed or stable rate of exchange, and that with silver there can be no permanent rate of exchange. A fall of 1 penny changed a surplus in the Indian budget to an alarming deficit.

Owing to the fluctuations in exchange, taxation could not be adjusted. The merchants of India complained bitterly of the injury to trade. The European officers whose salaries were paid in rupees were in distress because of the loss on their remittances. And driven to extremity, Sir David Barbour, the financial adviser to the Indian Government, and a staunch bimetallist, was forced to advise the stoppage of free coinage.

Delay was ruining India, and the silver standard introduced into her subject country by Great Britain before the days of Clive and Warren Hastings was forever abandoned. And it must be noted that this course was found imperative in a country where the whole of the great internal trade of 300,000,000 of people is carried on by the actual transfer of coin from hand to hand, there being no system of payment by check or draft.

Let us take the experience of another silver country. In Mexico the shifting from the silver to the gold standard in exchange makes the consumer pay 10 per cent more than he ought to pay for imported goods, while the exporter of Mexican products loses about 5 per cent through the charge made by the banks for converting the exchange into Mexican currency.

On the other hand, to use the words of Mr. Robert Hardie—

> Between effective gold standard countries there is a fixed par of exchange which does not vary beyond the narrow limit of the cost of transport of money from one country to the other.

"But," say the silver leaders, "never mind about exchange. We do not care for England or Germany or France. What, wait upon England to fix the ratio for us? Let us build a Chinese wall around our country and defy the outer world." These gentlemen, Mr. Speaker, do not seem to understand that we have any foreign trade or commerce. They do not know that in point of fact the great bulk of the world's commerce is conducted by seven ports, of which New York stands second, coming between London and Liverpool. We can not consume our wheat or corn or cotton, and unless the crops of our farms and plantations decay and diminish beyond conception we must continue to rely in part upon the export of our cotton and breadstuffs.

London is the settling house for our foreign trade, practically the clearing house of the world, and it will so remain in spite of allusions to the Cobden Club and the battles of the Revolution. Were free coinage to be established, the eventual loss through fluctuating exchange to our planters and farmers, to our meat-packers and manufacturers, would amount to millions of dollars, not for one year alone, but annually for all time. [Applause.]

What would happen upon the passage of a free-coinage act? We should lose all our gold at once. The $187,000,000 in gold coin and gold bullion in the Treasury would be immediately drawn out, and gold payments would be stopped. Many, if not

all, the banks in the country would suspend payments. All our securities held abroad would come tumbling back. Every one would rush in panic-stricken haste to exchange silver for gold. Coined silver would be poured in from India, where a billion five hundred millions have just been turned loose; from Mexico, where it has already dealt its paralyzing blow, and the uncoined silver would pour in from every country of the civilized or semi-civilized world; we should be compelled to buy gold to settle our balances, as we did during the civil war—and instead of having lost some forty or fifty millions of dollars within three years, we should lose hundred of millions of dollars within a few weeks. The silver men would destroy at one fell blow all our present system of finance, and they have no other scheme to present beyond the free coinage of silver. Nor have they any thought of the morrow. They seem to think:

> The present moment is our own;
> The next we never know.

For the sake of trying a new evolution in the way of experimental finance, these admirals of the white would sink the whole ship of state.

Mr. Speaker, I desire to call attention to only two acts in the somewhat complex history of our coinage legislation—the gold bill of 1834 and the coinage bill of 1873—for I consider those measures the most creditable and the wisest of our financial legislation. Prior to 1834 gold had been undervalued by the over-valuation of silver, and as a consequence much of the more precious metal had fled the country. The then situation was summed up by Senator Benton of Missouri:

> A great amount of gold, both foreign and domestic, is now waiting in the country to see if Congress will raise gold to its fair value. If so raised, the gold will remain and enter into circulation; if not, it will immediately go off to foreign countries, for gold is not a thing to stay where it is undervalued.

And Mr. Benton submitted a resolution for the appointment of a committee to report what alterations were necessary to be made in the value of the gold coined at the mint, so as to check the exportation of that coin and to restore it to circulation in the United States.

Mr. Benton believed in the axiom of Sir Thomas Gresham, the money broker of Edward VI, that—

> Bad money drives out good money.

In the following June the famous gold bill fixing the ratio of 16 to 1 was passed by overwhelming majorities in both Houses, and Mr. Benton thus happily pictures the result:

> The good effects of the bill were immediately seen. Gold began to flow into the country through all the channels of commerce; old chests gave up their hoards; the Mint was busy, and in a few months, and as if by magic, a currency banished from the country for thirty years overspread the land and gave joy and confidence to all the pursuits of industry. * * * The instinctive feeling of the masses told them that money which would jingle in the pocket was the right money for them; that hard money was the right money for hard hands, that gold was the true currency for every man that had anything true to give for it, either in labor or property; and upon these instinctive feelings gold became the avidious demand of the vast operative and producing classes.

Practically this law was the establishment by the United States of the gold standard after its initial trial of silver for forty years. Silver then went out of general circulation—from 1853 to 1862 there were no silver dollars in circulation—and so it remained until the coinage act of 1873 made the law conform to the existing state of things by formally and explicitly demonetizing silver.

This much-abused law of 1873 has, ever since 1876, been denounced as a conspiracy against silver, but in my judgment there never was a charge more absurd and unjust. A conspiracy is a secret combination to effect an evil purpose. Here there was no combination save the union of able and expert minds on the wisdom of the measure, and there was no wicked or sinister purpose, but merely the intent to do that which was for the good of the nation. A conspiracy is committed in secrecy, covertly, by stealth, not in the broad light of the noonday sun, openly, and with full publication and on due notice, as was passed this salutary law. The simple truth is that the silver dollar was then at a premium of 3 or 3½ cents, and no one cared whether it was demonetized or not.

Secretary of the Treasury Boutwell first drafted the bill omitting the silver dollar in April, 1870, and sent it to the Senate, where it was passed in the next session, in January, 1871, by a vote of 36 to 14. The House Committee on Coinage, Weights, and Measures reported the bill favorably, but no action in the House was then taken.

Gen. Warner has recently denounced the act of 1873, and has stated that Mr. William D. Kelley, then on the Coinage Committee, knew nothing about it; yet, in fact, Mr. Kelley introduced in the next session a bill similar to Secretary Boutwell's, and omitting the silver dollar, and in debate Mr. Kelley said:

> I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar, and that so long as these provisions remain you can not keep silver coin in the country.

Mr. Thomas W. Stoughton, of Michigan, another member of the Coinage Committee, said:

> The time has come in this country when the gold dollar shall be distinctively declared to be the coin representative of the money unit.

The bill was passed in the House on May 27, 1872, with a silver dollar of limited-tender quality.

The Senate substituted the trade dollar, and a conference was ordered. A long debate, in which Senators Cole and Casserly of California and Senator SHERMAN of Ohio were most conspicuous, took place on two occasions, the debate being principally upon the recoinage of abraded gold and the charge for the original coinage of gold: But in this debate, in which Senator James W. Nye, of Nevada, also took part, Senator Casserly used this language:

> We have more silver than we want. Nevada appears to be getting ready to deluge the world with silver. I see that her silver product last year was probably over $20,000,000.

The conference report was signed by Senators JOHN SHERMAN of Ohio, John Scott of Pennsylvania, and Thomas F. Bayard of Delaware, and by Representatives Samuel Hooper of Massachusetts, and Thomas W. Stoughton, of Michigan—men of national reputation, clear-sighted and strong-headed. Their report was concurred in by the Senate, agreed to by the House, and finally the coinage act became a law on February 12, 1873. The bill had been passed in the House by a vote of 110 to 13, and in the Senate unanimously. In bringing up the bill in the Senate on January 17, 1873, Senator SHERMAN stated, "It passed the Senate two years ago, after full debate," and thereupon the bill was read by the Chief Clerk of the Senate. And the Senator from Ohio, in a speech in 1891, said:

> The act of 1873 was not the act of the party then in power, but it was the act of all parties. It was voted for by Republicans and Democrats alike, after full consideration for three years in Congress. It was voted for by every representative from the silver States.

Were any further evidence needed, we might look at the sworn testimony, before the Indian currency committee, of Mr. Robert Giffen, the distinguished writer on finance:

> This act (that of 1873) has been objected to by the bimetallic people in the United States ever since, as a thing that was done *sub rosa*, without sufficient notice and discussion. I may say that so far from this being done *sub rosa*, I was one of the people at the time who knew about it, and there was really no mystery about it. It was openly discussed in the Economist at that time.

As to the mare's nest discovered by a gentleman in this House the other day, that the words "and no deposit of silver for other coinage shall be received" were surreptitiously added to the section providing that any owner of silver bullion could deposit the same to be formed into bars or trade dollars, it is sufficient to say that, according to a familiar principle of statutory construction, the alleged sinister words added no force to the provision.

The record and the testimony thus make it manifest that the only conspiracy in connection with the act of 1873 has been that of the silver men to distort, pervert, and falsify the history of its enactment.

The law itself was sound in finance and right in commercial morality. It needed then—it needs now—no apology, and had our coinage legislation stopped right there the country would to-day be prosperous.

Enough has already been said by others about the fatal laws of 1878 and 1890. It was declared by a well-known writer that the clock of Europe went back fifty years after the battle of Waterloo. The clock of this country, sir, turned back a quarter of a century upon the passage of the Bland-Allison act of 1878.

We have heard, Mr. Speaker, a great deal of solicitude expressed in this House for the miner and the agricultural laborer, who, we are told, cry for free coinage of silver. But, sir, I believe and I know that the farm laborers of the country taken as a whole are on our side, and I feel certain that the miners would be with us were they permitted to understand the issue.

It would be a narrow view to assume that the only laborers in our vast territory are upon the farms of Nebraska or in the mines of Colorado or Montana. The blacksmith at his forge, the mill hand at his loom, the carpenter, the mason, and all the higher classes of mechanic, artisan, or artificer, the banker, the merchant, the clerk, the clergyman, the doctor, the lawyer, the editor, the reporter, in fact, everyone who is not an idler, all are laborers in the broad, generic sense of the term; all earn their bread by the sweat of their brow, and they are entitled to just as much consideration as the miner who drills the hole for the dynamite cartridge, or swings the pick in the mountains of the far West.

The relations, too, of capital and labor are misunderstood by some of these gentlemen. Capital and labor are not antagonistic; they are supplementary the one to the other, for without the coöperation of both, nothing can be achieved. All industry is limited by capital; and without the new investment of capital there can be no increase of industry. So, the capitalist, or large

employer of labor, who, instead of spending his money in selfish pleasures, consumes his capital in the purchase of machinery, or a plant, and in paying the wages of his employés, receiving in return the interest on his money and a fair compensation for his risk and his own labor—is, in reality, a great benefactor.

And yet, Mr. Speaker, the other day the gentleman from Colorado attacked Massachusetts because she had largely increased her wealth. There are, sir, in many States statutes against vagrancy, but I know of no community in which the honest acquisition of wealth, the outcome of industry and thrift and economy, is held to be a crime.

In this country there is great divisibility of ownership. We are a nation of small landowners, of small householders in the main, a nation of taxpayers, not a country of insolvents and bankrupts, and most of our people desire the full and honest payment of their debts, to pay and to be paid one hundred cents on the dollar. And it was with astonishment that I listened to the strange theory advanced by the gentleman from Nebraska last week, that the debtor can select the mode of payment of his debts, and that he can pay back the gold he borrows in the way which shall inure most to his own advantage without regard to the creditor.

Let us see how this system would operate with the miner, who at the end of his week's work, when he, the creditor, appeared for his wages before his employer, his debtor, should be told, if not in words in substance, "Here, take your pay in this silver which is worth in purchasing power 50 per cent of gold. Take it because I am your debtor for your labor and to me belongs the choice of mode of payment. I know that the purchasing power of our currency has been so scaled down that you can not now buy half the food and drink and clothing for the same nominal amount of wages, and that your wife and children are on the verge of starvation, but remember that you are a wage-earner and that wages are the last thing to advance, although the cost of living has been much enhanced. Do not complain, for the great cause of free coinage has triumphed." [Laughter.]

The mine owner himself, however, when he becomes the creditor, will not yearn for the depreciated metal, as is illustrated by the story that the billheads of a prominent silver Senator bear the legend, "All bills payable in gold."

This is an issue between a small section of the country, the silver States on the one hand, and the great body of the federation on the other. Out of 66,000,000 of people but a small proportionate number ask for free coinage, and sordid self-interest is arrayed against the common weal of the Republic. It is an effort to protect the silver industry at ruinous cost to the whole people, and it is, therefore, as asserted in our Chicago platform, unconstitutional and undemocratic.

When we reflect that Colorado last year produced $31,000,000 of silver out of the total product in the United States of $74,989,000, we can understand why the governor of that State desires that his horse should wade in blood, and why a clergyman at Aspen the other day impiously announced that the silver men were on the side of God, although it is a marvelous creed which asserts that the All-wise Creator is in favor of any but the highest standard of intrinsic worth.

The attacks, Mr. Speaker, upon the banks of New York and the East are as wild and frantic as is the assertion that New York and Boston and London would gain an undue advantage by the defeat of free coinage. London and our own cities would gain no more and no less than the full, honest payment of the moneys due them. And this is what the silver men do not wish, for, as one of them confessed a few days since, they want to pay their debts for fifty cents on the dollar. The sale at a fancy price of the output of the silver mines, which can be produced at a cost of 30 cents an ounce, and the evasion of just debts would seem to be the cardinal objects of the silver crusade.

And I ask the silver leaders if it be not somewhat ungenerous to use Northern and Eastern capital to build your railways, lay your water pipes, open your mines, and in every way develop your country, and then to assail the money-lenders because they expect simply the honest fulfillment of the bond.

Why do they attack our banks? Do they not comprehend that it is for the interest of the banks and of Wall street that the market should be full, fair, buoyant, and elastic, that their success depends upon the general prosperity throughout the country? Their interest is the common welfare; they are trustees for the citizen in the preservation of his money, and money-lenders to the producer in time of need; and without the aid of our Northern and Eastern banks the enormous cotton crop of the South could not be moved, for millions of dollars are advanced by these banks every summer and autumn. Without the great central reserve cities of our national banking system and its twenty subordinate reserve cities the commerce and trade of the Union would become so retarded and clogged as to languish and decay, and yet, while the banks of one of the great central reserve cities (New York) are frequently attacked in this House, those of the other two, Chicago and St. Louis, which are engaged in exactly the same business, are never criticised. Is this because some outlying votes are hoped for in the West?

I apprehend, Mr. Speaker, that no legislation can at once restore the country to complete prosperity, but as the causes of the money famine which now afflicts the land are, first, the withdrawal of confidence, and second, the hoarding of money consequent upon such failure of confidence, it is clear that any measure which restores confidence will bring forth all the money we need, and such a measure is that introduced by the gentleman from West Virginia, repealing absolutely the silver-purchasing clause.

The wide-spread hoarding of our money would indicate that with all our boasted civilization we are no more intelligent than the natives of India, who hoard the gold ingots which come out from England. While there the disposition to hoard is dying out, here within the past few months the disease has shown an extraordinary development.

Let the Sherman law be repealed and coin no more silver except as subsidiary coin; at least no more for the present. Our circulation per capita is $24.02, which is sufficient, and nearly twice as great as in 1860. In gold and silver, in paper representatives of gold and silver, such as certificates and Treasury notes, in greenbacks, and in national bank notes we have a circulation of $1,611,000,000; and as 95 per cent of our business is done with checks, and drafts, and notes we need in reality no largely increased volume of money. Repeal the law, and gold will pour in from Europe, confidence both at home and abroad will be renewed, money in hoard will come forth, and foreign capital once more will seek investment on our shores.

At an appropriate season I should favor, Mr. Speaker, the bill introduced by the Senator from Indiana, authorizing national banks to issue circulating notes up to the par value of their bonds deposited, and I can see no objection to a law permitting the issue of notes equal in amount by the Comptroller of the Currency to anyone who shall deposit United States bonds, thus giving direct relief in time of stringency without the necessity of applying to a bank. Since July 1 the circulation of our national banks—in notes issued or ordered and to be issued—has been increased by some $34,000,000, and it will soon be over $200,000,000.

Owing to the mistakes of the past our system of currency is not perfect. Like France and Germany, we have the "*étalon boiteux*," or limping standard. That is to say, we have in reality a gold standard, but with a large, although not unlimited, amount of silver circulating at gold value.

"One leg," as Dr. Ludwig Bamberger, a high German authority, expresses it, "which is the gold currency, has a free and healthy motion, while the other, the silver currency, is lame and drags behind and thus proves more or less of a hindrance to its healthy brother." Our silver in the Treasury, like the thalers in the German Reichsbank and the five-franc pieces in the Bank of France, serves only to appeal to the imagination as a last reserve. In reality the only security we have is our gold and the faith of the Government or its pledge to redeem its obligations. We must stop right here and not go on increasing them beyond the possibility of redemption.

The gentleman from Colorado asks: "Can you afford to vote to increase the value of the dollar?" I answer: We do not vote to increase its value; but we vote not to degrade or depreciate it. We can never afford to do that which is wrong; we can always afford to do that which is right.

The silver men all tell us that they are but following the behests of their constituents. It is true that this is a representative government, and that we are the representatives of the people—but our sense of responsibility to our constituents would not justify obedience to the dictates of selfishness or folly.

Any other view would be to reduce the function of constitutional government, indeed, to a very low level.

I say, therefore, in answer to these gentlemen, "It were far better to forfeit your renomination, to lose forever all chance of reëlection, than to vote for any scheme of dishonest finance. The unanimous suffrage of your district, the mad plaudits of all the miners in your State, could not excuse or palliate the injury done to the whole country. Cast back the dread of your constituents. Vote right; vote for repeal, and so shall ye die not at your death, but shall live in the glad hearts of the people saved. [Applause.]

Mr. STOCKDALE was recognized.

Mr. SIMPSON. Mr. Speaker, as it is getting quite late, and after the eloquent address of the gentleman from New York who has just taken his seat, I think the members have all they can well digest to-day, I move that we now adjourn. That is, of course, with the understanding that the gentleman from Mississippi will have his time to-morrow.

The SPEAKER *pro tempore*. The gentleman from Mississippi has been recognized. If the gentleman yields, the Chair will submit the motion.

Mr. STOCKDALE. With the understanding that I will have the floor in the morning.

The SPEAKER *pro tempore*. The present occupant of the chair has no power to decide that. The gentleman from Mississippi can proceed now, unless he yields the floor for the motion.

Mr. STOCKDALE. I think I will proceed to-night.

The SPEAKER *pro tempore*. The gentleman has the floor for that purpose.

[Mr. STOCKDALE withholds his remarks for revision. [See Appendix.]

A SOUND AND STABLE CURRENCY.

Mr. DAVIS. Mr. Speaker, I bring to you a bit of news. It is reliable and important. I received it in an open letter written by the President of the United States, and addressed to the members of Congress. It is in effect, this: "The stone which the builders rejected has become the head of the corner!" There *is* a money question! Our presence here in this Hall, in extraordinary session, proves that the money question is paramount. The tariff has been relegated to second place. The patriotic little party which I, in part, represent has been vindicated and our statements and positions approved. President Cleveland very justly attaches great importance to "a sound and stable currency."

In his inaugural address last March, President Cleveland said:

While every American citizen must contemplate with the utmost pride and enthusiasm the growth and expansion of our country, the sufficiency of our institutions to stand against the rudest shocks of violence, the wonderful thrift and enterprise of our people, and the demonstrated superiority of our free Government, it behooves us to constantly watch for every symptom of insidious infirmity that threatens our national vigor.

The strong man who, in the confidence of sturdy health, courts the sternest activities of life and rejoices in the hardihood of constant labor, may have lurking near his vitals the unheeded disease that dooms him to sudden collapse.

It can not be doubted that our stupendous achievements as a people and our country's robust strength, have given rise to a heedlessness of those laws governing our national health, which we can no more evade than human life can escape the laws of God and nature.

Manifestly nothing is more vital to our supremacy as a nation and to the beneficent purposes of our Government than a sound and stable currency. Its exposure to degradation should at once arouse to activity the most enlightened statesmanship; and the danger of depreciation in the purchasing power of the wages paid to toil should furnish the strongest incentive to prompt and conservative precaution.

In dealing with our present embarrassing situation as related to this subject, we will be wise if we temper our confidence and faith in our national strength and resources with the frank concession that even these will not permit us to defy with impunity the inexorable laws of finance and trade. At the same time, in our efforts to adjust differences of opinion, we should be free from intolerance or passion, and our judgments should be unmoved by alluring phrases and unvexed by selfish interests.

I am confident that such an approach to the subject will result in prudent and effective remedial legislation. In the meantime, so far as the executive branch of the Government can intervene, none of the powers with which it is invested will be withheld when their exercise is deemed necessary to maintain our national credit or avert financial disaster.

Mr. Speaker, I am frank to say that I agree with every word and sentence here quoted. Words can not exaggerate the importance of the question of the finances among a commercial people like ours. There is a power in money which no human agency can resist. There is no engagement, national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements in all the domestic concerns of life, the wages of labor, the transactions of the highest and lowest amounts, the payment of debts and taxes are all affected by the quantity or quality of money in circulation. There resides in money the most enormous power known to man. It is the tide in human affairs upon which all things must rise or fall. It is as irresistible as the wings and wheels of commerce on the high seas and the broad continents. More powerful than the thunder blasts of armadas that throb upon the ocean, or the tread of continental armies; and this mighty force is self-acting in all the large and small transactions of men. This is the concurrent testimony of the ablest writers.

The United States Monetary Commission of 1876 mentions the importance of money in modern society as—

The great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish, and, unless relieved, finally perish.

Sir Archibald Alison, England's great historian, speaks of money as—

This mighty agent in human affairs.

Mr. Alexander Del Mar, formerly director of the Bureau of Statistics of the United States, member of the United States Monetary Commission, an able writer on the finances, describing the operations of this factor in the affairs of nations, says:

Unheard, unfelt, almost unseen, it has the power to so distribute the burdens, gratifications, and opportunities of life that each individual shall enjoy that share of them to which his merits entitle him, or to dispense them with so partial a hand as to violate every principle of justice and perpetuate a system of social slaveries to the end of time.

The late Senator Plumb, speaking of the money question in 1888, said:

We are dealing with a question which has more to do with the welfare of the people of the United States, which is of more concern to them, than any other thing that is pending, or that can be pending, etc.

Mr. Speaker, I have not overestimated, and it is impossible to overestimate the importance of "a sound and stable" money system to the people of the United States. Having agreed upon this, the paramount question now arises, which, among the many systems which have been tried by commercial nations, or among the several systems, either tried or untried, proposed by the various currency doctors of the present day, is the one which is preëminently "sound and stable."

Is it gold only?

Is it silver only?

Is it gold and silver combined?

Is it a paper system founded on gold only?

Is it a paper system founded on gold and silver?

Or, is it a paper system founded on receivability in the Government revenues, and the quality of general legal tender?

In the discussion of a vital question like this, involving the material and moral interests, the prosperity and happiness, or the poverty, ruin, and death of so many millions of people, untried theories must have no place. Only the facts of history and the experiences of commercial nations and peoples should be considered. We can not afford to admit any new system as an experiment. In my opinion it is not necessary. In searching for "a sound and stable" money system, in my judgment it is only necessary to follow the examples of the greatest and most successful nations of history at those times when they were most prosperous.

THE GOLD STANDARD.

From the beginning of history gold has been used as money, but during the whole of that time it has never proven itself a safe or satisfactory money. Being a commodity of commerce, it has always been subject to the fluctuations in price common to commodities. Worse than that, its weight and volume are such that it is easily collected and hoarded by the gamblers in money. By this means it is rendered subject to greater fluctuations and more frequent changes in value than most other commodities.

The intrinsic value of gold is not great. Its commercial value arises from an artificial demand created by law; and, by reason of its being manipulated through the whims and devices of usurers and gamblers, the fluctuations of the value of gold are greater, more sudden and irregular than any other known substance. Unless one can foresee all the demands of commerce and all the means of supply; unless he knows the potency of all the schemes, intentions, and devices of the money gamblers of the world's great financial centers, he can not guess with any certainty the price of gold even for a single day. If a merchant buys goods to be paid for in gold on sixty days' time, his business is a game of chance, as uncertain as the winds, and quite as subject to destructive fluctuations.

In ancient Peru gold was plentiful, but it was not used as money. There was no artificial monetary demand created by law. It passed from man to man on its commercial value only. When thus left to itself, on its own merits, it had very little commercial value. Mr. Prescott, in his Conquest of Peru, tells us that on one occasion, in the open market of Cuzco, the capital of Peru, it required gold bullion of the weight of $116 to buy a quire of paper. A bottle of wine sold for the weight of $690 in gold bullion. A sword was worth $500; a cloak $1,160; a pair of shoes $400 or more; and a horse about $30,000 weight of gold bullion. Between that low price of gold and the high charges for it by the gold gamblers of our time, there is room for ten thousand stages and degrees of fluctuation. And, Mr. Speaker, the experiences and observations of all men in business prove that gold is equal to any and every emergency of that sort. It is the loaded dice of the gamblers who rob men and nations. It is the jumping-jack of the shylock revelry, when the gamblers and bandits hold high carnival in celebration of their greedy and merciless achievements. Long experience and observation have proven that gold is about as safe and reliable for the foundation of "a sound and stable currency" as is a powder keg or a plug of dynamite for a steady corner stone under a family residence. It is liable to explode at any moment, whenever it is to the interest of prowling thieves to touch it off that they may rob the house during the confusion.

Mr. Speaker, I do not and I will not speak at random on this important subject. The ablest writers agree with me as to the experiences of nations and the facts of history. An English economist has written of the gold-standard finances of England as follows:

England is the peculiar seat of monetary crises, just as Egypt is of the

plague and India of the cholera. These monetary plagues are the bane and opprobrium of our country.

Prof. Vissering, of Holland, explained the troubles of England and objected to imitating her money system, as follows:

Because England, which then almost alone had the standard of gold, was subject to frequent monetary crises, and that, by adopting the same rule, we should run the risk of being involved in those crises.

The United States Monetary Commission of 1876, the ablest of all American authorities on this subject, says:

In addition to the irregularities of its production, gold lacks sufficiency of mass to give it steadiness. It is necessarily so subject to "jerks and changes," that to use it as an exclusive standard must reduce all business to gambling. No merchant can buy goods with gold to be sold for gold a year afterward, or even a few months afterward, without being subjected to a heavy risk. If he covers the risk by extra profits in the nature of insurance, he must impose a heavy tax upon those who deal with him. Whoever enters into a contract to pay gold in one, two, or three years can not, by any possibility, foresee what its value may be when the contract matures. Gold, when unsteadied by silver, is as unstable as water. The long experience of England has shown it to be one of the most fluctuating, treacherous, and dangerous currencies ever devised. The present head of the British ministry said, three years ago, that England did not become rich by adopting gold, but adopted gold because it was already rich. He might have added that it was only the great wealth acquired by England under a sounder and better system which has enabled it to endure the mischiefs of a currency which has made it "the peculiar seat of monetary crises, just as Egypt is of the plague and India of the cholera." If England was not the creditor of all the world on gold contracts, and if that consideration did not really dominate everything else in determining its policy, it would abandon a system which is its "bane and opprobrium."

The report of the United States Monetary Commission further says:

With a currency of gold, or of paper convertible into gold, we should feel instantly every change in Europe, and especially England. We should not altogether escape that influence with the double standard of gold and silver, but at any rate, with such a standard, one part of our currency would be secure from European perturbations.

Mr. John J. Ingalls, for eighteen years United States Senator, and part of the time acting President of the United States Senate, has recorded the following correct opinion of gold as a currency:

No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty it does not break. It has no friend it does not sooner or later betray. Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of the greatest peril, it becomes an enemy more potent than the foe in the field; and when the battle is won and peace has been secured, gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the enemy. It was the most invincible enemy of the public credit. Gold paid no soldier or sailor. It refused the national obligations. It was worth most when our fortunes were the lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction. But, as usual, when danger has been averted, and the victory secured, gold swaggers to the front, and asserts the supremacy.—*J. J. Ingalls's speech in the United States Senate*, February 15, 1878.

A nation using gold money, or gold-basis money, has no control over the volume of its circulating medium. It is in the power of the holders of gold to make money scarce or plenty as suits their own convenience and interests, regardless of the public welfare. Mr. Garfield once stated, most truthfully, that—

Whoever controls the volume of the currency is absolute master of all industry and commerce.

Senator Thomas H. Benton, speaking of the same dangerous class of men, said:

All property is at their mercy.

We thus see that according to the experience of nations and the testimony of the best writers, gold is not "a sound and stable currency." It has but little value, except through an artificial demand created by law. It is subject to very great fluctuations in value, because it is a commodity of commerce, and it is utterly unfitted for the basis of a monetary system because it is the handy tool of the money gamblers, by the use of which they are able to rob men and nations at will.

But, Mr. Speaker, if it were a fact that gold is a safe basis for "a sound and stable currency," there are still other considerations. The people of the United States are now staggering under a burden of some thirty billions of dollars of monetary obligations. That burden is in the various forms of national and State debts, railroad debts, municipal debts, and private debts secured by real-estate mortgages. On three great central States of the Union the private debts of the people are frightful. The people of my own State, ranking among the most industrious, intelligent, and enterprising, are mortgaged to the amount of $235,000,000; the people of Illinois $384,000,000, and the people of the great State of Pennsylvania, with their rich mines and their protected (?) manufactures (which are said to insure a prosperous agriculture), are mortgaged to the amount of $613,000,000.

Mr. Speaker, it is hardly necessary for the statement to be made to an intelligent statesman like yourself that, on the low level of gold-basis prices for the products of labor, the debts of this country can not be paid. In order to reach and to maintain the low level of gold-basis currency it has required and still requires a contraction of money and falling prices, ruinous to the prosperity of our people, dangerous to their liberties, and a menace to the peace of the country. Already the homes of the people are passing into the hands of foreign and domestic landlords with frightful rapidity. Already the wealth of our rich men, acquired from the earnings of labor through the manipulations of money and the conquests of the purse, rivals the opulence of the Roman patricians, when that great empire entered the dark shadow of its decline and fall. Already the great estates of our home and foreign landlords rival those of France when that unhappy country was dashing headlong into the abyss of the bloodiest revolution of history. Every indication of the times and all the facts of history prove most positively, with no shadow of doubt, that the public and private monetary obligations of the people of this country can neither be paid, nor much longer carried, with property and products at gold-basis prices. Such a policy of finance leads to bankruptcies and foreclosures for the workers, resulting in a change of ownership of the soil, whereby it passes into the hands of the rich. It means the establishment of universal landlordism, and the serfdom and slavery of the American people. Gold is the most fluctuating and unstable of currencies, and, in quantity, it is entirely inadequate as a money basis in America. Its use as such is incompatible with the preservation of popular liberty in this country.

Mr. Speaker, we are said to have had in this country a practical gold basis since January 1, 1879. Yet no one is satisfied with our financial condition. President Cleveland says:

In dealing with our present embarrassing situation as related to this subject, we will be wise if we temper our confidence and faith in our national strength and resources with the frank confession that even these will not permit us to defy with impunity the inexorable laws of finance and trade.

Now, with these timely and truthful words in mind, let me call attention to a few facts of history which we are now copying, vainly hoping, it would seem, that "the inexorable laws of finance and trade" which have ruined other nations defying them will not harm us.

At the close of the wars of Napoleon in 1815 England stood at the front among the victors, in a blaze of glory unequaled in modern times. She was mistress of the ocean, had acquired an empire which encircled the earth, and dictated the policies of Europe. Her people were prosperous, happy, and jubilant. Ignoring or defying the lessons of history and the "inexorable laws of finance and trade," the British Parliament enacted a law restricting the use of silver, in order to establish the famous single gold basis for money. This checked the prosperity of the country by decreeing falling prices for agricultural products and the commodities of commerce.

Then were heard the first murmurs of distress among a people that for twenty years had uncomplainingly paid the troops which met Napoleon on so many bloody fields, a people that had carried victory on their bayonets throughout the Peninsula, on the Rhine, and on the field of Waterloo; a people whose cannons had won the victories of Trafalgar and the Nile and maintained the glory of British arms and British power as only Anglo-Saxons could. These people were now to be sacrificed by the millions to the false god known as gold-basis money. In 1819, in pursuance of this murderous policy, the British Parliament enacted a law for the retirement of the paper money which had conquered Napoleon—that money which Mr. Alison, the great English historian, said had saved England from becoming "a province of France." The process of contraction, bringing falling prices, began in 1816; it was accelerated in 1819. By the year 1862 four-fifths of the landholders of England had lost their lands and the laboring people of the country were in such a condition of suffering that troops were necessary to compel men, women, and children to starve in peace. Landlordism was greatly extended, the relative number of the serfs and tenants of the realm was greatly multiplied, and the public distresses among the innocent people were such as no tongue can adequately describe.

Mr. Speaker, ignoring that recent and notable example of history, and defying "the inexorable laws of finance and trade," we are at this moment copying the baleful example of England in our efforts to reach and maintain a gold-basis currency.

Our experiment commenced in 1866. The American Congress passed a law at that time to contract the currency of the country. It was enacted that interest-bearing bonds should be sold for currency, and that the currency which had saved the nation should be burned. This was, in effect, a copy of the English law of 1819. In 1873 the American Congress passed a law which demonetized silver. This was, in effect, a copy of the British law of 1816. Through these laws England destroyed the currency which had prevented that country from becoming "a province of France." We have destroyed a currency which saved the life of the Republic when gold was snugly hidden in the vaults of its unpatriotic owners. England demonetized silver for amounts above 40 shillings. We did the same for amounts above $5. In both na-

tions that metal which had been good money, "current with the merchant" since the days of Abraham, was abolished, and that dollar of the United States, which had been the standard of value and the unit of account since the days of Washington and Jefferson, was dethroned and branded as base metal.

The results in both countries were alike disastrous. In England came falling prices, the closing of the shops, mines, and factories, the idleness of labor, the bankruptcy of business, the loss of homes by all land-owners who were not also bondholders. And the public distresses were so great that troops were on duty day and night to preserve the peace. It is estimated that more than a million men, women, and children in England died of starvation. That is, were sacrificed to the wicked gold-basis fallacy. No such wholesale sacrifices are recorded of heathen peoples in their worship of idols made of wood, stone, clay, or metal.

The President has rightly said that "the inexorable laws of finance and trade" can not be defied with impunity. So, having copied the financial policy of England, is it strange that we must suffer the same penalties? In 1865 the people of the United States emerged from the greatest war of modern times. They had been successful. They had saved the best Government on earth. Money was plenty, times were good, the national debt was not large, and, as individuals, we were "out of debt and prosperous." We felt as did the British people after their great victory at Waterloo, and the banishment of Napoleon. The British system of contraction, inaugurated here in 1866, began to tell on the clearing-house transactions in 1870. In 1873, the same policy struck down silver. This was at once followed by a disastrous panic, distressing the entire country, as had never before been witnessed. According to Senator Logan, it was a "money famine;" and it has continued ever since with only temporary abatements.

I have now shown the similarity of the British and American financial policies instituted for the same general purpose, under similar conditions. Ours was and is a substantial copy of theirs. To show that similar crab trees bring forth the same bitter fruits, I call attention to the testimony of eyewitnesses as to the results in the two countries.

Mr. Thomas Carlyle has pictured a period of monetary stringency in England in the following language:

British industrial existence seems fast becoming one vast prison-swamp of reeking pestilence, physical and moral, a hideous living Golgotha of souls and bodies buried alive. Thirty thousand outcast needlewomen working themselves swiftly to death, and three million paupers rotting in forced idleness, helping the needlewomen to die.

Col. Robert G. Ingersoll has drawn a picture of society in this country during contraction, as follows:

No man can imagine, all the languages of the world can not express, what the people of the United States suffered from 1873 to 1879. Men who considered themselves millionaires found that they were beggars; men living in palaces, supposing they had enough to give sunshine to the winter of their age, supposing they had enough to have all they loved in affluence and comfort, suddenly found that they were mendicants with bonds, stocks, mortgages, all turned to ashes in their hands. The chimneys grew cold, the fires in furnaces went out, the poor families were turned adrift, and the highways of the United States were crowded with tramps.

Mr. Speaker, the inexorable laws of finance and trade can not be defied with impunity. We have copied England's financial policy, and we have suffered her disasters. We are still copying her policy and also continue still reaping the same results. It appears to be impossible for our public men to learn anything from history, or even from their own experiences, with the well-known facts thrust into their very faces.

It was said by the contractionists that when we reached a specie basis, in January, 1879, no further contraction would be necessary, and that then we would again have good times. The promise was false, and the hope delusive. Standing in his place in the United States Senate on two occasions, the late Senator Plumb, himself the president of a national bank, explained the question under discussion very fully. In 1888 Senator Plumb said:

But this contraction of the currency, by the retirement of national-bank circulation, has been going on for more than ten years, and all the committee has to say now is that it has considered some bill, but it is not completed. If the committee will not complete some measure the Senate must. If the Senate will not, and the other House will not, then the country is going upon the breakers of financial disturbance. As a Senator says in my hearing, "It is there now." I think it is there now.

* * * * * * *

The retirement of the national banking circulation during the past twelve months has been 5 per cent of the total amount of the currency outstanding. There has been during that period a phenomenal depreciation of the prices of property. There has been the greatest depreciation of the price of agricultural products the country has ever known.

* * * * * * *

The contraction of the currency by 5 per cent of its volume means the depreciation of the property of the country $3,000,000,000. Debts have not only increased, but the means to pay them have diminished in proportion as the currency has been contracted. Events based upon nonlegislation have proved of advantage to lenders, but disastrous to borrowers.

According to that statement, the contraction of the currency still proceeded long after the date of resumption of specie payments. And two years later (1890) the same Senator repeated the fact of the continued contraction of the currency by the banks and by hoarding in the Treasury. He described the devices of the false Treasury reports which are monthly made by the United States Treasurer, with apparently no other purpose than to mislead the people. He claimed that much gold was counted in the reports as circulating in this country which had long ago gone to Europe; that $46,000,000 of greenbacks were counted as in circulation which did not exist, and that hundreds of millions of money, said by the official reports to be in circulation, were locked up as reserves in the banks and in the United States Treasury. In his speech of June, 1890, the Senator said:

If I were deciding this case upon what I consider the best evidence, I would be bound to say that I believed the money in actual circulation did not much, if at all, exceed $500 000,000. Upon this narrow foundation has been built the enormous structure of credit of which I have spoken. It is the greatest of the kind that was ever built, because it was built by the best people that ever built anything. Over twenty thousand millions of debts, the enormous and widely extended business of 65,000,000 of people, all rest upon and must be served by a volume of currency which must seem to the veteran financier as absolutely and dangerously small.

Mr. Speaker, this gold-standard specie-basis policy has now been in force for over twenty years. During all that time the administration of that policy has been in the hands of its friends. The war on silver has been unrelenting. That ancient money has been, in practice, reduced to a commodity. The gold-basis advocates brand it as "base metal," and with every opprobrious epithet. Although by law and contract the silver dollar is legal tender to bondholders, yet for twenty years we have not had an Administration with courage or patriotism enough to tender silver dollars to bondholders. The practical discriminations are all against silver and in favor of gold as money metals.

In that respect we are copying the policy of England. The two most powerful commercial nations on earth, with the German Empire and all northwestern Europe to help, have united and cooperated for twenty years to perfect the gold-basis system. No experiment ever had a more auspicious birth and more thorough trial at the hands of its friends. What is the result? Banks everywhere on the brink of ruin. Boys on the streets of Chicago, peddling newspapers, are forbidden to announce the contents of their goods, lest the news of recent bank failures will cause other failures and precipitate a panic. The rulers of the greatest nations of Europe and America have been for twenty years working at the absurd experiment, trying to balance a pyramid on its apex—trying to rest the billions of business of two hemispheres on a handful of gold for which everybody is grabbing. So delicate is the experiment, that the police officers of great cities hiss through their teeth, "Silence!" "Hush!" lest the breath of a street gamin may start an avalanche which will cause national or international bankruptcy and ruin on two continents.

Verily, gold is "a stable currency." Have not the Shylocks said so? And do they ever lie—except for their own purposes? And have not a thousand eminent statesmen and "financiers" sworn to the lies, as the agents, attorneys, and puppets of the Shylocks? Of course. In years agone an equal number of scientists and eminent men for centuries testified to the geocentric doctrine of the universe, when all the facts were as much against them as well known facts are now against the doctrine of the stability of a gold-basis currency. This is the absurd position of the gold-basis theory and practice in the hands of its friends, and among the banks and bankers who profit by the system. The condition is so precarious that we are having an extra session of Congress in the dog-days of August to redress the situation.

Mr. Speaker, is a gold-basis currency "the stable (?) currency" which we seek? If so, we have it now in all its glory. We are now in the paradise of the Shylocks and the money gamblers. To prove this I need only refer to the condition of its victims—the people. The Census Reports of 1890, which are just now being published, show that the people who were "out of debt and prosperous" in 1866 are now in debt and distress beyond the power of the imagination to comprehend.

Over $3,000,000,000 have been paid on the national debt. This has reduced it over one billion. That is something of which we never cease to boast. But through the fall of the prices of commodities, it will now take as many bushels of wheat or as many pounds of cotton to pay what remains of the public debt in 1893 as it would have taken to pay it in 1866. So, then, there has been no progress in reducing the burden of the national debt by the payment of over $3,000,000,000. Contraction of the currency and falling prices has neutralized the entire payment. Besides the national debt, we have over a billion of interest-bearing State, county, and municipal debts, which, with present gold prices of the products of land and labor, can be paid only through the greatest sacrifices of the people. These are but the beginning

of our burdens. The private debts of individuals, brought on by currency contraction and falling prices, are high up in the billions.

These burdens which have been heaped upon the shoulders of the people are the price of our present sound (?) and stable (?) gold-basis currency. So "stable" and reliable is this famous system that the breath of a child may topple it down and bring untold ruin on all the world. Our billions of debts and the inevitable serfdom and slavery of our people are a big price to pay and a terrible sacrifice to make, but the system is a famous one, and the Shylocks are patting our backs and telling us, "Bravo! good dog, Bose!" while we weld the chains on ourselves and our children!

Mr. Speaker, it is safe to say that our people can not pay their present debts with constantly declining gold prices for the products of land and labor. Our lands are already passing from the people into the hands of the money lords as fast as time can move and the courts can grind. In passing through the courts our farms usually pay the court expenses and part of the mortgages. The rest of the debts hang over the homeless debtors in the form of judgments. When the mortgages were executed the lands were worth twice the loans placed on them. The shrinkage of values came through currency contraction. Senator Plumb placed this shrinkage in a single year, through the retirement of bank currency, at three billions of dollars. That loss cost the people through shrinkage of values, in a single year, nearly as much as the war of the rebellion cost the country in four years.

Hon. JOSEPH H. WALKER, of Massachusetts, stated on the floor of this House in May, 1892, that farms in New England are selling to-day at about half the cost of the improvements on them. This statement means that the lands go for nothing, and half the improvements thrown in. This is the cost to New England of our stable (?) gold standard, which may be so easily toppled to the ground. It comes high, but the "eminent financiers" of New York and London, who have the ear of our rulers, say we must have it.

During the twenty-five years of our currency contraction the bankruptcies of business men have averaged about ten thousand per annum. The public and private debts of the people have grown beyond the remotest hope of payment, and the capitalization of our railroads, on which the people must pay interest and dividends, is now above ten billions of dollars. At present prices this burden (mostly water) is simple robbery. The corporations, like the military barons of the Middle Ages, stand between the people and their markets, and extort from them "all the traffic will bear." This burden grows annually at the will of the corporations. The people have no word nor voice in the matter. The officers of the corporations boldly publish that it is an "impertinence" for the people to discuss the subject. When it has been intimated that the railroads should be managed for the public benefit a leading officer of a great corporation has said, "The public be damned!"

It may be denied that our railroad capitalization came through contraction of the currency. I do not claim that it did; but, Mr. Speaker, all must admit that the burden of carrying it from year to year is greatly increased by currency contraction and the continued falling prices of products. The charges for travel and traffic are sometimes reduced through the clamoring cries of a distressed people, but seldom in proportion to the decreased prices of commodities and means of payment.

THE SILVER STANDARD.

Is silver a steadier basis for a money system than gold? If facts prove anything, it most assuredly is. During all the fluctuations of the two metals since 1873, as compared with general prices, gold has continually fluctuated, usually bounding upward by large jumps and subsiding by smaller ones. Silver has not done this, but has steadily remained "stable" as compared with the prices of commodities. This is especially true as compared to wheat and cotton, the leading agricultural products which are exported to foreign countries. The advocates of a single gold standard never tire in asserting that silver has fallen in value since 1873. This is not true. The bullion in the silver dollar will buy as much of the average products of land and labor now as in 1873, if not more. If there has been a change in the value of silver bullion since 1873, it has risen in value rather than fallen. This is proven beyond a doubt by comparing the commercial value of silver bullion with the commercial values of commodities in general. It can not be proven by a comparison with gold, as that fluctuating metal agrees with nothing with any reliable certainty. It is subject to every demand of the gold centers of Europe, and to every whim of the great gold gamblers and speculators of the world. Such a standard must necessarily fluctuate. It agrees with nothing, and is consistent with nothing except that it is usually going up, as is proved by the constantly falling prices of commodities as measured in gold.

Gold and silver have each made a record in history. Silver bought the field of Machpelah where Abraham laid to rest his beloved Sarah. Gold was the tool and ally of Philip of Macedon, when he overthrew the liberties of Greece. Silver was the only coin in the pockets of poverty during the struggle for American independence. Gold was the coin of the enemy, for which the first American traitor sold himself and his country's liberties. Silver, in all its history, has been the money of the common people—the money of liberty, the money of the Constitution, the money of four-fifths of the population of the world. Silver is steady and reliable, constituting the favorite hoards in the pockets of industry and serving as a balance wheel on the approach of panics. Gold has ruined Germany, covering 80 per cent of the people's homes with irredeemable mortgages. Silver and paper were the money of France in the days of anguish and adversity. They have raised France to be the most prosperous and independent nation of Europe. Gold is the fluctuating tool and ally of the gambler and thief, the tyrant and the traitor, and at this moment is driving the entire gold-basis world into the dishonor and crime of repudiation, through falling prices, making the payment of honest debts impossible.

Mr. Speaker, I do not speak at random on this important subject. It would be treason to the American people to do so. I call your most candid attention to the positive testimony of the highest and most respectable authorities. Hon. JOHN P. JONES, United States Senator, and formerly chairman of the United States Monetary Commission of 1876, in his late speech in Brussels, before the international conference, says:

Since its demonetization in 1873, silver has lost none of its command over commodities, and therefore none of its value. Even as bullion to-day it has the same power in exchange for commodities that as full legal-tender money it had in 1873.

Index numbers printed in a late number of the London Economist show that the fall in gold prices from 1869 to 1892 was 33 per cent.

The same authority shows that on twenty-two leading articles of commerce the fall in gold prices since 1869 has been 67 per cent. On the other hand, the same authority shows that silver prices during all that time have scarcely changed at all. In this way it is easy to show which is the "stable currency," and which the unstable.

The philosophers tell us that—

By measuring two things, one against the other, you can never arrive at any determination as to which has changed. Instead of disputing as to whether one clock has lost or another gained, would it not be well to consult the sun and stars and ascertain exactly what has happened?

The commodities of commerce are the "sun and stars" of the commercial and monetary world. By this test the golden clock has gained twelve hours in the twenty-four, and at midnight tells us that it is noon, while the silver clock still keeps step with the "sun and stars" of the commercial world as from the beginning. The same in 1869 as in 1892. Silver then is "the sound and stable currency" of the world.

The London Bankers' Magazine, in 1881, deprecated the attempt of Italy to resume specie payments, upon the ground of the scarcity of gold, and said:

There has thus been created a new demand for gold, of considerable magnitude, and that at a time when the supplies of the metal are barely adequate for existing wants. For years past there have been complaints of a gold scarcity. The addition of Germany and the United States to the body of nations using a gold currency has greatly increased the demand for the metal in the production of which there has been no corresponding increase, but on the contrary, a slight diminution. The international competition for gold has therefore been keener, and the fear now is that the advent of Italy as a buyer will still further intensify this competition and thus cause a general enhancement of the value of money.

In November, 1873, Mr. Benjamin Disraeli (afterwards Lord Beaconsfield) said:

I attribute the monetary disturbance that has occurred, and is now to a certain degree acting very injuriously to trade—I attribute it to the great changes which the governments in Europe are making in reference to their standard of value. Our gold standard is not the cause of our commercial prosperity, but the consequence of our commercial prosperity. It is quite evident we must prepare ourselves for great convulsions in the money market, not occasioned by speculation or any old cause which has been alleged, but by a new cause with which we are not sufficiently acquainted.

Six years later this same statesman, Lord Beaconsfield, further said:

Gold is every day appreciating in value, and as it appreciates in value the lower prices become.

In January, 1876, speaking of the demonetization of silver, the Westminster Review said:

One of the things involved we hold to be the probable appreciation of gold; in other words, an increase of its purchasing power, and that, consequently, unless fresh discoveries are made, prices have seen their highest for many a long day, and that debts contracted in gold will, by reason of this movement, tend to press more heavily on the borrowers, and that it will be well if this pressure does not become so intolerable as to suggest by way of solution something like universal repudiation.

Mr. Bagehot, editor of the London Economist, in 1877 said:

If Germany and America, and, let us say the Latin Union, were to adopt the gold standard, the supply of this metal would scarcely suffice, and the money markets of the world would in all probability be seriously affected by this scarcity.

Prof. Thorold Rogers, of Oxford University, in 1879 accounted for the fall in prices as follows:

The principal, the most general, and in all probability the most durable [cause] is the rapid rise in the commercial value of gold. At the moment when the domain of civilization is enlarging in every way, and as a consequence the want of media of exchange is correspondingly increased, one of the great states of Europe [Germany] has expelled silver and at the same time adopted gold. She believes herself to be able to do so, thanks to the indemnity imposed upon France, but she has done the greatest harm to her population and industries.

Mr. Speaker, monetary history is bristling and blazing all over with facts proving that the commercial value of gold, exposed not only to the laws of supply and demand, as other commodities are, but to all the whims and devices of the money gamblers, is as unsound and unstable as the winds. As a standard of value it is the "dishonest dollar" the world over. To deny this is to ignore the universal experience of mankind. To attempt to build "a sound and stable currency" on a single-standard gold basis is to "defy the inexorable laws of finance and trade," which all agree can not be done with impunity. We are, then, driven by the logic and results of these researches to further inquiry after a better and safer money system than the gold standard.

SILVER AND BIMETALLISM.

A money system based on a single commodity, as already shown, must fluctuate with the demand and supply of that commodity. Such a system also gives the owners or holders of that commodity complete control over the volume of money afloat. It makes the holders of that preferred commodity complete masters of the monetary system, and, through this, masters of all industry and commerce. Senator Thomas H. Benton, discussing this subject and referring to the men or corporations who control the volume of our nation's money, said:

The Government itself ceases to be independent.

And further along in the same argument he said:

All property is at their mercy.

This shows the very great danger of basing a money system on a single commodity. The ease with which gold is handled, hoarded, cornered, and hidden away, makes it the most dangerous of all commodities. Silver is less easily cornered and hidden; less easily stolen and carried away. It is more likely to be in the pockets of the people. It is more difficult to collect into the great money centers; and far more difficult to manipulate in the interest of money-gamblers; hence, it is a safer foundation for "a sound and stable currency" than gold.

But as two is better than one—as a man on two feet possesses a broader and safer means of walking than a man on one foot—so a money system based on both gold and silver is broader, sounder, and safer than a one-metal system. With a moment's thought the bimetallic system will also be seen to be the essence of simplicity. And the maintenance of parity between the metals is so easily accomplished that in friendly or impartial hands it is self-acting. The commercial value of all things, including the money metals, is controlled by demand and supply. With a given fixed ratio between the money metals the loaner always exercises his option and loans the more plentiful and cheaper money. No one disputes his right to do this. This is a demand for the cheaper metal which tends to maintain its commercial value.

Now, if the debtor is permitted in like manner to exercise his right of option in choosing the money of payment, he will seek to pay with the more plentiful and cheaper money which he borrowed. It is only justice that the debtor be allowed this right. This double demand for the cheaper metal or money establishes its parity with the scarcer metal, which can not remain scarcer and dearer when relieved from the demands of both creditors and debtors. If, then, through the vicissitudes of supply and demand the metals change places, the disparity is at once checked, and parity is restored by the change of demands on the part of loaners and debtors, both uniformly choosing to use the cheaper money when permitted to do so. Disparity can only continue by depriving one or both parties in commercial transactions of their right of option to use any lawful money which they may prefer. The gold men who justify the loaning of cheap money utterly refuse the right of option on the part of debtors to pay in the same lawful money which they borrow. The gold men claim that loans of cheap currency, secured by real estate mortgage, can only be paid honestly with gold coin. This doctrine, in practice, compels an unnatural demand for gold coin. It creates and perpetuates the disparity of the metals which is so loudly complained of.

Bimetallism is like a man walking on two feet. The demand for action is always on the hindmost foot. This brings it up to the other and insures the continued parity of the two. Monometallism is like the man on one foot. He makes no progress except by jerks and jumps, which shock and derange the entire system. At the present moment in this country we are testing the qualities of monometallism. Gold coin is the lawful standard, and the prices of all commodities are rated by the fluctuating standard of the least "stable" of all standards. By this fluctuating standard, on which all demands are made, the prices of all property are fluctuating and falling. Nothing is fixed, because the standard of value is unfixed. The rocks of Gibraltar, with the same treatment—measured by the rolling billows and changing waves and tides of the ocean—would be as fickle and unstable as gossamer.

In our present experiment, all demands for payments are made on gold. That raises its price. All demands for monetary exports are made on gold. That raises its price still higher. The Secretary of the Treasury ignores and repudiates laws and contracts, and all the rules of common justice, swelling the demand for gold, and, by comparison, depreciates the price of silver. With our present unfair administration of the Treasury, we are like the man with two feet trying to make progress by the exclusive use of that foot which is already in advance of the other. His position is extremely awkward and absurd: such defiance of natural law is physical anarchy. Our Secretary's disregard for the rights of the people in the payment of coin obligations is very unjust toward the people. If the present Secretary of the Treasury would use both silver and gold coin on coin contracts, making the heavier demands on the cheaper metal—always exercising the right of option in the interest of the people—in all coin payments, the parity of the two metals would immediately be restored and maintained.

Gold can never meet the double demand for exportation and for home use as money. The man with two feet can not walk on one with the other tied to a post. His active foot may be a golden one, but he is paralyzed and helpless, as our country is to-day. Every interest is suffering. Business is bankrupt, labor is not employed, debtors are losing their homes, men, women, and children are unemployed and starving, the padlock of silence is placed on the mouths of children in the streets, lest their announcements of our bad condition may precipitate a revolution; and the Congress of the United States is called together in the "dog days" to redress the situation.

All this, Mr. Speaker, in my judgment, is occasioned by the Secretary refusing to pay out silver coin on coin contracts, and because of his continual demand on gold for every monetary purpose, with the certain practical result of increasing the disparity of the money metals, in the interest of the gold gamblers and money lords of London and New York, and against the interest of the American people.

It is said by some that the purchase of 4,500,000 ounces per month, by the United States Government, prevents the rise of silver bullion, and that, if this demand would cease, bullion would rise. Mr. Speaker, does not this position presume a little too much on the lack of intelligence among men? Does it not reverse the self-acting laws of demand and supply? Have we not said that the laws of finance and trade can not be defied with impunity? Sir, is not the Secretary of the Treasury, by ignoring the spirit of the law and the rights of the people, venturing upon an absurd and dangerous experiment? The logic of the situation is this:

If there were fewer buyers of wheat, wheat would rise; if there were fewer buyers of cotton, of corn, or of silver, then those respective commodities would bear higher prices.

That is the argument which is made in favor of repealing the silver-purchase law of 1890.

Mr. Speaker, I beg of you let us relieve the American people of this scandal. Let us not be guilty of harboring such unwisdom at the head of our financial affairs. It is bad to be robbed, as our people are now being robbed through currency contractions and falling prices. It is bad to be bankrupted, as our business men are being driven to the wall. It is bad to be idle and starving, as our miners, railroad employés, and other workers are out of work and starving, but it is unbearable, Mr. Speaker, to add to all of these distresses of the people the scandal and humiliation of financial idiocy! Let the Secretary, sir, pay out silver coin on all coin contracts—require him to increase his demands on silver, under the present laws and the present contracts—and silver will at once rise to a parity with gold.

It is said that the present silver-purchase law drives gold from the country, and hence must be repealed. The law does not do this. The law provides for the putting into circulation of about $40,000,000 per annum of United States Treasury notes. Those notes, besides being legal tender for most purposes, are redeemable "in coin," and the law provides for the coining of silver to redeem them, but gives the Secretary his option as to which coin he shall use. He chooses to use gold coin. This increased demand for gold raises its price, increasing the disparity of the two metals. It also robs the gold reserve by permitting the gold to be exported. It is not the law which robs the reserve and sends gold abroad, but it is the Secretary. It is obvious that the

Secretary's wrongful ruling needs "repealing" much more than the law does. If the spirit of "Old Hickory" Jackson were in the executive chair now, that Secretary would, in my opinion, be dismissed so quickly that it would make him dizzy, and there would be no extra session of Congress in August to relieve the gold gamblers from their troubles.

If any man capable of opening his eyes desires positive evidence as to the superiority of silver over gold as a stable money basis he has but to observe the stable finances of Mexico at the present moment. That country is not a strong one financially, yet with her silver standard she sits serenely amid the storm which is rending the gold countries, viewing their trepidation and distresses with pity and complacency. With her mints turning out silver dollars at the rate of $14,000,000 per month, her finances were never in sounder condition nor her commerce more flourishing. The following dispatch explains the Mexican situation:

CITY OF MEXICO, *July 5.*

Published opinions of foreign bankers that Mexico will be bankrupted through the recent fall in silver are not taken in earnest here. Nothing approaching a business crisis is apprehended. The credit of the great commercial and financial establishments of this city continues unquestioned. The crop reports are excellent, and this is regarded by local bankers as a most hopeful feature of the situation. If Mexico is able to feed herself she can afford to play a waiting game in the matter of silver.

That example ought to teach enlightened and patriotic men an important lesson. If the Mexican finances were on the fickle gold basis, that country would be compelled to enter the general scramble for the delusive yellow metal. Every gold standard nation must, inevitably, be shaken by every cyclone in the great gold centers of the world. There is no escape from this conclusion. This great country of ours, struggling to maintain a gold standard, is compelled to call an extra session of Congress to doctor the finances and save the country; while "poor old Mexico" sits firmly and calmly on her basis of white metal without a tremor. It appears, Mr. Speaker, that wisdom and common sense are worth more than gold.

Mr. Allard, of Belgium, delegate to the International Monetary Conference in Brussels, last winter, made the following general statement as to the silver standard:

What is the state of things we see at present? We see that in those countries which have a gold standard, prices have fallen enormously, and that, on the contrary, in the countries which have a silver standard, in spite of the unfavorable treatment of silver in Europe, and in spite of the diminution in its uses, the relation of value between money and goods has remained almost exactly what it was twenty years ago. They try to frighten us by pointing to the dangers which ensue from the abundance of silver, and yet I repeat that in spite of the unfavorable position in which silver is placed, we fail to observe in silver standard countries any of the evil results which ought to flow from that abundance.

I call attention to another historic lesson which should be of value at the present time. The finances of England are on the single gold basis, long established and skillfully managed. France, just across the channel, on the Continent, bases her finances on both gold and silver, and on the quality of legal tender. During the last fifty years the bimetallic Bank of France has not been shaken with the fears of bankruptcy. Even the unusual demand on its resources to pay the German indemnity of $1,000,000,000, caused but a temporary tremor. On the other hand, on two or three occasions, we find the gold basis Bank of England, on the verge of ruin, applying to the bimetallic Bank of France for help, which was promptly given. The fact is, the payment of the German indemnity of France caused quite as much alarm in London as in Paris.

In proof of what is here stated, I call attention to the testimony of the very highest authorities. Mr. Allard, of Belgium, already quoted, stated in the Monetary Conference at Brussels, last winter, as follows:

Mr. de Rothschild appears to me to have forgotten that not long ago the bimetallic Bank of France came—for the third time, I think, and at any rate, for the second—to the assistance of the monometallic Bank of England, and was obliged to lend to that bank 75,000,000 francs in gold, in order to spare it the difficulties which might have ensued from a fresh suspension of the act of 1844. Is the system of the bank which confers the benefit, or of that which receives it, to be preferred by us? I do not hesitate to give the preference to the Bank of France, which conferred the benefit, although that bank is absolutely bimetallic, and my conclusion is that of the two banking systems I prefer that which is based upon the two metals. (Page 93.)

Sir Guilford Molesworth, delegate for British India, in the International Conference last winter, stated:

During the seven years, 1883-1890, the Bank of France only changed its rate of discount seven times, whilst the Bank of England changed it sixty-two times, the variations in France only amounting to 2 per cent, whilst those in England amounted to 4 per cent. (Page 143.)

Mr. Molesworth quotes Mr. Goschen as follows:

I feel a kind of shame on the occasion of two or three millions of gold being taken from this country to Brazil or any other country [that] it should immediately have the effect of causing a monetary alarm throughout the country.—*Page 143.*

Mr. Molesworth then says:

Then came the Baring failure, and our weakness was shown by having to call France to our aid. The currency of France had weathered without difficulty storms to which the Baring failure was mere child's play; for example, the Prussian war, the communistic struggle, the war indemnity, the failures of the Panama Canal, of the metal ring, and of the *comptoir d'escomte.*

* * * * * * *

Mr. Giffen has stated that in almost every year since 1873 there has been a stringency of greater or less severity, directly traceable to or aggravated by the extraordinary demands for gold and the difficulties in supplying them.

And, finally, we have the declaration of Mr. de Rothschild which threatens us with a monetary panic, "The far-spreading effects of which it would be impossible to foretell."

* * * * * * *

I repeat, "it is gold that is sick, not silver," and unless this fact be recognized by the members of this conference it will be impossible to apply the proper remedy to the crisis which menaces us.

* * * * * * *

I beg also to lay before the conference the accompanying diagrams which I have prepared; and in doing so I would draw particular attention to diagram No. 3 A, because it shows at a glance the instability of gold and the stability of silver.—*Pages 143, 144.*

"A SOUND AND STABLE CURRENCY."

In order to arrest great national danger—to ward off impending ruin—I have shown the superiority of silver and bimetallism over gold, as a safe, sound, and stable basis of currency, under the present conditions and tendencies of the monetary world. I have appealed to the facts of history and the experiences of mankind. I have avoided untried theories. I think I have made out my case. Of course the gold gamblers will not yield. You can not reason with Demetrius; and the prostrate worshipers of Juggernaut would rather be crushed than face the anger of their idol. Yet the people may be convinced and saved.

But, Mr. Speaker, to merely escape sudden ruin is not a very high ambition for a great, glorious, and progressive people like ours. We should have higher aims than that. Money is the blood of our civilization. A single gold standard is a disease in an acute form. It is delirium. It is neither a healthy nor a plentiful blood. It is both paucity and impurity. Add to it silver, and you have a safer and more bountiful circulating medium. With this improved and increased supply of the "protoplasm" of commerce and civilization our people will stand on a higher plane and the nation will live longer. But our position in the world justifies higher ambitions than mere existence. The examples of the statesmen and heroes of our history beckon us onward to higher attainments. Our opportunities as an enlightened nation, and the moving, industrious, and enterprising characteristics of our compound American people forbid mere commonplace achievements. To reach our most cherished and reasonable destiny as a commercial and civilized people we must have a sound, stable, pure, and plentiful currency. To find and draft such a system we need seek for nothing new or untried. Although the most important of all questions, the money question is not difficult. Any common mind can easily comprehend and understand it when stripped of the glamour and mystery sought to be thrown around it by the gamblers.

The circulating medium of our industrial and commercial life must be pure, plentiful, and permanent. We must not subject it to the phlebotomy of the money gamblers, nor even to the uncertain supply of the costly money metals. Gold and silver coin must be continued:

1. Out of respect to the traditions and usages of mankind for forty centuries;

2. Because we have agreed to pay some billions of monetary obligations, which, per contract, are to be paid in coin of a given weight and fineness;

3. Because our country is the largest producer of the money metals in the world, and we should not demonetize and depreciate the value of our own products; and

4. Because we can not discard them without industrial and financial ruin.

Let me illustrate: By the laws of 1873-'74 silver was demonetized. That act created a disparity between the coin and bullion values of silver. It created and now perpetuates a rich field for the great speculators of the world. Taking advantage of the disparity thus created, the British speculator goes into the London market, where he buys silver bullion at a discount. This is coined for him into East Indian rupees. The coin is more valuable than the bullion. With the new coin the speculator buys East Indian wheat and cotton for the European markets in competition with American wheat and cotton. The British speculator can sell his eastern wheat and cotton at the same low price at which he bought them because of his profits on silver. And Americans must sell in those markets at the same low prices, or abandon the European markets for our two great staples of export.

This explanation shows why American wheat and cotton rise and fall with silver bullion. It also proves that the cotton and wheat growing States have a greater direct interest in the silver question than the silver States themselves.

The same policy and the same speculations practiced in India in the handling of wheat and cotton are practiced in the South

American silver-using countries in connection with wool, hides, and the cheaper grades of grass-fed beef. This shows that not only the wheat and cotton growing States, but also the cattle and wool growing States, are quite as much interested in the silver question as are the silver-producing States. Restore the parity between the bullion and coin values of silver by free and unlimited coinage of silver, and we raise the prices of our great agricultural staples in foreign markets at least 40 per cent.

It will thus be seen that this silver fight is comprehensive and one in which we are all deeply interested. Demonetization destroys our European markets for many of our leading commodities of export. That is one aspect of the question. Then, besides that, it closes the American silver mines, shuts off our supply of metallic money, and destroys our great and increasing mountain market for agricultural products. The western third of the American continent, rich in everything except agriculture, under normal conditions would be a better market for all agricultural products and for the products of our great manufacturing establishments than all the rest of the world.

By the demonetization of silver this best side of the Republic is made a desert. The mines are closed. Great and rich States are depopulated and changed into deserts. Their purchasing power is destroyed. Agriculture and manufactures are without a market, business is bankrupt, and laborers by the millions are changed into mendicants and tramps. We can not discard silver money if we would. The subject is far reaching, and afflicts all men with unbearable evils except the Shylocks of London and their American allies, agents, and attorneys.

In connection with this statement I call attention to a prediction made by the present Secretary of the Treasury, then a member of this House. It is not the first time in history when a prophet has become the willing agent of the evils which he opposed and predicted. In 1878, discussing this silver question, Mr. Carlisle said:

I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

Mr. Speaker, we can not change the present ratio of 16 of silver to 1 of gold without great inconvenience and loss. It would involve the recoinage of our present stock of silver money now in the hands of the people. It would require a change of contract in connection with many millions of monetary obligations which are by their terms payable in coin of the standard weight of July 14, 1870. On this subject the joint resolution of the two Houses of 1878, known as the Matthews resolution, reads as follows:

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.

A change of ratio or a change of the weight of the silver dollar creates a lawful excuse for the bondholders to refuse the silver dollar in coin payments, which they will use to their own advantage.

In this silver matter we are all, except Wall street, in the same boat, and must sink or swim together. Our only course is to rehabilitate the old silver dollar as it was prior to 1873, and to maintain the full and free coinage of both gold and silver as money metals at the present ratio of 16 to 1. If the people are left alone, and the laws of supply and demand are permitted fair play, the parity of the metals, at that ratio, will be assured and perpetual.

Mr. Speaker, both sides in this discussion admit that neither of the metals, nor both of them combined, are a satisfactory currency for actual use in the channels of trade and business. Both sides propose a supplemental paper, either in the form of Treasury notes or bank notes. And in one of these forms we are expected to find that "sound and stable currency" which is to meet the necessities of the people. I now call the attention of the House to a discussion of these two forms of paper currency.

THE UNITED STATES TREASURY NOTE.

Mr. Speaker, money, strictly speaking, is not a material thing. It is a function created by law; and by law this function may be attached to any proper material. It is an office or function, as is the office of sheriff. A man naturally is not a sheriff or other public officer, but when the office or legal function is attached to the man, he is then a public officer, and as such can do many things and perform many acts which he could not do or perform in his individual capacity. When the money function has been legally attached to a material thing, then that material thing becomes tangible money. In rude societies the money function may grow up by custom, and by common consent may become attached to a material thing. In this way cattle, copper, gold, silver, tobacco, and various articles of commerce have become tangible money by reason of their endowment by custom or law with the money function. The various commodities of commerce have never proven themselves entirely satisfactory money, because of their unwieldiness and frequent scarcity.

All things considered, no material seems so well adapted to practical business purposes as well-executed paper notes. The material is easy of procurement, reasonably durable, and easy to transport, count, and handle in large or small amounts. It is easy to conceal about the person, being small of bulk and light of weight; and, above all, when executed in the highest style of art, it is the most difficult to counterfeit, perhaps, of all moneys. On this latter point, Mr. Alexander Del Mar, in hisable work on The Science of Money, says:

The silk-threaded, distinctive-fiber paper, the water marks, the printing in colors, the highly artistic vignettes, the geometrical lathe work, the numbers, signatures, and other mechanical safeguards of the modern paper note, render it far more difficult to imitate than coin.

The importance of having a money above the arts of the counterfeiter is seen when we contemplate a few facts of history. All agree that money is valuable in proportion to limitation, and that an unlimited money must be ultimately a worthless money. A money that is easily counterfeited is practically an unlimited money. As examples in point, I mention the Continental currency of the American Revolution and the assignats of France. Both were largely counterfeited by the British Government. In each case the counterfeits are said to have far exceeded in amount the genuine notes when the point of worthlessness was reached.

The issuing of money is an act of sovereignty, and as such ought not to be delegated to individuals or to corporations. All money should be issued by the sovereign power of the nation. When so issued it is in effect a check on society for value, and like all checks, it must be redeemed. All money, whether metal or paper, must be redeemed. That is what money is for. It rests on the value that is behind it. But let us not be mistaken; let us not be misled by terms. Swapping dollars is no redemption. The first and primary redemption of money is receivability by the issuing power. It must be receivable in the revenues of the issuing government. That is primal redemption. A money so received in the United States and Great Britain has been and is uniformly good money. This primal redemption is like a man accepting his own checks in payment of dues to himself when he transacts business.

But there is a wider and more general redemption, which arises from the quality of legal tender. All perfect money is endowed with this necessary quality; and when so endowed all men advertise their eagerness to redeem such money with value. In effect, this is basing money—not on gold, not on silver, nor on any single commodity, but on all commodities. A money so based is precisely as good as the issuing government—no better, no worse. A money so based, though made of paper, never falls below gold while the issuing government remains intact and continues to collect and disburse revenues.

This rule has no exceptions. A paper money so founded and redeemed is always preferred to gold. Intrinsic or commercial value in the material which is endowed with the monetary function is not only unnecessary, but it should be further stated that such intrinsic value is a great and sometimes fatal objection to the money material. It gives the owners of the valuable money material a monopoly of the money of the country. If gold alone is used as money, then the amount of money in a given country can not exceed the amount of gold available in that country; and the holders of gold, by making money scarce or plenty at will, become masters of the situation. They occupy the position described by Mr. Garfield when he said: "Whoever controls the volume of the currency is absolute master of all industry and commerce." In the words of Senator Benton, speaking of the same dangerous class of men: "All property is at their mercy."

Money has been defined as a "measure of value." This is not strictly true. Values are measured by the combined judgments of the parties concerned, influenced by surrounding circumstances and conditions. In other words, "values are measured with brains." But money is a unit of account, and values are expressed in the money units. In the United States the dollar is the unit of account, and values are expressed in dollars and fractions of a dollar. Values having been fixed by the combined judgments of the parties in interest, then it is the office of money

to settle the account between the parties as a medium of exchange or means of payment. When I pay a man money for service I give him a general check on society for value. So far as I am concerned, he is paid, but in fact he has not yet received anything which satisfies his ultimate wants. He has only received a check on the general wealth of the country for what he desires. This check must be redeemed, and society is eager to redeem it with all the values of the country that are for sale. Hence the man to whom I paid the check is better paid than if I had given him some form of value which he did not specially need. If I had given him a horse or a cow, when he needed a suit of clothes, it would have been less satisfactory to him than the money, though of the same or even greater value. Though money may be without intrinsic value in itself, and should be so, yet, when fairly treated by law, it stands for all values; and the holder of it has a check or order on the entire country for his choice of all property that is for sale, to the extent of the value mentioned in his check or order, and all men are eager to accept or redeem his check, and give him choice of the values in their possession.

Money is a labor-saving machine. It is a bookkeeper and accountant, saving much time and expense when it floats in proper volume. For this purpose the material of money need not have value. If A owes B $10, and B owes A $10, the accounts balance, the parties shake hands, and the transaction is ended. If A owes B $10, B owes C $10, and C owes A $10, the parties, if brought together, may still see through the matter. The case is more complicated than before, yet the opportunity for cancellation exists, and the parties may shake hands, as before, without money payment. But suppose fifty men are involved. Then money must be used in some form, either to pay the entire debts or to settle the balances. Each owes another $10, but all are not aware of the facts. Let the parties be together with no money in their pockets, but, looking on the ground, one of them finds a $10 note. He asks for a claimant or owner of the money, but finds none. He then pays a debt of $10 to his neighbor standing near. His neighbor pays the money to another, to whom he is indebted. Debt-paying is the order of the day until fifty debts have been paid, when the money finally stops in the hands of the finder, who, owing no one present, puts the note in his pocket. I inquire, are those debts paid? Plainly they are. But suppose the holder of the money should drop it into the fire, and it should be consumed. Would that make any difference? Surely not. Whatever may become of that note, the debts are paid. But let us suppose that the holder of the bill, instead of dropping it into the fire, should carry it to a bank for deposit, and there find it to be a counterfeit. Now, are the debts paid? Let each reader decide for himself. Evidently it was a case of cancellation; and if the parties had known of the facts and relations of each to each, they might have clasped hands and the debts would have been settled, canceled, or paid, without the use of money.

Now, let us suppose that fifty men are present in a clearing house. The first man, A, hands his personal check to B, his creditor. (This is not final payment, as money is. A personal check may be called money of conditional payment.) The second man, B, owes C $40. He hands to C a $10 check, received from A, and his own personal check for $30. And so the payment continues until all are paid with these checks of conditional payment. Then comes cancellation and the payment of balances. In practice it is found that checks do not balance and cancel each other in full, as men do not owe each other the same amounts, but that there must be used in every clearing house some money of final payment; that is, money, or general checks on society at large, issued by the sovereign government or society in the concrete, which all are willing to accept as money of final payment. By the records of clearing-house business for long periods it is found that, on the average, the amount of money of final payment necessary to settle balances is about 5 per cent of the business done.

This is not much, but it is absolutely necessary to prevent bankruptcies. Ninety-five per cent of the business is done with individual checks and drafts, 5 per cent with money of final payment. In view of these well-settled facts some flippant writers and speakers have taken the ground that all business may be done with individual checks and drafts, and that the volume of actual money cuts no figure. This is not correct. The 5 per cent of actual money is small, but it is absolutely necessary to prevent bankruptcies. The entire business is based on this 5 per cent; and for every dollar of this money which may be withdrawn from circulation $20 of business must stop. This shows the importance of watching closely the volume of money of final payment. Even a small contraction deranges business, causes bankruptcies, and reduces the volume of the business of the country.

Money is a war power. There are two great war powers known among civilized nations—the sword and the purse. By the sword is meant that physical force which overcomes the enemy in the field. The purse is that power which equips, subsists, recruits, and pays the fleets and armies. Among savages there is much of the sword and little of the purse. As a rule, the purse power increases among nations as civilized methods are adopted, until ultimately most of the purposes of war may be attained with only a show of physical force. Money, as a war power, need not have intrinsic value. It has been proven time and again that modern wars can not be prosecuted with intrinsic money as a support to the armies.

I call attention to the following examples of money as a war power:

1. The history of the Republic of Venice is a history of continual war on land and sea. The Republic of Venice was the great commercial nation of the earth for centuries, and its maritime wars were necessary for the protection of its extended commerce in every quarter of the known world. In the year 1171 intrinsic money utterly failed to meet the monetary requirements of the republic, and a book credit or inscription money was adopted. This inscription money had no material value whatever. It was not redeemable in coin or bullion, and there was no pretense that it would be so redeemed; but it was receivable in the revenues of the Government, and legal tender for all debts. The legal-tender quality, in the language of Dr. Franklin, was "greater advantage" than coin redemption. For six hundred years that paper-credit money ruled 20 per cent above coin. During all that time there was not a money panic in the country. Venice became and remained the center of commerce and the clearing house of the world. There is not a line on record that any citizen of Venice was dissatisfied with their financial system. This is the longest and most satisfactory continuous financial experiment recorded in history, and it proves very conclusively the superiority of functional, or fiat money, over intrinsic money in times of war.

2. At the beginning of the American Revolution coin, or intrinsic money, failed to materialize. It was not to be had. It was an utter failure. Our fathers had no resources but paper. They had no government capable of issuing a proper money of any sort, but they did the best they could. They could print paper and call it money, but they could not receive it in the revenues of the Government, because the old Confederacy did not collect revenues. They could not endow it with the quality of legal tender, because the old Confederacy was not a sovereign government. They could not even make it redeemable in coin, as there was no coin to be had. Coin is always absent when most needed. But the patriot fathers had wit as well as patriotism, and they issued the best money they could. It was rudely executed and easily counterfeited, hence in practice must be unlimited in amount. People were expected to take it as a matter of patriotism. This was the only foundation of that Continental money; yet for five years it met the requirements of the country, and Mr. Albert Gallatin afterwards spoke of it as follows:

> The paper money carried the United States through the most arduous and perilous stages of the war, and, though operating as a most unequal tax, it can not be denied that it saved the country.

If the American Colonies had depended on coin money as a war power they would have remained subject to the tyranny of King George. American liberty would never have been born.

3. In the year 1797 money of intrinsic value failed in England. The bank paid out its last silver sixpence, and the nation was on the verge of ruin. A paper money not redeemable in coin was adopted, which met every monetary requirement for twenty-five years, through all the terrible trials of the wars of Napoleon. It carried the country triumphantly through every crisis, conferring on the empire a prosperity and glory unequaled in ancient or modern times. On this subject Sir Archibald Alison says:

> It is in these moments of public and private suffering that the paper circulation steps in to sustain public and private credit during the interval when national industry has been paralyzed by the disappearance of the precious metals from circulation. * * * But for its aid the empire would certainly have been destroyed. * * * Had bank notes been rendered scarce when gold disappeared, the nation and all its trading classes would have been bankrupted, and we should long since have been a province of France.

4. In the year 1813, during the wars of Napoleon, gold utterly failed to meet the needs of the allied armies on the Continent of Europe. England, Russia, and Prussia issued a joint paper money, which supported the armies, broke the power of Napoleon, and saved the Continent. The late Judge Martin, in his work on The Money of Nations, says:

> It met the emergency as coin could not.

Mr. Alison says:

> It passed as cash from Kamchatka to the Rhine, and brought the war to a successful issue. * * * Without this paper money the vast armaments of the allies would have been dissolved for want of funds for their support.

5. During the war of the rebellion, when gold left the field,

there were three kinds of nonmetallic war money, which stood the shock of arms to the end. The revolutionary government of the South issued the best paper possible for such a government. It was precisely as good as the issuing power—no better, no worse. It was a brave money—far better than cowardly metal. It staid with the armies, and fought with them to the bitter end, and went down with them on the field of battle. That paper money of the South was rudely executed and easily counterfeited. This, of course, made it practically impossible to limit the volume in circulation; and, as already stated, an unlimited money is a worthless money.

Money is valuable in proportion to limitation. If it is possible, the counterfeiters will inflate the money to the point of worthlessness, as in the case of our Continental currency and the French assignats. In the North there were two sorts of paper money. The first sixty millions were receivable in the revenues of the Government the same as coin, and legal tender for all debts. That money was preferred to coin during the war, and as long as it circulated. Another class of paper money issued during the war, known as greenbacks, was not receivable for duties on imports nor for interest on the public debt. It was like any other useful machine with a number of important bolts left out. It went below par as compared with coin, or as compared with paper without these legal disabilities. It sometimes went below 50 cents on the dollar because of its legal disabilities, and from no other cause. Yet such as it was, all the Shylocks and the armies of the South were beaten by it at one and the same time. All agree that the greenback saved the life of the nation. With gold only, the armies would have been paralyzed and anarchy would have prevailed. It would have been a contest of swords after the manner of savages, with little union or adhesion on either side.

Money is the instrument of association. Without money there is no cohesion, and disintegration must ensue. A perfect money will remain at its post in times of danger. Gold money will not do this.

Mr. Speaker, I have shown that gold is not a "sound and stable currency." I have shown that silver is less fickle and far safer than gold. I have shown that bimetallism is a better basis for "a sound and stable currency" than either gold or silver alone, and, finally, I have shown you a still safer, sounder, and more stable money system, not based on gold alone, or silver alone, or even on gold and silver combined, but on all commodities of commerce. Money does not depend on the value of the monetary material, but on the value that is behind it—a value always plentiful and ready for redemption purposes, not in the hands of unwilling Secretaries, nor in the vaults of banks of doubtful solvency, but in the hands of the people themselves, anxious and desperately eager to redeem all lawful money with all the values of the salable commodities of this great nation. Such a money, founded on all commodities, is like a pyramid standing on its base, instead of on an apex composed of a single, scarce, and dear commodity, subject to theft, and to all the fickle and wily devices of the gold gamblers. Such a money is precisely as good as the issuing government, no better—no worse. Such a money will stand by the people in times of peace and prosperity, and will fight for the government in time of war. Gold will not do this. While the Roman people used a numerary money printed on copper, without intrinsic value, they maintained their liberties, and Rome was a republic. When they adopted intrinsic money, of shrinking volume, the republic gave place to the empire, and the nation entered the thickening shadows of its decadence.

A nonlegal paper based on coin is never reliable, but is always subject to discount or failure when the strain comes. Between the years 1812 and 1860 the United States Government authorized twenty issues of Treasury notes, receivable in the revenues of the Government, but not otherwise a legal tender. Those Treasury notes were uniformly preferred to coin. During those same years (from 1812 to 1860) numerous experiments were made with nonlegal coin-basis bank paper, with an average of failures about once in seven to ten years. In 1860 the failure of gold-basis paper was universal and complete. Gold itself left the field, and legal-tender Treasury notes were necessary to meet the crisis and save the country.

The Treasury notes, receivable in the revenues, was the favorite money of the early leaders of your party, Mr. Speaker, and all I have said or shall say on this branch of the subject was formerly good Democratic doctrine. I am not proposing a new and untried scheme.

In the years 1837-'38 John C. Calhoun, of South Carolina, discussed this matter of government paper very fully in the United States Senate. Mr. Calhoun said:

> I now undertake to affirm positively, and without the least fear that I can be answered, what heretofore I have but suggested—that a paper issued by government, with a simple promise to receive in all dues, leaving its creditors to take it or gold and silver, at their option, would, to the extent to which it would circulate, form a perfect paper circulation, which could not be abused by the Government, that would be as steady and uniform in value as the metals themselves. I shall not go into the discussion now, but on a suitable occasion I shall be able to make good every word I have uttered.
>
> * * * * * * *
>
> We are told there is no instance of a government paper that did not depreciate. In reply I affirm that there is none, assuming the form that I propose, that ever did depreciate. Whenever a paper receivable in the dues of a government had anything like a fair trial it has succeeded.
>
> * * * * * * *
>
> It may throw some light on this subject to state that North Carolina, just after the Revolution, issued a large amount of paper, which was made receivable in dues to her; it was also made a legal tender, but which, of course, was not made obligatory after the adoption of the Federal Constitution. A large amount—say between four and five hundred thousand dollars—remained in circulation after that period, and continued to circulate for more than twenty years at par with gold and silver during the whole time, with no other advantage than being received in the revenues of the State, which was much less than $100,000 per annum.—*Money of Nations*, pages 64, 65.

Mr. Speaker, I offer no new experiment. This subject is too important for the permission of expiricism. New experiments are hazardous. They may fail. Old experiments which have uniformly failed are criminal. Gold-basis paper is an old experiment which always fails when the strain comes. Government paper, legal tender and receivable in the revenues, is an old and well-tested system. It is preferred to coin, and never fails while the issuing government stands.

Mr. E. G. Spaulding, a banker in Buffalo, N. Y., in time of the war, chairman of the Subcommittee on Ways and Means in 1861, 1862, and 1863, and known in financial history as "The Father of the Greenback," has discussed commodity redemption of money as follows:

> Every time a hundred-dollar bill passes from one person to another, it is a practical redemption of it by the person who takes it. Every time a merchant at Chicago pays to a farmer $500 in national currency for a carload of wheat, the farmer by the operation redeems such national currency, not in greenbacks, nor in gold, but in a commodity better than either, namely, wheat, a staple article useful to all. So every merchant in New York that sells a bale of cotton goods and receives his pay for it in currency, redeems such currency, not in the way that banks redeem it, but in cotton goods, which is far better, because it performs the true functions of money by facilitating the legitimate sale of commodities. So every time that a merchant or manufacturer pays his internal-revenue tax to the United States collector in national currency, the Government redeems such currency by receiving and discharging such tax. So every mechanic or laborer that receives national currency for his services, redeems such currency by the labor performed. So it will be seen that just so long as the national currency is practically redeemed every day in its passage from hand to hand in the payment of commodities and services, and in the ramified operations of trade and business both with the Government and the people whose operations it greatly facilitates, there is not the slightest necessity for resorting to the expensive and risky operation of assorting and sending it home for redemption.—*Spaulding's History*, Appendix, page 10.

Mr. Speaker, we all favor a "sound and stable currency," and believe that the life of the nation depends on the creation and maintenance of such a circulating medium. Now, sir, in the light of the facts of history and uniform human experience, I propose such a currency. I propose a currency of gold and silver coin, "of the standard weight of July 14, 1870," said coin to be supplemented by United States Treasury notes, all to be coined and issued by the General Government, and made legal tender for all debts and taxes. That, sir, is a simple, "sound and stable currency," old and well tried, and when submitted to the severest tests it has uniformly proven successful. We must retain the coins of gold and silver, because they are necessary to pay all monetary obligations which call for coin. These should be supplemented with Treasury notes, because of the convenience of paper, and because the coins can not be relied on to furnish the proper volume of currency needed by a prosperous and growing nation. "A sound and stable currency," like the one I propose, would not require the services of the "extra session" doctor to "restore confidence."

With such a system in operation, our finances would cease to be as now—a mere "confidence game," set up by the Wall street gamblers to entangle and rob the people. Men would do business with money instead of confidence—commerce would become more of a certainty and less a game of chance.

The supplemental paper herein advocated is necessary to insure the prosperous employment of the people. The full employment of labor, the encouragement of enterprise, and the prosperity of industry, trade, and commerce depend very largely on what are known as time contracts. These in their turn depend for their success on a steady money market; otherwise trade and industry become games of chance, in which timid capital will not venture—the result being that labor is not given profitable employment.

The merchant who buys goods on time makes a time contract. If the money volume declines and prices fall, his profits are reduced or cut off entirely. The farmer who plants a field of corn enters into a time contract, investing labor and capital. If prices are falling through currency contraction, his expenses may prove greater than the market value of the crop when grown. If the stock-raiser invests his money in a herd of young

animals, which require one, two, or three years to fit them for market, he incurs extra hazard in his enterprise, unless he is sure that the country has "a sound and stable currency," which will endure until the day of sale. The manufacturer who invests his money in any industry does so with greater confidence and certainty if he can depend on a safe, full, and even flow of money, insuring reasonable and stable prices.

If the enterprises I have named are safely pursued and reasonably profitable, wage laborers are usually employed and well paid. But, if these enterprises are rendered unprofitable or extra hazardous, by reason of an unstable money volume and declining prices, they must cease, and labor must remain unemployed.

Now, all history proves, from the days of the Roman Augustus to the present time, that metallic money alone can not maintain full and equal prices in a great and growing nation. The experiment was tried by the Romans. It failed and the Empire fell. As the gold and silver mines of Greece and Spain failed in productiveness, prices in Rome fell, lower and lower. Every industrial enterprise was a failure, laborers were out of work and starving; turbulence and rapine, the strong preying upon the weak, became the only means of life. Society became disintegrated. The population of Europe fell off one-half, and the suffering of mankind was greater than the imagination of man can conceive. It is not possible for a great and growing nation to depend with certainty on the irregular and declining productions of the gold and silver mines of the world for "a sound and stable currency," which shall maintain a full and even flow of prices, subject only to the supply and demand of commodities. A metallic currency, for the sake of argument, may be reckoned sound, but if it can not prevent the perpetual decline of prices it can not be rightfully considered stable. However sound the timbers of a ship may be, if in a sinking condition, inevitably carrying down with it all on board, it can not be called a safe or "stable" vessel.

For twenty years the financiers of this country have been seeking a gold basis. During these same years we have had declining prices. In spite of the indomitable energy and industry of our people, business has not grown in proportion to the increase of population. The New York clearing house shows more business in 1869 than in 1892; more in 1881 than in any year since. Bankruptcies and debts have increased, and at this moment men in financial circles are in distress, crying out for help. The Secretary, in imitation of his Republican predecessor, in his monthly reports, tries to cover up the fact of shrinking money, and in so doing deceives the unsuspecting; but among intelligent men he is covering himself with infamy. A recent dispatch says:

A. R. Chisholm & Co., bankers, New York, state in their bank circular dated May 29, 1893:

> We quote that Right Hon. Mr. Lidderdale, of the Bank of England, agrees with our views, so often expressed during the past ten years in our market letters, that this country needs more legal tenders. France, a stationary country, has $60 per capita. The Director of the Mint places the per capita in the States at $22, but two hundred millions of gold have disappeared and no estimate is made of the loss of paper and coin during the past twenty-five years. It is known that silver wears out and is renewed once in thirty years. We claim that, deducting amounts in the United States Treasury and banks held as reserve and losses in paper currency and coins, gold exports and hoardings, this country is down to the actual famine circulation of less than $6 per capita, counting our population at sixty-five millions.

This statement corroborates the estimates of the late Senator Plumb, who was president of a national bank; and Mr. N. A. Dunning, statistician, in Washington, D. C., and others. And on no other ground can the present financial distresses be accounted for. "It is a money famine and nothing else." Gold can not be relied on to furnish "a sound and stable currency." Both the metals together can not do it, the "eminent financiers" of New York to the contrary notwithstanding.

Mr. Speaker, the only hope for the industrial and commercial prosperity of this country is a full and even flow of legal-tender Treasury notes, to supplement and to take the place of the coins when the money metals are drawn off to other countries through adverse balances of trade.

No Democrat should object to the legal-tender Treasury note. That was the money of Jefferson, Jackson, and Calhoun, and of the long line of Democratic statesmen from 1812 to 1860. During those years of Democratic ascendency twenty issues of Treasury notes were authorized and sent out. They were receivable in the revenues of the Government, and were uniformly preferred to coin. In 1846, in the heart of Mexico, the United States Treasury note was valued at 6 per cent above coin. For fifty years this Democratic paper money was deemed good money (as good as coin, or next to coin) by all good Democrats. On various and sundry occasions it has saved the Government from difficulties and pending bankruptcy when coin failed. In the sixties, though badly treated by law, it saved this great nation from disintegration. And, at this moment the United States legal-tender Treasury note, if used to supplement the coins and maintain prices, will prove a sure means of financial, commercial, and industrial salvation. This is the doctrine of "the inexorable laws of finance and trade," which can not be defied with impunity. No political party can long stand in opposition to these laws. Even the gold gamblers of Wall street can not long resist them.

The American people are kindly, good-natured, and long suffering. In the language of the great Jefferson, they are not disposed to right their wrongs as long as their wrongs are sufferable. But, sir, with all due respect toward those who differ, candor compels the statement that with twenty to thirty billions of monetary obligations hanging over their heads in various forms, largely resting as mortgages on their homes, the people of these United States will never submit to perpetual decline in the prices of the products which they must sell for money to pay debts. Such decline now in progress must continue if the vain effort to reach and maintain a single gold standard is persisted in. In Europe, with half the able-bodied men under arms to coerce the others, the attempt may be feasible, but in a great and free Republic, unaccustomed to physical coercion, with the ballot box in reach, the single gold standard can hardly be reckoned as a permanent possibility.

This money question may be made very plain by a simple statement of an arithmetical example. Thus:

Divisor,	Dividend,	Quotient,
Commodities)	volume of money	(prices.

The people and their commodities are the divisor in the problem which we are solving in this country. The volume of money afloat is the dividend. The quotient is the general average of the prices of property. The divisor is continually increasing, through the increase of population and the energy and enterprise of our people. The dividend decreases through the various devices of the gamblers in cornering and suppressing money. Is it any wonder that the quotient is less and less from day to day, in the form of declining prices? There is but one practical remedy, namely, add money to the circulation as the people and their transactions increase. Increase the dividend as the divisor increases, that the quotient may remain the same. This can only be done by supplementing the coins with legal-tender Treasury notes.

THE BANK-NOTE SYSTEM.

Mr. Speaker, the gold men, as I understand them, do not claim that gold shall be the only circulating medium in the hands of the people, but that it should be the basis of a bank-paper system redeemable in gold. In other words, they desire to supplement the gold coin with bank paper, and for this purpose very generally favor the present national banking system in preference to the old Democratic Treasury-note system, which I have been discussing and advocating. Let me call the attention of the House to this gold-basis paper system known as the national banking system. And, first, I desire to say that President Cleveland has wisely and earnestly warned his party and the country against the evils of "paternalism." In his inaugural address last March Mr. Cleveland said:

> Closely related to the exaggeratd confidence in our country's greatness which tends to a disregard of the rules of national safety, another danger confronts us not less serious. I refer to the prevalence of a popular disposition to expect from the operation of the Government especial and direct individual advantages.
>
> The verdict of our voters, which condemned the injustice of maintaining protection for protection's sake, enjoins upon the people's servants the duty of exposing and destroying the brood of kindred evils which are the unwholesome progeny of paternalism. This is the bane of republican institutions and the constant peril of our government by the people. It degrades to the purposes of wily craft the plan of rule our fathers established and bequeathed to us as an object of our love and veneration. It perverts the patriotic sentiments of our countrymen, and tempts them to pitiful calculation of the sordid gain to be derived from their Government's maintenance. It undermines the self-reliance of our people, and substitutes in its place dependence upon governmental favoritism. It stifles the spirit of true Americanism and stupifies every ennobling trait of American citizenship.
>
> The lessons of paternalism ought to be unlearned and the better lesson taught, that while the people should patriotically and cheerfully support their Government, its functions do not include the support of the people.

The above sentiments, fully and fairly interpreted and energetically enforced, would place Mr. Cleveland's administration alongside of the administration of President Jackson, and inaugurate a policy which formerly embalmed in the hearts of the American people a love for Democratic principles, and which gave to that party five national victories in seven political campaigns prior to 1860.

That condemnation of "protection," which means the taxing of one man or class of men for the benefit of another, is just and timely. But, sir, I am of the opinion that, in full justice to our people, it should have a wider meaning than a mere reference to the tariff. The wildest tariff protectionist seldom asks for a protection of more than 100 per cent. To ask for 200, 300, or 600 per cent protection, and for freedom from local taxation

besides, on the bulk of the investment would excite derision and special condemnation. That being so, I desire to call attention to one particularly favored calling in this country, which is the special pet of the Government—a business devoted almost entirely "to pitiful calculation of the sordid gain to be derived from their Government's maintenance."

I refer, Mr. Speaker, to the national banking system. The investment of capital in United States bonds is considered a good and safe one; so much so that competition for their ownership has carried them to a premium. When these bonds have been purchased by a banking corporation, they are used as security for currency to the amount of 90 per cent of their face value. In doing this the owner of the bonds does not sacrifice any part of his interest income from the bonds. His semiannual interest is regularly anticipated and paid to him in gold, usually one year in advance. The currency advanced to the corporation costs the corporation 1 per cent per annum as an offset for the cost of printing the notes, for renewing them as they become mutilated, and "in lieu of all other taxes." That is the entire cost of the notes to the corporation. The banks are authorized to loan the currency at the legal rates of the respective States in which the banks are located. These rates vary from, say, 6 to 12 per cent per annum, compounded every thirty to ninety days. The gain by compounding will partly or wholly balance the idleness of the lawful reserves required under the law. So, then, the net result of the operation is approximately this:

The currency which the Government furnishes to the banks costs them 1 per cent per annum. They loan it at six to twelve times that rate, through favor of the Government. This is a practical protection to the important monopoly of furnishing currency to the people at from 600 to 1,200 per cent.

No man in any legitimate business has such an enormous "robber tariff" protection as that! It can scarcely be doubted that such paternalism "degrades to the purposes of wily craft the plan of rule our fathers established and bequeathed to us as an object of our love and veneration."

This important matter can not be viewed too carefully from every standpoint. Suppose that, under the laws as they now exist, five men shall become organized into a corporation for business purposes. They unite their funds and purchase $50,000 of United States bonds with the intention of borrowing money from the United States Government at 1 per cent per annum, on twenty years' time. Their agent proceeds to Washington, and having found the office of the Secretary of the Treasury, the following dialogue might naturally occur:

Agent: "You have money to loan, I believe, Mr. Secretary, on United States bonds at 1 per cent per annum?"

Secretary: "Plenty of it. How much do you want?"

Agent: "I have $50,000 in Government bonds which I desire to deposit as security for a loan of $45,000 in currency to be used by our corporation in opening and operating its farming lands."

Secretary: "Stop! Stop! You need say no more. This Government has no money to loan for farming purposes. That would be 'paternalism,' such as President Cleveland condemns in his inaugural address."

Agent: "I am surprised, Mr. Secretary, that I can not borrow money for agricultural purposes; but, since the lands our corporation owns are underlaid with valuable mineral deposits, if I may be allowed to use the money for the purpose of opening and working our mines it will answer our purpose quite as well."

Secretary: "You can not, sir. The Government has no money to loan for mining purposes."

Agent: "Can we have this 1 per cent money, then, for the purpose of operating the plant in which our ores will be refined by the use of coal from our mines? If not, by your leave, we will take the loan for the purpose of building a steamer in which to transfer the products of our mines and farms to distant markets."

Secretary: "You can not have the money for any such purposes. A law authorizing such loans as you mention would be one of those class laws, 'the unwholesome progeny of "paternalism"' which is 'the bane of Republican institutions.' The doctrines of paternalism, which you seem to have imbibed, 'ought to be unlearned, and the better lesson taught, that while the people should patriotically and cheerfully support their governmen, its functions do not include the support of the people.'"

Agent: "Thank you, Mr. Secretary, for your kind advice. I know that I and my people are not very wise, but by keeping ourselves in a receptive frame of mind, we may learn something. Perhaps I may venture to assert that just now I am learning very fast. The information you have just imparted gives me a wonderful insight into the philosophy of government. The members of our corporation knew of an instance wherein a certain banking corporation was granted a loan of $45,000 in currency for twenty years, at 1 per cent per annum, on deposit of $50,000 in United States bonds as security, and we innocently supposed that our corporation, for the same security, would be granted an equal sum to be used in industrial pursuits which will give employment to labor and develop the resources of the country."

Secretary: "That is entirely a different matter, sir. For banking purposes you can have all the money you desire (up to 90 per cent of the bonds you deposit) at 1 per cent per annum, on twenty years' time. I will pay you gold interest on the face value of your bonds, while they are on deposit, one year in advance, exempt your currency from all State or local taxation, and renew your currency when old bills become mutilated, without extra charge. Your bonds are already exempt from all taxation. Your currency, which costs you 1 per cent here, can be loaned in most of the Western States at 10 per cent, compounded from four to twelve times per annum. Your taxes will be light, and the profits on the cost of your currency will be approximately ten dollars to one; or, a protection of about 1,000 per cent. No business in this country is guaranteed by the Government such profits as banking."

Agent: "Again, Mr. Secretary, I thank you. But is there no paternalism about this?"

Secretary: "You will get all needed information regarding details of the loan from the Comptroller of the Currency, who will, in due time, forward you the money. I will be much pleased to see you at any time you are in Washington. Good day, sir."

Mr. Speaker, do you see any "paternalism" in the national banking system? Do you see in it any "bane of republican institutions, and constant peril of our Government?" Do you see anything in it which "undermines the self-reliance of our people, and substitutes in its place dependence upon governmental favoritism?"

I ask these questions with the greater freedom because prominent Democrats, in times past, have had decided opinions on this banking question and have freely recorded them, although these institutions in their day were less powerful and far less dangerous than the banking system and institutions of the present.

Thomas Jefferson, the first great Democrat in this country, expressed himself on various occasions substantially as follows:

Bank paper must be suppressed and the circulation restored to the nation to whom it belongs.

The power to issue money should be taken from the banks and restored to Congress and the people.

I sincerely believe that banking establishments are more dangerous than standing armies.

I am not among those who fear the people. They, and not the rich, are our dependence for continued freedom. And to preserve their independence we must not let our rulers load us with perpetual debt.

Put down the banks and if this country could not be carried through the longest war against her most powerful enemy without ever knowing the want of a dollar, without dependence on the traitorous class of her citizens, without bearing hard on the resources of the people or loading the public with an indefinite burden of debt, I know nothing of my countrymen.

The first real contest with the bank power occurred under the administration of President Jackson, who in one of his messages described the case as follows:

It being thus established by unquestionable proof that the Bank of the United States was converted into a permanent electioneering engine, it appeared to me that the path of duty which the executive department of the Government ought to pursue was not doubtful. As by the terms of the bank charter no officer but the Secretary of the Treasury could remove the deposits, it seemed to me that this authority ought to be at once exerted to deprive that great corporation of the support and countenance of the Government in such a use of its funds and such exertion of its power. In this point of the case the question is distinctly presented, whether the people of the United States are to govern through Representatives chosen by their unbiased suffrages, or whether the power and money of a great corporation are to be secretly exerted to influence their judgment and control their decisions. It must now be determined whether the bank is to have its candidates for all offices in the country, from the highest to the lowest, or whether candidates on both sides shall be brought forward, as heretofore, and supported by the usual means.

Thomas H. Benton, in the United States Senate, declared himself as follows:

The Government itself ceases to be independent, it ceases to be safe when the national currency is at the will of a company. The Government can undertake no great enterprise, neither war nor peace, without the consent and coöperation of that company: it can not count its revenues six months ahead without referring to the action of that company—its friendship or its enmity, its concurrence or opposition—to see how far that company will permit money to be scarce or to be plentiful; how far it will let the money system go on regularly or throw it into disorder; how far it will suit the interest or policy of that company to create a tempest or suffer a calm in the money ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices to make and break fortunes; to bring the whole community upon its knees to the Neptunes who preside over the flux and reflux of paper. All property is at their mercy. The price of real estate, of every growing crop, of every staple article in the market, is at their command. Stocks are their playthings—their gambling theater, on which they gamble daily with as little secrecy and as little morality and far more mischief to fortunes than common gamblers carry on their operations.

The sad experiences of the country in its struggle with the bank power in the earlier days of the Republic, and the bold and patriotic teachings of the great Democrats of those times, instilled into our people a just and prudent jealousy toward the

banks, which usually insured the success of the Democratic party at the national elections. President Jackson began his memorable contest with the bank power during his first term. His second election was on the bank issue. His signal and glorious victory showed that the people were with him. He declared in his fight that a national bank is unconstitutional and dangerous to liberty. And at the polls the people declared that Jackson was right.

Martin Van Buren was elected in 1836, because it was understood that on this bank question he would "walk in the footsteps of his illustrious predecessor." Seven times the people voted on this bank question, with the expressed or implied understanding that the Democratic party was in deadly hostility to the existence of a national bank, and was opposed to the mixing of the Government money with the funds of banking institutions. Five times at those seven elections the people elected the Democratic ticket on the antibank platform. In 1860 and since that time, the Democratic platforms have expressed no hostility to national banks. Since 1860, the Democrats have been beaten seven times in nine. And a new antibank party is organizing and coming to the front to renew the fight of the old Democrats on the money question.

To show the form and nature of the contests in the national elections referred to, I quote from the Democratic platforms of 1852 and 1856, the following resolutions:

Resolved, That Congress has no power to charter a national bank; that we believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power, and that above the laws and will of the people; and that the result of Democratic legislation in this and all other financial measures upon which issues have been made between the two political parties of the country have demonstrated to candid and practical men of all parties their soundness, safety, and utility in all business pursuits.

Resolved, That the separation of the moneys of the Government from banking institutions is indispensable for the safety of the funds of the Government and the rights of the people.

Mr. Speaker, that was the emblazonry on the proud and victorious banner of the ancient Democracy hoisted by the immortal Jackson at the close of the most memorable political contest in our history. Through seven Presidential campaigns it was carried aloft to almost certain victory, winning the day by the approval of the people five times in seven. All this, the ancient leaders of your party and their followers did, with that hydra, chattel slavery, gnawing at their vitals, and on their shoulders that pile of tigers—the moneyed institutions of the East.

Speaking of Jackson's victory over the national bank and its branches, Senator Benton said:

She is not dead, but holding her capital and stockholders together under a State charter, she has taken a position to watch events and to profit by them. The royal tiger has gone into the jungle; and, crouched on his belly, he awaits the favorable moment of emerging from his covert and springing on the body of the unsuspicious traveler.

During the late war, when this country was in a death struggle to avert dismemberment, and while the minds of the people were intensely occupied with that contest, the "favorable moment" came; and for thirty years the progeny of that "royal tiger," in the form of 3,000 whelps, have had this great nation by the throat, fattening on its lifeblood. All the experiences and teachings of the ancient Democracy on this subject have been ignored and forgotten. Millions and millions of public moneys have been placed in the banks without interest, to be handled and loaned by them at a profit, from the people's earnings. Hundreds of millions of dollars of national currency have been furnished the banks at mere cost of printing, by means of which they have fattened from the labor and business of the country. Bankers and bank presidents, and bank stockholders have occupied the highest positions in the Government; and so haughty and powerful have they become, that they now make money plentiful or scarce at will, as described by Senator Benton. The Government itself ceases to be independent and every man's fortune and property is in their hands. They can make a special session of Congress necessary at any moment they please.

The President of the United States must not only obey their insulting commands, but he must do it in haste. If the banks say a special session in September is too late, it must be in August, then the Chief Magistrate of this Republic, cap in hand, calls the session in August.

But why should Congress meet at all? Have not these, our masters, long ago published that—

The machinery is now furnished by which, in any emergency, the financial corporations of the East can act together on a single day's notice, with such power that no act of Congress can overcome their decisions.—*New York Tribune.*

Of course it is in the interest of temporary peace for Congress to enact the present will of the banks into law, but it is seldom long until new demands are made. In case Congress should prove refractory and should desire to enact laws in the interest of the people, the banks usually coerce compliance with their wishes.

Mr. Speaker, should it be claimed that our present highly protected banking system is unlike the old national bank of Nicholas Biddle fame, and hence is harmless, I ask attention to the testimony of some of our later statesmen on the subject. Hon. D. W. VOORHEES, United States Senator from Indiana, and a leading Democrat of the nation, on June 19, 1892, said:

A brief glance at the conduct of the banks during the last year and a half is all that I can indulge in at this time, but it is sufficient to prove the truth of what I say.

In the closing days of the last Congress and of the last Administration the banks precipitated an issue upon the people which ought not to be forgotten on an occasion like this: an issue so full of danger to constitutional liberty that it ought to be faithfully remembered now that they are asking a new and indefinite lease of power.

It is now twenty years ago that this Government first engaged in building up, fostering, and encouraging the present vast and overshadowing system of national banking.

No favor ever demanded by the banks has ever been withheld, no privilege denied, until now they constitute the most powerful moneyed corporations on the face of the globe. Congress has heretofore on nearly all occasions abdicated its powers under the Constitution over the finances of the banks, except when called upon to legislate in their favor. They have demanded the violation of legislative contracts with the people, and the demand has been granted, whereby their own gains and the people's burdens have been increased a thousand fold beyond right and justice. They have demanded the remission of all taxation on their bonds, and it has been conceded, thus leaving the poor to pay the taxes of the rich. They have been fortified in their strongholds of moneyed caste and privilege by double lines of unjust laws, supplemented with here a redoubt and there a ditch, to guard them from the correcting hand of popular indignation, until now, deeming themselves impregnable, they bully and defy the Government.

* * * * * * *

Sir, with full and unrestricted power over the volume of the currency and, consequently, over all values conceded to the banks, together with ample machinery by which in an emergency they can defy the passage of any act of Congress, what is left to the Government except an abject submission? This Government could not, to-morrow, go to war in defense of its flag, its honor, or its existence without first asking permission to do so of the great financial corporations of the country. If there was an invading force on our soil this hour, Congress could not with safety or show of success declare war to repel it without first supplicating cowardly and unpatriotic capital, engaged in banking, not to contract the currency, withhold financial aid, and leave the country to starve. In fact, there is no measure of this Government, either in peace or in war, which is not wholly depending on the pleasure of the banks.

This Government is at the mercy of its own creatures. It has begotten and pampered a system which is now its master. The people have been betrayed into the clutches of a financial despotism which scorns responsibility and defies lawful restraint. * * *

The methods adopted by our present national banking system are also similar to those pursued by the United States Bank in its rebellion against the Government. The contest between the United States Bank and the United States Government commenced in 1829 and terminated in 1836, covering a period of seven years, as long as the American revolution, and involving results as important to the rights and power of the people to govern themselves. The charter of the bank was to expire in 1836, and Andrew Jackson, who was a magnanimous foe, gave notice in 1829 that it should never be renewed with his consent. The war at once opened. A torrent of incessant abuse was at once poured on General Jackson and his supporters by the bank and its stipendiaries. The newspapers of that period show that he and his followers were all stigmatized as hopelessly ignorant on the subject of the finances and bent on destroying the public credit. These charges have a familiar sound and are in daily use now, as they were fifty years ago, against all who dare oppose the insolent pretensions of the banks.

Senator Benton has told us the manner of the fight of the bank on President Jackson and his supporters:

Both he and they during the seven years that the bank contest in different forms prevailed received from it, from the newspapers and periodical press in its interest, and from the public speakers in its favor of every grade, an accumulation of obloquy only lavished upon the oppressors and plunderers of nations—a Verres or a Hastings. This was natural in such an institution.

CONCLUSION.

Mr. Speaker, I must now close with some thoughts arising from the foregoing discussions, and with a cursory touch on a few of the points not mentioned.

In all seriousness, my dear sir, can we not see that our hidebound, fluctuating, costly, and insufficient gold-basis system is "an insidious infirmity that threatens our national vigor?" Is it not the "unheeded disease" which may doom our country "to a sudden collapse?" The President wisely suggests that we have grown "heedless of those laws governing our national health, which we can no more evade than human life can escape the laws of God and nature."

That is a bold, strong, and true statement. We are defying those laws which Rome defied when she adopted a metallic system of shrinking money and falling prices and entered the dark shadow of national decay and ultimate disintegration. We are defying those laws which England defied when she adopted gold-basis money with declining prices, bringing distress and starvation on the common people, and compelling four-fifths of her happy freeholders to abandon their hearthstones. We are defying the same laws which Germany defied when, at the close of the Franco-German war, intoxicated with a thousand millions of indemnity money, she adopted the gold-basis system. Consequent falling prices doomed her people to serfdom intolerable, with irredeemable mortgages resting on 80 per cent of the German real estate. We indorsed the policy of defying "the laws of God and nature" twenty years ago when we adopted the gold standard, producing shrinkage of money and falling prices. Our

finances have been in the hands of the currency doctors ever since, constantly growing worse, until now the surgeons are crying out for help to save themselves, amid the death struggles of their prostrate victim. Our farm mortgages mount into the billions: business is everywhere bankrupt, and labor is starving, as in England when troops were required to compel men, women, and children to starve in peace.

We all agree that "a sound and stable currency" is "vital to our supremacy as a nation." That being true, Mr. Speaker, how can we favor the most fluctuating and insufficient currency known in all history? The President condemns class legislation and "paternalism," yet I nowhere find him condemning that national banking system, than which no more glaring example of paternalism can exist—that system which was condemned by all true Democrats and by the people of this great country five times in seven elections prior to 1860.

The President expresses himself as very solicitous in regard to the degradation of the money "paid to toil." He expressed very earnestly the same just solicitude in his letter of February 27, 1885. I am glad to know that this is an abiding sentiment with him. Every patriot should be solicitous to do justice to the laboring people, because they are the very foundation of the life and prosperity of the Republic. Let me mention to him a bit of news:

For twenty years it has been the custom to furnish for the particular use and payment of honorable labor a specially light and cheap coin.

While the President and his advisers deprecate and condemn the standard silver dollar of 412½ grains as inconvenient, "dishonest," and dangerous, labor is furnished a light subsidiary coin of 385 grains of standard silver. This is supplemented by a token coinage made of nickel, having a commercial value of about ten cents on the dollar. The great Government creditors spurn the standard silver dollar of the fathers, which, as bullion, when fairly treated by the laws, has been usually worth more than gold; but the humble and helpless boys of toil, who black the boots of the Government creditors must doff their ragged hats and bend the fawning knee in order to obtain 10 cents on the dollar for their labor. I do not thus speak in jest nor carelessly. There has been a special effort made by the moneyed classes that labor shall be thus paid in cheap money.

On July 20, 1885, the associated banks of New York issued a circular in which they expressed themselves very fully as to the circulation of cheap money, which usually pays the wages of toil. This circular of the associated banks of New York in part says:

> It is an undeniable fact that a silver coin of the size and denomination of the dollar is not in popular demand, and is not a convenient form of money for ordinary use, but that the fractional coins may more largely circulate. For this reason the committee cordially invite all banks and bankers throughout the country to unite with them by lending their aid in disbursing as far as they are able the fractional silver coins, of which there are now lying idle in the Treasury some $30,000,000. Whatever portion of this amount can be put in circulation will so far relieve the present exigency.

To the common reader that looks very much like a "conspiracy" of the associated banks to disburse for the use of men unable to own and carry a whole dollar, a light-weight silver money, legal tender for $5 only in any one payment. And if some richer man should become the fortunate owner of four quarters or two halves he would have the consolation of knowing that his load was 27½ grains lighter than if he were compelled to lug around the common standard dollar, which the banks say is not in popular demand. I wonder the Executive or his Secretary, in July, 1885, did not detect this combined effort of the New York banks to circulate a "degraded currency" into "the hand of toil."

When we hear from the platform, and read in the great state papers, what solicitude legislators and other officers of the Government have for the rights and equties of "toil," the wonder is that laboring people are not all rich! One would hardly suspect that those speakers and writers, after the sermon is over, would spend their time devising, enacting, and enforcing systems of taxation and finance specially designed to filch from toil every dollar it earns beyond the cheapest possible living. It is words for the humble to tickle the ear. It is acts for the rich and powerful to add to their wealth and power.

Mr. Speaker, the committee of the associated banks strongly intimate that President Cleveland agreed with them in their efforts to force a degraded currency into the hands of labor. Their circular says:

> This committee can not better serve the purpose of their appointment than by reproducing the letter of the President of the United States, written just before his inauguration, wherein he expresses his own views upon the silver question with great clearness and force, and in doing so he also reiterates the opinions of his predecessors in office.

Can it be possible that the then President of the United States was friendly to the policy of the bankers in forcing a degraded currency into "the hand of toil;" and that, in so doing, he agreed with "his predecessors in office?"

It has often been charged that, on the finances, there is no difference between the Democratic and Republican leaders. Here is a clear statement by a high and friendly authority that the charge is true. I have watched in vain for years to see or hear an authorative act or word in favor of paying "into the hand of toil" gold only, as is paid to wealth, sometimes in violation of contracts and against the interests of the laboring people.

Mr. Speaker, the rulers and high officers of leading nations can not escape history. It is something to transmit to our children great wealth, but it is far better to bequeath to them free institutions and the bright and glorious examples of patriotic statesmanship in the service of our common country. The hero who defends his people with the sword does much. He who defends them against the wily and merciless oppressions of the purse does more. Gen. Jackson was a hero on the battlefield whom we all admire. His heroism in the Cabinet was incomparably greater, and his victory over the money power embalmed him in the hearts of the people, and impressed itself on the policy of the country beyond comparison in modern history. That other great and glorious Democrat, Thomas Jefferson, stands preëminent among the earlier statesmen of this country, because he planned the field and began the battle which Jackson victoriously won. The salvation of this Republic and the perpetuity of human liberty in America is now in the scale waiting for other patriots to gloriously continue the fight. The battle is between God's people and the worshipers of the golden calf.

The people of this country have had a struggle with the black demon of chattel slavery. There is another slavery. Slavery is a means by which the master enjoys the earnings of the man. If its requirements are enforced by the lash and the bloodhound, it is called chattel slavery. If the robberies are enforced by means of bonds and mortgages created through the manipulations of taxation and finance, it is slavery all the same. Chattel slavery is a system of physical force, after the manner of the lion and the tiger. The slavery of the purse is after the manner of the serpent. It is mildness itself in the beginning. It charms, entices, and slimes. Then it crushes and devours by slow processes, through the mortgage, the bond, and other devices, but the day of judgment finally comes with merciless certainty and relentless savagery. We have beaten the lion's process on the fields of Lexington, Yorktown, and New Orleans, and at Appomatox. The God of battles inspired the people with patriotism, and sent us leaders worthy of the great occasions. Our history has been a proud one, surpassing that of the greatest nations. The lion is beaten on American soil.

Next, we encounter the serpent. He has his bonds and mortgages about our institutions and our people. It is said that men can not see, but they can feel. First, they feel in their pockets: they are empty. Then they feel in their stomachs; they are hungry. Next they feel the grip of the sheriff on their shoulder: it is an eviction. Then they see and hear as they never saw and heard before. The world looks dismal. Women and children weep and cry. Brave hearts melt. There is another convert to the people's cause. The enemy makes all our converts. There are millions of them now, and the number is increasing. They have no hope for relief except through the ballot box. This is a contest, not of swords and guns, but of brains and ballots. God and his people against Shylock and his gold! Every man must take sides. We can not escape the responsibility of action, nor the verdict of posterity upon our acts. Either we will stand with Jefferson and Benton and Jackson and a long line of noble patriots, or we must be classed with Nicholas Biddle, the defaulter and corrupter of men. Mr. Speaker, let each for himself make such a record that the muse of history will speak kindly of us, and that our children may read the story of our deeds with enthusiastic pleasure and not with shame!

The House then, on motion of Mr. PENDLETON (at 11 o'clock and 5 minutes p. m.) adjourned until to-morrow at 11 a. m.

SENATE.

TUESDAY, *August 22, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

THE MALTBY BUILDING.

The VICE-PRESIDENT laid before the Senate the following communication from the Architect of the Capitol; which was read, referred to the Committee on Public Buildings and Grounds, and ordered to be printed:

ARCHITECT'S OFFICE, UNITED STATES CAPITOL,
Washington, D. C., August 21, 1893.

To the Vice-President:

SIR: As directed by the resolution of the Senate, passed August 16, requiring the Architect of the Capitol to make a "thorough examination of

the Government property known as the Maltby Building, and to report whether or not the structure is secure, and may be occupied with safety to life and property," I have the honor to state that, upon examining the building, I find that some of the cracks in the walls which were formerly closed by patching with plaster have slightly reopened. This, in my opinion, has been caused by the heavy weight stored upon the floor of the basement story.

The foundations of this structure, I understand, were built upon comparatively newly filled earth of unequal depth. The weight imposed upon the floor of the basement would naturally compact the earth and cause further settling of the walls.

This weight is now being removed, and when accomplished I consider the occupation of the structure entirely safe for committee rooms and offices, provided care be taken to prevent the accumulation of heavy matter as heretofore.

Very respectfully,

EDWARD CLARK,
Architect, United States Capitol.

PETITIONS AND MEMORIALS.

Mr. HARRIS presented a petition of citizens of Morristown, Tenn., praying for the repeal of the silver-purchasing clause of the so-called Sherman law, and the appointment of an expert commission to consider and recommend a scientific plan of currency based on the experience of other countries and adequate to the requirements of a great commercial country; which was ordered to lie on the table.

Mr. PEFFER presented a petition adopted by a convention of citizens of Butler County, Ky., held in Morgantown, Ky., praying for the free coinage of silver and gold, as was allowed from the foundation of the Government up to 1873, etc.; which was ordered to lie on the table.

Mr. CHANDLER presented the petition of John L. Farwell, and 45 other citizens of Claremont, N. H., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. CAMERON. I present 136 petitions of business men of Philadelphia, Pa., indorsing the resolutions of the Trades League of Philadelphia, praying for the immediate repeal of the silver-purchasing clause of the so-called Sherman law. I move that the petitions lie on the table.

The motion was agreed to.

Mr. CAMERON presented a petition of the McKean County Central Labor Union, of Bradford, Pa., praying for the repeal of the so-called Sherman silver law, provided free coinage of silver is substituted in its place; which was ordered to lie on the table.

He also presented a petition of the Tobacco Trade Association of Philadelphia, Pa., praying for the repeal of the compulsory silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. WASHBURN presented a petition of the Chamber of Commerce of Minneapolis, Minn., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. VANCE presented a petition of the Evening Star Farmers' Alliance, No. 1895, of Washington County, N. C., praying for the free coinage of silver and the increase of the currency; which was ordered to lie on the table.

Mr. GRAY presented a petition of the Board of Trade of Wilmington, Del., praying for the speedy and unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

BILLS INTRODUCED.

Mr. SHERMAN. At the request of citizens of Northeast Washington I introduce a bill which I ask to have read the first and second time, and referred to the Committee on the District of Columbia.

The bill (S. 656) to define the route of the Baltimore and Ohio Railroad in the District of Columbia, and for other purposes, was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. SHERMAN. I also present a report of a committee appointed by the Northeast Washington Association of citizens on proposed legislation by Congress, setting out the grounds for the passage of this bill. I move that the paper be printed and referred to the Committee on the District of Columbia.

The motion was agreed to.

Mr. McPHERSON introduced a bill (S. 657) for the relief of Mary H. Noonan, of Jersey City, N. J., for the payment of her claim for rent and occupation of property in the city of New Orleans by the military forces of the United States as reported by the Court of Claims, under the provisions of the "Bowman act;" which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 658) for the relief of the Samuel L. Moore & Sons Company, of Elizabeth, N. J.; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Naval Affairs.

Mr. SQUIRE introduced a bill (S. 659) for the relief of the heirs of Martha A. Dealy, deceased, widow of David Dealy, deceased, and Mary Younkin, widow of Moses Younkin, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. LODGE introduced a bill (S. 660) to regulate the appointment of fourth-class postmasters; which was read twice by its title, and referred to the Committee on Civil Service and Retrenchment.

Mr. SHOUP introduced a bill (S. 661) for the relief of the Shawnee tribe or nation of Indians; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. BLACKBURN introduced a bill (S. 662) for the relief of Leo L. Johnson; which was read twice by its title, and referred to the Committee on Claims.

Mr. PEFFER (by request) introduced a joint resolution (S. R. 20) to diminish the public expenses by reducing salaries of officers and employés of the United States; which was read twice by its title, and referred to the Committee on Finance.

SILVER COINAGE.

Mr. ALLEN. I submit an amendment intended to be proposed to the bill (S. 570) discontinuing the purchase of silver bullion. I ask that the amendment be read, lie on the table, and be printed, and at some future time I desire to address the Senate upon the subject.

The amendment was read, and ordered to lie on the table and to be printed, as follows:

Amend by adding after the repealing clause the following:

"*Provided*, That hereafter standard silver shall be coined at the several mints of the United States into dollars, half dollars, quarter dollars, and dimes, at the present ratio of 16 grains of standard silver to 1 grain of standard gold under the same conditions as to mintage and other charges that are now or may hereafter be in force with reference to the coinage of gold. And it shall be the duty of the Secretary of the Treasury, without unnecessary delay, to cause all uncoined silver bullion owned by the Government of the United States to be coined into standard silver dollars. All money coined under the provisions of this act shall be a full legal tender for all debts public and private."

INCREASE OF NATIONAL BANK CIRCULATION.

Mr. STEWART. I desire to give notice that to-morrow morning, after the routine morning business, I shall ask leave to submit some remarks on the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. PLATT. To-morrow is the day fixed to vote upon the admission of the Senators appointed by governors. I know that some Senators desire to be heard, though not at very great length, upon that subject, to-morrow.

Mr. STEWART. I shall not speak at length. I do not expect to occupy more than twenty minutes.

Mr. PLATT. There will then be plenty of opportunity to discuss the question of privilege to-morrow.

Mr. STEWART. If it will interfere with the order of business, I shall not insist upon speaking to-morrow.

Mr. HOAR. I suppose if the bill to provide for the issue of circulating notes to national banks, to which the proposition for the abolition of the tax on the circulation of State banks is an amendment, is the order when the Senate adjourns, it will come up in its regular course, to be laid aside when Senators desire to speak on the question of seating the appointed Senators.

Mr. STEWART. I shall not antagonize anyone who desires to speak on the admission of the Senators, but to-morrow morning I will submit a few remarks on the bill I have indicated if there is time.

MR. SEYD'S VIEWS ON COINAGE.

Mr. HOAR. Mr. President, if the routine morning business is over, I understand the Senator from Indiana [Mr. VOORHEES] is about to proceed, but I have his leave to ask the Senate to have printed in the RECORD a letter from Ernest Seyd, an Englishman, a celebrated writer on political economy, to Samuel Hooper, formerly a member of Congress from Massachusetts and chairman of the Committee on Banking and Currency in that body.

The letter is dated London, the 17th of February, 1872. It begins by saying that Mr. Hooper has forwarded to Mr. Alfred Latham, who I think was a governor of the Bank of England, a copy of the coinage bill proposed for the United States, and requested to have it sent to Mr. Seyd for his criticism. The writer of the letter discusses, as a master of the subject, various practical questions, among them the question of the proper size of gold pieces, their value and denomination, questions relating to mintage, the question of mint charge, the question whether the coin should be milled or should be surrounded by a rim cast separately, all of which are very instructive.

But Mr. Seyd then goes on to say that the fifteenth section of the bill is the part which after all is of the greatest importance. He says it is a matter of gigantic importance; that it is the great question of the century. He avows himself earnestly in favor of the free coinage of silver at the ratio of 14 to 1, a little less than the rate then existing in the United States, if I am not mis-

taken. He implores Mr. Hooper to reconsider the subject, and says the great fault of Mr. Hooper's bill is that it abolishes the coinage of the silver dollar with the full legal-tender quality; and he says that America being a producer of both metals is the nation upon whom the world must depend to resist the enormous danger which menaces mankind by the threat of adopting a single gold standard. He says that although many of the English writers are monometallists, several English and continental writers whom he names have recently, he thinks, come around to his own views.

No advocate of the doctrine of bimetallism, if that doctrine means the coinage of both metals on an equality freely at the old rate, could express more earnestly, more powerfully, more persuasively the importance of that doctrine to the interests of mankind.

I ask that the letter be printed in the RECORD as part of my remarks. I suppose the Senate would not wish to have me read it in full at this moment. It covers 28 or 30 foolscap pages. I also ask that it be printed as a document.

The VICE-PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The letter is as follows:

I have the bill before me, and Mr. Latham kindly sent me a copy of your remarks respecting my book and inviting my suggestions.

I cheerfully respond to this invitation and beg to submit to you the following remarks. (I shall pass over those sections in reference to which I have no remarks to make, and point to others requiring notice.)

IA PRINCES STREET BANK, *London, February 17, 1872.*

DEAR SIR.—You were kind enough to forward to Mr. Alfred Latham a copy of your coinage bill for the United States, to be sent to me, and you expressed a wish to receive criticisms on its provisions.

SEC. 14. The issue of a variety of gold coins, such as the twenty, ten, five, three, two-and-one-half, and one dollar pieces, is injudicious. True, the twenty-dollar piece is a magnificent coin, but for ordinary purposes in obtaining change it is less useful than four five-dollar pieces; for large transactions connected with international trade the twenty-dollar pieces are the most convenient coins for melting down, and that is the fate of the majority of them. The one-dollar gold piece, on the other hand, is much too small. Its wear is excessive, and it soon becomes totally unfit for a standard of value. The French five-franc gold piece has already been condemned for this very reason.

A variety of coins must also be objected to for another reason, viz, that connected with the handling of the pieces it prevents the use of the "weighing scales." On pages 164, 165, of my book, Suggestions in Reference to the Metallic Currency of the United States, I speak of this matter at length, and I think the remarks therein made are worthy of attention.

I can quite understand that Americans, accustomed to see their splendid twenty-dollar piece and the one-dollar, do not fully appreciate the weight of these objections, but it mu-t be borne in mind that the American public have only had a short period, say from 1849 to 1861, in which they had anything like dealing in gold money, since which time, through the war, they have been so much habituated to paper money, whereas we in England, accustomed to vigorous dealings in gold, have learned experience, and are better able to appreciate these distinctions and their importance from practical and economical points of view. And from these points of view the question of a variety of gold coins is not an English or an American one, but one of cosmopolitan importance also, for there are principles involved in it.

In England, we only issue sovereigns and half sovereigns; but we complain, and with just reason, of the latter piece (see X's letter in English, page 40, of German pamphlet which I send herewith, wherein the issue of the one-half sovereign is fittingly called a legislative error). The German new coinage will consist principally of the 20-mark piece and only a limited number of 10-mark pieces will be issued. The French have coined 100 franc and 40-franc pieces only as "show pieces," and the 5-franc gold pieces will be given up.

I think that America ought to coin only ten and five-dollar, or five and two-and-one-half dollar pieces, certainly not more than ten, five, and two-and-one-half dollars, and that the twenty, three, and one dollar pieces ought not to be coined, excepting as show pieces, in limited quantities. The suggestion that twenty-dollar pieces can be coined cheaper has no foundation worth mentioning.

The question of a variety of coins has also a most important bearing on the abrasion of the pieces and their consequent lightness. In the bill I find nothing whatever making provision for this; and I may perhaps be pardoned for charging this omission to the account of the general want of thorough experience made in America in reference to gold coin.

Where are the provisions for limiting the current weight of gold coins? May they be abraded or light to any extent and still continue legal tender? And if not, who is to bear the cost of their reinstatement?

In England the individual holder must bear the loss; if the sovereign is under weight by three-quarters of a grain, it is cut up and the owner loses the difference. In France the state has hitherto withdrawn light gold, but sparingly; on the rest the coinage is young, and the question will now be postponed because of the paper issue.

In Germany the new coinage bill provides for the reinstatement of worn coins by the state; but the question is open, for, as the state has conquered the gold and issues it at its own option, it can afford such a liability. It is, however, acknowledged that the business "of making coins light" and obtaining new ones for them may become extensive.

The English system, in regard to light coins, is the only true one. Attempts were made by Mr. Lowe to levy 1 per cent mintage, so as to provide a fund from which the recoinage loss on old pieces by the state might be recouped. The proposal, however, as it deserved, fell through as absurd. The controversy on that score has been published by the Bank of England. The letters in English (printed in the German pamphlet) again refer to the matter.

The allowance for light coin, made here, is 3½ grains, *i. e.* the mint weight of the sovereign being 123.274 grains, it ceases to be legal currency when below 122½ grains. The public offices and the Bank of England's issue department weigh out light pieces and cut them by a machine. The owner can receive the pieces so cut back again, or sell them to the bank as standard bullion, at 77*s.* 9*d.* per ounce. Some people complain of this, but all who have fully studied the subject agree that it is the only true way of settlement, and that the coinage can thus be kept in fair order.

The twenty-dollar piece ought not to be allowed to lose more than 2 grains; the ten-dollar, 1¼ grains; the five-dollar, three-quarters grain; the three and the two-and-one-half-dollar, one-half grain; the one-dollar, one-quarter grain; and you will now at once perceive how very necessary it is that the variety of the pieces should be as restricted as possible, so as to save trouble to the public departments and the Treasury.

I do not know how you intend to treat this matter, and whether this plan of keeping the gold coinage in order may not excite much opposition.

The favorite idea of those opposed to this system is that the state itself should pay for light coins, either by a direct appropriation from the revenue or by applying the "profits" of the mint on the token coinage for this purpose. In this country it has been shown that the state has no such obligation—that by so doing it would only encourage the sweating of the coin—and as for the profit on the minor coinage, you will find that it can not be brought into accord with the wear and tear of the gold coin.

We look upon all these suggestions as "hocus pocus." I think, therefore, that your public departments ought to check the gold received by them, taking out the light pieces and defacing them by a stamp, but that the mint should undertake to buy these pieces by weight, giving new ones for them.

And if the mint does not charge the one-fifth per cent brassage on such light coin, but makes the exchange by weight gratis, it makes a sacrifice in the matter which is already beyond its immediate functions, and this policy may be adopted as a compromise between the holders of light coin and the state.

It can not be asserted, for instance, that gold pieces of one-half or one-quarter dollar could be used; hence the idea of a limit in size must be maintained, and there can only be *one true* limit, so to speak. This true limit excludes the one-dollar piece at once. Indeed, the two-and-one-half-dollar piece is somewhat below it, and all European mint masters agree with me that a gold piece of about three and three-quarter dollars should be the smallest. Unfortunately, almost all the monetary systems are committed to smaller pieces. Bearing in mind, however, that the one-dollar piece is absolutely away from this limit, it would seem to be injudicious to select it as "unit of value;" it would be like starting with an "imperfect" thing.

In section 14 I find the expression "of the one-dollar piece or unit of value." The term "unit of value" (rather vague wherever used) might best be taken as implying a standard of value. Now, the one-dollar gold piece is not a suitable piece, as experience shows, and such experience does not rest on mere practical results, but on principles connected with metallurgy and fixed mechanical laws, having reference to the difference between the resisting power of the metallic structure of the piece and the extent of surface exposed.

Indeed, I do not see why any coin of "denominational" value should be selected as a special valuator. The true valuator is the bullion itself by weight, irrespective of its division into pieces, and as the weight of the latter is led off from the divisions of the ounce, the ounce itself is the proper starting point. This practice is pursued by all the large states; thus in England, 480 ounces standard gold = 1,869 sovereigns (these figures are so given because they are without fractions); in France, a kilogram 900 fine gold = 3,100 francs; in Germany (new law) the mint pound fine gold (one-half kilogram) = 465 thalers or 1,395 marks, and so might the United States do, say, 43 ounces of standard (900) = $800 (this gives correct proportions without fractions).

Hence section 14 might commence: "That the standard weight of gold coins shall be in the proportion of 43 ounces of standard gold to $800, viz: The weight of the double eagle, etc.," leaving out "or unit of value" in line 8. And if in addition thereto you could introduce, "*Provided*, That the double eagle, the $3 and the $1 piece be manufactured and issued only by an express order from the Secretary of the Treasury." Thus, you would not abolish these three pieces, but give liberty to try the more restricted variety.

The policy of using the ounce of bullion as the standard of value can best be appreciated by those who are fully acquainted with vigorous dealings and holdings in bullion and the necessity and economy involved in acquiring and retaining it. In this respect America fails signally; the want of a suitable "re ervoir" for holding bullion during the phases of international exchanges, without coining it, leads to unnecessary mint operations and to losses, direct and indirect, in American commerce. In Europe we have large central banks (banks of England, France, and Prussia), which, by their note-issue, thus hold uncoined bullion, receiving and parting with it. In my book (Suggestions, etc.) I have endeavored to make this clear.

It is very possible that Americans are opposed to such a central bank for a national issue based on bullion, as I have proposed it, and that as long as the Treasury must continue its policy of selling gold in the market against greenbacks, the way is not clearly seen.

Nevertheless, that is no reason why some such system of "reservoir" for bullion should not be established by the Treasury through the mint or *vice versa*. I know what your usual mint certificates are which carry with them the time taken by the mint in making the coin. I think that the system can be made to go further. Supposing, for instance, that such a clause as this were introduced into the bill:

"SECTION —. That it shall be lawful for the Secretary of the Treasury to issue through the Director of the Mint bullion certificates (payable to bearer) of gold bullion deposited at the Mint, such certificates stating the value of the bullion so deposited upon the owner of such bullion paying the coinage charge thereon in United States gold coin; and if the value of such deposit exceeds the sum of $20,000 the Director of the Mint, at the option of the owner, shall have the right of paying the fractional sum above the last $1,000 in coin, issuing the certificate for a round sum in thousandths, and deducting the coinage charge therefrom; and if the amount deposited be below $20,000 the owner of such bullion shall pay such additional sum in United States gold coin as will complete a round sum in thousandths: *Provided*, That at the option of the Director of the Mint such certificates shall be paid on presentation either in bullion or coin, or in such proportions of bullion and coin as he may deem fit: *And provided also*, That if the owner of such bullion chooses to be paid in coin he shall receive in exchange thereof a mint certificate specifying the time when such coin will be ready for delivery."

I do not know whether I have worded this section in American bill style, but I think I can show you its advantages:

1. It will entirely do away with the necessity of keeping a special mint fund, as provided by section 50.

2. It relieves the state of uselessly coining the gold, for the greater portion of American coins go to European melting pots (see Suggestions, pages 24 and 25), and the monthly sales of gold are absorbed that way.

3. The Government will make the profit of one-fifth per cent coinage charge, without having coined (a similar profit is made by the banks of England and France, which buy gold less the supposed coining charge and sell it at mint value).

4. The owners of such bullion certificates will be paid at once, and for shipment to Europe bullion is more profitable to them (see Suggestions, pages 197 and 198).

5. If coin is insisted upon by the holders, they can get it on the usual terms by the ordinary coin certificates.

6. The provisions for the "rounding off" of the certificates in thousands I think are very useful and necessary in order to make these instruments convenient and popular, and the provisions as to the right of the mint to insist upon a balance of coin to make up a round sum below twenty thousand (or less) is, of course, expedient. For sums above that amount the mint might keep a small reserve of coin.

7. The United States Treasury would, of course, hold the gold instead of the mint, and might also hold the certificates so as to maintain its control over the gold market as long as requisite.

I am convinced that this system will enable the Government to effect great saving in minting gold, lead to regular operations in supply, retain bullion in the country, and be much more satisfactory to the exchange market and the public.

Superior to this policy I hold the establishment of a large central bank (Suggestions, page 68), but in the mean time I think that the above clause might well be included in the mint bill.

SEC. 25. Assayer. It is essential in every mint law that the inspector of bullion should know "how the assay of gold" is to be stated. Is the assay to be in 1,000 parts or one-half of thousandth parts, or in ten-thousandth parts? The importance of this will at once be apparent to you when I state that by the thousandth assay an importer would obtain, say, $9,990 for a certain parcel of bullion, whereas if the ten-thousandth part was stated he might obtain $9,999, or $9 more.

In the United States, assays are stated at two-thousandth fine; in France, at ten-thousandth fine. Why should the United States assayers not state the assay in the same way as the French?

I am perfectly well aware that the American assayers assert (in print and in speech) that they can not assay so fine, and that the liability to error ranges between one and two ten-thousandths. If the American assayers were subject to the same competition as ours are here, *they would soon learn how to do it.* I underline these words in the hope that you will not allow yourself to be jostled out of the wish to promote accuracy.

We have made numerous experiments here in Europe, and find that, although divergencies will occur of one-tenth per mille, and occasionally two-tenths per mille, yet that, on the whole, the assays agree, and that, at all events, the purchaser of bullion can not lose, because he has an almost entire one-ten-thousandth part as a margin. In France the tariff for qualities of gold is at one-ten-thousandth fine, and the assays at the Bank of France corresponded with the independent assays of the mint, for a coinage of 100,000,000 of francs (gold), within 132 francs, and that in favor of the bank.

French assayers pretend to go to one-hundred-thousandth fine, and I am satisfied that it can be fairly done; yet in America the one two-thousandth is still maintained. Even the British mint has always assayed to one-thirty-second grain fine, equivalent to $\frac{1}{1000}$ fine, and the Bank of England, in consequence of a pamphlet which I wrote (see Suggestions, page 174) altered its assay system to $\frac{2}{1000}$ fine, although it is not a government concern. All our British and continental assayers state assays to one-ten-thousandth fine; several go to one-hundred-thousandth parts (in half .005).

I think that the least Americans can do is the adoption of the one ten-thousandths part; rely upon it—all opposition in this is captious. I trust that there are really scientific men in the States able to make such accurate assays; but I maintain that if even they are unable to vindicate the rights of scientific accuracy and if they continue to insist upon errors between one and three ten-thousandths, the system should nevertheless be adopted, because, as said before, the mint or the purchaser of bullion can not on the average go wrong, and above that he has an entire one ten-thousandth reserved. So in section 25, at the end of line 2, there should be the words: "in tenths of millièmes"—a technical term perfectly understood.

SEC. 26. In my book, Suggestions, etc., I recommend a coinage charge of one-tenth per cent, and if the organization and machinery of state mints were perfected (see "Improvements in the Process of Coining" in the Society of Arts Journal sent herewith) that rate would cover the actual working expenses. I am opposed to the so-called absolute free coinage, and I am glad to observe that you propose one-fifth per cent at all events as an installment, and I hope it will not be increased. The charges for refining, melting, etc., ought to be put at as low a figure as possible, or even at a sacrifice to the mint.

SEC. 36. The "allowance" or remedy for gold of only one one-thousandth in the fineness is an improvement; in England and France it is two one-thousandths. This advance in favor of accuracy in America strengthens my demand for assaying to one ten-thousandth part fine, as remarked in section 25.

SEC. 39. The allowance for deviation in the weight of the half eagle is in accordance with the practice here, but for the two and a half and one dollar pieces it is far too large; the two and one-half dollar piece ought to have but one-eighth or one-sixth the dollar, say one-tenth of a grain.

SEC. 46. Allows to the melter and refiner one-thousandth part of weight for gold, and one and one-half-thousandth for silver waste, and to the coiner one-half-thousandth for gold and one-thousandth for silver waste. These are enormous allowances, which, in my opinion, are tantamount only to "legalizing pilfering" to that extent.

I altogether repudiate the suggestion that any material can be absolutely lost in the melting or coining. I admit that during the process of melting, copper may oxidize, but in that case the gold or silver alloy becomes finer, as the assay by one ten-thousandth would show. Careful manipulation and proper heating lessens this liability, and if, after all, the melter thoroughly knows his business, he can find out the average oxidation, and should be allowed to make a slight surcharge of copper, say one-tenth per mill, to counterpoise it.

The "evaporation" of pure gold and silver only takes place when the metal is much overheated and particles of it, by stirring, go up the flue, where they can be found. This subject has been well tested here and elsewhere, and the evaporation has been found so infinitesimal that one one-hundred-thousandth part will cover it over and over again, notwithstanding all the assertions and statistics of other mint officers.

Supposing, then, that the above-mentioned surcharge of copper is so that a loss of weight to one-tenth per mill becomes possible, and making a liberal allowance for so-called "evaporation," I maintain that a loss of one-eighth per mill ought to cover the whole; yet your bill allows eight times as much for gold and twelve times as much for silver.

But it will be said, "there are spillings in casting, and traces of metal adhere to the pot, etc." I know all that; but they can all be got out of the "sweepings;" they can not disappear, and if I allow another one-eighth per mill, *i. e.*, one-fourth per mill for absolute (?) loss in melting, all those contingencies are covered; the rest, the three-fourths and one and one-fourth per mill are simply stolen.

Under melting and refining, I presume that you understand the melting and bringing to standard of gold, but not the process of "parting" by acids, here called refining; for these "parting" operations, properly speaking, are separate from the business of the mint, and conducted by private refiners. The parting process does not give any loss; on the contrary, as the assay is always higher, it yields more gold. (The spilling and dropping about of metal can be altogether avoided if the plan of casting plates be adopted, as recommended in my paper in the Journal of the Society of Arts, page 178, for the whole melting-pot can be emptied at once into the mold.)

You are, no doubt, in possession of a book on the British Mint, written by Mr. G. F. Ansell, wherein you will find this business of losses well laid open. On page 101 of that book is a condensed statement showing that the highest loss ever made by that mint in melting is not quite four-tenths per mille (in 1868-'69) while in the years 1857-1866 it was as low as $\frac{1}{10}$ per mille (Mr. Ansell then managing the mint), and the high loss of four-tenths per mille is clearly owing to the fact that the work is badly done, and that frequent spillings are "purposely" made. Yet you would give them permanent authority to lose one-tenth per cent. I assert that a conscientious melter, one who looks well after the men, does not require such an allowance.

In the coining department no loss whatever is possible unless the work is done bad purposely. Slight traces will sometimes color the rollers, or the oil may carry with it small atoms, but any bits or strips, no matter how small, must be found in the sweepings. The statement on page 101 of Mr. Ansell's book shows that from 1851 to 1857 the losses in the coining department of the British mint were very high (when several prosecutions for pilfering were instituted); since then, as the statement shows, they have been very trifling, and during Mr. Ansell's time there were slight gains, as there should be, for the 1,000 sovereigns (previously weighed singly) may be short only by 5 grains to produce the average of grains stated on one million pieces.

The lowest total loss in melting, standarding, and coining in England since 1857 is 140 per million and the highest 330, yet your bill allows a margin of 1,500 per million. And if you take into account that the assay at the mints in the United States is stated at only one half-thousandth, giving an average surplus of one-quarter or 250 against the British mint margin of one thirty-second grain fine, one-eighth, or 125 average, the total allowed by you would be 1,650 per million.

This is so extravagant and extraordinary that I must protest against it, notwithstanding all the experience and statements of the mint authorities.

Compare this allowance, for instance, with the French mint law. The French contractors receive 6.70 francs for coining 3,100 francs, 2,170 per million. They are credited and debited with over and under weight. They take the metal at one ten-thousandth part of assay, and in the trials of their coins they are rigorously credited and debited with fineness over or below the one ten-thousandth part; *i. e.*, if the coin assays, say, 900.2, they are credited with the 2; if, say, 899.7, they are debited by 3. They are, consequently, bound hand and foot, and dare not allow any waste. If they conceded 1,650 per million out of the 2,170, they would only have ½ per mille left.

It may be alleged that pilfering by the men can not be prevented. Let me assure you it can. The French contractors do it, and turn out their men if they find any unusual discrepancy, and the men know that they must not rob the employers. In the British Mint there is no such guard, and if in the United States you actually legalize the allowance of 1,500 per million, you may depend upon its being made use of.

The best plan is to make no allowance at all, but let the published returns speak for themselves, or if limits be thought advisable, let them be fixed at no more than one-third of the rates named by the bill, with the understanding, if the losses exceeds these rates, that an inquiry shall take place, which, if not clearing up the matter, will lead to the discharging of the men. I maintain that if the responsible melters and coiners earnestly take the trouble to show the men how to melt, cast, and coin (and no one should be so appointed unless by his own hands he can show and train men) they may prove "how gold and silver can not be lost," and that must stand as a precedent for future proceedings. The discharge of men should not be feared; a working chief melter and coiner can always train new hands if he has a mind to do so.

I know very well that in enlarging upon this subject I touch upon an often discussed chronic mint sore, but I know that I am right.

In pleading, then, for legal enactments in favor of the one ten-thousandth part assay, far better machinery, and the avoidance of "legalizing" waste, I request you to recognize my wish that the United States may succeed in vindicating the principles of "accuracy" in their mints.

SEC. 50. I think that if the suggestion in reference to the bullion certificates alluded to before be adopted, the fund in question will be but a very moderate one.

SEC. 15. I now come to the most important part of the bill that of the valuation, which according to section 15 omits the coinage of the silver dollar, and confirms the debased silver coinage of half dollars and below, under the tender limit of $5. I am aware, of course, that through the amendment of 1853, the same debased coinage was already established, but although the actual coinage of the silver dollar had practically ceased, still that piece was not abolished by law. As this new bill presumably repeals all previous enactments, I suppose that the total abolition of the silver dollar is contemplated.

In my book (Suggestions) I enter fully into the discussion of this matter and show the gigantic consequences to international as well as national trade through the demonetization of silver, to which the United States would thus lend a helping hand, and for a number of years this subject of the abolition of silver as tender coin has occupied the attention of European economists. It is the question of the age and takes precedence of every other matter involved in monetary science.

Unfortunately the subject requires not only a thoroughly practical knowledge of exchange matters, the principles of valuation, for which very few people have inclination, and so it happens that even the framers of mint bills do not grasp its importance, as I have found before. You yourself, in your letter to Mr. Latham, referring to my book, make the remark, "As to the theory of the double valuation, I do not understand it." I infer from this that you have remained a stranger to the controversy; that you have not as yet formed an opinion as to the merits of it, and that you have framed your bill in favor of the absolute gold valuation according to that which has been of late the practice in the United States, if not the law.

Permit me to beg that you will first investigate the question of double vs. single valuation. Chapter 3 of my book, "Suggestions, etc.," opens the question; appendix, notes 8 (page 291), the consequences of the gold valuation and 9 (page 212) the injustice of the gold valuation. Treat the matter in their international and national aspects, and they may furnish you sufficient materials for reflection.

Other writers, such as Mr. Wolowski, in France, and several other French, Dutch, and German authorities, defend the double valuation on the same grounds.

The great portion of English economists defend the gold valuation, but several of them have lately come over to my views; and one them, the most important and a staunch defender of English institutions, to whom I shall presently allude, has agreed with me as to the advisability of modifying the English gold valuation, which is even less strict than that adopted by your bill for America. These pages do not afford room for the whole discussion of the subject, therefore I beg you will read the parts of the books quoted, so as to form an opinion of it.

Apart from the theory, why should America have given up her silver dollar? The cause of its disappearance from circulation is due to the original error of there being too much silver in the piece (see page 52 of Suggestions); that cause would have been removed if the dollar weighed 400 grains, that being the true proportion of 1 to 15½ gold to silver, instead of 412½ grains, as by the old law.

Why should it not be reintroduced at its true full weight of 400 grains and become again one of the active agents of commerce? The charge of weight as against the individual piece does not hold good when two half-dollars are of nearly equal weight and same value. Railways and steam transport large masses with great facility when compared with previous times.

Do you fear its undue exportation? If so exported, America will get its equivalent for it, and the rich silver mines of the country can give any fresh supply of it; therefore, the more it is exported the better it is for America.

I think that the United States, with both her gold and silver mines, is in the eminently favorable position of upholding the full use of both gold and silver, and that the double valuation (as it existed before) would be of great benefit to the country; but you may, nevertheless, giving way to the one-sided arguments of English economists, incline to the gold valuation and express the fear "that if America adopts the silver dollar and lays itself open to the coining of these pieces for the public to whatever quantity of silver may be sent in from coinage from abroad, and if full legal-tender value is given to such pieces, it may be placed in danger of losing gold and obtaining too much silver currency."

That is the only fear to be apprehended, and certainly as long as England and other countries are in conflict as to the systems of valuation this may be the case.

France, however, by her system of double valuation, accumulated more gold bullion than any nation has ever had; having within the last twenty years coined two and a half times as much as England, and if the universal valuation was the double one, *i. e.*, both metals in equal use, these fluctuations would altogether cease.

Against this danger of too much silver America can guard itself without the total abolition of the full valued silver dollar. It is but necessary so to modify the severity of the gold valuation as to admit of a reasonable use of silver dollars. Supposing that a certain amount of silver dollars of full value (400 grains) were issued, coined for the owner at a charge of, say 1 per cent mintage, and that the limit of tender for such pieces were fixed at, say, fifty to one hundred dollars, would this in any way interfere with the supremacy of the gold valuation? I contend that the gold valuation would remain supreme with either of these restrictions, viz, either a certain limited issue and giving full tender weights to the coin, or with unrestricted issue limiting the tender value.

Both restrictions combined will undoubtedly prevent any excess, and if under them certain amounts were so issued and used the issue of more might be made dependent thereon; so that while for the present the gold valuations were maintained in full force the door would not be shut abruptly and forever on silver; and pending the future international settlement of a universal system of valuation the pure double valuation might be found not only practicable, but necessary. I urge this upon you not only on cosmopolitan grounds, but also in the interests of American silver mines; for if America, so important a part of the world, rushes blindly and irrevocably into the gold valuation, and thus contributes to the general terrible error, the value of silver must fall greatly (see appendix, note 8, the consequence of the gold valuation), and all the arrangements made even with the debased silver coinage fail to please.

You, therefore, should hesitate to enter upon this course without a full knowledge and investigation of the immensely important considerations appertaining to the case.

Some proper issue of silver dollars might be provided for in the bill by the introduction between sections 14 and 15 of some such—

"Section 2. That of the silver coin the weight of the one-dollar piece shall be 400 grains, which coin shall be legal tender at its denominational value to any amount not exceeding one hundred (or fifty) dollars," and this would have to be followed between stations 21 and 22 by—

"Section —. That the charge for converting standard silver into silver dollars whenever the mint is ready, according to section —, to coin such silver dollars shall be 1 per cent."

The object of these clauses will be apparent to you. The Secretary of the Treasury may commence, for instance, by authorizing the coining of one million of silver dollars. The holders of the silver bullion would gladly pay the 1 per cent charge, rather than send the bars to Europe. What risk would the holders of these dollars run? Even supposing that the public positively refused to take these coins, the holders could sell them as silver to Europe; but I believe that they would be welcomed, even without the law of tender. And if you succeed by the force of legal tender in compelling people to take in payment coins debased by 4 to 5 per cent to the amount of $5, why should not you succeed in placing coins of full and honest value into healthy circulation?

So, if the first million succeeded, the Secretary then might authorize more, encouraging it even, while at any time, by ceasing his advertisement, he could foreclose the mint against an excessive importation of silver from abroad.

You will also perceive that the reintroduction of the silver dollar is a necessity, seeing that the one-dollar gold piece is an unsuitable coin, and that it can take place without disturbing clauses 14 and 15, the latter providing for the issue of debased half-dollars, quarters, and dimes as they are now.

Indeed, I must wish also that the half dollar should be of full value, so that the issue of those pieces should not be guided by the more or less faulty human judgment of the Secretary of the Treasury, but by the pure action between supply and demand. I put the "supply" first as the active "demand-creating" element in all matters of commercial intercourse. But as the debased half dollar is already in use it may be best not to disturb it now, whilst the whole silver dollar can be introduced again without any disturbance in the other coinage.

I quite recognize the necessity of giving the character of tokens to copper coins and to lower class silver coins. What I contend is that "enough is the evil thereof," and that it is wrong to extend this character of tokens to coins which, like the dollar and half dollar, are so important in social intercourse and where supply should not be restricted by unfavorable laws.

I may now mention that Mr. William Newmarch, F. R. S., who as president of the economical branch of the Social Science Congress, lately delivered an oration on the advantages which he supposed England had derived from the gold valuation, nevertheless agrees with me that we in England might with advantage issue a full-valued four-shilling piece without disturbing the gold valuation, and that we might thereby militate against the evil of a constant or periodical scarcity of silver coin in the hands of the lower classes and a correspondingly constant or periodical sole surplus in the hands of bankers.

In a lecture delivered before the Statistical Society in February, 1871, on "Currency Laws and Pauperism," I showed that excessive poverty and idleness in England among the lower classes was due to the restricted supply of mediums of exchange suitable for their wants as means of intercourse between themselves, and that the scarcity of silver coin was the consequence of the severe laws oppressing the use and debasing the value of this kind of money. (The substance of this lecture is contained in appendix, note 9, "Injustice of the gold valuation," in Suggestions, etc.) I there proposed, as a mitigating measure, the issue of full-valued four-shilling pieces, and I have, from many well-informed quarters, received sufficient encouragement to anticipate that in spite of the strong prejudice and want of spirit of inquiry prevailing in England in reference to such questions, it will be seriously considered. Now, the United States gold valuation is even more severe than in England, for whilst here the limit for silver is £2 or $10, it is but five with you.

I venture, therefore, to recommend to you the introduction of these clauses in favor of the silver dollar. At all events, I hope you will fully investigate this subject before you commit America to this course of the one-sided gold valuation.

Men like yourself, on framing a coinage bill, undertake a gigantic responsibility, which strongly affects not only a whole nation's welfare and happiness, but also that of the world at large. Pray do not despise this language: the deep study of all the principles and interest connected with the organization of social life warrants it.
